Steel Freight Cars.

By W. S. Atwood, Mechanical Engineer, Dominion Car and Foundry Co.

The subject of steel freight cars is one which may at present time be considered a live one in Canada and a very important one among those interested in the designing, handling, and maintenance of railway freight cars. Steel cars have long since passed the experimental stage, and have demonstrated conclusively their superiority and desirability, and the Canadian railways are, therefore, specifying each succeeding year a greater proportion of their requirements to be of all-steel or steel underframe construction. The introduction of all-steel or steel frame cars on the American continent is comparatively recent, the first of the modern steel cars being built about 1897, yet we have records of steel cars being built in limited quantities as early as 1853 in America and in much larger quantities a few years later on the European continent, the Eastern Ry. of France alone having in 1905 over 20,000 cars, with metal framing or all-metal construction, in service. During 1907, which represented a healthy condition in the car building industry, the returns from 36 car building concerns in the United States and Canada show 284,188 freight cars built, of which 72% were of all-steel or steel underframe construction. This proportion of steel cars to wooden cars built seems remarkable when one considers the comparatively short time since their introduction, and is very convincing evidence that they have demonstrated their superiority over the wooden cars.

DESIGN.—The designing of the modern all-steel and steel frame cars has been left, in large measure, to the car builders themselves, in conjunction with and often under the supervision of railway officials, due to the fact that this type of construction was new, and it was necessary for the steel car builders to design and illustrate to the railroads the many advantages to be gained in substituting steel for wood in car construction. How well they have succeeded, as well as the proof of their assertions, is shown by the figures just referred to, as well as other figures given in the numerous articles appearing in the press during the last few years. Some of the larger systems have, however, taken up the designing of their steel car equipment on quite an extensive scale, and not only furnish the builders with complete specifications, but complete detail drawings and bills of material, and insist on the cars being built in accordance with them. Both arrangements have their advantages and disadvantages. In the case of the railways designing their own cars they are able to standardize their castings, forgings, and miscellaneous parts to some considerable extent, and, by keeping in mind their standard cars of different classes, are often able to design them in such manner as to have several parts common to all classes, thereby helping to reduce the investment for spare parts, as well as making substitutions easily. This, however, often works out to the disadvantage of the builders, as they, too, have their standard dies, patterns, etc., which, of course, are to their advantage to use, but which may differ from the railway company's standard just enough to necessitate new dies and patterns to such an extent that the saving gained in having the drawings, specifications, and bills of material furnished is more than offset by the die and pattern cost. These dies may never be used on later orders, which means, of course, that the entire die and pattern cost would have to be borne by this particular lot. In the case of large orders this cost, distributed over the entire lot, would, of course, not represent as important a charge per car as in the case of small orders, but it is an important item to be taken into consideration in estimating and designing, and the number of complicated shapes should, therefore, be kept as low as possible. And particular attention should be paid to standardizing all castings and such forgings as might be termed the moving parts, such as brake gear, draft gear, etc., which are more liable to damage and need renewal at repair points.

F. CONWAY.
Acting General Superintendent and General Freight and Passenger Agent, Kingston and Pembroke Railway.

Too much cannot be said in favor of standard parts, and while the Master Car Builders' Association has accomplished admirable results in the way of standard truck parts and wooden car body parts, they have, as yet, done little towards standardizing construction for steel car bodies. It would also seem as though the railways could do a great deal along this line to cheapen the building of freight cars, and it has often occurred to me that an ideal arrangement would be possible, in Canada at least, if the railways could each appoint representatives to assemble and decide on a standard construction for each class and capacity of freight cars, and have standard specifications and drawings, in so far as general dimensions, arrangement of framing, unit fibre stress, etc., are concerned, which would be common to all the railways. A representative from the leading car building firms, and perhaps a representative from the Railway Commission, could be included if considered advisable, the idea being to decide on the best possible construction, keeping in mind the building and maintenance cost. Any improvements suggesting themselves from time to time could be considered by this committee, and, if found advisable, would be adopted on all roads and incorporated in the standards. This standardizing is carried out extensively and advantageously on some of the largest railway systems, so, why not go farther and include all railways? This, no doubt, would be considered by many as an impossible task, but the advantage that would be gained and the money that could be saved would certainly warrant a considerable outlay in establishing such a system. In fact, after all things are considered, each railway company's cars are in operation accomplishing practically the same results, the differing details being more or less an expression of personal opinion and experience, and it would seem as though the spirit of give-and-take could prevail, creating a practical standard which would be satisfactory to all. This, of course, would apply to the more common types which are more numerous, and not to the few special types designed for special service.

the indestructibility of steel cars, the question of repairs is still a very important consideration in designing them; in fact, it might be called the all-important one, with the possible exception of strength. On some of the first steel cars built there were several details which developed weaknesses in service, but, owing to the manner in which this subject has been taken up, these defects have all been remedied and the steel cars as now proportioned are withstanding the service to which they are put.

The proportioning of the longitudinal sills for the vertical load is an important question in designing, and one which has been the cause of frequent discussions; some advocate proportioning the sills for an evenly-distributed load, while others consider it necessary to figure for concentrated loads. A large number of designers and car builders favor the assumption that it is perfectly safe to take the maximum load carried by the sills and assume it as evenly distributed, and keeping the fibre stress within reasonable limits. For the rare cases of concentrated loads in service the metal would not be strained beyond its elastic limit, as it would be taken care of by the low fibre stress, and it would hardly seem economical to provide for a heavy concentrated load with low fibre stress, when the usual condition would be a distributed load which would only produce a portion of the fibre stress provided for, in figuring concentrated lading.

It is also an open question as to how the sills should be proportioned in relation to each other, viz., as to whether the centre sills should carry all the load, or whether side and centre should each carry their portion, and, in the case of the cars requiring sides for containing the lading, whether these sides should also act as a plate girder and carry all the load. The usual method followed for flat cars is to design them having deep centre sills proportioned to carry all the load, and a rolled section for side sill figured as a continuous beam, supported at the bolsters and top cross-bearers, and carrying only that portion of the load distributed along the sides of the car. For gondola and such cars as require sides for containing the lading, and which usually consist of a web plate with top and bottom flange angles, it is, of course, the most economical construction to figure them as complete girders and proportion them to carry the entire load, keeping in mind to provide for lateral stiffeners to contain the lading, and prevent the girder from buckling. The centre sill would then be proportioned for the buffing shocks only. The severity of the buffing shocks to provide for is usually specified by the railway, and is simply a question of how safe they wish to make the cars in this respect, and whether they are willing to stand the extra expense of providing for the more excessive shocks recorded in recent dynamometer tests. This construction usually works out the cheapest, but would, of course, not apply to box cars with wooden superstructure. In this case the framing should not be depended upon to carry any of the load, on account of its becoming loose due to wood drying out, nuts on the frame rods becoming loose, etc. It would, apply, however, where the side frames are of steel, securely riveted to the side sill at the bottom and to a member forming the side plate at the top, thereby constituting an open truss between the bolsters. In proportioning the side frame, however, to carry a portion or all of the vertical load, account should, of course, be taken of the bulging stress in the members due to the loading.

The splicing of the centre sills in front of the bolster to facilitate repairs is a detail which has been the source of many arguments, but a large number of master car builders now contend that, if the sills are made proportionately stronger at and between the bolsters than they are between the bolster and the end sill, any stress great enough to damage the sills would do the damage where they could be easily gotten at and cut off and spliced if necessary, and that the cost of doing this in the small number of cases required would not be nearly as great as the additional cost of making the splice on all the cars at the time of building.

The diagonal brace, which is usually put in all underframes at the corners, is a detail which varies according to the ideas of the designer or master car builder. Some advocate extending it from the ends of the centre sills to the intersection of the side sill and bolster, arguing that it relieves the centre sills of a portion of the buffing shocks, transmitting same to the sides; also that any cornering of the car sufficient to damage it to any extent would also be great enough to damage the brace if it was extending from the corner of the car to the intersection of the centre sill and bolster, and without the brace at the corner the underframe is much easier repaired. It would seem good practice however, to extend the brace from the intersection of the centre sill and bolster to the corner of the car, bracing the corner against ordinary cornering shocks, and to always take care of the buffing shock in the centre sills.

On some of the early types of cars one can notice both sides and ends have bulged out, due to the lading, but more particularly the ends, due to the shifting of the lading, on acount of rough handling of the cars. This has now been overcome by the use of horizontal end braces, extending the entire width of the car and being tied securely to the sides, in place of the former vertical end stakes. The sides have also been strengthened, some using an inside pressed flange stake tapering towards the top in the form of a gusset, which is, no doubt, the strongest form of stake when securely fastened at the bottom, but has the objection of decreasing the available space for lading when the car is being used for handling long material. One common cause of damage to the sides of coal cars is the mechanical unloader, and it would seem as though some improvement could be made in the manner of gripping the car sides to distribute the load over a larger area.

The proportioning of the bolsters and cross-bearers depends, of course, to a large extent, as to how the vertical load is distributed and carried by the sills, thereby determining how much load is to be carried to the centre through these members. The fact of the possibility of having to raise the car while under load, by placing jacks at the extreme ends of the body bolsters, should not be overlooked. One of the most important details in the bolster construction is the centre brace between the centre sills, directly over the centre plate. On some of the early cars it was customary to use rather light pressed diaphragms, and one can see a number of these cars with the bolster bottom plate bowed up between the sills sufficient to allow the side bearing clearance to be taken up. This, however, is well taken care of by substituting a substantial malleable-iron or cast-steel casting, securely riveted to the centre sills and having a good bearing on the bolster plate. This especially applies to cars having a body centre plate of small diameter, and where the load on the centre plate is transmitted to the centre sills by the bolster centre brace.

At the time of the introduction of the modern steel cars the matter of weight received considerable attention, as one of the leading arguments in favor of them was the greater ratio of paying load to dead weight, and on this account some parts were designed too light, so that the same class of car as built to-day is considerably heavier. The important question among railway officials at present is, is the car designed strong enough to withstand the service for which it is intended and keep off the repair tracks, as the cost of moving the small additional dead weight is more than offset by its decreased maintenance cost and the increased earnings, by reason of its continuous service?

CORROSION AND PAINTING.—A great deal has been said on the subject of painting steel cars, some roads going into this phase quite extensively, while others give it less consideration, arguing that the corrosion can in most cases be neglected, and paint for appearance only. It would seem, however, that the car should not only be well protected with paint at the time of building, but should be repainted as often as the service which the cars are in would require. Up to the present time, however, where the cars are kept in service there has been no serious effect from corrosion, except, perhaps, under some extraordinary conditions, and while in a badly corroded steel plate it is possible to chip off quite a thick scale, it does not, of course, follow that the plate is decreased in thickness an amount equal to the thickness of the removed scale. The 12 years which steel cars have been in service in this country have not been sufficient to determine accurately the percentage of loss in section due to corrosion, as it has not taken place to any appreciable extent, except, perhaps, in some floor sheets in cars loaded with coal and similar material, when allowed to stand idle, particularly when wet. So that the report of Mr. Tolmar, chief of shops on the Eastern Ry. of France, who has had experience with steel cars since 1861, is very interesting, and shows conclusively that the corrosion of steel cars is not a consideration of consequence. Mr. Tolmar found that steel frame cars showed the following proportion of loss in section from corrosion:—

Cars built in	Life.	Loss in p.c.
1869	27 years.	6%
1874	22 years.	4%
1875	21 years.	3.18%

From the above, it will be noted that a piece of steel one-quarter inch in thickness would, after 27 years of service, be reduced in thickness by a little less than one sixty-fourth inch, so that, if, as usual, the cars are given a very small amount of attention in the way of repainting, and are kept in service and not allowed to stand for long periods of time, the matter of corrosion can be practically neglected.

REPAIRS.—The ease with which steel cars have been repaired and maintained with a few very simple tools and facilities has probably been one of the main reasons for their adoption. Some years ago it was thought by many that the repairing of steel cars was going to be a serious problem, and would have to be done by expensive skilled labor, but, instead one has only to walk through some of the large repair yards, and notice the regular wood car repair gangs working either on wood or steel car repairs, to be convinced that the wood car repair men handle the steel car equally as well as the wood car, and that there is no need of additional skilled labor. In fact, in building steel cars highly-trained mechanics are not required, so it would hardly seem necessary to use more expensive labor to repair them. Not only can the steel car be as easily repaired, but the cost of the repairs are much less. This saving, of course, varies with the different companies and different classes of cars, but it has been conservatively estimated that the cost of running repairs to steel cars is at least 30% less than for wooden cars, with the additional advantage of being on the repair tracks a fewer number of times, and instead of there being from 2 to 4%, or, in some cases, as high as 7%, of the cars out of service for repairs as with wooden cars, the number of steel cars out of service for repairs is nearer one-half of 1%.

One could give a large volume of fig-

ures showing these advantages, but it would only be repeating what has already appeared in all the leading journals in the past few years. As a fair representation, I will refer slightly to an article appearing in the American Engineer, of October, 1908, written by G. E. Carson, who was at the time of writing the article with the P. & L.E. Ry., which road was among the first to adopt steel cars, and which has nearly 60% of its equipment all-steel. Mr. Carson states as follows:—

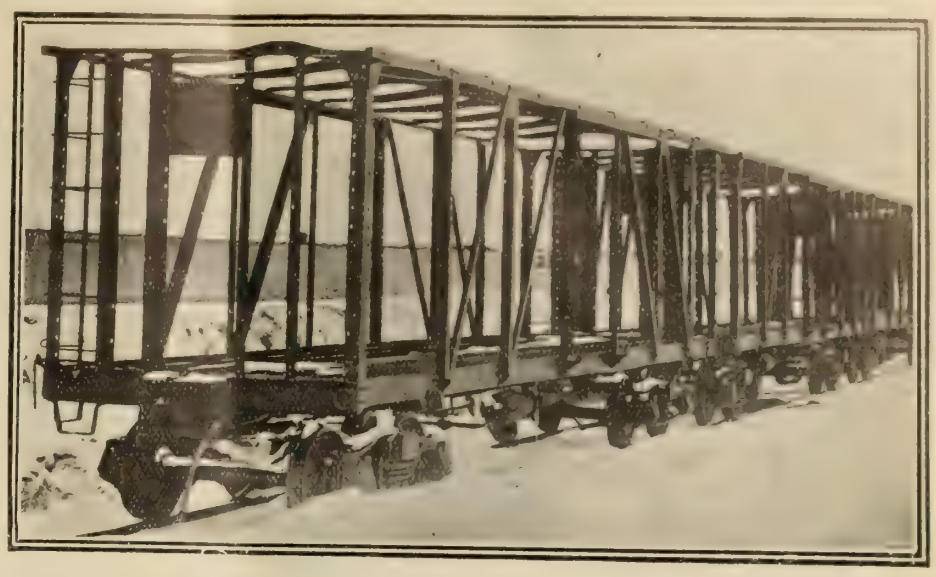
"A very accurate record was kept of the average number of times the different classes of cars were called into the shop for light, medium, and heavy repairs, covering a period of one year.

"Average number of times one wooden coal car was in the shop during one year..... 7 times.
"Average cost of repairs each time in shop $16.23
"Average number of times one wooden coke car was in the shop during one year ..... 6 times.
"Average cost of repairs each time in shop $10.74
"Average number of times one steel car was in the shop during one year .....1½ times.
"Average cost of repairs each time in shop ..... $6.74."

The above figures, Mr. Carson states, are the cost of material and labor less scrap credit, and show average cost of the total light, medium, and heavy repairs to 11,338 steel cars and 32,070 wooden cars. Adding the above amounts for the wooden car together, and averaging same would show the saving in cost of repairs in favor of the steel car of $5.74, or a saving of over 42% in cost, and also showing that the wooden car was on the repair track five times as often as the steel car, which, in itself, is an item of considerable consequence, especially in times of car shortage.

LIFE OF STEEL CARS.—Owing to the modern steel cars having only been in general use since about 1897 and 1898, and their still being in such good condition, it would be difficult to state accurately the life of steel cars, and same can only be estimated principally from the experience of the companies in the old country, who have had steel cars in use long enough to enable them to ascertain the life more definitely. From this information, and also from what experience has been had in this country with the steel cars, it has been conservatively estimated that the life of steel cars is from one and a half to two times that of the wooden cars, and that during the life of the cars the repairs to the body of the steel cars would be considerably less than those to the body of the wooden cars. In fact, the steel car bodies are practically indestructible, and the estimate of twice the life of a wooden car would seem to be very conservative, when one considers the small number of steel cars which have been destroyed since their adoption. In this connection one might refer to the American Engineer, of March, 1909, in which it was stated that on the Pennsylvania Rd., which had then 47,775 all-steel cars in service, 1,075 of which had been in use since 1898, only seven cars had been destroyed. Two of these cars were lost in a flood in Kansas, and most of the others were destroyed on foreign lines.

The foregoing paper was read before the Canadian Railway Club recently.



CANADIAN PACIFIC RAILWAY STEEL FRAME BOX CARS.
Photographed before the wooden lining was put on.

C.P.R. Steel Frame Box Cars.

The C.P.R. has had built by the Dominion Car & Foundry Co. 500 box cars which are somewhat different from the usual type, as the frame, including the carlins, is entirely of steel, and is only sheathed on the inside, or in other words, the car has only a single course of lining on the inside of the frame, the linig being 1¾" thick both on the sides and ends. This 1¾" lining is bolted to the members of the steel frame, as shown in the accompanying illustration, with ½" bolts, the holes for the bolts through the steel frame being slotted, in order that in case the lining should shrink sufficient to develop cracks between the planks, they can be pulled together by means of a strap rod, which extends up and hooks over the top board, the bottom end being forged round and extending through the steel side sill, and which is threaded for a nut, and as the lining extends up and overlaps the side plate about 3", the boards can be drawn down this distance before any opening would be left between the top and side plates. This, of course, is much in excess of anything that would ever be required. These cars, however, have now been in service for a considerable length of time, and no serious trouble has been experienced along this line, with the exception of a few cars in which the lining was not very dry, and which therefore were required to have the sides drawn down and tightened by means of the rod referred to.

The underframe of these cars is of the usual design, and consists of standard 15" channels with ¼" cover plate, the side sills of 8" channels and the end sills of 10" channels. The bolsters and cross bearers are the built up type with pressed diaphragms, and top and bottom cover plate. The floor supports are composed of Z bars in place of the usual wood stringers, and the floor is bolted to same. The framing of the cars is quite clearly shown in the illustrations, the side members being made of standard 3" Z bars. The corner posts are 5 5 angle iron. The end framing, it will be noticed, is of unusually strong design, the two centre posts being composed of 4" Z bars and the intermediate posts of 3" Z bars, which extended down back of, and are securely riveted to, the end sills. To thees posts, of course, is bolted the 1¾" lining which taken altogether makes an unusuallly strong construction. The roof of the cars above the pressed steel carlins is of the usual construction. These cars conform to the American Railway Association standard dimensions, being 46 ft. long inside, 8½ ft. wide, and 8 ft. high, with 5 ft. door opening.

On account of the lining being on the inside of the frame, these cars phesent a very smooth interior, and they are particularly adapted for grain service. Since having been in service, they have been watched carefully by the C.P.R. officials, who are so well satisfied with them that they have placed an additional order with the Dominion Car & Foundry Co. for 1,000 more.

CANADIAN PACIFIC RAILWAY STEEL FRAME BOX CAR

Letters patent were issued in Sept., 1909, covering railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, respecting C.P.R. grants of 571.24 acres.

Galena-Signal Oil Company

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY

Galena Railway Safety Oil

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT

MAINTENANCE REGULATION CARDS

By R. W. Burnett, General Master Car Builder, C.P.R.

In the operation of a railway one matter of prime importance in all departments is the issuing of instructions in such a clear and concise manner that there will be no misinterpretation by those who have to be guided by them, and to the extent that they are clearly understood largely depends the efficiency of any department. Instructions as to maintenance of equipment, standards, shop practice, etc., have been issued in various ways. The M.C.B. Book of Rules, for what it is intended, is complete and indispensable. Instructions on certain subjects, such as air brakes, steam heat, etc., are to a large extent issued in book form. Other instructions are contained in blue prints.

Aside from the instructions issued by the methods above mentioned, there is a field which has to be covered in a more direct way, and in the past this has largely been done by circular letters. The preparation of circular letters consumes a great amount of time and study, to prevent conflicting instructions being issued. This time is consumed by the head of the department or most valuable members of the staff, in reading former instructions and checking the various points covered to make certain that the letter to be issued covers the subject in a clear manner, and that all letters issued, subsequent to the original, modifying or cancelling portions therof, are taken into consideration. This is sometimes impossible by reason of the number of former issues and multiplicity of duties of the person who has the responsibility. This naturally results in letters being hurriedly prepared partially covering a subject, with the feeling that omissions or inaccuracies can be corrected by subsequent letters. These are also often issued to persons not in active touch with details, and to persons in other departments who shonld have the information, but who do not have the time or the assistance available to go through the file and arrive at what the present practices are. They, therefore, do not constitute the ready reference which such persons should have.

I might at this point mention some of the difficulties met with in depending too much on blue prints for every-day reference. A station of sufficient importance to warrant an office staff, that can keep the prints properly filed, may keep them in reasonably good shape, but there are a large number of men whose facilities for filing prints is limited by the available wall space for framing and hanging. Furthermore, blue prints or folios of pattern numbers contain a vast amount of information which is useful only as a matter of record. What the man doing the work requires is condensed information relative to parts liable to failure, instructions as to how, and under what conditions, repairs or betterments are to be made, materials to be used, and drawings to be followed.

The filing of circular letters is a difficult problem. In an office where there is a sufficient staff to properly attend to the filing any letter may be located quickly, but with the foremen and inspectors, who are the men depended upon to make daily use of the instructions and for whom they are really intended, it is different. Some men may place them in books or in files that may be provided, others will place them in the most convenient drawer, or on hooks, but, in search of information, we have too often discovered that there are missing links. Even with the most modern filing systems a considerable time is often necessary to arrive at a correct understanding of what constitutes the up-to-date instructions on any one subject. It is often impossible to ascertain this in any reasonable time, owing to overlapping, conflicting, or apparently conflicting, letters having been previously issued. This may result in arguments between various persons as to the proper interpretation, or they are left in doubt for indefinite periods as to the meaning intended, the result being different practices at different points.

As a substitute for and improvement on the circular letter system, we have instituted a system of issuing instructions by cards, which we call "Maintenance Regulation Cards." To distinguish between the car and locomotive department, those pertaining to car work are called "C. R." cards, meaning "Car Regulation," and those pertaining to motive power "M. R.," meaning "Motive Power Regulation." The use of these cards has been developed by evolution. In the earlier stages they were used only to give direct instructions relative to standards, materials to be used (such as paint for the various classes of freight equipment), giving drawing numbers, or such

CANADIAN PACIFIC RAILWAY.
OFFICE OF THE GENERAL MASTER CAR BUILDER
CAR REGULATION 67 C R 1
ISSUE NO. 1, SEPTEMBER 8, 1909

INSTRUCTIONS GOVERNING THE **REPORTING, REPAIRING, CONDEMNING ETC.,** OF CARS DAMAGED IN WRECKS OR GENERAL DELAPIDATED CONDITION DUE TO AGE WEAR AND TEAR ETC

1. As soon as possible after arriving at wreck the foreman in charge will write the Gen M C B Gen Supt and such other officials as he requires, giving initial number or name of each car damaged, with estimated cost to repair and cause of wreck
2. When wreck has been picked up the foreman in charge will fill out and send to the Gen M C B at Montreal on first train Form M C B 89 The estimate on this form may vary from the telegraph report as more complete inspection may make necessary
3. Divisional Car Foremen in all cases must be notified by wire of wrecks and should make every effort to get to serious wrecks to take general charge and prevent unnecessary damage to equipment
4. Precautions must be taken in lifting or rolling passenger cars to prevent damage to the frame roof or sheathing by crushing or twisting, or slipping of ropes or cables due to improper hitching
5. (a) Wooden flat, Ballast, or Coal cars of 30 ton capacity or over must not be burned or otherwise destroyed under any circumstances, but when badly damaged loaded on flat cars and shipped to point designated by the M C B. for repairs
   (b) Wooden cars of 30 ton capacity and over of other than flat or coal should not be burned unless the car is in two pieces and can not be picked up and run on trucks, and then should be burned only with the consent of the Divisional Car Foreman who should make every effort to make personal inspection
   (c) Cars of less than 30 ton capacity may be destroyed when damaged to the extent of $100.00 or more unless equipped with metal roofs in which case they should be treated as cars of higher capacity
   (d) Steel cars, or cars with steel underframes must never be reported as destroyed except on authority from the Gen M C B
6. No cars will be condemned other than cars destroyed in wreck as covered by paragraph No 5 without submitting Form 25 and receiving authority from the Gen M C B
7. All cars destroyed must be reported to the Gen M C B on Form M C B No. 15
8. (a) Cars taken from revenue service to use as boarding cars must be selected by the Divisional Car Foreman and approved by the Gen M C B.
   (b) Cars must not be taken for boarding car service that are equipped with metal roofs
9. Cars that are to be burned at wreck or when otherwise condemned that are equipped with metal roofs must have serviceable roofs or parts of roof carefully removed and kept for further use and when destroyed at repair points purlines, carlines, rafters etc should be kept as far as practicable, to avoid using new material
10. All cars that are burned should first have couplers, springs, air brake equipment and serviceable side doors removed

Branch Offices:

PITTSBURG AND NEW YORK

instructions as pressures to be used in mounting various sizes of wheels, etc. But, as the cards were issued, the possibilities of the scope for which they could be used became more and more apparent. In a short time cards were prepared giving in detail instructions covering certain subjects, containing drawing, pattern, and form numbers, stating under what conditions betterments could be made, naming stations that would do the work, and the amount of work expected at various stations, and in many cases saying what not to do and advising how report of work should be made.

The method of preparing these cards varies. The usual procedure is to originate them in the general office, by making a preliminary draft of the proposed card, covering the subject as completely as possible, and giving copies to one or more members of the staff, or to foremen particularly interested, for criticisms and suggestions, after which all papers are turned over to one of the staff to compare with previous instructions and rewrite. The card is then given to the Chief Draughtsman to be checked for accuracy as to drawing, pattern, and form numbers and dimensions. Copies are then sent to the heads of the departments interested, who in turn refer them to their staff for suggestions and criticisms. The card is then finally approved and proof-printed, proof is checked up, and necessary number printed. If necessary, extracts of the proposed card are sent out for the guidance of the foremen, pending the final approval and issuing of the card. The Chief Draughtsman is asked to prepare cards which consist principally of data that would be furnished by the drawing-room. Various other members of the staff are called upon to make drafts of proposed cards on subjects with which they are in close touch. In some cases a local foreman may be asked to prepare a card on some practice that he has developed, or which has necessarily been carried on more largely at his station than at other points. It does not necessarily follow, however, that it is always advisable to assign the preparing of cards to the persons most intimately acquainted with the subject, as some men, owing to close application to other duties, may get out of touch with a certain subject, but when it is necessary for them to prepare a card on same they are forced to familiarize themselves with all the details in a way not likely to be forgotten. Considering the manner in which these cards are prepared, which gives so many of the staff an opportunity to make suggestions and criticisms, it may be said that, to a large extent, foremen are carrying out their own instructions. We invite suggestions as to the subjects that should be covered by cards, and at divisional car foremen's meetings the drafts of the proposed cards are criticized and suggestions considered, also propositions are made as to the issuing of cards on subjects requiring definite instructions, sometimes accompanied by draft of proposed card. This combines the practical side of the subject, as seen by the men actually handling the work, with such necessary data and further instructions as may be furnished by the office.

The cards are given the same index number used for correspondence. The index number of wheels, tires, and trucks is 5, and the first card on any of these subjects would be 5-C. R. 1, and the second 5-C. R. 2. One card has been issued showing the index numbers and the subjects they cover. A card is issued quarterly showing the active cards, giving the index number of each, subject covered, issue number and date, by which all on the mailing list are enabled to check their file, and should they be short of any, they are supplied upon request.

In the beginning we had a mailing list, each person on the list receiving a copy of each card printed. Some of the persons on this mailing list received a stated number of each card printed, to supply their different foremen. We have since found it necessary to issue in a different manner, and one card is printed on which the persons to whom certain cards are to be furnished are designated by symbol letters, as it has been found that, instead of confusing the foreman with a large number of cards on subjects in which he is not interested, he should receive only such as pertains to the work that he handles. Heads of departments on this list receive a copy of each card issued, and are designated by symbol letter "A"; others, such as assistant foremen, receive only such as pertain to their work. The symbol indicating to whom they will be sent is printed on the card. The cards pertaining to wheel-mounting, tire-turning, etc., are mounted in a frame and placed in a conspicuous place in the wheel shop. Cards pertaining to air brake work are mounted in a frame and placed in a conspicuous place in the air brake room.

14 C. R. 2.

CANADIAN PACIFIC RAILWAY
OFFICE OF THE MASTER CAR BUILDER
CAR REGULATION 14 C R 2
ISSUE NO 2 APRIL 1, 1909

METHODS OF FUMIGATION
"THOROUGH" AND "ORDINARY"

THOROUGH FUMIGATION

1. Fumigation should be done before the carpet or anything in car is removed, or cleaning is begun.
2. Close all outside doors, windows, deck sash and ventilators tight as packing, locks and similar jacks tightly with waste from the outside.
3. Open all interior doors and **RAISE CLOSET SEATS**. If car has dry hoppers stop up chutes at bottom.
4. Pull seats forward and loosen pillows in pillow boxes.
5. Open upper berth and lay headboards across the seats so that one corner rests upon a seat arm.
6. Lay lower mattresses on the headboard with middle arched upwards, by placing the ends together.
7. Raise curtain poles and hang curtains near the ends by a single hook.
8. Throw blankets over curtain poles, making as few folds and thicknesses of cloth as possible.
9. Arch the upper mattresses in the berths.
10. Soiled linen in the lockers must be pulled out and scattered in passage.
    NOTE It is necessary to make the greatest possible surface exposure of the contents of the car, so as to ensure the best results.
11. After car has been prepared for fumigation as above, place 3 galvanised iron pails per Dwg. No 4896 1-6 in the aisle of the car, one in each end, and one in the middle. In each pail place 1 lb. of Permanganate of Potash and 1 pint of Formaldehyde.
12. After placing pails in position, cars must be closed and locked, and left for at least 3 hours, after which time thorough ventilation will be necessary. Pails should be removed soon after opening car to hasten ventilation.
    NOTE In ventilating the car, open all windows, and deck sash when weather will permit.
13. The ventilation usually requires about 3 hours before car is in condition to recieve passengers.

ORDINARY FUMIGATION

1. Make the car as nearly air tight as possible by closing all deck sash, windows, ventilators and other openings.
2. Open all inside doors, berths and lockers and raise closet seats. If car has dry hoppers stop up chutes at the bottom.
3. Prepare Formaldehyde as in "thorough" fumigation, except that only 1 pail containing one lb. of Permanganate of Potash and one pint of Formaldehyde will be used, placing the pail in the aisle in the centre of the car.
4. Close and lock car, and leave closed for 1 1-2 hrs, or longer if time will permit, after which car should be ventilated as thoroughly and quickly as possible, the same as in "thorough" fumigation.

CANADIAN PACIFIC RAILWAY
OFFICE OF THE MASTER CAR BUILDER
CAR REGULATION 5 C R 5
ISSUE NO 1 APRIL 10, 1908

MOUNTING OF CAST IRON WHEELS

1. **WHEELS WITH REINFORCED FLANGES** --I e wheels having 5 5-8" total width of tread and flange-- must be mated on the same axle.
2. **WHEELS WITH CORRESPONDING TAPES** must be mounted on the same axle.
3. **USE M. C. B. STANDARD WHEEL CIRCUMFERENCE MEASURE** shown on M. C. B. sheet No. 7 when taping wheels.
4. **NEW WHEELS MUST BE INSPECTED** for flange thickness, by maximum and minimum gauges as shown on M C B Sheet No 12.
5. **NEW WHEELS** must be retaped before mounting.
6. **WHEN ENTERING AXLES IN WHEEL BORE** care must be taken not to damage the journal after entering the first wheel on axle, journal must be protected by using wooden wedge or brass lining between the wheel bore and the journal.
7. **BEFORE REMOUNTING SECOND HAND WHEELS** they must be inspected for shape, thickness and height of flange- M C B Limit Gauges & method of using same are shown on drawing No 4641 1-6.
8. **SECOND HAND WHEELS MUST BE TAPED** before remounting, and wheels with corresponding tapes must be mounted on the same axle.
9. **WHEEL PRESS SHOULD BE FITTED** so that either wheel can be pressed on without having to turn wheels and axle.
10. **WHEN MOUNTING CAST IRON WHEELS** press on both wheels together, using centre Gauge--As shown on Drawing No 4471 1-4-- on the wheel farthest advanced- when end of gauge reaches centre mark on axle stop pressing this wheel, and do all further pressing on the other wheel, using Standard Reference Gauge --as used for mounting-- and as shown on M C B Sheet No 12, after wheels are being pressed equi-distant points on the circumference-- by the other side of gauge -- as used for inspecting. If wheels are out of true, this indicates either a warped wheel or defective boring.

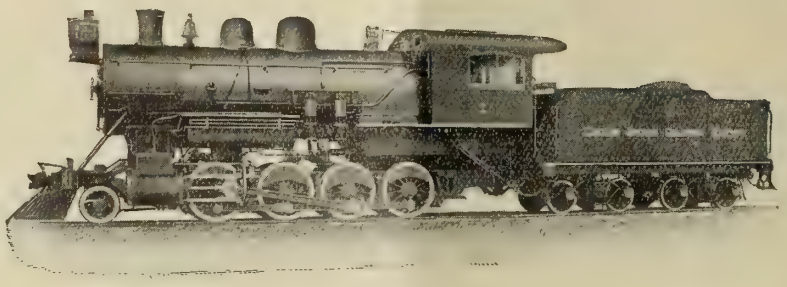
    LENGTH OF CENTRE GAUGES SHOULD BE AS FOLLOWS -
    For wheels 5 0-8" wide over tread and flange 2' 2 9-16"
    For wheels 5 1-2" wide over tread and flange 2' 2 11-16"

11. **WHEEL BORE AND WHEEL SEAT** on axle must be painted with a mixture of white lead and Fredonia Lubricating Oil before wheels are mounted. Axle journals must be given a coat of same mixture to keep journal from rusting. Paint oil must not be used.

OVER

To file the cards a box which is illustrated on pg. 7 is furnished, and it is expected that in a short time it will amount to a text book, covering the maintenance of our equipment, at all times revised to date. It has been found that to a large extent it is advisable to eliminate parts of the contents of instruction books and issue on cards, as it is easily seen that any part of the subject can be revised and reissued much more easily and cheaply than by reprinting an entire book. The result is that they are revised, where a book would not be. The difficulty of filing circular letters was explained earlier in this paper. In contrast with this there is only one manner of filing these cards, which is instantly apparent to any man of ordinary intelligence. The subjects are numbered in numerical order. The first in the file is the index card; the second is the card issued quarterly showing the active cards. I have sometimes visited points where the

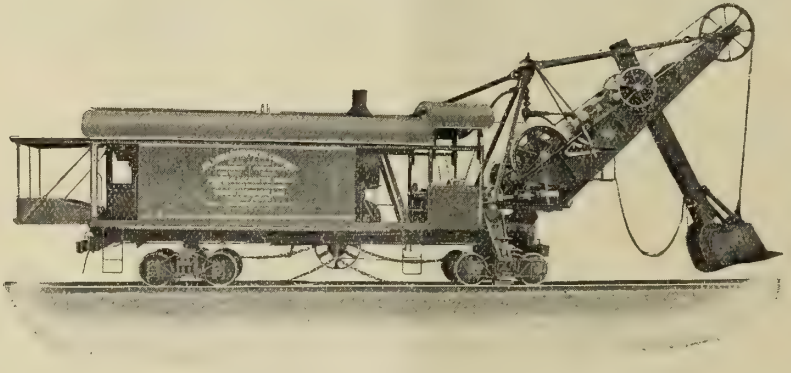
LOCOMOTIVES FOR ALL CLASSES OF SERVICE



Consolidation Type Freight Locomotive, Built for Eastern British Columbia Railway.

Total weight of engine in working order, 186,310 pounds. Weight on driving wheels, 166,100 pounds. Diameter of driving wheels, 51 inches. Boiler pressure, 210 pounds. Cylinders, 20 x 28 inches. Maximum tractive power, 39,200 pounds.

ATLANTIC STEAM SHOVEL



Direct wire rope hoist with but one sheave, instead of chain hoist with from five to seven sheaves, reduces delays and loss of time due to breakdowns, increases the efficiency of the engines, and reduces repair bills as well as fuel consumption.

Finished, interchangeable spare parts always on hand at works.

MONTREAL LOCOMOTIVE WORKS, LIMITED

BANK OF OTTAWA BUILDING, MONTREAL, CANADA

cards were not properly filed through carelessness, and have properly filed and checked them, to see if the file was complete, within five minutes time, which could not be accomplished with any circular letter system I have seen, regardless of time. Such assistant foremen, leading hands, and inspectors, as do not have a place in which to keep a file of cards, not only have access to the regular office file, but it is insisted that they read the cards and familiarize themselves with up-to-date instructions.

It is, of course, necessary to occasionally revise the cards to take care of new developments, such as a change in shop practice or the alteration of drawings that would affect the subject covered. When this is done the card retains its index number, but is given a new issue number corresponding with the number of times it has been issued, and is also given the last date of issue. When a revised card is issued, the card which it supersedes is returned to the office. It has not been found necessary to revise many cards. The cards that have been revised were those issued before the present more thorough system of preparing them was developed and the revisions have consisted principally in more thoroughly covering the subject. It has not been found necessary to make any extensive arrangement for revising, as, the correspondence having the same index number, it is an easy matter to run through a file and make note of developments subsequent to the last date of issue. This, however, we find can be more easily done by keeping one set of cards especially for revision purposes, and making notations on the cards in this file of anything affecting the subject they cover.

It is the intention to institute a system of examination of foremen and inspectors with regard to their familiarity with the cards covering their work. This is carried on to some extent at present, although it is not perfected, but, with a properly arranged set of standard instructions and regulations, it is evidently a comparatively easy matter to establish a periodical examination of foremen and others, which will insure their familiarity and thorough understanding of the methods which they are expected to pursue in handling their work.

It should be understood that the development of this system has not been followed, regardless of expense, to the extent of obtaining an unnecessary degree of refinement, but on the contrary, in addition to the benefits derived by those to whom instructions are issued, through the saving of time, and their having a clear understanding of what is required, the amount of office work has been greatly reduced, with the result that more attention can be given to other things. When a card is once issued it furnishes a foundation upon which any changes or alterations can be made with comparatively little work, and avoids the reconsideration of any subject as a whole. To a large extent, where explanatory correspondence was formerly used, where work has been neglected or information asked, it is only necessary to call attention to the card and insist on instructions being carried out.

Our set of cards is by no means complete, as we have not covered all the subjects we originally intended to cover, but we daily find an extended scope for their use beyond that originally anticipated. While the work of drafting and revising will never be complete, we expect that in a short time the main subjects will be so thoroughly covered that the work of preparing will be comparatively small.

One thing that has been learned in the development of this system is that, before the preparation of a card is commenced, it is best to sub-divide a subject, covering sub-divisions by separate cards. As an instance of this, the card covering gas equipment. 28-C. R. 1, gives full catalogue reference as to lamps, class of cars in which used, and where used in car, also catalogue reference of parts liable to failure. 28-C. R. 2 gives instructions regarding cleaning and testing of gas equipment both at terminals and shop. 28-C. R. 3 gives instructions regarding gas mantles, showing catalogue reference, stating where large and small mantles are used, how and in which car extra mantles will be carried, and method of applying new mantles. For electric train lighting equipment we have the cards subdivided into instructions for shops, originating terminals, and intermediate terminals, as we wish the men at intermediate terminals to have a clear understanding as to the extent to which they should attempt to make repairs to a car in transit, with brief instructions as to how to locate cause of trouble and make repairs quickly.

I will cite a few of the advantages we have found in using cards in place of circular letters. In

CAR REGULATION 5 C. R 6
ISSUE NO. 1 APRIL 10, 1908.

MOUNTING OF STEEL TYRED WHEELS.

1. WHEELS HAVING TYRES WITH REINFORCED FLANGES -- i. e. tyres having 6 6-8" total width of tread and flange-- must be meted on the same axles.
2. WHEELS OF THE SAME DIAMETER ON TREAD must be mounted together
3. WHEN ENTERING AXLES IN WHEEL BORE, care must be taken not to damage the journal- after entering the first wheel on axle, journal can be protected by using wooden wedge or brass lining between the wheel bore and the journal.
4. WHEEL PRESS SHOULD BE FITTED so that either wheel can be pressed on without having to turn wheels and axles.
5. WHEN MOUNTING STEEL TYRED WHEELS COMPLETE press on both wheels together, using centre Gauge --as shown on Drawing No. 4471 1-4-- on the wheel farthest advanced- when end of gauge reaches centre mark on axle, stop pressing this wheel and do all further pressing on the other wheel, using Standard Reference Gauge --"as used for mounting"-- and as shown on M. C. B. Sheet No. 12, afterwards checking wheels --at 3 equidistant points on the circumference-- by the other side of the gauge --"as used for inspecting"-- Use check gauge for discs of steel tyred wheels --as shown on Drawing 4471 1-4-- measuring from the two farthest sides of the inside retaining rings of the two wheels. If this does not check up, then examine tyre to see if it has been correctly turned See Car Regulation 5 C. R. 10

LENGTHS OF CENTRE GAUGES SHOULD BE AS FOLLOWS:-
For wheels 6 6-8" wide over tread and flange 2' 2 9-16"
For wheels 6 1-2" wide over tread and flange. 2' 2 11-16"
LENGTHS OF CHECK GAUGES SHOULD BE AS FOLLOWS:-
For 36 1-4" wheels " " " 4' 7 1-4"
For 34" and 40" wheels " " " 4' 7 1-2"

6. WHEN MOUNTING CENTRES OR DISCS NOT FITTED WITH TYRES press both on together using Centre Gauge --as shown on Drawing No. 4471 1-4-- on the disc farthest advanced - When end of gauge reaches centre mark on axle, stop pressing this disc and do all further pressing on the other one, using Check Gauge for Discs of Steel Tired Wheels --as shown on Drawing No. 4471 1-4-- at 3 equidistant points in the circumference.

LENGTHS OF CENTRE GAUG ES SHOULD BE AS FOLLOWS:-
For discs for 36 1-4" wheels - 2' 3 6-8"
For discs for 34 and 40" wheels - 2' 3 3-4"
LENGTHS OF CHECK GAUGES SHOULD BE AS FOLLOWS:-
For discs for 36 1-4" wheels - 4' 7 1-4"
For discs for 34 and 40" wheels - 4' 7 1-2"

the first place, they are prepared with more care and cover in detail all points of the subject referred to, while circulars letters are more apt to be hastily prepared, and subsequent circular and other letters often give further instructions and modify or cancel portions of former ideas. This is often confusing to the persons receiving such letters, causes extra work checking with previous letters, and also necessitates great care to avoid issuing contradictory instructions. With the card system all obsolete instructions are cancelled, but, when letters are depended upon, any prudent foreman can refer to some long-forgotten letter as authority for almost any practice that may be found at his station.

Another advantage is that, when a card is to be prepared, it is found that there are many points in connection with the subject that have not received the necessary amount of attention. Frequently

VANADIUM
IS AS OLD AS THE WORLD

THE only thing new about Vanadium is man's knowledge of it:—where to find it,—how to get it into a useful state,—how to apply it,—and what it will do.

Its History:—

1. A Chemical element hidden in earth and rock since Time began.
2. Discovered by Sefström in 1830.
3. Isolated as a metal by Sir Henry Roscoe in 1867.
4. Classed as a rare element, and used for making dyes and tinting glass.
5. In 1890 there wasn't enough ore in sight to make a lump of Vanadium big as a base-ball. Valued then at $10,000.00 a pound.
6. Minute quantities found in the finest Swedish Irons and Steels.
7. Immense ore beds found in Peru and purchased by The American Vanadium Co.
8. Methods of refining developed and accurate data secured by Experts concerning the effects of Vanadium on Iron, Steel, Copper, Bronze and other metals.
9. The American Vanadium Company's factories built at Bridgeville, Penna., and Vanadium Alloys produced in commercial quantities, absolutely true to specified analysis, and low enough in cost to permit their use in all High Grade Steels, such as armor plate, springs, forgings, gears, shafts and piston rods; also in iron and steel castings.
10. Vanadium recognized by Steel Experts all over the world as "The Master Alloy."

Vanadium is old,—the knowledge is new. We are prepared to furnish all you want of either. Booklets free. Mention your line of work, and particular needs.

The American Vanadium Company
324 FRICK BUILDING
PITTSBURGH, PA.

parts have not been maintained as they should be and could have been without extra expense, and inexpensive alterations can be made and betterments applied. For example, in considering the maintenance of doors and door fixtures, we find that a 3-inch stop secured in a certain manner is necessary in place of a 2-inch stop, that the brackets should be rivetted on (a plain inexpensive bracket can be used for all wooden cars), that the hasp should be secured with a wrought staple instead of malleable and malleable wedge applied to doors of old cars in place of wooden. All these changes were found advisable on going into the subject thoroughly, in order to avoid as far as possible any afterthoughts that would make it necessary to change instructions, and that when repairs or alterations were made they would all be considered at once and be cheaply done. It might be said that this could have been done independently of the regulation card, which is of course true, but the fact remains that, had the work been ordered in the usual way by circular letters, it is probable that first one item and then another would have been changed, and, in place of one clear, concise set of instructions on a single card, a series of letters would have been issued, which would have been far more difficult to follow up.

Another advantage that has been found is that some devices, having a number of parts with in many cases no established name for each part, have to some extent been ordered complete to get one part, the heavier and more expensive pieces being held indefinitely in stock, where they have little better than scrap value, owing to their freedom from failure. To overcome this we have issued cards on the various devices or specialties, with full information as to what parts have proven liable to failure, instructions as to what should be ordered, pattern numbers, stating which parts are interchangeable, and other necessary information, and coining a name where necessary. On the back of the card is printed a photograph of the device, showing number and name of each piece, which has promptly enabled the foreman to obtain the parts which he had difficulty in procuring before, and prevented the purchase of parts not required.

Another point of advantage in the card system, which also illustrates the disadvantages of depending on circular letters and blue prints, is found when an officer visits a station with limited time to check various subjects. He is often confronted by some subject on some points of which, on account of possible confusion, neither he nor the local man are entirely clear. They go to the office, and his time is consumed in looking over circular letters and correspondence pertaining to the subject, and drawing and pattern numbers, possibly having to follow the file through several years to determine what should be done on one subject, only to learn perhaps that a part of the instructions are missing, and at best having no assurance that the file is complete. His time should be used in looking at the actual work, assuring himself that proper shop practice is being followed, and that maintenance of equipment is promptly and economically conducted. Where maintenance cards are depended upon, the foreman would most likely be informed on the subject, and, if in doubt, a very few moments would locate the card and settle the matter.

In preparing these cards the difficulties often experienced by one of the staff more familiar with the subject—in sorting out various instructions, eliminating obsolete and cancelled instructions, filling in proper pattern, drawing, and form numbers, and dimensions and conditions under which certain instructions should be followed—have brought to us a realization of what we have been expecting of our foremen in the way of memory and office work, which expectations have not always been realized, or have been partially realized at the expense of proper supervision.

By the use of this system, it has been possible to have work done in a uniform manner, at points separated by thousands of miles, which could not always be done when other means of issuing instructions were used, and that when you step into the office of a foreman or inspector at the most remote station, even if he is not present, you can instantly locate his set of maintenance regulation cards, complete and properly filed, and, on questioning, he is almost invariably found to be familiar with all instructions pertaining to his work, having exactly the same understanding as his co-worker 3,000 miles distant.

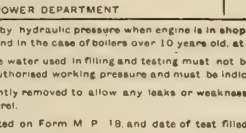
The foregoing paper was read before the Canadian Railway Club recently.

53 M. R. 8.

Issue to a. b. d. e

CANADIAN PACIFIC RAILWAY. ALL LINES MOTIVE POWER DEPARTMENT	MAINTENANCE REGULATION 53 M. R. 8 SHIPPING DEAD ENGINES ISSUE NO. 2 SEPTEMBER 15 1909

1. When dead engines are being moved in trains it is advisable that they be placed in the front portion in case two or more are together they must be separated but not more than three cars apart. All brakes must be cut in and operative and the following precautions taken to prevent skidding of drivers due to boilers being empty: application of new brake shoes or tyres new or newly turned.
   a. Cut out cock under the engineer's brake valve must be closed and wired in that position.
   b. Driver brake piston travel must be lengthened a sufficient distance so that when brakes are applied fully by a 20 lb. reduction not more than 35 lbs. will be shown on the gauge registering driver brake cylinder pressure.
2. Main rods are to be taken off, put together complete with straps and brasses and placed on the tender: side rods must not be removed unless necessary and a speed of 20 miles must not be exceeded at any point. If the side rods are removed the maximum speed will be reduced to 10 miles per hour.
3. When an engine thus shipped is equipped with an engine truck brake the piston travel must be increased to at least two thirds of the TOTAL TRAVEL.
4. On tenders handled empty without coal and water the tender piston travel must not be less than 9 inches. When fitted with slack adjusters they must be released sufficiently to insure 9 piston travel and their automatic operation prevented by removing the pipe connected with the brake cylinder and plugging the hole.
5. A competent man must be sent in charge of the dead engine or engines handled in any train.
6. The boilers and tenders should be emptied before the dead engines are put in the train and all superheater pipes cylinders and W. A. B. pumps thoroughly drained.
7. Wrecked engine rods to be taken care of as stated in Clause 2. If the engine truck is destroyed or broken on 8 wheel Mogul or Ten Wheel Engines they should not be hauled past the first siding until a temporary truck is put under and the weight of the engine distributed as well as circumstances will permit, the speed under these conditions must be limited to 10 miles per hour.
8. If the tyre is off any wheel on an engine or tender that wheel must be blocked up clear of the rail under no circumstance must the wheel center be allowed to run on the rail.
9. Locomotives being shipped dead to Angus Shops must have such loose or easily removable parts as engine tools, signal lamps, oil cans etc. placed in the smoke box and smoke box door fastened in usual manner.
   Car replacers to be placed in the tool boxes under tender frames and sealed up, on tenders not so equipped they are to be placed in tool box on the front of the tender.



13 M R 1.

Issue to a. b. c

CANADIAN PACIFIC RAILWAY. ALL LINES MOTIVE POWER DEPARTMENT	MAINTENANCE REGULATION 13 M R 1 BOILER INSPECTION AND TESTING NO. 3. AUGUST 14. 1909

1. Boilers must be tested by hydraulic pressure when engine is in shop for No. 1 or 2 machinery repairs after any repairs have been effected to the boiler and in the case of boilers over 10 years old, at intervals of service not exceeding 12 months.
2. The temperature of the water used in filling and testing must not be less than 100 degrees, the test pressure must equal 25 per cent in excess of the authorised working pressure and must be indicated by a standard test gauge.
3. Jacket must be sufficiently removed to allow any leaks or weaknesses to be detected, especially those which may occur around the bottom of the barrel.
4. The test is to be reported on Form M. P. 18, and date of test filled in on Form 181 in cab of engine.
5. Boilers under 10 years old must be inspected internally the first time flues are removed after 2 years from the date of last inspection, and when over 10 years old within 2 years service from date of last inspection.
6. Inside of boiler to be thoroughly cleaned, edges of all joints scraped, careful examination made for grooving and pitting, longitudinal braces, dome and belly stays thoroughly examined and hammer tested, and thorough examination made for any weakness or defect.
7. All defects discovered must be marked by the Inspector for repairs and reported on Form M. P. 18. Fireboxes must be inspected when engine is in shop for No. 1 or 2 machinery repairs.
8. Inspectors will be held responsible for reporting all defects and calling attention to those caused by improper maintenance or construction.
9. Locomotive Foreman will be held responsible for tests being carried out and properly entered and reported.
10. See 18 M. R. 2 for additional inspection required for special classes.

Elements of Transportation.—This is the title of one of a series of books on business subjects published by D. Appleton & Co., New York. It is written by E. R. Johnson, Ph. D., Professor of Transportation and Commerce, University of Pennsylvania, and author of a number of other works on transportation and transportation economics. The present book has been written with special reference to its use with classes in commercial and business high schools, and for classes in practical economics in normal schools and colleges. The subject is dealt with in four parts, viz.: steam railway transportation; electric railway transportation; ocean transportation; lake, river and canal transportation. The field is thoroughly covered in each part, and the various subjects are dealt with in a clear and simple manner, making it a valuable work for the general body of transportation employes, as well as for the student of economics. The volume is well illustrated, the specially engraved maps being an interesting feature. The price of the volume is $1.50, and it may be procured through the Railway and Marine World's Book Department.

Machine Shop System and Economy.

By H. J. Varlow, General Foreman C.P.R., Fort William, Ont.

Machine shop economy may be summed up as developing every machine to its utmost efficiency, and obtaining the maximum output from each. Consistent with the requirements and nature of the work, which can only be accomplished by a good system of tool work, a portion of the shop should be devoted to the manufacture and storing of tools, for the whole of the shop's requirements, discriminating between poverty and excess, and discontinuing all waste. An attendant should be appointed to supply the wants of the men, who come provided with necessary checks, which all employes are supplied with when given employment, the checks being numbered as on the register. When a tool is required a check is handed in to the attendant, he at once supplies the tool, and on the returning of the tool the check is handed back to the workman. Should the tool have sustained any damage, the fact is recorded by book being kept for the purpose, with spaces for the workman's name, with number, date and remarks as to conditions. Tools should be kept in first-class condition for good results. Taps, stocks, dies, gauges, twist drills, templates, milling cutters, ratchets, manarils, etc., are all dealt with in this manner.

A shop without system and organization is simply chaos, whereas with them everything is reduced to order; every man knows what to do, and when and where to do it. System does not require any more workmen, but it reduces the work of existing hands, and everything is done well because each is individually responsible for the particular work in his care. At the same time the responsibility is reduced to a minimum for every individual knows the system, and that it will be rigidly carried out. In fact, it is impossible to grapple with large concerns without it and even small ones become utter failures. It also insures that nothing is interrupted, not only in one shop, but every portion of the works, if by absence for whatever reason of foreman, man or apprentice. Every machine is fixed to a plan, so that heavy or light work can be done most expeditiously. Suitable crane power or lifting hoist are found exactly where wanted.

The beneficial effect of accuracy in tool work is well and easily illustrated by the twist drill, the circumferential speed for half-inch to seven-eights inch diameter is 20 to 30 ft. per minute on mild steel, and a good feed is about 1-100 inch for each revolution, that is half that amount per lip for each revolution. Consequently, if the drill is ground with uneven lips, the whole cut comes on one edge. Therefore, the drill is soon damaged, and the driller reduces the feed until the one edge cuts well, which is apparently to one-half the feed. To drill at the smallest cost, absolute accuracy is required throughout, each egde must be of equal length for obvious reasons, and have the same angle with the centre of the drill.

It will be clearly understood that grinding is an important factor. Two very important points respecting all tools are the cutting and clearance angles in all ordinary lathe work. Deep cuts and course feeds are first principles, one doughing and one finishing, bringing down the speed to suit the cut rather than suit the cut to the speed, for the greatest amount of work will be done in a given time, that is let it be a maximum of feed rather than speed, and have the finishing a good sliding cut.

Milling machines now take the most important place of all tools in any shop, efficiency and economy. It is almost impossible to push the utility of the universal machine too far. One of the first essentials is to well man the machine, and keep the cutters in first-class order, as success depends entirely upon the facility for production and re-grinding cutters, it being an absurdity to use a cutter beyond a profitable period of service, consequently there is less wear and tear upon the machine. It is needless to make comparison between milling and other machine tools, it is also difficult to estimate and compare the cost of work done by milling with that of other machines, because sometimes the milling machine embodies the work of various others. Where it replaces slotting or planing only its superiority is at once recognized. It is an important machine and cannot be set up too rigidly on good foundations. Let any part of the machine be defective and it will effect the work done.

January Birthdays.

Many happy returns of the day to:—

W. U. Appleton, Assistant to Superintendent of Motive Power Intercolonial Ry., Moncton, N.B., born there Jan. 29, 1878.

G. Bazzard, ex-Freight and Passenger Agent Delaware, Lackawanna and Western Rd., Toronto, now of Hamilton, Ont., born at Westhide Court, Herefordshire, Eng., Jan. 3, 1838.

A. H. Bears, Master of Bridges and Buildings C.P.R., Saskatoon, Sask., born at Charlottetown, P.E.I., Jan. 6, 1857.

F. X. Belanger, General Freight and Passenger Agent Temiscouata Ry., Riviere du Loup, Que., born at Chlorydormes, Que., Jan. 20, 1876.

R. H. Bell, Commercial Agent Canadian Northern Ry., Pittsburg, Pa., born at Toronto, Jan. 13, 1865.

J. R. Bowles, City Freight Agent, G.T.R., Montreal, born at Sarnia, Ont., Jan. 14, 1874.

G. McL. Brown, General Traffic Agent C.P.R., London, Eng., born at Hamilton, Ont., Jan. 29, 1866.

W. H. Burr, Traffic Manager Dominion and Western Express Companies, Toronto, born at Bloomington, Ill., Jan. 19, 1864.

C. A. Cotterell, Chief Train Dispatcher district 1, Pacific Division, C.P.R., Revelstoke, B.C., born at Enden, Eng., Jan. 18, 1877.

W. A. Cowan, Resident Engineer C.P.R., London, Ont., born at Galt, Ont., Jan. 22, 1877.

J. E. Dalrymple, Assistant Freight Traffic Manager G.T. Pacific Ry., Winnipeg, born at Montreal, Jan. 1, 1869.

Sir Sandford Fleming, K.C.M.G., Director C.P.R., born at Kirkcaldy, Scotland, Jan. 7, 1827.

Gordon Grant, Chief Engineer National Transcontinental Railway Commission, Ottawa, born at Dufftown, Banffshire, Scotland, Jan. 2, 1865.

H. V. Harris, ex-General Manager Midland Ry. of Nova Scotia, Truro, N.S., now of Louisville, Ky., born at Devonport, Devonshire, Eng., Jan. 16, 1857.

F. L. Hay, Superintendent Sleeping and Dining Cars and News Service C.P.R., Vancouver, B.C., born at Portland, Ore., Jan. 16, 1868.

G. F. Hichborn, formerly Agent Great Eastern Fast Freight Line, New York City, born at Boston, Mass., Jan. 31, 1875.

Carl Howe, Manager New York Central Fast Freight Lines, Buffalo, N.Y., born at Berrien Springs, Mich., Jan. 11, 1870.

W. C. Hunter, ex-Manager New Brunswick Coal and Ry. Co., Sussex, N.B., born at St. John, N.B., Jan. 4, 1865.

W. J. Hunter, Division Freight Agent G.T. Pacific Ry., and Commercial Agent G.T.R., Winnipeg, born in Toronto, Jan. 10, 1864.

H. G. Kelley, Chief Engineer G.T.R., Montreal, born at Philadelphia, Pa., Jan. 12, 1858.

Jas. Kent, Manager C.P.R. Telegraphs, Montreal, born Jan. 15, 1854.

A. Lichtenhein, Galena Signal Oil Co., New York, born there Jan. 15, 1855.

A. J. McGee, Secretary-Treasurer Temiskaming and Northern Ontario Ry. Commission, Toronto, born at Lachine, Que., Jan. 24, 1876.

G. Pepall, Canadian Agent National Despatch—Great Eastern Line, Toronto, born at High Wycombe, Buckinghamshire, Eng., Jan. 15, 1849.

W. Phillips, General Eastern Agent Canadian Northern Ry., and General Freight and Passenger Agent, Canadian Northern Ontario Ry., Toronto, born at Toronto, Jan. 31, 1870.

W. Pratt, Superintendent Sleeping and Dining Cars C.N.R., Winnipeg, born at Sibbertoft, Northamptonshire, Eng., Jan. 18, 1870.

J. Pullen, Assistant Freight Traffic Manager G.T.R., Montreal, born at Shepton Mallet, Somersetshire, Eng., Jan. 23, 1863.

L. J. Rouleau, Travelling Freight Agent and Agent National Despatch—Great Eastern Line, Montreal, born there Jan. 6, 1879.

S. L. Shannon, Comptroller and Treasurer Intercolonial Ry., Moncton, N.B., born at Halifax, N.S., Jan. 18, 1862.

S. J. Sharp, Western Passenger Agent C.P.R., Atlantic Steamship Line, Toronto, born at London, Ont., Jan. 21 1860.

J. R. Steele, Freight Claims Auditor C.P.R., Montreal, born at St. John's, Newfoundland, Jan. 14, 1856.

J. G. Sullivan, Assistant Chief Engineer C.P.R., Montreal, born at Bushnell's Basin, N.Y., Jan. 11, 1863.

S. G. Wagstaff, Commercial Agent G.T.R., Toledo, Ohio, born at Hamilton, Ont., Jan. 6, 1866.

F. J. Watson, Division Freight Agent G.T.R., Montreal, born at Toronto, Jan. 12, 1866.

G. H. Webster, C.E., Vancouver, B.C., born at Creemore, Ont., Jan. 31, 1866.

T. H. White, Chief Engineer in charge of C.N.R. surveys in British Columbia, Vancouver, B.C., born at St. Thomas, Ont., Jan. 27, 1848.

We are officially advised that the reports that the C.P.R. is figuring on operating its trains between Montreal Jct. and the Windsor St. Station, Montreal, by electricity, are entirely incorrect.

The Province of Quebec Association for the Protection of Fish and Game, held its annual dinner and meeting in Montreal, Dec. 9, 1909. An appeal was made for subscriptions and $3,000 was raised in the room, of which W. E. Davis, Passenger Traffic Manager G.T.R., contributed $500.

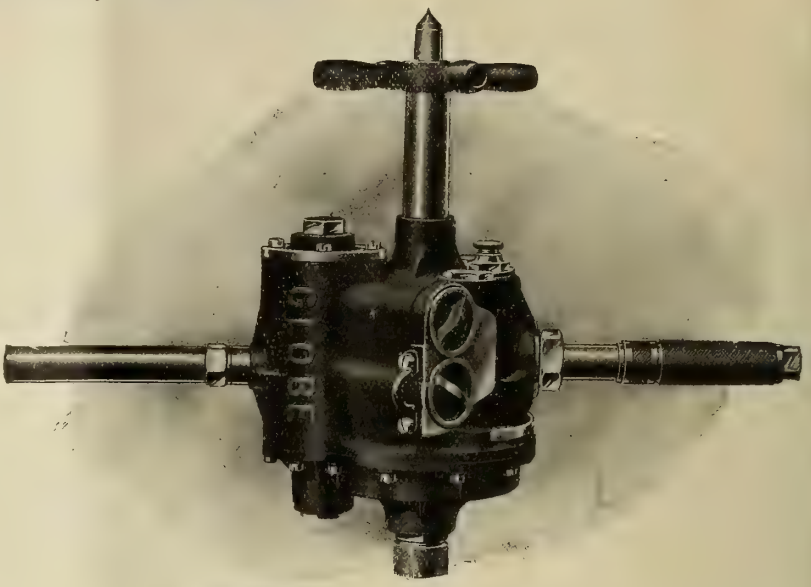
In giving evidence at the inquiry in Halifax, N.S., into the alleged coal operators' combination Dec. 16, General Manager Cowans of the Cumberland Ry. and Coal Co., stated that the company had practically lost all its trade owing to the strike at Springhill collieries. It would take a year to get the collieries in the position in which they were a year ago, when the strike was declared. The company owns a railway extending from Springhill mines to Parrsboro', N.S., 30 miles.

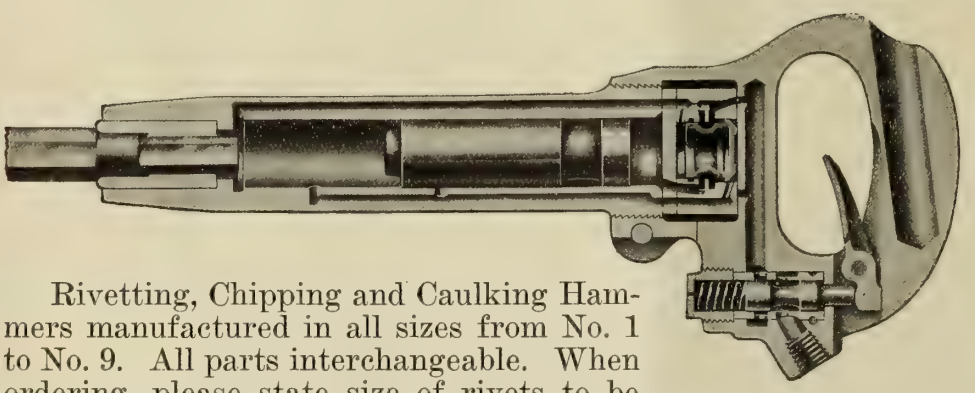
During Oct., 1909, 26 employes were killed and 44 injured in the course of their work on Canadian railways. Of the fatal accidents, nine were due to being run over, seven to collisions, four to falls, two to being caught between cars and one each to being struck by an object in passing, to blood poisoning, to a derailment, and to falling material, while of the other accidents, 15 were due to derailments, nine to collisions, seven to being run over, four each to explosions, to falls and to being caught between cars, and one to falling material.

GLOBE PNEUMATIC ENGINEERING CO., LTD.

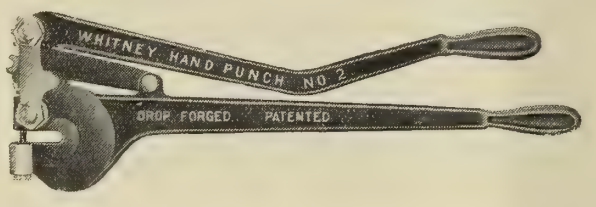
LONDON, ENGLAND

Globe Drills. These tools are patented and manufactured by J. W. Tierney exclusively for the Globe Pneumatic Engineering Co. The workmanship and material is of the very best. Sizes and capacities from 9-16 in. to 3½ in. Reversible or Non-Reversible Drills, reciprocating type. Air pressure required, 60 to 100 lbs. per sq. inch.



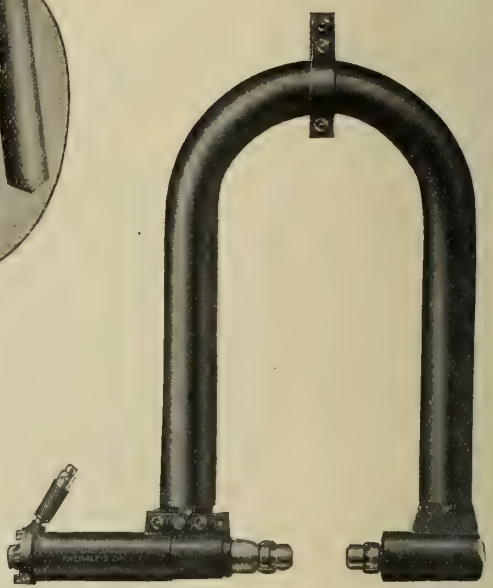


Rivetting, Chipping and Caulking Hammers manufactured in all sizes from No. 1 to No. 9. All parts interchangeable. When ordering, please state size of rivets to be driven.



WHITNEY HAND PUNCH. The most modern and labor-saving tool of its kind on the market for manufacturing plants and general repair of outside construction work, drop forged, total length 23 in.; length of lower level, 22 in.; weight, 11 lbs.; capacity, ¼ in. hole in ¼ in. plate or its equivalent, punches up to ½ in. in lighter material. Write for price. We also carry a complete line of Machine Tools generally; High Speed Steel, special twisted High Speed Drills, Ultra Rapid Water Hardening Steel and Steel for all purposes. Write for prices.

Composite Bearings Manufactured under Canadian Patent No. 115784



Yoke Rivetters, Angle Iron Attachments, Holder-ons, Deck Rivetting Machines, Jam Rivetters, Pneumatic Stone Cutting Plants and other appliances.

Greatest efficiency, accessibility, lightness coupled with rigidity and strength are a few of the leading features of these pneumatic tools. We solicit enquiries.

COPPER AND STEEL FOR LOCOMOTIVE FIRE BOXES.

By H. B. Lake, Chemist, C.P.R. Western Lines.

In commencing a consideration of the suitability of these two metals for the making of locomotive fire boxes, it may be advantageous to tabulate their principal physical properties.

PHYSICAL PROPERTIES.

Metal	Sp. Gr.	M. Pt.	E. Con. @ 0° C.	T. Con.	Ratio of Wt.	Ratio of Thermal Conductivity.
Copper	8.9	1080° C.	52	73.6	9	6
Iron (Steel)	7.9	1600° C.	9.7	11.9	8	1

NOTE:—E. C. compared with Mercury @ 0° C.=1 T. C. compared with Silver - 100.

Metal	% pure	C.	Fe.	Si.	S.	P.	As.	Pb.	Sb.	Bi.	An. and Ag
Mechl.	99.46	—	.14	—	—	—	.10			.30	
Copper Electrolytic	99.47		.0189				.0015	.0013	.0010	.0008	
Steel (Firebox)	99.285	.15	Mn. .45	.035	.04	.04					

TENSILE STRENGTH AND DUCTILITY

Metal	Breaking strength, lbs. per sq. inch	Elastic limit	Elong % on 8 ins.	Redtn. of area %	Cold bend	Hot bend	Drifting test
Copper Electrolytic	60.480	49.280	20	20	Flat upon itself	Flat upon itself	Greater than for steel
Steel (Firebox)	52.000 to 62,000	32.000	26	45%	Bend double	Bend double	¾" hole to 2"

NOTE:—Bending tests for steel are generally around diameter twice thickness of plate. Copper easily bends double flat.

It appears therefrom that sheet copper weighs ⅛ more than sheet steel. Assuming the price of steel at 3c. and copper at 21c., then copper costs 7 times as much as steel, and as the thickness of the sheets of copper used in a firebox are generally about twice those for steel, the initial cost of the material for the copper box will be a maximum of 16 times that for a steel box. However, we have to allow for the value of the scrap copper which locally is stated to be 75%, and allowing 5% off this for the steel scrap, this reduces the ratio of the cost of the copper plate to about 5 times that of the steel.

Now we come to the labor cost of making the box. This ought to be in favor of copper, being the easier metal to work, less wear and tear on tools, and the time required to make the copper box ought to be less. Where cost of labor bears a high ratio to cost of material, then this factor will increase in importance.

The possible life of the two fireboxes depends largely on local conditions; but with copper boxes it appears to be, on English roads, about 10 years=800,000 miles, and copper tube plates last about five years in hard, constant service at high pressure. Steel boxes, under similar conditions, only appear to give a life of one year=80,000 miles before requiring repair, and on a certain section of the C.P.R. where the water supplies are of medium quality the side sheets of steel boxes in new engines have required renewal inside 12 months=about 45,000 miles. Hence the labor expended in making steel boxes is as much, or more, than in making copper boxes, and totally with labor for repairs it is apparently safe to assume that it is five times as great. Where labor costs as much, and more, than the material used in the box this will reduce the relative life cost of the two boxes to copper 1 is to steel 1. This reduces the considerations to the relative time engines fitted with either kind of box would spend in the shops directly consequent to the copper or steel firebox. Evidently if a steel box required more frequent repair the comparison will be in favor of copper.

Another important consideration is the greater reliability of one material by which engine failures, or delays, might be less than with the other. Copper is more resistant to corrosion than iron, and being higher in purity than mild steel, as tabulated 99.5: 99.28, and electrolytic copper (whilst equally ductile and tenacious with that produced by smelting and rolling) is even purer, being 99.9. Pure iron, and more readily steel, is dissolved by pure water, and when carbonic acid and air are present the action is accelerated. Also the impurities in the steel are segregated, and are more readily acted upon with local electrolysis producing pitting. Copper is not acted upon by pure water at any temperature, and even resists the action of hydrochloric acid if air is absent, and is far more resistant to corrosion than steel.

As to tensile strength copper is almost equal to very mild steel, and in ductility very much higher. It is, therefore, less physically damaged by the punishing operations of riveting and beading than steel, and makes a tighter and more tenacious joint than steel with the tubes or flues. This superiority was demonstrated in a series of tests made by J. A. Holden, of the G.E. Ry., Eng. He expanded steel flues into copper and steel plates, and then pulled the plates. Out of 12 tests the tubes started in the steel plates 10 times, and finally 11 tubes pulled through the steel, whilst 11 remained tight in the copper plates. The tubes were expanded in taper and straight holes, the former giving more uniform results. The plates used were copper 1¼" thick, and ¾" thick steel. No ferrules were used. Bending over did not improve the hold in steel plates, but increased the tenacity in copper plate from 7 to over 12 tons pull required to remove tube.

In reply to a letter I addressed to him, B. A. Raworth, Editor of Engineering, London, Eng., points out that, "The merit of the copper firebox is that it lasts a long time; the material is exceedingly tough and plastic, and stands the very severe strains caused by differences of temperature without exhibiting fatigue." In addition, the plates are very much thicker than in the steel box; the tube sheet is generally 1" or 1⅛", while the side sheets are ⅝" thick. "The screwing of ¾" or ⅞" stays into a ⅜" steel plate can never be made a secure job, while in the ⅝" plate, of course, the stays get a great deal better hold. The flanging of copper, of course, is a much easier matter than the flanging of steel, and the plates are not nearly so apt to crack in the corners (in the course of time) where the flanging has been done."

G. H. Churchward, Chief Mechanical Engineer of the G. W. Ry., of England, states that "In 1901 we fitted 14 sets of steel firebox plates in Belpaire boilers, working at 180 lbs. per sq. inch. Thickness of the tube plates was ⅝" and ⅜" below. The wrapper was in one plate ⅜" thick, and the back was ⅜". The life of the boxes varied between 30,000 and 80,000 miles. No signs of failure occurred in the crown of the firebox where the vertical stays were tapped into the plate, and had a nut and washer underneath. Copper stays were used and the boxes failed generally by cracking from the stay holes in the tube and back plates, as well as in the [illegible] plate. The failures were probably ca[illegible] by the work done in riveting over the stay heads, producing initial stress in the plates round the holes."

In reply to the same question W. J. Benton, Consulting Engineer, of Leeds, England, writes, "The copper firebox is looked upon as an old and thoroughly reliable servant; its advantages are, when of good quality, uniformity of texture, freedom from lamination and blistering, resistance to corrosive action of various waters; resistance to the adhesion of most kinds of scale; ductility, which makes it easy to work, and to stand repeated racking strains; good conductor of heat, and it stands the wasting action of the fire; all of which qualities endear it to the English locomotive engineer, regardless of its first cost."

Edgar Worthington, Secretary of the Institution of Mechanical Engineers, London, writes, "The advantages claimed for copper over steel fireboxes are: Less tendency to cracking of the plates, which takes place in steel fireboxes if the material is not of exactly the right quality. Copper also has an advantage in taking up contraction strains when the boiler is cooled down either for washing out or for repairs. It was claimed in 1895 that the time the engine was out of service while fixing the new steel firebox was longer than for fixing a copper box. The result of experiments made on the G. S. and W. Ry. of Ireland with English and American steel plates, and on the N. L. Ry., the G. E. Ry., the L. & N. W. Ry., and the Compagnie du Nord tended with one or two exceptions to the abandonment of steel fireboxes in Europe."

Mr. Brocklebank suggests that "In view of the fluctuations in value of copper in recent years, it might be possible to obtain a bigger price for the old copper than that originally paid for the new copper.

SUMMARY.—The initial cost of a copper firebox is much higher than steel. The life cost, allowing for the value recovered on the scrap copper, of copper and steel is about equal. Copper sustains mechanical work better, and makes stronger and tighter joints than steel. It takes up sudden fluctuations in temperature more quickly and uniformly. Copper offers greater resistance to corrosion than steel. Therefore, engines fitted with copper fireboxes should spend less time in shop directly consequent to firebox trouble, and be less liable to failure on the road from leaking of stays and tubes, and cracking of plates.

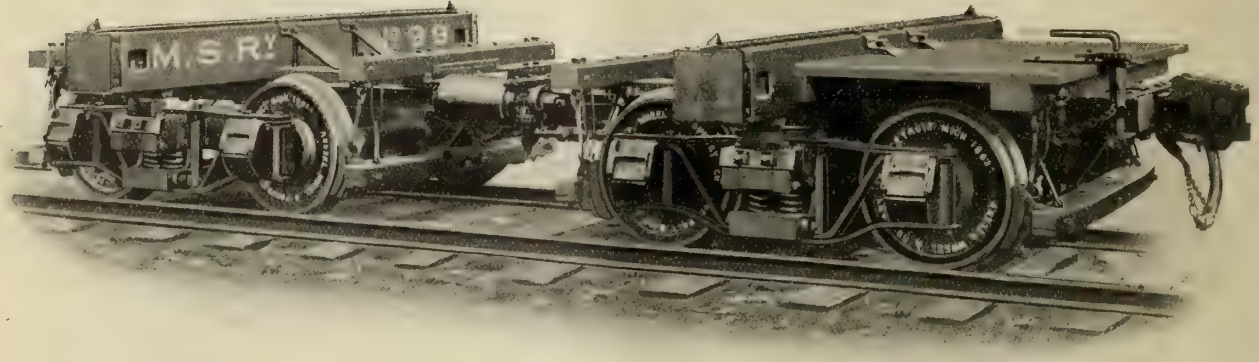
The foregoing paper was read before the Western Canada Railway Club recently.

The Intercolonial Ry. and Branch Lines.—The bill providing for the leasing by the Minister of Railways of branch lines connecting with the Intercolonial Ry. is under consideration by the House of Commons. The bill provides that upon the recommendation of the Government Railways Managing Board the Minister may lease any such line which is found to be in a safe and proper condition for operation, the lease not to be operative until confirmed by Parliament. The bill was read a second time Dec. 8, and subsequently was passed through committee.

Toronto Viaduct Question.—The appeal against the order of the Board of Railway Commissioners directing the construction by the railway companies of a viaduct along the waterfront of Toronto came before the Supreme Court at Ottawa, Nov. 25. Arguments were concluded Dec. 3, and judgment reserved. In an interview in Toronto, Dec. 4, J. W. Leonard, General Manager C.P.R. Eastern Lines, said the railways would fight the issue to a finish. They did not contemplate abandoning their present lines on the waterfront.

Russel Heavy Duty Dump Cars

The only dump car built that will stand the severe service of the heaviest steam shovels. Acknowledged by the operator to be the best car on the Mesaba Range. : : :



RUSSEL LOGGING CARS

Superior in design. Built to accommodate any length of logs and of any capacity desired. : : : :

RUSSEL WHEEL & FOUNDRY CO.

Detroit, Mich., U.S.A.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

The Alberta Ry. and Irrigation Co. during 1909 laid eight miles of new track from Raley to Woolford, Alta., this is a branch line from the old St. Marys River Ry., which runs from Sterling, on the main line from Lethbridge to Coutts. (Oct. 1909, pg. 743.).

Algoma Central and Hudson Bay Ry.—We are advised Dec. 14 that the surveys had not been completed for the line connecting the Michipicoten branch with the C.P.R. It is expected to call for tenders for the construction of the section of the line from Hawk Lake Jct., on the Josephine branch, to the C.P.R. transcontinental line at Hobon, Ont., about 29 miles. It is expected that a very favorable line will be secured, with a maximum gradient of about 0.6% and a maximum curvature of six degrees. There will be no large bridges or water crossings of any magnitude. No decision has been reached with regard to starting construction on the completion of the main line from the present end of track, mileage 69.33 to Hawk Lake Jct., a distance of 95.15 miles. (Dec., 1909, pg. 881.)

The Atlantic, Quebec and Western Ry., Co. entered into a contract with the Dominion Government Oct. 30, 1909, in respect of the construction of 26 bridges on the line from Paspebiac to Gaspe, Que. During 1909, 36 miles of track was laid as follows:—from Port Daniel to Grand Pabos, 20 miles; from Grand Pabos to Grand River, 10 miles; and from Gaspe to Douglastown, six miles. The portion of the line between Grand River and Douglastown, 46 miles, is under construction, the contractor being the New Canadian Co., Gaspe, Que. W. L. Browne is Chief Engineer in charge of construction.

We were advised Dec. 11 that a further two sections of this line had been inspected by the Dominion Government engineers and it was expected to have them open for traffic by Dec. 31. The temporary terminal station will be Newport, mileage 37, for passenger, and Pabos, mileage 42, for freight traffic. The work which will be carried on during the winter will be the erection of the different steel superstructures, the one for the crossing of Grand Pabos River being the first taken in hand. The steel is being manufactured by the Dominion Bridge Co.

Bay of Quinte Ry.—Application is being made to the Dominion Parliament to authorize the company to construct a branch from Bridgewater, to near the Actinolite mines, Ont., about 15 miles, and to extend the time for the completion of the previously authorized lines.

British Columbia and Manitoba Ry.—See Northern Empire Ry. on pg. 21, this issue. (Dec., 1909, pg. 831.)

The Canada and Gulf Terminal Ry. Co. has under construction the section of its line from St. Flavie, Que., the point of junction with the Intercolonial Ry., to Matane, 35.5 miles. Considerable work has been done, and we are advised that track laying will be proceeded with in the spring. It is expected to have this portion of the line opened for traffic about Sept. 1. The contractor is H. Doheny, Montreal. The company has power to construct the following additional lines:—from Matane to Gaspe Basin, 150 miles; and from St. Flavie to Pohemagamook, on the National Transcontinental Ry., 100 miles. (Nov., 1909, pg. 829).

Diamond Ry. and Coal Co.—We are advised that this company's recently completed line connects with the C.P.R. at Kipp station, six miles west of Lethbridge, Alta., on the new cut-off between MacLeod and Lethbridge. From Kipp to Diamond City, where the line terminates, is a fraction under six miles; the gradient is not over 1%, and the curvature not more than 20 degrees at any point. The contractors for construction were Cazier Bros., Cardston, Alta., and —. Medley, Calgary, was engineer in charge. The officers of the railway company are: President and Manager, T. Underwood, Calgary; directors: Hon. G. H. V. Bulyea, Edmonton; G. F. Stephens and C. W. Clarke, Winnipeg. We are informed that it is quite possible the railway will be transferred to the Diamond Coal Co., of which T. W. Underwood is Managing Director and Secretary-Treasurer. The line is being used for the carrying of coal from the Diamond Coal Co.'s mine at Diamond City. (Nov., 1909, pg. 829).

Dominion Atlantic Ry.—The construction of a branch line from Centreville, N.S., on the Cornwallis Valley branch, was under discussion, between a deputation from the district through which the branch will run and the management, Dec. 3, 1909. General Manager Gifkins stated that the line would be constructed, and it was probable work would be started in the spring. The line will run west from Centreville and extend to Somerset, passing through a large fruit growing district. It is hoped to complete the first 10 miles during the year.

The Dominion and Provincial Governments have voted subsidies at the usual rates. (Dec. 1909, pg. 881).

Eastern Townships Ry.—The Dominion Parliament is being asked to extend the time within which the company may construct the line of railway it is authorized to construct by sec. 8, chap. 84 of the statutes of 1907. (Nov., 1909, pg. 829).

Gatineau and Ungava Ry.—The Dominion Parliament is being asked to incorporate a company with this title with a capital of $2,000,000, to construct a railway, from the National Transcontinental Ry. near the height of land in Quebec, to Lake Chibougamau, 140 miles, thence to the east side of Lake Mistassini, 40 miles, and to the northern boundary of the province of Quebec, or border of the territory of Ungava, at Homani, or Summit Lake, a distance from the starting point of about 400 miles; thence turning round the headwaters of Big River to Lake Kaniapiskau, near the intersection of the 70th meridian and the 54th parallel; thence north-westerly, crossing the source of the Stillwater River to Lake Minto or Leaf River, or northerly on Kokseak River, and from either point north-easterly to Leaf Lake on Ungava Bay, a total of about 800 miles. The company also asks power to acquire steam and other vessels, to construct wharves, docks, telegraph and telephone lines, and to carry on general mining development and business operations along the line. Brooke, Chauvin and Devlin, Hull, Que., are solicitors for applicants.

Graham Island, B.C.—Application is being made to the British Columbia Legislature to incorporate a company to construct a railway on Graham Island, commencing at Queen Charlotte township, on Skidegate Inlet, northerly along Honna River and its tributaries and the Yakoun River, to Masset Inlet, near the mouth of the Yakoun River. The company also asks power to construct wharves, docks, etc.; to generate and dispose of electric power; to carry on a general navigation business, and to construct telegraph and telephone lines. F. Higgins, Victoria, is solicitor for applicants. (See Graham Island, B.C., Dec., 1909, pg. 881).

Graham Island Ry.—The British Columbia Legislature is being asked to extend the time for the deposit of security and construction of that projected railway. R. C. Lowe, Victoria, B.C., is agent for applicants. (Aug., 1909, pg. 573.)

Ha Ha Bay Ry.—We are advised that track has been laid from St. Alphonse, on the Saguenay River, to Jonquieres, on the Quebec and Lake St. John Ry., two miles, and that the construction of a further 25 miles inland is being proceeded with. The contractors are O'Brien, Payne and Jennings, and J. F. Grenon is Chief Engineer in charge of construction.

The officers and directors are:—President, Hon. A. Choquette, Quebec; Vice-President, J. E. A. Dubuc, Chicoutimi; Secretary, J. H. Parlardy, Chicoutimi; other directors:—H. Einon, A. Lepage, W. Levesques, E. Bolvin, R. H. Beaulieu, S. Lapointe, J. E. Cloutier, Bagotville, Que. (Dec., 1909, pg. 883).

Intercolonial Ry.—We are advised that the work which has been in progress for the last three years on the section between Blackville and Indiantown, N.B., has been completed and the line is now being operated. A diversion of 2,000 ft. was made at White Rapid Brook to improve the alignment, and 2,803 ft. of track was put in at Renous bridge and Blackville. The bridges have all been strengthened, and, in some cases reconstructed.

With reference to the proposed diversion from Sydney Mines to George's River, N.S., we are advised that revised location surveys have been made, but no decision reached when work is to be started.

As to the proposed diversion at Chatham, N.B., we are advised that the final location surveys are being made. (Dec., 1909, pg. 883).

International Ry. of New Brunswick.—A press report states that the grading on this line was completed into St. Leonards, N.B., Dec. 10, and that it was expected to have track laying practically completed by Dec. 31. (Dec., 1909, pg. 883).

Kamloops and Yellow Head Pass Ry.—Application is being made to the Dominion Parliament for an act extending the time within which the company may construct the line of railway authorized by its act of incorporation, chap. 115 of the statutes of 1906, as amended by chap. 120 of the statutes of 1908. This latter statute is to be repealed by the new act. (Nov., 1909, pg. 829).

Kettle Valley Lines.—We are advised that the company is considering the construction of additional lines, from Midway to Nicola, B.C., 150 miles; and from Republic, to Spokane, Wash., 120 miles. The first named is to be constructed under the contract with the B. C. Government, which will come up for ratification at the approaching session of the Legislature.

The company is applying to the Dominion Parliament for an extension of time for the commencement and completion of the various lines authorized, and for authority to construct an additional line from Coldwater to the navigable waters of the Fraser River. This line is part of that to be constructed under the agreement with the B. C. Government. (Dec., 1909, pg. 883).

London and Port Stanley Ry.—The directors have recommended the London, Ont., city council to permit the Pere Marquette Rd., lessee of the L. and P. S. Ry. to construct a siding on the north side of Bathurst St., from the freight sheds, across Burwell St. to Maitland St. The conditions attached to the permission are that the company shall indemnify the city against actions for damages arising from the presence of the siding, and that it shall become the property of the city when the P. M. Rd. lease expires. (July, 1909, pg. 477).

Lytton to Teslin Lake.—Application is being made to the British Columbia

OFFICES: BOARD OF TRADE BLDG., MONTREAL, CAN.

Makers of Base Supported Rail Joints for Standard and Special Rail Sections, also Girder, Step or Compromise, Frog and Switch, and Insulating Rail Joints, protected by Patents.

Legislature to incorporate a company to construct a railway from Lytton, along Fraser River Valley through Lillooet to near Fort George, thence following Stuart River Valley, Stuart Lake, Tacla and Middle Rivers to North Tacla Lake, thence following the Stickine River to Telegraph Creek, and northerly to Teslin Lake, on the northern B. C. boundary. The company also asks power to construct wharves and docks; to carry on a general navigation business; to construct telegraph and telephone lines, and to generate and dispose of electricity. Barnard and Robertson, Victoria, are solicitors for applicants.

Manitoulin and North Shore Ry.—Construction was started on the eight mile extension from Gertrude mine to Crane Hill mine near Sudbury, Ont., in July, 1909, at station 738, a mile south of Gertrude, and we are advised that at the end of Nov. the grading to station 830 had been completed, with the exception of a trestle 500 ft. long. Work was started on this trestle early in Dec., all the material being on the ground, and it is expected to have it, together with all the grading to station 935, completed and ready for track by Jan. 31. This will bring the construction to near the Vermillion River. The abutments for the bridge across this river are under construction. From the opposite bank of the river to Crane Hill, grading is under way and it is hoped to have it all ready for track laying by April 1. The only difficulty in the way of completing the work as desired is labor. At present the supply is not abundant.

We are advised that the company has laid tracks from mileage 13 to 14.14 west of Sudbury and that the total length of the extension now being constructed by the O'Boyle Construction Co. is 9.68 miles. Surveys have been made for an extension from the end of the mileage at present under contract to mileage 81.3.

The Dominion Parliament is being asked to extend the time for the construction of the line from Sudbury to Little Current, on Manitoulin Island, (partially constructed); the line between Meaford and Owen Sound, Ont.; and the following:—from near Elsie mines northeasterly for 50 miles to Lake Timagami; from the line in Drury or Hyman tp., to Lake Superior, between Michipicoten harbor and Batchawana Bay; from Bothwell tp. to Maclennan tp.; from Little Current, northerly and easterly for 100 miles, crossing the C.P.R. at or near Onaping or Cartier (except that portion of such line between Little Current and Sudbury); from Drury or Hyman, easterly to Sudbury; from Little Current, to the south shore of Manitoulin Island or Fitzwilliam Island; and from Tobermorey, Bruce county, passing through Wiarton to Owen Sound. It is also desired to have it declared that the company's lines are works for the general advantage of Canada.

Margaree Coal and Ry. Co.—We are advised that a contract has been entered into between the Nova Scotia Government and the M.C. and R. Co. for the construction of a line from Chimney Corner Cove, via St. Rose to South West Margaree and thence by the east side of Lake Ainslie, passing west of Whycocomagh, to the Intercolonial Ry. near Orangedale station; and also from the Intercolonial Ry. near McIntyre's Lake to Habitant Bay or River. The total distance is not to exceed 51 miles. Surveys were made for these lines about a year ago, but no construction has been done. Arrangements are being made, we are advised, for the letting of a contract for construction to C. J. Wills and Sons, London, Eng., and that it is possible construction will be started in the spring. W. B. McDonald, Halifax, N.S., is President, and A. G. Morrison, Secretary. (Dec., 1909, pg. 883).

Menzies Bay to Quinsan River.—The British Columbia Legislature is being asked to incorporate a company to construct a railway from Menzies Bay, Vancouver Island, either north or south of Trout Lake, to the junction of Salmon River and Mamekay River, and from Menzies Bay to the point where the Quinsan River touches the south-east corner of lot 81, near the 50th parallel of north latitude. The line is to be operated by steam, electricity or other motive power, and is for logging traffic, but a section of the bill gives power to convert the proposed railway into a regular line for the conveyance of freight and passengers. The company also asks power to construct docks, and to operate steam and other vessels, as well as for various other powers. Wilson and Blomfield, Vancouver, are solicitors for applicants.

Montreal Central Terminal Co.—Application is being made to the Dominion Parliament for an act extending the time when this company may construct the various works which it is authorized to construct. Power is also being asked to amalgamate with the Canadian Northern Ontario Ry., the Ottawa Valley Ry., the Carillon and Grenville Ry., the Boston and Maine Rd., the Chateauguay and Northern Ry., the Montreal Terminal Ry., the Montreal Suburban Ry. and the Intercolonial Ry. The company also asks for power to acquire the franchises of certain power companies and to issue fully paid-up shares in payment for the same and for services rendered; to make agreements with telegraph and telephone companies, and with the city of Montreal. (Dec., 1909, pg. 883).

Montreal, Kapitagewan and Rupert's Bay Ry.—Application is being made to the Dominion Parliament to incorporate a company to construct a railway from Rupert's Bay northeasterly to Lake Kapitagewan, crossing the G.T.P.R., thence to Montreal; to construct telegraph and telephone lines, hotels, wharves, docks, grain elevators, etc., and to operate steam and other vessels; to generate electric power; and to connect and make agreements with other railways. P. Rainville, Montreal, is solicitor for applicants.

Nelson River Ry.—The Dominion Parliament is being asked to pass an act incorporating a company with this title for the purpose of constructing a railway from Lake Winnipeg, near its outlet into the Nelson River, or near the discharge of the Saskatchewan River into Lake Winnipeg, or from a place between these two points, to a junction with any railway to Hudson Bay which may be located by the Dominion Government. The company is asking for navigation and other powers to enable it to develop the country which it will traverse, and especially for power to construct tramway lines at points on the Nelson and Saskatchewan rivers where necessary to transport freight and passengers round any rapids. The offices are to be at Winnipeg; its capital will be $500,000, and it may issue bonds to the amount of $30,000 a mile of railway. The provisional directors are:—T. Malcolm, Campbellton, N.B.; C. Riordan, Hawkesbury, Ont.; R. C. Smith, J. J. Westgate, Montreal; W. H. Truman, Winnipeg; and W. Rigby, London, Eng. (Nov., 1909, pg. 829).

Northern Empire Ry.—The following press dispatches were sent from Edmonton, Alta., Dec. 16: "During the past two days plans have been formulated which will result in the carrying out of the biggest railway project yet planned in the west. The project is backed by millions, and will open up Athabasca and Peace River sections to a great extent. The charters granted to the Northern Empire Ry. Co. and the Manitoba & British Columbia Ry. Co. have been transferred to a new company, headed by Henry Roy, a millionaire. The newly-organized company is capitalized at $4,500,000. It will ask for a guarantee of bonds by the Government for the construction of a line north and south of Edmonton."

The Northern Empire Ry. Co. was incorporated by the Dominion Parliament in 1908, H. Roy, being one of the provisional directors. The British Columbia and Manitoba Ry. is the new name given to the Crawford Bay and St. Marys River Ry. incorporated by the Dominion Parliament in 1904, H. Roy being one of the provisional directors. Notices were issued calling meetings of shareholders at Edmonton, Alta., for the N. E. Ry., and at Lethbridge for the B. C. and M. Ry., early in Nov. Subsequently these notices were withdrawn and new dates fixed for the meetings, that for the N. E. Ry., being fixed for Dec. 15, at Edmonton; and that for the B. C. and M. Ry. for Dec. 18, at Lethbridge. (Dec., 1909, pg. 833.)

Northern New Brunswick and Seaboard Ry.—We are advised that track has been laid upon four miles of the line being constructed from Nipisiquit Jct., on the I.C.R., four miles south from Bathurst, N.B., towards the Canada Iron Corporation's mines. The ballasting upon this mileage has been partly completed. Track laying was gone on with until the weather caused work to be closed down for the season. Grading has been completed to the mines, a distance of 17 miles from the junction with the I.C.R., and it is expected that the line will be completed and ready for operation by May 15. The company has also completed the construction of a mile of track from Newcastle station, on the I.C.R., to its ore dock site, and is now proceeding with the construction of the ore discharging plant. (Nov., 1909, pg. 829).

Northern Quebec Colonization Ry.—Application is being made to the Dominion Parliament for the incorporation of a company with this title with power to construct a railway commencing at Tadousac, at the mouth of the Saguenay River, thence north-westerly along the north shore of the Saguenay River to between Lake Chibougamau and Lake Mistassini, thence north-westerly to Hannah Bay, Ont., with a branch line from Lake Chibougamau to Weymontache, on the National Transcontinental Ry. The company is also asking power to acquire steam and other vessels and to enter into arrangements with other companies. Smith and Johnston, Ottawa, are solicitors for applicants.

Ottawa, Montreal and Eastern Ry.—Application is being made to the Dominion Parliament for the incorporation of a company with this title to construct a railway from the shores of Lake Megantic, Compton County, Que., to Montreal, crossing the St. Lawrence River at Longueuil, with power to construct a bridge over, or a subway under, the river; and to continue the line westerly from Montreal to Ottawa through Prescott, Russell and Carleton counties in Ontario; with power to construct branch lines to Arthabaska, Victoriaville, and Yamaska, Que. LaFlamme, Mitchell and Chenevert, Montreal, are solicitors for applicants.

Ottawa Valley Ry.—The Dominion Parliament is being asked to authorize the company to enter into agreements with the Canadian Northern Ontario Ry., the Canadian Northern Quebec Ry., and the Central Ry. Co. of Canada, or either of them; and also for power to issue bonds or other securities for $30,000 a mile of single track, and $15,000 for eact mile of second track; to generate and distribute, gas and electric, or other power and energy; and to operate hotels, parks and places of amusement at any point on its railway, and to issue bonds to cover the cost of same.

Pacific Coast Coal Mines, Ltd.—We are advised that the company has constructed a line from Fiddicks Jct., on the Esquimalt and Nanaimo Ry., to Boat Harbor, about eight miles below Nanaimo, B.C. The line is approximately 5.5 miles long, and there is under construction an extension of 1.5 miles from Fiddicks Jct. to the company's mine at South Wellington. So far as future extensions are concerned, the company is at present developing a coal property at Suquash, in Rupert district, and it is possible that further railway construction will be necessary as this development proceeds. The line at present constructed is used solely for the purposes of the mine. The officers and directors are:—President, J. Arbuthnot, Victoria; Vice-President, L. D. Wishard, New York; Managing Director, S. H. Reynolds, Victoria; Secretary-Treasurer, J. M. Savage, Victoria; other directors, W. J. Moran, C. C. Michener and M. Hodgson. (April, 1909, pg. 249).

Pine Pass Ry.—Application is being made to the Dominion Parliament for the incorporation of a company with this title to construct a railway from Edmonton, Alta., north-westerly to the confluence of the MacLeod with the Athabasca river, thence continuing north-westerly to Pouce Coupe Prairie, and thence south-westerly to Fort George on the Fraser River, B.C. The company also asks for power to acquire and navigate steam and other vessels on any navigable waters touched by its line, and to amalgamate with the C.P.R., the Canadian Northern Ry., the Saskatchewan Valley and Hudson Bay Ry., or the Prince Albert and Hudson Bay Ry. The offices are to be at Edmonton, Alta.; its capital will be $1,000,000 and it may issue bonds for $50,000 a mile. The provisional directors are:—M. Kimpe, J. Smith, A. R. Chisholm, T. W. Lines and B. J. Saunders, Edmonton. (Nov., 1909, pg. 829).

Port Moody to Indian River, B.C.—The British Columbia Legislature is being asked to incorporate a company to construct a line of railway to be operated by steam, electricity or other motive power, from Port Moody to the north shore of Burrard Inlet, thence along the north shore of the inlet to lot 256, thence westerly or north-westerly to the north arm of Burrard Inlet, thence along the eastern shore of the north arm to the mouth of Mesliloret or Indian River, B.C.; and branch lines, not to exceed 20 miles in length in any one case. Davis, Marshall and Macneill, Vancouver, are solicitors for applicants.

Prince Albert and Hudson Bay Ry.—Application is being made to the Dominion Parliament to change the route of the line as originally projected, increase the bonding powers, and to extend the time for the commencement and completion of the lines. (Nov., 1909, pg. 829).

Prince Edward Island Tunnel.—A copy of all memorials, reports, correspondence and documents in the Government's possession not already brought down, relating to a survey of a route for a tunnel under the Northumberland Straits between the mainland and Prince Edward Island, and also relating to the construction of such a tunnel has been ordered to be made for the House of Commons. The object of the motion calling for the return was, that a case might be made out for the ordering of a survey which would finally settle the practicability or otherwise of the construction of a tunnel. It was pointed out that previous surveys showed the possibility of construction, but that before final estimates were made borings from the bed of the strait should be taken to ascertain definitely the geological formation, and the quantity of water likely to be encountered. (Dec., 1909, pg. 805).

Quebec Central Ry.—The extension from St. George Beauce to St. Justine, 30 miles, was practically completed on Dec. 15, track being laid up to St. Justine, the 28th mile. The stations are in course of erection and regular train service between St. George and St. Justine will be established on Jan. 1. The season being so late the line could not be fully ballasted but ballasting will be completed early next spring. Powers & Dessault, Levis, Que., are the contractors.

The further location of the line in the direction of Cabano is being proceeded with. J. T. Morkill, Chief Engineer, with a party is on the survey and 10 miles are already located, a very favorable line being found. It has not been decided what amount of construction will be proceeded with this year. (Dec., 1909, pg. 225.)

The Reid-Newfoundland Co. has entered into a contract with the Newfoundland Government to construct five branch railways, the total length of which will be nearly 300 miles. They will extend from the main line to different points on the coast as follows:—from Shoal Harbor to Bonavista Bay, about 75 miles; from Broad Cove to Heart's Content and Grete's Cove, about 62 miles; from Ransford Bridge to Trepassey, about 70 miles; from Country Chance to Fortune Bay, about 48 miles, and from Bay of Islands to Bonne Bay, about 42 miles. The gauge will be the same as the R.N. Co.'s other lines, viz., 3½ ft., and 50 lbs. rails will be used. The company has already graded about 22 miles of the Bonavista branch and will take out the necessary ties this winter. The company has also entered into a contract for the operation of all branches mentioned as they are completed, receiving therefor a subsidy of 4,000 acres of land per mile. (Dec., pg. 885.)

Salmon River, B.C.—Application is being made to the British Columbia Legislature to incorporate a company with power to construct a railway to be operated by steam, electricity or other motive power, from where the Salmon River crosses the International boundary between British Columbia and Alaska, to the source of the river, and such branch lines as may be necessary. Wade, Wheeler and McQuarrie, Vancouver, are solicitors for applicants.

Saskatchewan Central Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to construct a railway from tp. 41, range 3, west of the second meridian, westerly to Battleford, Sask., thence north-westerly to Smoky Lake, Alta., thence south-westerly to Edmonton; with power to construct branch lines as follows:—from near the starting point of the line, northerly to where the Saskatchewan River intersects the easterly boundary of the Saskatchewan; also from near the starting point of the line through Canora and Yorkton to North Portal; from tp. 43, range 21 west 2nd meridian north-westerly to Prince Albert, Sask., and from the same starting point southerly through Regina to the southern boundary of Saskatchewan, between ranges 18 and 20; and from the same starting point north-easterly to where the Saskatchewan River crosses the eastern boundary of the province; from near Battleford northerly to Meadow Lake, Sask.; from tp. 42, range 25 west of 2nd meridian, south-westerly through Saskatoon to the southern boundary of the province between ranges 10 and 21; from tp. 18, range 14, west 3rd meridian, westerly to the Saskatchewan River, and thence south-westerly to Lethbridge, Alta. The company is asking for all the usual powers, and for authority to enter into agreements with other railway companies. Smith and Johnston, Ottawa, are the solicitors.

The Temiskaming and Northern Ontario Ry. Commissioners have under survey a branch line from Cheritan to Gowganda, Ont., 50 miles. The question of construction will not be settled for some time, as the Legislature has to approve and the Commission is not desirous of recommending its construction until fully convinced of the possibilities of traffic from the district to be opened up.

Tenders were received to Dec. 31 for the grading required in the construction of a second track between Cobalt and North Cobalt, two miles. The other work proposed to be done during the winter includes the completion of stations at Cobalt and Cochrane. (Dec., 1909, pg. 885).

Toronto Central Terminal Co.—The application to the Dominion Parliament for the incorporation of a company with this title, signed by P. Howland, Toronto, and others, has been presented to the House of Commons, and is passing through the usual routine. The Mayor of Toronto has received a letter from the solicitors of the company expressing a desire to obtain the fullest information as to the present and future requirements of the city and its environs in the way of freight and passenger terminal facilities, and as to the cheapest and most expeditious mode of transferring freight between different parts of the city. The company is said to have secured the services of engineers of experience in the matter of laying out terminals who are making surveys with a view to preparing plans, and desires to have all the information available, so that plans to the advantage of all interests may be drawn up. The city council has decided to oppose the bill. (Dec., 1909, pg. 914).

Vancouver to New Westminster, B.C.—Application is being made to the British Columbia Legislature to incorporate a company to construct a railway from Vancouver to New Westminister, B.C. Abbott and Hart-McHarg, Vancouver, are the solicitors.

Vancouver to Upper Lillooet Lake.—Application will be made to the British Columbia Legislature to incorporate a company to construct a railway, to be operated by electricity, steam or other motive power, from Vancouver to Upper Lillooet Lake, either by way of Stave Valley or Harrison River Valley, with power to construct branch lines to points not more than 30 miles distant. It is also desired to have power to construct wharves, docks, and operate steam and other vessels. Barnard and Robertson, Victoria, are the solicitors.

Western Alberta Ry.—Application is being made to the Dominion Parliament to extend the time for the commencement and completion of the authorized line of railway. Beaton and Shapley, Toronto, are the solicitors. (July, 1909, pg. 483).

Western Canada Power Co.—The Dominion Parliament is being asked to enlarge the scope of the company which was incorporated under the Dominion Companies Act, so as to enable it to construct such railways, and branches, side-tracks, turnouts, tramways, and telegraph and telephone lines, and works in connection therewith, as may hereafter be authorized by legislation or other authority. C. H. Cahan, Ottawa, is the solicitor.

Winnipeg City Power Plant Line.—We are advised that during 1909 the Commission laid track on 25.25 miles of its line as follows:—from Lac du Bonnet to Pointe du Boise, 24 miles; and from station 1187 to gravel pit, 1.25 miles. It has under construction a line, 0.93 mile, from station 1217 to the power house. The contractor is O. E. Anderson, Winnipeg. (Feb., 1909, pg. 105).

Inside Pump Type

Quick Action Hydraulic Jacks

Joyce-Cridland Hydraulic Jacks have a speeding device whereby they can be run quickly up to load, where the speeding device automatically cuts out, leaving only the power pump in action This device adds no extra pump or complicated parts to the jack. These jacks are so built that they may be used in any position and the filling liquid will not escape. The outside pump type has a short barrel, adapting it for use in cramped quarters.

Full description and explanation of the working parts of the Joyce-Cridland Hydraulic Jacks are given in Bulletin 33.

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them.

8680. Nov. 4.—Ordering that C.P.R. forthwith erect shelter on or near wharf at East Robson, B.C. for protection of merchandise from weather.

8681. Nov. 8.—Dismissing application of town of Lemberg, Sask. for authority to open Main St. across C.P.R.

8682. Nov. 4.—Dismissing complaint of A. E. Watts, Cranbrook, B.C., with regard to inflammable material left on railway right of way and the destruction of public roads, including those from Yahk to Copeland and Sicamous to Vernon, B.C.

8683. Nov. 4.—Dismissing complaint of Kootenay Shingle Co., Salmo, B.C., that C.N.R. has departed from tariffs fixed by Board with respect to rates, weights, and shortage on shipments of shingles originating at Salmo and consigned to points in B.C., Alberta and Ontario.

8684. Nov. 18.—Authorizing East Luther and Amaranth Telephone Co. to install telephone instrument in C.P.R. station, Grand Valley, Ont.

8685. Feb. 5.—Authorizing city of Winnipeg, to construct subway under its tracks on east side of McPhillips St., between Fonseca Ave. and Jarvis St.

8686. Nov. 18.—Authorizing G.T.P.R. to put on a tri-weekly mixed train service between Wainwright and Edmonton, Alta.

8687. Nov. 18.—Authorizing city of Brantford, Ont., to lay sewer pipe under T.H. & B.R. at Gilkinson St.

8688. Nov. 18.—Authorizing Farmers' Telephone Co. to erect wires across C.P.R. in Northampton parish, Carleton Co., N.B.

8689, 8690. Nov. 18.—Authorizing Farmers' Telephone Co. to erect wires across C.P.R. at Brighton and Hartland, N.B.

8691. Nov. 18.—Authorizing C.N.R. to open for traffic the portion of its line from Saskatoon to Rosetown, Sask., 72 miles.

8692, 8693. Nov. 17.—Authorizing C.P.R. to construct a 3-track spur across road allowance between secs. 22 and 23, tp. 24, r. 9, w. 5th mer. and five other spurs near Exshaw, Alta., and a system of industrial spurs for International Elevator Co., St. Boniface, Man.

8694. Nov. 18.—Authorizing C.P.R. to open for traffic the extension of its Snowflake Branch to Windygates, mileage 0 to 6.5., Man.

8695. Nov. 18.—Recommending to Governor in council for sanction, agreement between C.N.R. and Northern Extension Ry.

8696. Nov. 15.—Authorizing Winnipeg Electric Ry. to operate cars over C.P.R. crossing at Logan Ave. for a further two months without being brought to a stop.

8697. Nov. 18.—Authorizing C.P.R. to construct spurs across Ross Ave., Xante St. and over blocks 89, 90, 91 and 92, lot 9, Winnipeg.

8698, 8699, Nov. 18.—Authorizing city of Toronto to lay ducts under G.T.R., C.P.R., near Strachan Ave., and on Strachan Ave., northern crossing.

8700, 8701. Nov. 18.—Authorizing village of Brussels, Ont., to erect wires across G.T.R.

8702, 8703. Nov. 18.—Authorizing Horton & McNab Telephone Co. to erect wires across C.P.R. in Horton tp., and near Castleford station, Ont.

8704 to 8709. Nov. 19.—Authorizing C.P.R. to use bridges at mile 47, Central Division, Prince Albert Branch; over Battle River, Western Division, Wetaskiwin section; over Government drainage ditch, Central Division, La Riviere section; bridges 147, 151, 196, 71, 84.3, 99.5, and 132.5, Cranbrook section, Western Division; 104.17 McLeod section, over Old Man River; and bridges 1.5 and 102.9, Western Division Edmonton section.

8710. Nov. 19.—Authorizing C.N.R. to operate temporarily and until further order, spur constructed by G.T.P.R. into Clover Bar Coal Co.'s property at Edmonton, Alta.

8711. Oct. 29.—Ordering that C.P.R. construct highway crossing about one mile west of Carlin station, B.C.

8712, 8713. Nov. 20.—Approving location of G.T.P.R. Calgary branch, mileage 0 to 24.753 and Tofield-Calgary branch, mileage 24.75 to 50, Alta.

8714. Nov. 20.—Authorizing C.P.R. to construct spur across 9th St., North Bay, Ont.

8715. Nov. 15.—Dismissing complaint of J. F. Hunter, Boissevain, Man., against C.P.R. as to the manner in which it handles local freight.

8716. Nov. 15.—Dismissing application of Tees & Persse, Ltd., for order directing C.P.R. to perpetually maintain a siding on what was formerly Point Douglas Ave., Winnipeg.

8718. Oct. 15.—Ordering C.N.R. forthwith to make passenger station facilities adequate and suitable to accommodate 12 persons, at Howell, Sask.

8718. Nov. 15.—Dismissing complaint of McCollom Lumber Co., Winnipeg, that C.P.R. and C.N.R. overcharged on a mixed carload of lumber from Warroad, Minn., to Indian Head, Sask.

8719. Nov. 22.—Authorizing G.T.P.R. to connect with C.N.R. near 1st St. east of 21st St., Edmonton, Alta.

8720. Nov. 23.—Recommending to Governor in council for sanction Temiscouta Ry. by-law re spitting in cars and premises.

8721. Nov. 22.—Authorizing G.T.P.R. to cross C.P.R. at grade at Yorkton, Sask.

8722. Nov. 24.—Authorizing city of Toronto to construct sewer under C.P.R. on Bathurst St.

8723 to 8725. Nov. 23.—Authorizing Bell Telephone Co. to erect wires across G.T.R. at Chesley, Ont., and across P.M.R. at Glenwood station and Leamington, Ont.

8726. Nov. 24.—Authorizing C.N.Q.R. to place tracks and telegraph wires under telephone and power wires of Quebec, Jacques-Cartier Electric Co. and Bell Telephone Co. in St. Sauveur parish.

8727. Nov. 23.—Authorizing Horton & McNab Telephone Co. to erect wires across C.P.R. on lot 9, con. 3, Horton tp., Ont.

8728. Nov. 24.—Authorizing Alberta Government Telephone Company to erect wires across C.N.R., near Bruderheim station.

8729. Nov. 24.—Dismissing application of A. Gordon, Cowichan, B.C., for order directing Esquimalt & Nanaimo Ry. to provide farm crossing where it intersects his farm in Shawinigan district, B.C.

8730. Nov. 23.—Ordering C.P.R. to construct spur at mileage 84.8, from Muskoka on its Toronto-Sudbury branch, Bigwood tp., Ont.

8731. Nov. 23.—Authorizing C.P.R. to construct spur in Beausejour, Man., for J. L. Turner, and Manitoba Glass Mfg. Co.

8732. Nov. 23.—Authorizing G.T.P.R. to construct spur on blocks 13 and 14, river lots 12 and 14, Edmonton, Alta.

8733. Nov. 24.—Authorizing Kaministikwia Power Co. to erect power lines across C.P.R. north of Victoria St., Westfort, Fort William, Ont.

8734. Nov. 24.—Authorizing C.P.R. to construct bridge 19.6 Farnham section, over Richelieu River, Que.

8735. Nov. 23.—Amending order 6523, authorizing G.T.R. to construct overhead farm crossing bridge at m.p. 125.12, between London and Windsor, Ont., and A. M. Dickie's land.

8736. Nov. 25.—Amending order 6858, Apr. 19, 1909, authorizing Atlantic Quebec & Western Ry. to operate its railway from mileage 19.75 to 20.5 at Port Daniel, Que., by striking out clauses 1 and 2 in the operative part.

8737. Nov. 15.—Extending for 30 days from date of order period within which M.C.R. may widen bed of stream across its right of way under trestle bridge at Bear Creek, near Petrolea, Ont.

8738. Sep. 22. Amending order of Railway Committee of the Privy Council, Dec. 3, 1892, re crossing of G.T.R. by Davenport St. Ry. at Davenport Rd., Toronto, by ordering Toronto Suburban Ry. to install derails at crossing interlocked with semaphores and dismissing Toronto Suburban Ry. application for order reducing amount to be paid by it for construction, operation and maintenance of crossing.

8739. Nov. 17.—Restraining Nipissing Power Co. from erecting heat, light and power wires across Bell Telephone Co.'s wires between Powassan and North Bay, Ont.

8740. Nov. 24.—Ordering C.P.R. to lower its tracks where they cross Sutherland Ave., Winnipeg.

8741. Nov. 20.—Dismissing application of settlers of Ribstone, Alta., for order directing G.T.P.R. to provide a spur and loading platform between Dunne and Chauvin, Alta.

8742. Nov. 25.—Extending until Feb. 1, time for installation of interlocking plant at C.P.R. crossing of G.T.R., Drumbo, Ont.

8743. Nov. 22.—Limiting the speed of C.P.R. trains passing over Durham Rd., Walkerton, Ont., to 10 miles an hour.

8744. Nov. 22.—Ordering C.P.R. to provide a shelter with platform at Clark, Ont.

8745. Nov. 25.—Ordering C.N.R. to provide crossing at Lincoln Ave., Rosser municipality, Man.

8746. Nov. 19.—Authorizing C.N.Q.R. to construct its line across highways in Beauport parish, Que.

8747. Nov. 26.—Authorizing G.T.P.R. to appeal to Supreme Court of Canada upon all questions of law arising re location of its line through Fort William, Ont.

8748. Nov. 26.—Rescinding order 7320, June 18, 1909, approving plans of proposed C.N.R. subway at 22nd St., Saskatoon, Sask., by ordering that the city file new plans.

8749 to 8751. Nov. 25.—Authorizing Alberta Government Telephone System to erect wires across C.P.R. at three points.

8752. Nov. 26.—Authorizing Dresden Rural Telephone System to erect wires across P.M.R. at Emmett, Chatham tp., Ont.

8753, 8754. Nov. 26.—Authorizing town of North Battleford, Sask., to lay water and sewer mains under C.N.R. at Victoria St.

8755. Nov. 25.—Authorizing C.N.O.R. to cross and connect with G.T.R. near Brooklin, Ont.

8756. Nov. 27.—Authorizing Bell Telephone Co. to carry underground wires across Montreal Terminal Ry. at St. Antoine St., Tetraultville, Que.

8757. Nov. 25.—Authorizing C. Lawrence to lay water pipe under C.P.R. Walkerton & Lucknow branch at Durham Rd., Bentinck tp., Ont.

8758. Nov. 27.—Authorizing C.P.R. to construct spur for city of Winnipeg in St. Paul parish.

8759. Nov. 27.—Authorizing C.P.R. to construct spurs for North Pacific Lumber Co., New Westminster district, B.C.

8760. Nov. 29.—Approving C.N.R. location from mileage 0 to 5 up Fraser River from Yale, B.C.

8761. Nov. 29.—Authorizing C.P.R. to divert road allowance between secs 22 and 15, tp. 8, r. 5, Man.

THE ELECTRIC HEADLIGHT

The following letter was received under date of May 8, 1908, from Mr. J. W. Cleary, Travelling Engineer Pyle-National Electric Headlight Co.:

"I learn from_____the Master Mechanic here, that an engineer running between_____ and_____discovered a broken rail with the Pyle-National Electric Headlight and made the stop without ditching his train. One or two pairs of wheels got off, but that was a small affair to what it would have been where a foot of the rail was broken off. Also an engineer running east of here found some cars shoved out on the main line. He saw them with the 'Electric' and made the stop without hitting them."

PYLE-NATIONAL ELECTRIC HEADLIGHT CO.
MONADNOCK, CHICAGO

8762. Nov. 29.—Approving V.V. & E.R. location from Hope station 1988-79 to station 3020-7.5, to the boundary between Yale and Westminster districts, B.C.

8763. Nov. 29.—Approving C.N.O.R. location from Rideau River, mileage 5.3 to boundary between Goulbourne and Nepean tps.

8764, 8765. Nov. 29.—Authorizing Vancouver Power Co. to cross the Y of the C.P.R. Seattle branch north of Huntingdon station, and the main line and spur at Clayburn station, B.C.

8766. Nov. 29.—Authorizing C.P.R. to construct siding to R. West & Co.'s premises at mileage 14.75, London section, Ont.

8767. Nov. 29.—Extending for 30 days from date of order, time within which M.C.R. and P.M.R. shall each install upon its own line a highway crossing on town line between Southwold and Dunwich tps., Ont.

8768. Nov. 26.—Ordering C.P.R. to provide highway over its line at Mackey station, Head tp., Nipissing district, Ont.

8769. Dec. 2.—Authorizing Canada Atlantic Ry. (G.T.R.) to construct siding from south side of Sappers Bridge to the Chateau Laurier site, Majors Hill Park, Ottawa.

8770. Nov. 29.—Amending order 8540, Oct. 15, 1909, by approving substituted plans and specifications of Colchester North tp., Ont., re drain under M.C.R.

8771. Nov. 29.—Authorizing town of St. Louis, Que., to lay water pipe under C.P.R. at Sanguinet St.

8772. Dec. 2.—Authorizing Chatham Gas Co. to lay main under G.T.R. at Degge St. crossing, Chatham, Ont.

8773. Nov. 30.—Authorizing Burlington village, Ont., to place wires under G.T.R. at Burlington Beach, Ont.

8774 to 8777. Nov. 22.—Authorizing Consolidated Telephone Co. to erect wires across C.P.R., near Upper Kent station, one mile south of Bath, at Bath, and at Bristol, N.B.

8778, 8779. Nov. 22.—Authorizing Brussels village, Ont., to erect wires across C.P.R. at Walton and across G.T.R. at intersection of line between cons. 4 and 5, Morris tp., Ont.

8780. Nov. 22.—Authorizing North Huron Telephone Co., Wingham, Ont., to erect wires across G.T.R. near Whitechurch station, Ont.

8781. Dec. 1.—Authorizing Claremont & Ashburn Telephone Co. to erect wires across G.T.R. at 7th con. Whitby tp., Ont.

8782 to 8784. Nov. 18, 30.—Authorizing Bell Telephone Co. to erect wires across C.N.Q.R. at Tetraultville, Que., and across C.P.R. near Shaw station, Ont., and near St. Cuthbert station, Que.

8785 to 8793. Nov. 22.—Authorizing Manitoba Government Telephones to erect wires across C.P.R. at three points; C.N.R. at five points; and G.T.P.R. at one point.

8794 to 8798. Dec. 1.—Authorizing Alberta Government Telephones to erect wires across G.T.P.R. at two points; C.P.R. at two points and C.N.R. at one point.

8799. Dec. 1.—Authorizing Saskatchewan Government Telephones to erect wires across C.N.R. at Hague.

8800. Nov. 30.—Ordering C.P.R. to reconstruct culvert under tracks at mileage 3.3, Sudbury section, Humphrey tp., Ont.

8801. Dec. 1.—Amending order 7746, Aug. 5, 1909, approving C.N.R. location from tp. 15, r. 17, w. 6th m. to sec. 11, tp. 14, r. 17, w. 6th m., mileage 0 to 5, B.C., by changing the reference to r. 17, to read "r. 27."

8802. Nov. 29.—Authorizing C.P.R. to open for traffic the portion of its second track from mileage 59.4 to 59.6, Fort William section, Ont.

8803. Nov. 18.—Authorizing C.N.Q.R. to construct spur from near St. Marc's Jct. through St. Marc, Grondines and St. Albans parishes.

8804. Dec. 1.—Approving stress sheets of C.N.R. Lac Ouareau-Rawdon extension.

8805. Dec. 1.—Authorizing C.N.O.R. to construct its line across six highways in Whitechurch tp., York county.

8806. Nov. 30.—Extending until June 1, 1910, time within which North American Telegraph Co. may file tariffs of tolls.

8807. Nov. 30.—Extending until June 1, 1910, time within which North American Telegraph Co. may file tariffs of tolls.

8808. Nov. 30.—Certifying amended plan of C.N.R. right of way as constructed across s.e. ¼ sec. 24, tp. 43, r. 4, w. 3rd, m. north 28 miles from Dalemy, Sask.

8809, 8810. Nov. 27.—Dismissing application of city of Edmonton, Alta., for orders varying orders 5598, Nov. 12, 1908, and 6751, Feb. 19, 1909, providing that the G.T.P.R. and C.N.R. each provide its own diamond crossing, and that gates with home signals, to be operated by a watchman, be substituted for the half-interlocking plant required to be installed, and authorizing the city to again apply for the establishment of gates or other protection.

8811. Nov. 30.—Authorizing G.T.R. to construct siding to Otis-Fensom Elevator Co.'s premises, Hamilton, Ont.

8812. Nov. 30.—Authorizing C.P.R. to construct siding to the Noxon Co.'s premises, Ingersoll, Ont.

8813. Nov. 30.—Ordering G.T.P.R. to construct highway crossing and road diversion between secs. 25 and 26, tp. 35, r. 12, w. 3rd m., Saskatoon district, Sask., in accordance with and subject to general regulation of Board affecting highway crossings.

8814. Nov. 29.—Authorizing C.P.R. to construct spur in lots 15 and 16, r. 7, Aylwin tp., Que.

8815. Nov. 30.—Dismissing application of Tilbury East and Raleigh tps., Ont., for construction of bridge over Jeannette's and Baptiste Creeks, by G.T.R. on its Southern division.

8816. Dec. 3.—Authorizing C.N.O.R. to open for traffic the portion of its Ottawa-Hawkesbury division, from Rockland to Hurdman's bridge, Ottawa.

8817. Dec. 3.—Approving C.N.O.R. by-law authorizing D. B. Hanna, Guy Tombs and W. H. Jordan, to prepare and issue tariffs of tolls to be charged between and including Hawkesbury and Ottawa.

8818. Dec. 3.—Approving Standard Passenger Tariff C.R.C. 153, providing for maximum passenger rate of 3c. a mile between all stations on C.N.Q.R. and C.N.O.R., Ottawa section.

8819. Dec. 3.—Extending until June 1, 1910, time within which Canadian and Dominion Express Companies' tariffs of tolls for carriage of goods are temporarily approved.

8820. Dec. 2.—Dismissing complaint of Wagstaff, Ltd., Hamilton, Ont., that rate of $1.20 per 100 lbs. charged by the Dominion Ex. Co. on black currants from Montreal to Hamilton is excessive and discriminative as compared with rate of 80c. per 100 lbs. charged on like shipments from Hamilton to Montreal.

8821. Dec. 3.—Extending until June 1, 1910, time within which National and American Express Companies tariffs of tolls for carriage of goods are temporarily approved.

8822. Dec. 3.—Extending until June 1, 1910, time within which Maritime Express Co. may file tariffs of tolls for carriage of goods.

8823. Dec. 4.—Authorizing C.P.R. to open for traffic the second track of its Smith's Falls section from Vaudreuil to St. Lazare, also from mileage 44.9, just west of Dalhousie Mills to mileage 48.6; and from mileage 48.8 to Avonmore.

8824. Dec. 3.—Extending until June 1, 1910, time within which the United States and the Great Northern Express Companies may file tariffs of tolls for carriage of goods.

8825 and 8826. Dec. 2.—Authorizing city of Hamilton, Ont., to lay sewer under Hamilton Radial Electric Ry. and Toronto, Hamilton & Buffalo Ry. in Barton tsp., Ont.

8827. Dec. 6.—Authorizing G.T.P.R. to cross, at grade, the C.P.R. Pheasant Hills branch in sec. 13, tp. 21, r. 12, west of 2nd mer., Balcarres, Sask.

8828. Dec. 4.—Authorizing C.P.R. to construct spur to Continental Oil Co. and Canadian Petrified Brick & Stone Co.'s premises, Winnipeg.

8829. Dec. 6.—Authorizing city of Hamilton, Ont., to lay sewer under G.T.R. in Barton tsp., Ont.

8830. Dec. 4.—Authorizing Manitoba Government Telephones to erect wires across C.N.R. near Bethany.

8831, 8832. Dec. 4.—Authorizing North Huron Telephone Co. to erect wires across G.T.R. at two points near Wingham station, Ont.

8833 to 8837. Dec. 4.—Authorizing Guelph, Ont., Board of Light and Heat Commissioners to erect wires across C.P.R. at three points and G.T.R. at two points.

8838. Dec. 7.—Authorizing Temiscouata Ry. and Transcontinental Ry. to operate trains where the Temiscouata Ry. crosses Transcontinental Ry., about 12.2 miles west from Edmundston, N.B.

8839. Nov. 16,—Authorizing town of St. Louis, Que., to carry its highway under C.P.R. at St. Lawrence Blvd.

8840. Dec. 4.—Authorizing Bell Telephone Co. to place wires under Hamilton Radial Electric Ry. about two miles east of Burlington, Ont.

8841. Dec. 4.—Authorizing C.P.R. to construct spur for Riordon Paper Mills, Ltd., at mileage 95.16 from Ste. Therese, Que.

8842. Dec. 4.—Authorizing Toronto, Hamilton & Buffalo Ry. to construct spurs in n.e. part of Hamilton, Ont.

8843. Dec. 4.—Authorizing C.P.R. to construct spur in Lethbridge, Alta.

8844, 8845. Dec. 7.—Authorizing Bell Telephone Co. to erect wires across G.T.R. near Callander station, and near New Toronto, Ont.

8846. Dec. 7.—Authorizing Port Hope Telephone Co. to erect wires across G.T.R. at Newcastle, Ont.

8847. Dec. 6.—Ordering that Toronto Suburban Ry. install and maintain derails at crossing with G.T.R. at Davenport Road, Toronto.

8848. Dec. 7.—Authorizing Quebec Ry. Light & Power Co. to cross with its tracks the C.P.R. tracks at St. Valier St., Quebec.

8849. Dec. 7.—Approving location of C.P.R. station at Grassy Lake, Alta.

8850. Dec. 2.—Ordering G.T.R. to install distant semaphore at crossing with Galt, Preston & Hespeler Ry. at Hespeler, Ont.

8851. Nov. 24.—Authorizing city of Saskatoon, Sask., to carry Saskatchewan Drive under C.N.R. bridge.

8852. Dec. 7.—Approving stress sheets of G.T.R. for proposed renewal of viaducts near Tansley and Stewarton, Ont.

8853. Dec. 7.—Authorizing Erie Telephone Co. to place wires across G.T.R. two miles west of Canfield, Ont.

8854. Dec. 7.—Authorizing city of Toronto to lay sewer under C.P.R. on Huron St.

8855. Dec. 7.—Authorizing Bell Telephone Co. to place wires across G.T.R. telegraph lines two miles east of Burlington Jct., Ont.

8856. Dec. 6.—Authorizing G.T.R. to construct bridge over Ham's Creek, near Ernestown, Ont.

8857. Dec. 3.—Ordering C.P.R. to provide highway crossing at Murray St., Sault Ste. Marie, Ont.

8858, 8859. Dec. 10.—Authorizing Ontario Power Co. of Niagara Falls, Ont., to erect wires across the G.T.R. in Thorold tp., Ont.

8860. Dec. 10.—Directing that all railways, where shippers are compelled to

supply car doors to enable cars to be used for traffic, make allowance therefor to such shippers upon the following basis:—at and west of Fort William, lower car door, $1; upper car door, 50c.; east of Fort William, upper or lower car door, each 50c.

8861. Dec. 2.—Authorizing C.N.O.R. to carry its proposed railway under G.T.R. near Scarboro Jct., Ont.

8862. Dec. 9.—Approving proposed bridge of Atlantic, Quebec & Western Ry. over Grand Pabos gully, at mileages 41 and 40.8.

8863. Dec. 9.—Authorizing C.P.R. to construct spur for Western Canada Timber Co., mileage 29.5 north from Lardo, B.C.

8864. Dec. 9.—Authorizing C.P.R. to construct spur at Gerrard station, B.C.

8865. Dec. 10.—Approving location of C.P.R. revision on a portion of its Kininvie branch.

8866. Dec. 10.—Approving location of C.N.O.R. at Greenwood, Pickering tp., Ont.

8867. Dec. 10.—Ordering that P.M. Rd. erect fences along its railway where it crosses near Cedar Springs, Raleigh tp., Ont.

8868. Dec. 10.—Authorizing G.T.P.R. to construct its railway across highways between secs. 35 and 34, and 34 and 33, tp. 52, r. 27, w. 4th m., North Alberta.

8869 to 8875. Dec. 10.—Authorizing Manitoba Government Telephones to erect wires across C.P.R. at seven points.

8876, 8877. Dec. 10.—Authorizing Bell Telephone Co. to erect wires across G.T.R. at West and Market Sts., Brantford, and near Whitby, Ont.

8878. Dec. 11.—Approving C.N.R. location through tp. [illegible] r. 7-11, west of 2nd mer., Sask.

8879. Dec. 10.—Ordering that C.P.R. and P.M.R. may operate trains over interlocker installed at Walkerville Jct. Ont.

8880. Dec. 10.—Authorizing C.P.R. to construct spur for Andrews & Son, Winnipeg.

8881. Dec. 10.—Authorizing C.N.O.R. to construct bridge over Rouge River, Scarboro tp., Ont.

8882. Dec. 10.—Authorizing C.P.R. to construct branch line near Westminster Jct., B.C.

8883. Dec. 9.—Authorizing C.P.R. to construct spur at mileage 86 from Lethbridge, Crow's Nest branch.

8884. Dec. 11.—Authorizing Dominion Natural Gas Co. to lay main under G.T.R. at Maple St., Simcoe, Ont.

8885. Dec. 11.—Authorizing Dr. A. L. Russell to erect telephone wires across G.T.R. at Fraserville, Ont.

8886, 8887. Dec. 11.—Authorizing Alberta Government Telephones to erect wires across C.P.R. at Camrose and Sedgewick.

8888. Dec. 11.—Authorizing Bell Telephone Co. to erect wires across G.T.R. 2½ miles south of Harriston, Ont.

8889. Dec. 13.—Authorizing C.N.R. to cross with its Goose Lake branch the G.T.P.R. near Saskatoon, Sask.

8890. Dec. 13.—Authorizing C.N.R. to cross with its track the C.P.R. near Bienfait, Sask.

8891. Nov. 22.—Authorizing Ontario Power Co. to cross with its transmission line the M.C.R. in Stamford tp., Ont.

8892, 8893. Dec. 11.—Authorizing C.N.O.R. to construct bridge over Dixie and Greenwood creeks, Pickering tp., Ont.

8894. Dec. 11.—Authorizing C.N.Q.R. to construct its line across lot 408, St. Marc parish, Portneuf Co., Que.

8895. Dec. 11.—Authorizing Canada Atlantic Ry. to reconstruct bridge across River St. Lawrence, between Giroux Island and Isle aux Seines.

8896. Oct. 17.—Approving C.P.R. crossings at Blackstone Rd., Moor's Rd., Gough's Rd., mileages 118.09, 119.67 and 120.25, and Portage Bay Rd., mileage 123.21.

8897. Dec. 11.—Amending order 2139, Dec. 6, 1906, which approved form, size and style of tariffs of telephone tolls.

8898. Dec. 13.—Authorizing C.P.R. to divert Hamilton St, Regina, Sask.

8899. Dec. 14.—Authorizing C.N.O.R. to construct bridge in Whitby tp., Ont.

8900. Dec. 13.—Approving plan of subway at intersection of Albert St., Regina, Sask.

8901. Dec. 14.—Authorizing city of Brantford, Ont., to lay sewer under G.T.R. across West St.

Turbo-Electric Locomotive.

Hugh Reid recently addressed the Glasgow University Engineering Society on the Reid-Ramsay turbo-electric locomotive now being built in Glasgow, Scotland. In describing it he said that steam is generated in a locomotive boiler, which has a superheater, and the coal and water supplies are carried in the side bunkers and side water tanks at both sides of the boiler. The steam is led to a 3,000-r.p.m. impulse turbine, to which is directly coupled a d.c. generator. The dynamo supplies current at from 200 to 600 volts to four series-wound traction motors, the armatures of which are built on the four driving axles of the locomotive. The exhaust steam from the turbine passes into an ejector condenser, and is, together with the circulating condensing water, delivered eventually to the hot well. As the steam turbine, unlike the reciprocating steam engine, requires no internal lubrication, the water of condensation is free from oil, and consequently is returned from the hot well direct to the boiler by a feed pump. This condensing water is circulated by centrifugal pumps driven by auxiliary steam turbines placed alongside the main turbine and dynamo. The cycle of the condensing water is from tanks through the first pump, then through the condenser, where it becomes heated in condensing the exhaust steam, then to the hot well. From the hot well it passes through the second pump to the cooler, situated in front of the locomotive, where the full benefit of the blast of air caused by the movement of the locomotive, aided by a fan, is utilized for cooling the hot circulating water.

The condensation of the exhaust steam deprives the locomotive boiler of the usual exhaust blast which induces the draft through the firebox and boiler tubes. In the experimental locomotive the induced draft is replaced by forced draft provided by a small turbine-driven fan. The fan is placed within the cooler, so that it will deliver hot air to the boiler fire, and at the same time assist the current of air through the cooler. The small switchboard and the instruments required, and the controller for the four motors are all placed on the motorman's platform within easy reach.

The main and auxiliary machinery of this experimental locomotive is mounted upon a strong underframe, which is carried upon two trucks, each of which carries two motors. As the locomotive is intended for express passenger main line work, it is hoped to obtain comparisons from its actual working with the performances of the reciprocating steam locomotives, especially as regards the relative consumption of fuel and water, the efficiency of transforming the energy of steam into drawbar pull, and also the relative rapidity of acceleration under the old and new systems.

The American Railway Master Mechanics' Association and the American Railway Master Car Builders' Association annual conventions will be held at Atlantic City, N.J., June 15 to 18 and June 20 to 22, respectively.

Great Northern Railway.

In connection with the various lines in Canada, owned by the G.N.R., the following information as to work done during 1909, and the work in progress will be of interest:—In Minnesota, the company has laid about 20 miles of track from Nashawauk to Grand Rapids. The extension is not yet completed. Nashawauk is on the Duluth, Swan River and Virginia line, and Grand Rapids is on the main line from Duluth westerly. In Washington State it has laid 60.62 miles of tracks from Columbia River to Westfield, a line projected to connect up in course of time with the company's line either at Marcus or Republic, and so give a through connection with its existing lines in the Kettle and Kootenay valleys in British Columbia. Another piece of line completed is the reconstruction from Blaine to the International boundary, 2.96 miles. This line connects with the Vancouver, Victoria and Eastern Ry., at the boundary and runs into Vancouver, replacing the old New Westminster Southern Ry., which has been abandoned. The lines under construction or projected are:—in North Dakota, from Stanley to Powers Lake, 24 miles; this branch runs northwesterly, towards the International boundary. In Montana a line is projected for 52 miles from Bainsville, to Plentywood, also just south of the International boundary. In Washington State a line is under construction from Oroville, on the section of the Vancouver, Victoria and Eastern Ry., which runs south of the International boundary, to Pateros, 76 miles. This line will ultimately connect with the main line at Wenatchee. In connection with the Spokane, Portland and Seattle Rd., the company is also constructing two miles of line at Spokane.

Midland Ry. of Manitoba.—We are advised that no recent purchases of land have been made for terminal purposes in Winnipeg by the M. Ry. of M., or any of the other companies connected with it; neither is any further purchase contemplated. Practically all the property required was purchased some time ago. It is not likely that any construction will be proceeded with during the winter.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—The laying of track into Princeton, B.C., is reported completed, the mileage laid during the year, from Keremeos, being estimated by A. H. Hogeland, Chief Engineer, St. Paul, Minn., at 42 miles; and by J. H. Kennedy, Chief Engineer on the work at about 45 miles. The estimates were made on different dates, and at neither time was the work completed. The company also completed and put in operation 21.05 miles of new line from the International boundary, north of Blaine, Wash., to New Westminster, replacing the old New Westminster Southern Ry.; the track laying for this line was completed in 1909. It also completed the portion of the line from Cloverdale to Sumas, B.C., 29.29 miles; 27.29 miles of track had been laid on this line up to Dec. 31, 1908, so that only two miles had to be laid to complete it. The company has also laid 1.93 miles in Vancouver, called its Burrard Inlet line.

The section of the line between Keremeos and Princeton was taken over by the operating department, Dec. 8, and a permanent train service was put on Dec. 11. The company is purchasing a right of way for the extension of the line from Princeton and Abbottsford in the Fraser River Valley, west of the Hope Mountains. (Dec., 1909, pg. 887).

The bill brought by E. A. Lancaster before the House of Commons to amend Sec. 238a of the Railway Act was on Nov. 25 ordered to be "read a second time this day six months."

National Transcontinental Railway.

We are advised that it is estimated that 312 miles of track were laid during 1909 on the Eastern Division, and on various stretches between Moncton, N.B. and Winnipeg, making with the 249 miles laid to Dec. 31, 1908, a total of 561 miles, and leaving 1,244 miles to be laid to complete the division. The track laid during 1909 is distributed over the different contracts as follows:—Moncton westerly mileage 20 to 30, and mileage 53 to 56, 13 miles; Chipman, mileage 5 to 10 west, five miles; crossing of the Intercolonial Ry., 36 miles west from Moncton, to 13 miles easterly and to 14 miles westerly, 27 miles; from Quebec-New Brunswick boundary easterly for 27 miles, and from mileage 61 to 64, three miles, making 30 miles; east of Quebec bridge 16 miles have been laid between mileage 2.6 and 36; west of the same point 10 miles have been laid in the first 50 miles, 15 miles between the 50th and to the 158th mile; at the junction with the Temiskaming and Northern Ontario Ry. nine miles of track have been laid easterly and 35 miles westerly; from mileage 8 east of the Ontario-Manitoba boundary to mileage 152 east, 144 miles.

Replying to questions in the House of Commons, Nov. 25, the Minister of Railways stated in regard to the delay in the completion of work by several of the contractors, that the contracts provided for a forfeit of $5,000 for each calendar month of default; that no extensions of any of the contracts had been given, and that the enforcement of the penalty clause was a matter for consideration before final payments were made.

On Dec. 9, the Minister said, the only amount paid for terminals for the Railway was $2,187.50 a month paid to the Canadian Northern Ry., being the Government's proportion of rental for terminals at Winnipeg, under the agreement of Mar. 1, 1907. No estimate had been made of the total cost of the terminals required for the line.

Quebec Bridge.—Preliminary work was started on the reconstruction of the bridge over the St. Lawrence at Quebec, Dec. 8, when about 100 men were put to work around the approaches of the old bridge, for the purpose of preparing for the clearing away of the debris, and the demolishing of such parts of the old work as have been condemned, preparatory to the construction of new piers and other works. A contract will be let at an early date for the removal of the steel work between the land and the piers. This has to be done by the spring so as to allow the caissons for the new piers to be sunk by May 1.

The Minister of Railways, in reply to questions in the House of Commons recently, stated that the new bridge is to be erected at the same site as the old one, the south pier will be used in part but must be enlarged, a new pier will be sunk to the rock on the north side, and the other piers will be rebuilt. Further questions elicited the information that the existing south pier caisson will be fully used, and enlarged to carry the greater load that will be required for the new superstructure. At the north pier, borings have demonstrated that the caisson can be founded on the rock and the span reduced from 1,800 ft. to 1,758 ft. The existing north pier will be demolished. The old bridge was estimated to weigh 35,000 tons, and was to have been built of carbon steel. The new bridge will be built in part of carbon steel, using nickel steel in the more important members. The weight cannot be given at present pending the receipt of tenders for the superstructure.

On Dec. 9, the Minister stated that the total cost of the Quebec bridge to the Dominion Government to date was $6,905,852.35; including subsidies paid of $374,353.33. A contract had been let to M. P. Davis for the substructure of two pneumatic caissons, two abutments, two anchor piers and one intermediate pier, which will all be required if the ultimate decision is for a cantilever bridge, at a cost of $2,448,475. If the decision is that a suspension bridge is to be built the abutment, centre pier and anchor pier will not be required; but anchorage piers for the cables will be required. No estimate for the latter had been made. There was a provision in the contract for withdrawing the items named. The cost of the two pneumatic caissons would be $2,000,800, and these will be required as planned whatever type of bridge superstructure is ultimately decided upon. Pending such decision it was not in the public interest to give any estimates of the cost of the superstructure.

The Department has issued an invitation to contractors for bridge superstructures to visit the office of the Board of Engineers in Montreal, after Jan. 3, for the purpose of receiving information to enable them to prepare bids for the superstructure of a span of 1,758 ft., having a width of 88 ft.

GRAND TRUNK PACIFIC RY.

We are advised that during 1909 the company laid 309 miles of new track distributed as follows:—from Irma, Alta., to Cloverbar, Alta., 102 miles; from Edmonton to Wolfe Creek, Alta., 122 miles, making 224 miles of main line; branch line from Melville to Balcarres, Sask., 34 miles; branch from Melville to Yorkton, Sask., 25 miles; and branch line from Tofield to Camrose, Alta., 26 miles, making a total of 85 miles of branch lines. The company has under construction 414 miles of main line and 24 miles of a branch. The contract for the main line work is being carried out under several contracts by Foley, Welch and Stewart, with headquarters at Stoney Plain, Alta., and Prince Rupert, B.C. The eastern contracts cover the 179 miles from Wolfe Creek to Tete Jaune Cache, and the western contracts cover the 235 miles from Prince Rupert to Aldermere, B.C. The branch line under contract is an extension of the Tofield-Camrose branch 24 miles southerly, the contract being let to J. D. McArthur, Winnipeg.

Replying to questions in the House of Commons recently the Minister of Railways said the cost of the Prairie section of the line, from Winnipeg to Wolfe Creek, 915 miles, to Sept. 15 had been at the rate of $33,423 a mile, and it was estimated it would cost $1,557 a mile more to complete it. On the Mountain section, from Wolfe Creek to Prince Rupert, there had been expended to Sept. 30, $7,053,863, and it was estimated that it would require $60,002,136.89 more to finish it; this amount includes $5,536,000 for interest. In reply to another question he said the Government was not paying any sum for terminals on the G.T. Pacific Ry.; it merely guaranteed the company's bonds for $13,000 a mile on the Prairie section, and to the extent of 75% of the cost of the Mountain Section.

The company has under construction an 18-stall standard round house at Edmonton, Alta. The foundations will be of concrete, the walls of brick, the frame work of timber with cast iron door columns, the roof of steel trusses in the machine shop, and the roof covering of tar and gravel. The building will be heated with hot air piping carried underground.

In a recent interview at New York, C. M. Hays, President G.T.R., stated that of the line easterly from Prince Rupert about 110 miles had been completed. The whole line was expected to be completed within three years.

Reports from Prince Rupert state that work on the second section of the line easterly has been suspended owing to the lack of supplies, principally explosives for blasting. Navigation closed at a much earlier date than was anticipated, consequently the contractors were not able to get their supplies in by steamer. An attempt will be made to get in supplies for some of the camps by land, but it is not expected that it will be possible to keep more than two or three camps going.

The Dominion Parliament is being asked to pass an act authorizing the construction of the following additional lines by the G.T. Pacific Branch Lines Co.:—From between the east limit of range 12 and the west limit of range 17 west of the third meridian, thence south-westerly and westerly to Calgary, Alta., or to the line authorized to be constructed by par. 14, clause 11, chap. 99, of the statutes of 1909; from the last mentioned line between the east limit of range 20 and the west limit of range 28 west third meridian, easterly or south-easterly to Regina, Sask.; from the last mentioned line between east limit of range 24, and west limit of range 27, west of the second meridian to Moose Jaw, Sask.; from between Artland and Wainwright, easterly and south-easterly to the line authorized to be constructed to Battleford, by par. 13, clause 11, chap. 99, of the statutes of 1909; from Regina, south-westerly and westerly to Lethbridge, Alta., on the line authorized to be constructed from Calgary to the southern boundary of Alberta, near Coutts; from the main line between Moose Lake and Tete Jaune Cache, through the valley of the Clearwater River, Bonaparte River, Seaton and Anderson lakes, Lillooet or Squamish River, to Vancouver, B.C. The company also asks power to issue bonds for $30,000 a mile for the Manitoba, Saskatchewan and Alberta extensions, and for $50,000 a mile for the extension to Vancouver. (Dec., 1909, pg. 893).

Union Station at Fort William.

The plans for the new union station to be erected at Fort William, Ont., by the C.P.R., for the joint use of the C.P.R. and the G.T. Pacific Ry., show a building 272 ft. long. The central portion will have a frontage of 105 ft., a depth of 51 ft. and a height of three stories, and basement. This three story building will be about 46 ft. high and the plan shows an attractive and imposing frontage, the principal feature in which is the arched doorway. The one story building to the right will have a frontage of 104 ft. and a depth of 34 ft., and that on the left a frontage of 63 ft. and a depth of 34 ft. The track frontage while not quite so imposing as the road frontage is equally attractive. Projecting over the platform along the main building will be a glass awning carried on steel trusses. The building will be erected on concrete and stone foundations; the superstructure of brick with stone, copings, keystones, and other finishing. Entering from the street there is a large vestibule, leading by swinging doors into a general waiting room, 102 by 34 ft., off which, to the right are the women's waiting, retiring and toilet rooms; and to the left, are men's waiting room and lavatories. To the right, at the track front is the joint ticket office, while adjoining the women's waiting room is the telegraph office. At the left hand, towards the track front are offices for the station master, parcels office, and the stairway to the upper stories, in which will be the offices for the divisional staffs. The baggage annex, 104 by 34 ft., contains a general baggage room with closed off sections for baggage checkers, storage of valises, the general public, and the baggage masters office. The annex at the other end of the building has a frontage of 63 by 34 ft., and is to be divided between the Dominion and Canadian Express Co.'s.

MAINLY ABOUT PEOPLE.

Mrs. Hayter Reed, wife of the Manager in Chief, C.P.R. Hotels, is staying in California.

J. McVicar, a railway contractor of Goderich, Ont., died at Toronto, recently, aged 69.

A. R. Creelman, K.C., General Counsel C.P.R., and his daughters have gone to Bermuda.

C. R. Hosmer, director C.P.R., accompanied by Mrs. and Miss Hosmer, is spending the winter in Italy.

A. C. Smith, C.P.R. Ticket Agent, Winnipeg, has resigned to enter the Western Rubber & Supply Co.'s service there.

George Ham, of the C.P.R. headquarters staff, Montreal, is confined to his house by illness.

Sir Alfred L. Jones, head of the Elder-Dempster Co., Liverpool, Eng., died there, Dec. 13, aged 64.

Miss Margaret Haney, daughter of M. J. Haney, contractor, Toronto, is to be married there, Jan. 6, to Dr. A. H. Spohn.

H. Grout, C.E., who was for 30 years in the old Great Western Ry.'s service, died at St. Catharines, Ont., recently, aged 78.

F. Barlow Cumberland, Vice President Niagara Navigation Co., has published a third edition of his History of the Union Jack.

A. B. Calder, General Agent, Passenger Department C.P.R., Seattle, Wash., has returned there after a holiday trip to Europe.

John Mason, who died in Stratford, Ont., recently, was father of T. J. Mason, of the Northern Pacific Ry. engineering staff at Tacoma, Wash.

C. R. Hosmer, director C.P.R., will erect an additional pavilion to the Alexandra Hospital, Montreal, to be used for the treatment of erisypelas.

Nicol Kingsmill, K.C., Toronto, Canadian solicitor Michigan Central Rd., and his daughters are spending the winter in the south of France.

Miss Lilias Ahearn, only daughter of T. Ahearn, President Ottawa Electric Ry., was married Dec. 1 to H. S. Southam, of the Ottawa Citizen.

W. Whyte, Second Vice President C.P.R., Winnipeg, presided at a dinner of the Social and Moral Reform Committee, Regina, Sask., Dec. 3.

W. R. Baker, Secretary C.P.R., and assistant to President, Montreal, was married in New York, Dec. 6, 1909, to Miss Else Dicke, of Vienna, Austria.

S. N. Parent, Chairman National Transcontinental Railway Commission, has denied a recent rumor that he was about to resign to re-enter political life.

Miss Isabel Piers, daughter of A. Piers, Manager C.P.R. Atlantic Steamship Line, Liverpool, Eng., who has been visiting relatives in Canada, has returned to England.

Lord Strathcona had a narrow escape from a serious accident in London, Eng., Dec. 22, when his automobile collided with a motor bus. Though shaken, he was not hurt.

H. M. McCallum, General Agent C.P.R. Atlantic Steamship Lines, Winnipeg, and Miss J. B. Duncan, Winnipeg, were married Dec. 27, and sailed for a six weeks' tour in Europe.

R. H. Sperling, General Manager British Columbia Electric Ry., and Mrs. Sperling, who have been visiting Great Britain on their wedding trip, have returned to Vancouver.

Sir Thomas G. Shaughnessy, President C.P.R., left Montreal, Dec. 6, for New York, whence he sailed for Europe, to spend a short holiday on the Mediterranean, and then visit London.

C. H. F. Plummer, of the Canadian Lake and Ocean Navigation Co., who recently underwent an operation for appendicitis, is progressing satisfactorily at his home in Toronto.

F. Nicholls, director Canadian Northern Ry., sailed from New York, Dec. 22, for England, on account of the illness of his son, H. G. Nicholls, who was recently operated on for appendicitis.

Capt. Jas. Reid, of the Reid Wrecking Co., who was at Port Burwell, Ont., assisting the stranded car ferry, Ashtabula, received a paralytic stroke on Dec. 16, and was removed to his home at Sarnia, Ont.

H. Ingram, locomotive foreman C.P.R., Nakusp, B.C., was cut over the eye and had his lower jaw bruised, but was not seriously hurt, in the derailment of the C.P.R. Toronto express near Chapleau, Ont., Dec. 23.

W. E. Foster, who was recently appointed Assistant Solicitor G.T.R., Montreal, was born at Belleville, Ont., June 27, 1866, and has been connected with the G.T.R. Legal Department, since Sept. 30, 1884.

Four of the C.P.R. directors have been re-elected directors of the Bank of Montreal, viz., Lord Strathcona, Sir Thos. G. Shaughnessy, C. R. Hosmer and R. B. Angus, the former being Honorary President of the Bank.

Among the provisional directors of the recently incorporated York Club, Toronto, are, E. B. Osler, M.P., and W. D. Matthews, directors C.P.R.; W. Mackenzie, President C.N.R., and Z. A. Lash, K.C., director C.N.R.

W. Whyte, Second Vice President C.P.R., was a member of a deputation which waited on the Dominion Premier, Dec. 9, to ask for a grant of $2,500,000 to the Selkirk Centennial Exposition to be held in Winnipeg 1912.

Sir H. Montague Allan and H. A. Allan, of the Allan Steamship Lines; C. M. Hays, President G.T.R., and K. W. Blackwell, Vice President Montreal St. Ry., have been re-elected directors of the Merchants' Bank of Canada.

The late B. J. Coghlin, Montreal, left $200 each to the General Hospital and to the Notre Dame Hospital, Montreal, to provide life governorships for his two sons, B. W. P. Coghlin and G. J. R. Coghlin.

The following have joined the Canadian Ticket Agents' Association recently:—J. E. Finnegan, C.O.R., Bird's Creek, Ont.; C. G. Millard, C.P.R., Coldwater, Ont.; D. Goodwin, C.O.R., Gilmour, Ont.

Mrs. S. V. Paterson, wife of N. F. Paterson, K.C., Registrar at Osgoode Hall, who died in Toronto, Dec. 16, was the mother of N. F. Paterson, Inspector of Dining and Drawing Room Cars on the Chicago and North-West Ry., Chicago, Ill.

W. Downie, General Superintendent C.P.R. Atlantic Division, was married at St. John, N.B., Dec. 8, to Miss Charlotte Wilson, second daughter of the late Wm. Wilson, M.D., Q.C., of Quebec, the bride's brother-in-law, Rev. G. A. Kuhring, officiating.

H. Sutherland, Executive Agent Canadian Northern Ry., Winnipeg, is one of the provisional directors of the Canada's International Exposition and Selkirk Centennial Corporation, which has been incorporated in Winnipeg, under the Manitoba Companies' Act.

D. B. Hanna, Third Vice President Canadian Northern Ry., was the principal speaker at a dinner given by about 150 members of the National Club, Toronto, Dec. 11, to Noel Marshall, President Standard Fuel Co., in recognition of his services as director of the Club for 12 years and President for three years.

Mrs. M. A. G. Stanley, who died in Toronto, Dec. 10, aged 71, was a daughter of Mr. Garton, who was an engineer on the construction of the Lachine, [illegible] St. John's, Que., and Rouse's Point, N.Y., and other early lines in Canada. One of her sons, E. Stanley, is a traveller for the Ontario Wind Engine and Pump Co.

W. McL. Walbank, who died in Montreal recently, was First Vice President of the Montreal Light, Heat and Power Co. He was one of the founders of the Canadian Society of Civil Engineers and was its President for 1904. He married a daughter of W. Richards, President of the Charlottetown Steam Navigation Co.

R. L. Nelles, formerly G.T.R. freight agent, Toronto, who was recently appointed General Agent Toronto Terminals, was presented with $500 in gold, a mahogany roll top desk, and a mahogany rocking chair for Mrs. Nelles, Dec. 22, by the Freight Department employes, on his retiring from the former position.

While Geo. Moore, foreman motion shop I.C.R., Moncton, N.B., was superintending the loading of some iron on a flat car recently, one of the rods, which was thrown too far, struck him on the side, knocking him on to an adjoining track, breaking one of his ribs and dislocating a hip. He is progressing favorably.

H. J. Cowie, the Liverpool, Eng., representative of the Canadian Northern Ry., recently celebrated the completion of 25 years' service in Anglo-Canadian transportation business, by entertaining at dinner the representatives of the steamship companies doing business with Canada, and the representatives of Canadian railways in Liverpool.

G. C. Hopper, for many years Paymaster of the Michigan Central Rd., retired from active service Nov. 30. He had been in the service of the company and its predecessors, since 1846, with the exception of the years of the Civil War, during which he was in the Northern army. The directors passed a resolution expressive of appreciation of his services and provided for a pension.

R. G. McNeillie, who was recently appointed acting District Passenger Agent C.P.R., Kootenay District, Nelson, B.C., was born at Lindsay, Ont., July 1, 1883, and entered railway service Oct. 1, 1901, in the C.P.R. Passenger Department, Winnipeg, since when he has held various positions there, having been for three years prior to Oct. 20, 1909, chief clerk General Passenger Agent's office, Winnipeg.

C. D. Fisher, who has been appointed Superintendent C.N.R., Dauphin, Man., was born at Athens, Ont., Aug. 24, 1867, his railway record being, 1888 to 1891, operator and agent C.P.R. at various points; 1891 to 1902, Train Dispatcher C.P.R., Moose Jaw, Sask.; 1902 to 1907, Chief Train Dispatcher C.P.R., Brandon, Man.; 1907 to 1909, Trainmaster and Chief Train Dispatcher G.T.P.R., Melville, Sask.; May 1 to Dec. 1, 1909, Chief Train Dispatcher C.N.R., Dauphin, Man.

S. J. Montgomery, who has been appointed City Freight and Passenger Agent C.N.R., Ottawa, was born at Kingston, Ont., Jan 30, 1868, and entered railway service Feb., 1885, since when he has been, to May, 1887, operator G.T.R.; May, 1887, to May, 1889, operator C.P.R., Sudbury, Ont.; May to Sept., 1889, assistant agent C.P.R. North Bay, Ont.; Sept., 1889, to Jan., 1896, assistant ticket agent C.P.R. Windsor St. station, Montreal; Jan., 1896, to June, 1903, agent C.P.R., Bedford, Que.; June, 1903, to Dec. 6, 1909, chief clerk C.P.R. ticket office, Ottawa.

T. L. Willson, President International Marine Signal Co., Ottawa, has been awarded the McCharles Prize of $1,000. This prize is the result of a bequest of the late A. McCharles, who left $10,000, the interest of which is to be from time to time awarded to some Canadian who

discovers some new and practical process for treating Canadian ores, or for any device which will lessen the dangers and loss of life in connection with the use of electricity in supplying power and light, or for any marked public distinction in scientific research in any useful practical line.

E. Curry, until 1907, Secretary Treasurer Staten Island Ferry and Railway Co., who died recently at Staten Island, N.Y., aged 67, was born near Peterboro, Ont., in 1843, and entered business life as a telegraph operator and clerk, with the G.T.R. In 1860 he entered the Montreal Telegraph Co.'s service at Cobourg, Ont., as Assistant Manager, and was later appointed Manager. He was subsequently appointed in charge of the Northwestern Telegraph Co.'s office at St. Paul, Minn., and later, Assistant Secretary and Accountant same company. He moved to Staten Island in 1884, when he organized the Staten Island Ferry and Ry. Co.

J. C. O'Donnell, who has been appointed Trainmaster C.N.R., Dauphin, Man., was born at Cobden, Ont., Dec. 17, 1881, and entered transportation service Sept. 13, 1899, since when he has been, Apr. 2, 1901, freight brakeman C.P.R.; Apr. 2, 1901, May 1, 1902, conductor C.P.R., Chapleau, Ont.; June 17 to Sept. 18, 1902, freight brakeman C.P.R., Cranbrook, B.C.; Sept. 18, 1902, to Oct. 18, 1904, conductor C.P.R., Cranbrook, B.C., and Medicine Hat. Alta.; Nov. 3, 1904, to Jan. 15, 1905, switchman and engineer N.P.R., Jamestown, N.D.; May 16 to Nov. 30, 1909, with C.N.R., at Winnipeg.

F. Conway, acting General Superintendent and General Freight and Passenger Agent Kingston and Pembroke Ry., Kingston, Ont., whose portrait appears on the first page of this issue, was born at Ernestown, Addington county, Ont., Nov. 19, 1850. He entered railway service, Aug., 1869, since when he has been, to Feb., 1882, operator at Coteau, Que., relieving and station agent G.T.R.; Feb. to May, 1882, C.P.R. Freight Department; May, 1882, to Jan., 1883, agent Midland Ry. (now part of G.T.R.), Markham, Ont.; Jan., 1883, to date, General Freight and Passenger Agent Kingston and Pembroke Ry., Kingston, Ont., and since Oct. 1, 1906, also acting General Superintendent.

X. H. Cornell, who recently resigned the position of Master of Transportation G.T.R. Western Division, Durand, Mich., to become Chief Supervisor Michigan Car Demurrage Supervising Bureau, was in G.T.R. service for over 25 years, having been consecutively operator, dispatcher, Chief Dispatcher, Train Master, and, from 1903 to Nov. 30, 1909, Master of Transportation Western Division. He was entertained to dinner, at Durand, Mich., recently, by a number of his fellow officials, presided over by W. P. Fitzsimons, G.T.R. Commissioner of Industries, Montreal, and presented with a Knights Templar charm and chain set in diamonds, a gold cigar cutter and a sum of money in $5 gold pieces.

T. W. Paterson, who has been appointed Lieutenant Governor of British Columbia, vice J. Dunsmuir, resigned, was born in Ayrshire, Scotland, in 1852, and came to Canada with his parents, who settled in Ontario. He has been closely connected with railway construction for many years, commencing work on the construction of the Toronto, Grey and Bruce Ry., now part of the C.P.R. He was also associated with the construction of the Welland Canal, and later was one of the many contractors on C.P.R. construction. He removed to British Columbia in 1885, where he continued in the same work, and also became connected with various navigation interests on the coast. He was a member of the B.C. Legislature from 1902.

Ernest Walton, who was recently appointed Travelling Car Service Agent G.T.R., Montreal, was born at London, Ont., Sept. 29, 1878, and entered G.T.R. service as messenger at Stratford, Ont. July 1, 1891, since when he has been, Mar., 1893, to July, 1896, stenographer to Master Mechanic, London; July, 1896, to May, 1899, stenographer to Superintendent, Toronto; May, 1899 to Mar., 1901, secretary to Vice President and General Manager, Central Vermont Ry., St. Albans, Vt.; Mar., 1901, to Feb., 1902, secretary and Assistant to President Southern Pacific Rd., San Francisco, Cal.; Feb., 1902, to July, 1903, secretary to Vice President and General Manager, Central Vermont Ry., St. Albans, Vt.; July, 1903, to Jan., 1905, chief clerk to Vice President and General Manager Central Vermont Ry., St. Albans, Vt.; Jan., 1905, to Sept. 30, 1909, chief clerk to Third Vice President G.T.R., Montreal.

C. H. Nicholson, who has been appointed Manager G.T.P.R. Pacific Coast Steamship Lines, Vancouver, B.C., was born at Belleville, Ont., and was educated there, at Queen's University, Kingston, Ont., and at the University of Maryland, Baltimore. He entered transportation service with the Richelieu and Ontario Navigation Co., and subsequently became purser on one of the steamers operated by C. F. Gildersleeve, on the Bay of Quinte and River St. Lawrence. He remained as purser for three years, and became captain, having charge successively of the Hero, Hastings, Norseman and North King. When C. F. Gildersleeve organized the Lake Ontario and Bay of Quinte Steamboat Co., he became General Freight Agent, and until 1903 represented its interests in the U.S., with headquarters at Rochester, N.Y. During the season of 1903 he was Manager of Transportation Muskoka Lakes Navigation and Hotel Co. at Gravenhurst, and from Feb., 1904, to Nov. 30, 1909, was Traffic Manager Northern Navigation Co., Sarnia, Ont.

Dominion Railway Subsidy Contracts.

The Dominion Government has entered into agreements with the following companies, providing the customary aid, for the construction of the following lines:—

MANITOULIN AND NORTH SHORE RY.—Nov. 23. From Stanley between Little Current and Sudbury, westerly to the Algoma Central and Hudson Bay Ry., not exceeding 100 miles; from Little Current, crossing the C.P.R. at Stanley, to Sudbury, not exceeding 64 miles; from Sudbury northerly, not exceeding 30 miles, in all, not exceeding 194 miles.

QUEBEC CENTRAL RY.—Dec. 7. For extension of line from St. George to or towards St. Justine, Que., 30 miles.

Passenger Meetings at Buffalo.—Several passenger associations will meet at the Lafayette Hotel, Buffalo, N.Y., on Jan. 18, 19 and 20. The Niagara Frontier Summer Rate Committee's rate representatives will meet on Jan. 18 and 19 at 10 a.m. to arrange details as far as possible for submission to the general meeting on Jan. 20 at 11 a.m. The Great Lakes and St. Lawrence River Rate Committee will meet immediately after the adjournment of the Niagara Frontier Summer Rate Committee's meeting.

The Engineers' Club of Toronto held its annual meeting Dec. 16. Reports of the various committees and officers showed that the club was in a satisfactory condition. The following officers were elected for the current year:—Hon. President, J. Galbraith, LL.D.; President, Willis Chipman; First Vice President, C. M. Canniff; Second Vice President, Prof. R. W. Angus; directors, C. R. Young, W. V. Reynolds, W. A. Hare; Treasurer, L. J. Street; Secretary, R. B. Wolsey.

Speech by Sir Thos. G. Shaughnessy.

At the annual dinner of the Canadian Manufacturers' Association, Montreal branch, Dec. 2, Sir Thos. G. Shaughnessy, President C.P.R., said:—"I was reminded to-night that I was not entirely unqualified to be a member of the Manufacturers' Association, because I supervise in a general way one of the largest manufacturing establishments. Now, if there were no tariffs we could import our locomotives from the U.S. and save the expense of the Angus shops, but the 18,000 cars and locomotives built at a cost of $20,000,000, would have been built elsewhere, and the $20,000,000 would have gone out of the country and been lost forever to the people of this country. The five or six thousand men representing a population of 20,000 people for whom that work is furnishing employment, would not have been employed in this country, and you would have lost that population, and we would have lost the passengers and revenue resulting. When the C.P.R. was first opened for traffic in 1886, we had about 3,000 miles of railroad, which have since grown to about 10,000 miles in Canada, and the other railways of Canada have been progressing in something like the same proportion. We have rather too many railways for our population, because with our sparse population, there is not the requisite traffic, but notwithstanding this, I can say that the people of Canada are enjoying rates as low as any country in the world, and I can say that the men engaged are receiving wages equal to those in the U.S., and from 50 to 200% more than the wages in European countries. In a country like Canada, a railway has many functions to perform besides the mere carrying of passengers and freight, collection of revenue, and distribution of dividends when anything is left over for that purpose. I think at this stage we may look forward to the day when, with perfect lines of transportation, with our fields under cultivation, with our forests being worked intelligently, scientifically, with our minerals yielding yearly to the national wealth, with our manufactures, with our waterways deepened and improved, with our ports equipped, with an increased fleet on the Pacific Ocean, and faster ships on the Atlantic, that Canada may occupy the foremost place among the intelligent countries of the world, because while this work of progress is going on, education is not neglected and literature and the arts are encouraged. Canada a great nation—a powerful influence in the councils of the British people—unfailing in her devotion, in her fealty to the magnificent empire, with the protection that grew while she was growing—a nation self-reliant, self-confident, a nation honored and respected by her fellow-dominions in the Empire, a most potent factor in Imperial affairs."

The Central Railway and Engineering Club of Canada at its annual meeting in Toronto Dec. 21 elected the following officers:—President, J. Duguid, general foreman G.T.R. shops; First Vice President, G. Baldwin, general yardmaster Canada Foundry Co.; Second Vice President, J. Bannon, chief engineer city hall building; Executive Committee, C. A. Jefferis, W. R. McRae, O. A. Cole, A. M. Wickens, A. E. Till, A. Taylor, Toronto; R. T. Patterson, Stratford.

The Great Western Construction and Land Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $100,000 and office at Sudbury, Ont., to construct public works of all kinds, including railways, tramways, docks, harbors, piers, wharves, canals, etc. The provisional directors are: D. L. McKinnon, C. V. Price, Sudbury; W. E. Brown, C. W. Patton and J. W. Gamble, Ottawa.

THE DRAKE & WIERS CO., - - CLEVELAND, OHIO

C.P.R Betterments, Construction, Etc.

Entrance to Halifax.—H. M. Killaly, of the C.P.R. engineering staff, Montreal, arrived in Halifax, N.S., Nov. 29. He made an inspection of the waterfront at Halifax and Dartmouth, and then drove out to Bedford and Wellington, from Dartmouth. As soon as he had completed his survey work at Halifax, he went on to Amherst and other points on the suggested route for a line to connect up the C.P.R. with Halifax. At a public meeting in Amherst, Dec. 2, a number of prominent business men endorsed the plan, which so far is for the construction of a line to Harvey, N.B. No suggestions were made as to the route beyond this point. Letters were received at the meeting from Springhill and Parrsboro, endorsing the proposal.

St. Maurice Valley Ry.—Application is being made to the Dominion Parliament to extend for five years the time within which this company may complete the railway authorized to be constructed by sec. 8, chap. 123, of the statutes of 1904, as amended by sec. 1, chap. 156, of the statutes of 1905. Part of the line from Three Rivers northerly to near Shawinigan Falls has been completed.

Subway at St. Louis, Que.—Tenders were received to Dec. 6 by the town of St. Louis, Que., for the construction of a tunnel under the C.P.R. tracks on St. Louis Boulevard. This subway is being constructed at a total cost of about $200,000, toward which the Board of Railway Commissioners has ordered the Montreal St. Ry. to contribute $15,000.

Windsor St.—Place Viger Stations.—The Montreal Witness states that the attention of C.P.R. officials has again been turned to the old plan for connecting the Windsor and the Place Viger stations in Montreal, by a tunnel. The distance between these two stations is 1.25 miles, but freight trains run between them have to go round, 18 miles.

St. Lawrence Hall.—D. McNicoll, First Vice President, stated, Dec. 4, that the company's architects have been engaged for some time in preparing plans for the erection of a new building on the site of St. Lawrence Hall, Montreal, which the company purchased some years ago. Work will, it is said, be started in the spring, but it has not yet been decided whether it will be purely an office building, or whether arrangements would be made for the continuance of the hotel business there.

Ottawa, Northern and Western Ry.—A bill granting a further extension of time for the construction of the lines of railway authorized, has been approved by the Railway Committee of the House of Commons. The particular lines referred to in the bill, are those from Waltham to Grand Lake, from Waltham to Ottawa River, and from Shawville to Pembroke. A clause was added that 15% of the capital stock must be expended within two years.

Campbellford, Lake Ontario and Western Ry.—The Dominion Parliament is being asked to grant an extension of time within which this company may commence and complete its projected railway. When the bill came before the Railway Committee of the House of Commons, Dec. 9, it was stated that an extension of time had been granted in 1908 on the promise that construction would be gone on with immediately. On the statement of R. L. Fowke, M.P., who had charge of the bill, that he had been assured by the C.P.R. President that the line would undoubtedly be constructed, it was decided to report the bill.

South Ontario Pacific Ry.—The Railway Committee of the House of Commons, Dec. 9, approved a bill granting a further extension of time for the construction of the railway and bridge authorized by the Company's act of incorporation, chap. 85 of the statutes of 1887.

Overhead Bridge, Guelph.—A proposition has been made by the C.P.R. to the city council of Guelph, Ont., to construct an overhead bridge over the line at the Eramosa road and Heffernan St. crossings, if the city will undertake the responsibility of protecting Allan's crossing.

West Ontario Pacific Ry.—The Dominion Parliament is being asked to grant the company an extension of time for the construction of the railway which the company was authorized by chap. 87 of the statutes of 1885, to construct.

St. Marys and Western Ontario Ry.—The by-law granting a bonus of $20,000 to the St. M. and W.O.R. for the purpose of constructing a line through the township to Exeter, Ont., was carried by the taxpayers of Blanchard tp., Nov. 19. It is reported that a protest will be entered against the vote, as was done on previous occasions when the by-law was submitted.

Roundhouse at London, Ont.—When Sir Thos. Shaughnessy visited London, Ont., recently, he was reported to have said that seven new stalls would be added to the roundhouse in the yards there, and that a number of other improvements would be made. It is now reported that plans are in preparation for the erection of a new roundhouse of much larger dimensions than the present one, and that the latter will be taken down in the spring.

We are officially advised that Sir Thomas did not make any announcement respecting the London roundhouse and that no proposition was submitted to him.

Walkerton and Lucknow Ry.—Application is being made to the Dominion Parliament to grant an extension of time within which the company may construct the railway authorized by chap. 138 of the statutes of 1904.

Western Lines Construction.—We are advised that track was laid on the following extensions during 1909:—Extension of the Mowbray branch, from Mowbray to Windygates, Man., 7.00 miles, making the total length of the branch from La Riviere, 33 miles. Extension of the Broomhill branch from Broomhill to Tilton, Man., 8.4 miles. Completion of the Pheasant Hills branch from Wynyard to Lanigan Jct., Sask., 40.7 miles. Completion of the Saskatoon-Lacombe line, track being laid from Wilkie, Sask., to Hardisty, Alta., 136.6 miles. Extension from Weyburn to Forward, Sask., 26.00 miles. Lethbridge cut-off, Alta., 20.4 miles. Grade revision between Hector and Field, B.C., new track laid, 8.2 miles. The lines upon which construction has been done but upon which track has not been laid are:—Komarno to Icelandic River, Man., 29.2 miles; Virden to McAuley, Man., 14. miles; Regina to Craven, Sask., 23 miles; Langdon to Acme, Alta., 38 miles; Kipp to Carmanguay, Alta., 28 miles; Stettler to Caslor, Alta., 35 miles.

Manitoba and North Western Ry.—Application is being made to the Dominion Parliament to extend the time for the construction and completion of the branch lines authorized by chap. 106 of the statutes of 1906, and also authorizing the construction of additional lines, as follows:—From near Birtle, to Hamiota, Man.; and from Russell, Man., northerly or north-easterly for 150 miles. The company asks power to issue bonds for $25,000 a mile in respect of these branches.

Birtle to Brandon, Man.—We understand that the question of the construction of a line from Birtle, via Hamiota to Brandon, Man., is under consideration, but that nothing definite has been done in the matter.

Calgary and Edmonton Ry.—The Dominion Parliament is being asked to extend the time for the construction and completion of certain of the authorized lines, and also authorizing the construction of an extension of the Lacombe branch to Outlook, Sask., 200 miles.

Strathcona-Edmonton Bridge.—In connection with the high level bridge which the C.P.R. proposes to build across the North Saskatchewan River between Strathcona and Edmonton so as to give the Calgary and Edmonton Ry. entrance to the latter city, the Edmonton ratepayers have sanctioned an agreement made between the city and the company with reference to the entrance to the city over certain streets and lanes. It is proposed that the Dominion and Alberta Governments, the city of Edmonton and Strathcona municipality jointly defray the actual cost of increasing the rise of the bridge to accommodate vehicular and electric railway traffic. Till this matter has been decided and financial arrangements made, the bridge plant will not be perfected.

Hotel at Nelson, B.C.—We are advised that a proposal is under consideration for the erection of an additional small tourist hotel in the Nelson, B.C., district, but that nothing has been decided, either as to the locality in which the hotel will be erected, or as to when it will be built.

Columbia and Western Ry.—Application is being made to the Dominion Parliament to grant an extension of time for the construction and completion of the lines of railway which the company was authorized to construct by sec. 16, chap. 54, of the British Columbia statutes of 1896. The Dominion Parliament confirmed the charter in 1898, and has granted extensions of time for construction from time to time.

Electrification of Boundary Lines.—We are officially informed that the report that the recent trip of G. J. Bury, General Manager Western Lines, through the Boundary District, B.C., was with the object of passing upon plans for the substitution of electricity for steam on the C.P.R. lines in that territory, is entirely without foundation. A report that the lines in that district are to be operated by electricity has been current for several years, the most recent rumor being that "the reports of engineers detailed by the C.P.R. to investigate as to the advisability of electrifying their branch lines here (Phoenix, B.C.) have been so satisfactory that the project is seriously considered. The proposed initial electrification is to the Granby smelter." It was then added that G. J. Bury, was in the district to finally pass upon the project. When the reports were first made we were informed that the matter had been given some consideration by the company, but that the use of electricity for the haulage of trains had not reached that stage of development which would justify its adoption.

Nicola, Kamloops and Similkameen Ry.—The Dominion Parliament is being asked to grant an extension of time within which the company may commence and complete the construction of the lines authorized by sec. 3, chap. 47 of the British Columbia statutes of 1891, and by sec. 1, chap. 134 of the Dominion statutes of 1905.

Esquimalt and Nanaimo Ry.—We are advised that track has been laid from Wellington to Parksville, B.C., 18 miles, upon the extension of the line to Alberin. The remaining 40 miles from Parksville to Alberin, is under construction, the contract for the first 12 miles from Parksville, having been let to Dixon and Moore, and that for the remaining 28 miles to Jense, McDonnell and Timothy. The company has under consideration

the construction of a branch line from Parksville to Comox, 45 miles. H. J. Cambie, Vancouver, B.C., is Chief Engineer in charge of construction.

The Dominion Parliament is being asked to extend the time within which the company may commence the construction of the extension of its main line to Comox, and branches which it was authorized to construct by chap. 14 of the British Columbia statutes of 1884; and the railway and branches which it was authorized to construct by sec. 2, chap. 92 of the Dominion statutes of 1906.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—We are advised that the company has laid track on its extension into Duluth, between Superior and Duluth, and Moose Lake, 49.2 miles, and 45 miles westerly on the Moose Lake extension. This is the line which the company has under construction from Brooton to Duluth, upon which a train service has been in operation for some time from Brooton to Onamia, 86.5 miles. From Onamia to Moose Lake the distance is 53.97 miles, and the track laid as reported leaves a further distance of nine miles to complete the line.

The company has also let a contract to Foley, Welch and Stewart, St. Paul, Minn., for the construction of a line from Moose Lake, Minn., to Plummer, Wis., on the Wisconsin Central Rd., a distance of 180 miles.

Duluth, South Shore and Atlantic Ry. —During 1909 the company laid 7.1 miles of new track, as follows:—Wellsburg to Woods, Mich., 2.2 miles; Halfway to Davis mine at Megannce, Mich., 2.1 miles; and Halfway to Valentine mine, Mich., 2.8 miles. On the Mineral Range Rd., owned by the D., S. S. and A. Ry., 2.87 miles of mining spur tracks were laid during the year, and surveys were made for another spur track of a mile to be constructed during 1910. (Dec., 1909, pg. 889).

A Railway to Hudson Bay.

A resolution was adopted unanimously by the Saskatchewan Legislature Dec. 4, and will be forwarded to the Governor-General in council, urging the necessity and importance of the immediate construction of a railway to Hudson Bay, and requesting the Government to make provision at the present session of Parliament for its actual construction.

The report of the Department of Railways for the year ended March 31, 1909, recently presented to Parliament, contains the full progress report of the special survey of the route, ordered last session of Parliament. On Dec. 13, there was laid before Parliament a further report from J. Armstrong, Chief Engineer in charge of the surveys. The Deputy Minister in introducing this report says he has amended Mr. Armstrong's estimates as to the cost of construction by substituting 80 lb. steel for 60 lb. steel, and by adding estimates for roundhouses, shops, buildings, elevators and yard facilities at terminals, and harbour work of which Mr. Armstrong did not take cognizance. The estimated cost of the Nelson line is placed at $4,085,800; of station buildings, two 4,000,000 bush. elevators, yards at terminals, etc., at $7,440,540, and of harbour works at $5,000,000, a total of $16,426,340. The cost of the Churchill line is placed at $4,676,520; of station buildings, elevators, etc., $7,757,152, and harbor works, $6,675,000, a total of $19,108,672. These estimates provide for facilities on a scale that will admit of the maximum capacity for a single track, passing tracks and telegraph stations every five miles, water stations every 15 miles, and roundhouse and shop accommodation to care for 32 freight trains and one express train every 24 hours. Piers and terminals have been placed at Port Nelson, as from the information available there is no room for doubt that it is much the better harbor. The line is also 67 miles shorter; the country through which it runs is better, and the possibility of local business is altogether with the Nelson route. There is also a probability that a fair proportion of the route is available for settlement, whereas on the Fort Churchill route there is no such probability beyond Split Lake, where the lines separate. It is of the utmost importance that a hydrographic survey should be made of Hudson Strait and Bay, so that the position and cost of the necessary lighthouses may be ascertained. The course from Mansfield Island to Port Nelson requires to be accurately charted; it would be well also to secure information as to the harbors on the Labrador coast, and the special feature of Davis Strait. A good seagoing steamship is required at Nelson for a year or two to study the bay itself, its tides, currents, etc. The sea route from Port Nelson will pass to the north of Ireland, the distance to Liverpool being 3,200 miles, against 3,007 from Montreal to Liverpool.

The crux of the matter is, says the Deputy Minister, what business can be handled by such a railway and of what value is it likely to be to the country tributary to it. He estimates that with the exception of the southeasterly corner of Saskatchewan, the other portions of the province and the whole area of Alberta are tributary to The Pas. Assuming that the line is to be worked for all that is possible to be done. The grades are 0.4 or 21 ft. to the mile. All trains are fully loaded and composed of 40 ton pay load cars; and locomotives of the Mallet articulated compound type are to be used with a hauling power of at least 4,000 tons of pay load. Thirty-two trains per day is about the capacity of a single track—better than this has been done, but it is enough. Sixteen trains loaded equals 64,000 tons per day—making allowance for accidents and delays—say for 30 working days would give 1,930,000 tons, or 64,000,000 bushels of wheat. It is apparent that at least nine per day would need to be loaded, or say 135 to 140, to do the business—allowing two trips to each ship. Any additional business taken to the bay would have to be stored until the following August—nine months.

Other sources of traffic possible to the line are: the exportation of cattle; the usual package freight to and from Europe; and the possibility of developing a reasonably large import coal trade. It is practicable to lay down coal at Port Nelson from Nova Scotia at a cost not exceeding $3.75 a ton. The rail haul say to Saskatoon—as an average point of distribution—need not exceed $4 per ton, making the cost of the coal $7.75. Equipment for 32 trains per day of the character outlined will cost about $9,000,000; and means the providing of 108 train crews, 150 telegraph operators, 54 gangs of section men, shopmen, round house men, superintendents, train and yard masters—the greater number of whom are not likely to be required once the rush of the season is over. It appears, therefore, to be a difficult proposition for independent operation, and would seem to require to be worked by one of the large corporations, so that the men and rolling stock could be utilized the whole year. There is in Canada only one locomotive of the type described, and by using the largest freight engines now operated on western roads the train load would be reduced one-half—and the capacity of the road in like measure. It is apparent, however, that under any circumstances grain may be placed at the Hudson Bay on board ship as cheaply as at Fort William, hence the saving possible is 5c. per bushel, assuming that insurance and freight rates are equal at Montreal and Port Nelson. Capt. Bernier is of the opinion that it is unsafe to be caught in the vicinity of the Fox channel with a steamship of ordinary construction, any later than Oct. 15.

Railway Y. M. C. A. at White River.

The Y.M.C.A. building erected at White River, Ont., by the C.P.R., at a cost of about $27,000, was opened Dec. 11, H. B. Stevens, Chief Dispatcher, presiding, and W. B. Way, Assistant Superintendent, representing the company. The building is a frame structure with concrete foundation, providing sleeping accommodation for 50 men, with dining room, bowling alleys, baths, reading and social rooms. Possibly not one of the 250 railway Y.M.C.A. buildings on this continent has been provided to meet so great a need as this one. Its complete isolation, its destitution of social advantages, and its climate put this division point in a class by itself. The railway Y.M.C.A. buildings at Kenora, Schreiber, White River and Chapleau, none of which existed two years ago, form a remarkable group, offering as they do comfort and cheer to those who man the trains running through the wilds of New Ontario. In erecting these splendid buildings for the comfort and uplift of its employes, the C.P.R. has set a worthy example for other corporations employing large numbers of men. Letters endorsing the work achieved by the various associations already organized were read from D. McNicoll, Vice President; H. H. Vaughan, Assistant to the Vice President; F. P. Gutelius, General Superintendent Lake Superior Division, and A. Price, General Superintendent Western Division; and also from W. Whyte, Second Vice President, who said:—"The Y.M.C.A.'s have demonstrated that they are a great power and influence for uplifting humanity, and not only railway companies, but other corporations, are rapidly coming to realize that the building, operation, and maintenance of edifices for the associations is a good investment. The Railway Y.M.C.A. building at Kenora, which I had the pleasure of handing over to the management of the Y.M.C.A. in March last, is proving a great success as is shown by the fact that it has been found necessary to finish the upper story of the building as early as possible, and I had expected the accommodation provided would be quite sufficient for some time to come."

The Eastern Canadian Passenger Association has decided, as last year, not to make any reduced rates for the Montreal winter carnival, as it considers such affairs to be injurious to Canada's best interests.

At the recent meeting of the Canadian Freight Association Western Lines, and the Canadian Car Service Bureau Western Lines, held in Winnipeg, the following officers and committees were elected for the current year: President, G. Stephen, General Freight Agent C.N.R.; Vice President, R. E. Larmour, General Freight Agent C.P.R.; Executive Committee and Audit Board, W. B. Lanigan, Assistant Freight Traffic Manager C.P.R.; G. H. Shaw, Freight Traffic Manager C.N.R.; Secretary-Treasurer, Manager and Chairman of Committees, H. R. Patriarche, 101 Bon Accord Bldg., Winnipeg. In addition to the foregoing officers, which are the same for each association, the first association named has a Freight Inspection Committee, consisting of G. Stephen and R. E. Larmour, and the latter association a Car Service Committee, consisting of D. C. Coleman, Superintendent Car Service C.P.R., and J. P. Driscoll, Superintendent Car Service C.N.R.

H & E Patent Ball-Bearing Lifting Jacks

For Railway and Bridge Work, Contractors' and Builders' Use

Foot-Lift

For Convenience, Speed and General Efficiency these Jacks are Unequalled. Are fully guaranteed. Being made of the best grades of Malleable Iron and Steel are strong and durable. Working parts entirely protected insure long wearing qualities. Sizes from 8 to 50 tons now complete. Send for prices and discounts.

CAR CASTINGS, FORGINGS AND REPAIR PARTS

The Longest Continuous Double Track Railway in the World under One Management and the only Double Track Line Between Montreal, Toronto, Niagara Falls, Detroit and Chicago.

GRAND TRUNK RAILWAY SYSTEM

Finest Roadbed in Canada. Modern and Luxurious Trains. Courteous Employees. Beautiful Scenery. The Best of Everything on this Popular Route.

4 FAST TRAINS, TWO EXPRESS AND TWO LIMITED
BETWEEN MONTREAL AND TORONTO, EACH WAY, DAILY
THROUGH TRAINS between BOSTON (via Boston & Maine R.R. and Cent. Vermont Ry.) MONTREAL, TORONTO and CHICAGO.
THROUGH TRAINS between NEW YORK, TORONTO and CHICAGO via Lehigh Valley R.R. and Niagara Falls.
Dining and Parlor-Library-Cafe Cars on Day Trains. Pullman Steeping Cars on Night Trains.

THE "INTERNATIONAL LIMITED"
The "Railway Greyhound of Canada," the finest and fastest train in the Dominion, runs every day in the year between Montreal and Chicago.

The Lines of this Great System reach all the Principal Cities and Towns in Quebec and Ontario.
W. E. DAVIS, Passenger Traffic Manager, MONTREAL. G. W. VAUX, Gen. Passenger and Ticket Agent, MONTREAL.
G. T. BELL, Asst. Pass. Traffic Manager, MONTREAL.

Canadian Northern Ry. Construction, Etc.

Canadian Northern Ontario Ry.—The line from Hawkesbury via Rockland, to Ottawa, 59 miles, was inspected and passed for the operation of freight and passenger trains by the inspecting engineers of the Department of Railways, Dec. 3. A through train service from Quebec and Montreal to Ottawa was put in operation by the Canadian Northern Quebec Ry., Dec. 5. As a result of the refusal of the Board of Railway Commissioners to confirm an agreement with the Ottawa City Council, by which the line would cross Hurdman's Road at rail level, the company has had to erect a temporary station at Gladstone Ave. It is intended to construct a subway instead of a level crossing, and when this is done the line will connect with one of the existing lines near the University oval and run into the Central station.

In connection with the securing of the right of way for the line from Toronto to Ottawa, of which the section from Toronto to Trenton is under contract, the C.N.O. Ry. paid $17,800 into court, and has to pay $30,000 more into court, to enable it to enter into possession of certain lands required for its right of way in the vicinity of Toronto, the value of which is being settled by arbitration. Construction is proceeding with considerable rapidity. It is reported that the fencing along nearly the whole of the right-of-way has been put up. Between Trenton and Brighton, over four miles of grading has been completed, and considerable stretches have also been graded in the vicinity of Colborne, and other points between Cobourg and the Don Valley. An effort is being made by the residents of the lake front towns to induce the company to change the route of the line easterly from Trenton, so that it will take in all the lake shore territory, striking the C.N. Quebec line at Hawkesbury, from which point the company has already a connection with Ottawa. W. Mackenzie, President C.N.R., on his return to Toronto from Halifax, N.S., recently was waited upon by a deputation representative of the lake front towns between Toronto and Prescott, to urge consideration of the matter.

D. D. Mann, Vice-President C.N.R., said in an interview in Toronto, Dec. 16:

"We will erect repair shops and a roundhouse in Toronto next summer. Should we be given the right of entry, Ashbridge's Marsh will probably be the site on which they will be built. When our eastern and western lines are coupled up we will have to have very extensive shops in Toronto. And as our eastern line is being built under a year's contract, and should be finished, as far as Trenton next fall, we will have to start constructing these shops in the summer. They will be large enough for the requirements of our two lines running out of Toronto, and will be so arranged that extensions can be made just as fast as the exigencies of business demand. The suggestion has been made that Ashbridge's Marsh would be an excellent site, and should the city grant us the right to construct a line down there the district may be adopted." In connection with this matter the company's application for a right-of-way on the east bank of the Don into the Ashbridge Bay district have been left over with the Toronto City Council of 1910 to deal with.

Plans were filed Dec. 8, showing a proposed plan of entry of the company's line from Toronto to Buffalo, into Hamilton. The plans show a route over the C.P.R. and the Toronto, Hamilton and Buffalo Ry. A Hamilton report says that the C.P.R. objects to the plan on the ground that the Hunter St. tunnel is not calculated to accommodate more than the present traffic.

Engineering parties are in the field in the vicinity of the Nipigon River and Lake in connection with the surveys for the line to connect the C.N.O. Ry. near Sudbury, with the C.N.R. at Port Arthur. One party is reported to be at work between Nipigon River and Long Lake, and another between Nipigon River and Black Sturgeon River. It is expected that the new line will cross the Nipigon River at Deschamps, a short distance north of the C.P.R.

Canadian Northern Ry.—Application is being made to the Dominion Parliament to authorize the construction of the following lines of railway: from Dundee, northerly and easterly, to the Winnipeg River; Portage la Prairie, southerly and easterly, to tp. 2, r. 7, e.p.m.; Hartney, westerly, to tp. 5, r. 7, w. 2, m.; Moose Jaw, southerly and easterly, to Bienfait with a branch from near Estevan to Roche Percee. Between Davidson and Disley on the Qu'Appelle, Long Lake and Saskatchewan Rd., westerly and northwesterly, to the Saskatoon-Calgary line; Lashburn, westerly, to between Camrose and Edmonton; Sasktoon-Calgary line near tp. 28, r. 6, w. 4 m. to Rocky Mountain House; Saskatoon-Calgary near the crossing of Red Deer River, north-westerly, through or near Innisfail and Rocky Mountain House to head waters of Brazeau and McLeod Rivers and to Yellowhead Pass; Winnipegosis, southerly, to constructed line near south end of Lake Manitoba; from authorized line between Prince Albert and Battleford near tp. 49, r. 3, w. 3 m., northwesterly and northerly to Great Slave Lake; from authorized line east of Lake Manitoba, westerly, via the Narrows to its constructed line between Grandview and Roblin. The company asks power to issue bonds to the amount of $25,000 in addition to $5,000 a mile for the specific purposes mentioned in sec. 4, chap. 50, of the statutes of 1902, and excepting that in respect of any of the lines constructed west of the easterly limit of the foothills of the Rocky Mountains, bonds to the value of $35,000 a mile may be issued. The decision of the Minister of Railways shall be final as to the limit of the easterly limit of the foothills of the Rocky Mountains.

The bill also provides for an extension of time for the construction of the following lines authorized by sec. 2, chap. 92 of the statutes of 1908:—from Strathcona, southerly to Calgary, Alta.; from Regina, south-westerly to the International boundary between ranges one and four west of the third meridian, Sask.; from near Russell, on the Rossburn branch, westerly via Yorkton, to near Goose Lake, Sask.; from 10 miles north of the company's line between Winnipeg and Ste. Anne, Man., generally southerly to the boundary of Manitoba; from near Battleford, Sask., generally westerly to the Brazeau River, Alta.; from near Regina northerly to Humboldt, thence north-easterly down the valley of the Carrot River to a point near Pas Mission on the Saskatchewan River; and from between Humboldt and the South Saskatchewan River, north-easterly to the crossing of the South Saskatchewan River near the company's Prince Albert branch, and the bill further provides for further extending the time for the construction of the following lines:—from Prince Albert, Sask., to Edmonton, Alta.; from Swan River, Man., westerly to the Saskatchewan River, (partially constructed); from the Morden and North-Western Ry. between Neepawa and the westerly boundary of Manitoba, thence northerly to the line between Grandview and Battleford, Sask.; from near Regina, north-westerly and westerly to the Red Deer River, Alta., with a branch from west of the Saskatchewan River northerly to tp. 45, r. 4, west of the third meridian; the railway authorized to be constructed by the Winnipeg and Hudson Bay Ry. and Steamship Co. (partly constructed) from Winnipeg to Fort Nelson or Fort Churchill or some other point on Hudson Bay; the line commencing at the end of the 40 miles constructed by the Winnipeg and Great Northern Ry., thence to St. Laurent, or Oak Point, on Lake Manitoba, and thence generally northerly to the Grand Rapids on the Saskatchewan River, (partially constructed); the line authorized to be constructed from near the Narrows of Lake Winnipeg, Man., to near Battleford, Sask., thence to Edmonton, Alta., and on to the Pacific Coast, near the Skeena River, by way of Pine River Pass, or other feasible pass; and the partially constructed line from McCreary station, Man., passing through Cartwright to the southern boundary of the province.

W. Mackenzie, President, stated in a recent interview in Toronto, that the company had completed over 400 miles of track during 1909, and had finished the surveying of a route from Edmonton, Alta., to Vancouver, B.C. As soon as the necessary sanction had been given by the British Columbia Legislature to the agreement made with the Government, construction work would be proceeded with on the line to Vancouver.

The Supreme Court of Ottawa gave judgment Dec. 13, in the case in which the Canadian Northern Ry. appealed against an order of the Board of Railway Commissioners requiring it to fence certain portions of its railway. The court dismissed the appeal as to enclosed lands, but allowed it so far as unenclosed lands are concerned.

Edmonton and Slave Lake Ry.—The Dominion Parliament is being asked to authorize the company to amalgamate with the C.N. Ry. Co.

Yellow Head Pass to Vancouver.—We are officially advised that during last summer and fall an instrumental survey was made of the North Thompson River valley from Kamloops to Cranberry Lake, and a location projected thereon has been approved for 88 miles north from Kamloops. This survey was made by C. F. Hanington and Jno. Irvine, in charge of parties working from Cranberry Lake south and from Kamloops north, respectively. These two parties are now working, Hanington from Cranberry Lake easterly towards Yellow Head Pass, Irvine from Kamloops westerly, down the South Thompson. A survey of the Fraser River valley was also made during the summer from seven miles up the South Thompson above Lytton, westerly, for 37 miles, by J. V. Nimmo, to a junction with a party in charge of W. K. Gwyer, working easterly up from Yale, which party has since been running the line from Yale westerly towards New Westminster, where they were expected about the end of 1909. Of this work, 15 miles from Yale up the Fraser River and 5 miles from Lytton down, have been approved and plans for the remainder are now before the Government for approval or in course of preparation. T. H. White is the chief engineer in charge of the surveys.

Duluth, Winnipeg and Pacific Ry.—A U.S. press report states that contracts are about to be let for the construction of an extension of the Duluth, Rainy Lake and Winnipeg Ry., from near Virginia to Duluth, Minn., about 70 miles. Surveys have been completed for the projected line, the only point in regard to which there is any uncertainty is the entry into Duluth. (Dec., 1909, pg. 895.)

The brakeman was a novice, and on his first run there was a stiff grade to mount, on which the engineer always had more or less trouble, but this time he came near sticking. At the station at the top of the grade, the engineer saw the new brakeman, and with a sigh, said: "I tell you what, my lad, we had a job to get up there, didn't we?" "We certainly did," replied the brakeman, "and if I hadn't put the brake on, we'd have slipped back."

Railway Rolling Stock Notes.

The Michigan Central Rd. has ordered four Pacific type and four switching locomotives from the Montreal Locomotive Works.

The Silliker Car Co., Halifax, N.S., has recently received orders for one passenger and 10 flat cars from the Anglo-Newfoundland Development Co.; and 100 box cars from the C.N.R.

The d'Israeli Asbestos Co., which has a short railway connecting its asbestos mines with the works at d'Israeli, Que., is in the market for a locomotive, some cars and other equipment.

The Northern New Brunswick & Seaboard Ry. will probably be in the market for some locomotives, ore and other cars in the near future. G. E. Drummond, 28 Victoria Square, Montreal, is President.

The Canadian Northern Ontario Ry., in view of the increasing development of the Moose Mountain and Mond Nickle Co.'s properties, has ordered 100 steel ore cars from the Canadian Car & Foundry Co., Montreal.

The C.P.R., between Nov. 15 and Dec. 9, received the following additions to rolling stock: 90 box cars, one flanger, four vans, two store supply cars and five M-4 locomotives from its Angus shops, Montreal, and one 75-ton wrecking crane from the U.S.

The Diamond Ry. and Coal Co. operating in Alberta owns one locomotive, one passenger coach and two flat cars. It uses C.P.R. cars for shipping coal from its Diamond City mines. It does not expect to be in the market for any more rolling stock for some time.

The G.T.P.R. has received the following additions to rolling stock, between Nov. 2 and Dec. 16, 1909: five parlor-cafe cars, nos. 3,900 to 3,904, from the Canada Car Co., Montreal; six baggage cars, nos. 412 to 417, from Rhodes, Curry Co., Amherst, N.S.; and five snow plows, nos. 395,003 to 395,007, from the U.S.

The C.P.R., between Nov. 15 and Dec. 9, placed orders for rolling stock as follows: 18 baggage and express cars, two mail and express cars, 120 box cars, 34 flat cars and three vans at its Angus shops, Montreal; 1,000 40-ton steel frame box cars from the Canadian Car and Foundry Co., Montreal, and one 75-ton wrecking crane in the U.S.

The Intercolonial Ry. has ordered a Pacific type locomotive from the Montreal Locomotive Works, of which the following are the chief particulars:—

Weight in working order	198,500 lbs.
Weight on drivers	133,500 lbs.
Weight on engine truck	30,700 lbs.
Weight on trailer	34,300 lbs.
Wheel base, driving	12' 7"
Wheel base, engine	31' 6"
Wheel base, engine and tender	57' 11"
Cylinders	21" by 28"
Driving wheels, diar.	72"
Boiler, type	Extended wagon top.
Boiler, diar.	63½"
Boiler pressure	200 lbs.
Tubes, no. and diar.	232—2¼"
Tubes, length	19' 0"
Brakes	Westinghouse American.
Capacity, water	5,000 imp. gals.
Capacity, coal	10 tons.

Following are the chief particulars of consolidation locomotive which the Toronto, Hamilton and Buffalo Ry. has ordered from the Montreal Locomotive Works:—

Weight in working order	197,000 lbs.
Weight on drivers	172,000 lbs.
Weight on engine truck	25,000 lbs.
Wheel base, driving	17' 0"
Wheel base, engine	25' 9"
Wheel base, total, engine and tender	57' 3"
Valve gear	Walschaert
Cylinders	21½" by 28"
Driving wheels, diar.	55"
Boiler, type	Extended wagon top.
Boiler, diar	68¼"
Boiler, pressure	200 lbs.
Tubes, no. and diar	353—2"
Tubes, length	15' 0"
Brakes	Westinghouse American.
Capacity, water	7,000 U.S. gals.
Capacity, coal	10 tons.

Following are chief particulars of the two mogul locomotives which the Quebec Central Ry. has ordered from the Canadian Locomotive Co., Kingston, Ont.;—

Weight on drivers	113,500 lbs.
Weight, total	144,000 lbs.
Wheel base of engine, rigid	13' 6"
Wheel base of engine, total	23' 8"
Wheel base of engine and tender	50' 4"
Heating surface; firebox	138 sq. ft.
Heating surface, tubes	1518 sq. ft.
Heating surface, total	1656 sq. ft.
Driving wheels, diar	66"
Driving wheel centres..Main, cast steel; others	cast iron.
Driving journals	9" by 10"
Cylinders	19" by 26"
Boiler type	Extended wagon top.
Boiler, pressure	200 lbs.
Tubes, no. and diar.	223—2"
Tubes, length	13' 0"
Brakes	Westinghouse ET
Weight of tender loaded	104,000 lbs.
Capacity, water	4,300 gals.
Capacity, coal	9½ tons.
Truck	4 wheeled with steel bolster.
Wheels, diar.	33"
Wheels	W.I. centres, steel tire.
Journal	5" by 9"
Brake beam	Steel.

Following are chief particulars of the 10 Pacific type and two consolidation locomotives which the Montreal Locomotive Works is building for the Michigan Central Rd., as mentioned in our last issue.

	Pacific.	Consolidation (236).	Consolidation (274).
Weight in working order	245,500 lbs.	236,000 lbs.	274,000 lbs.
Weight on drivers	154,500 lbs.	211,000 lbs.	....
Weight on engine truck	44,000 lbs.	25,000 lbs.	....
Weight on trailer	47,000 lbs.	....	....
Wheel base, driving	13' 0"	17' 6"	19' 0"
Wheel base, engine	33' 7½"	26' 5"	....
Wheel base, engine and tender	65' 8½"	60' 11"	51' 5½"
Cylinders	22" by 26"	23" by 32"	24" by 28"
Driving wheels, diam.	75"	63"	51"
Boilers, type	Straight top, extended stay.	Straight top, extended stay.	Extended wagon top, radial stay.
Boilers, diam.	75"	63"	51"
Boilers, pressure	200 lbs.	200 lbs.	210 lbs.
Tubes, no. and diam.	394; 2"	446; 2"	447; 2"
Tubes, length	21' 0"	15' 0½"	19' 0"
Valve gear	Walschaert.	Walschaert.	Walschaert.
Brakes	Westinghouse.	Westinghouse.	Westinghouse.
Capacity, water	7,000 U.S. gals.	7,500 U.S. gals.	8,000 U.S. gals.
Capacity, coal	12 tons.	12 tons.	12 tons.

The Intercolonial Ry. has ordered a Pacific type passenger locomotive from the Montreal Locomotive Works, of which the following are the chief particulars:

Weight on drivers	126,000 lbs.
Weight, total	187,000 lbs.
Cylinders	21" by 28"
Drivers, outside diameter	72"
Boiler pressure	200 lbs.
Heating surface, tubes	2,584 sq. ft.
Heating surface, firebox	162 sq. ft.
Tubes, no. and diam.	232; 2¼"
Tubes, length	19 ft.
Firebox	96" by 70"
Capacity, water	5,000 imp. gals.
Capacity, coal	10 tons.
Axles	Open hearth steel.
Brakes	Westinghouse.
Brake beams	Simplex.
Brake shoes	American Brake Shoe & Fdry. Co.
Couplers	M.C.B. or other.
Headlight	Pyle National Electric.
Journal bearings	McCord. 5½" by 10"
Steam heat equipment	Safety Car Htg. & Ltg. Co.

Following are the chief particulars of the 10 consolidated locomotives, which the Canadian Locomotive Co., Kingston, Ont., is building for the Intercolonial Ry., as mentioned in our last issue.

Weight on drivers	148,300 lbs.
Weight, total	164,850 lbs.
Cylinders	21" by 28"
Drivers, diam.	56"
Boiler, type	Straight top.
Boiler, pressure	200 lbs.
Heating surface, tubes	1,934.6 sq. ft.
Heating surface, firebox	161.1 sq. ft.
Heating surface, total	2,095.7 sq. ft.
Tubes, no. and diam.	236; 2¼"
Tubes, length	14 ft.
Firebox	114" by 41"
Grate area	82.5 sq. ft.
Capacity, water	5,000 imp. gals.
Capacity, coal	10 tons.
Axles	Open hearth steel
Brakes	Westinghouse.
Couplers	Janney.
Headlight	Pyle National Electric.
Steam heat equipment	Safety Car Htg. & Ltg. Co.

Following are the general dimensions and chief particulars of the 10-wheel locomotives which the C.P.R. is building at its Angus shops, Montreal, as mentioned in our last issue.

Weight on drivers	141,[illegible] lbs.
Weight, total	190,000 lbs.
Cylinders diam and stroke	22½" by 28"
Drivers, diam.	63"
Boiler, type	Wagon top radial stayed
Boiler, pressure	180 lbs.
Heating surface, tubes	2,263 sq. ft.
Heating surface, superheater	408 sq. ft.
Tubes, no. and diam.	24, 5"; 244 2"
Tubes length	14' 6"
Firebox, length	8' 4⅞"
Firebox, width	5' 9¾"
Firebox, heating surface	19[illegible] sq. ft.
Grate area	49 sq. ft.
Capacity, water	5,000 gals.
Capacity, coal	10 tons
Air brakes	Westinghouse E. T. 6
Axles	C.P.R.
Brake beams	Simplex, diamond inside hung.
Brake shoes	C.P.R.
Couplers	Tower.
Headlight	Pyle National Electric
Journal bearings	C.P.R. standard.
Springs	C.P.R. crucible steel
Steam gauges	Star.
Wheel centres	Cast steel.
Tractive effort	34,400 lbs.

Weight on drivers ÷ tractive effort = 5.5.
Tractive effort × di. drivers ÷ heating surface = 96.1.
Heating surface ÷ grate area = 46.1.
Heating surface, firebox ÷ heating surface without superheater = 11.9.
Weight on drivers ÷ total heating surface = 52.8.
Total weight ÷ heating surface = 84.
Heating surface ÷ vol. cylinders = 175.

Following are chief particulars of the 10 consolidation locomotives which the Intercolonial Ry. has ordered from the Canadian Locomotive Co.:—

Weight on drivers	148,300 lbs.
Weight, total	164,850 lbs.
Wheel base of engine, rigid	15' 3"
Wheel base of engine, total	23' 6"
Wheel base of engine and tender	54' 5"
Length over all, engine and tender	65' 1"

C.P.R. Land Settlement.—Press dispatches from England say that Sir Thos. G. Shaughnessy, President C.P.R., stated in the course of an interview the company's intentions as to the future land settlement in Western Canada, as follows:—"Recently, when 1,600 small holdings were offered in England there were 35,000 applicants. All these could be accommodated in Canada. We propose to prepare land for this class of small holder, build his house and fence holding, break part of the soil and sow it, so that he can come and find all ready to settle down. This will be within reach of an English countryman, who has £100 capital to make a start."

Railway Finance, Meetings, Etc.

Alberta Ry. and Irrigation Co.—Approximate net profits from all sources, exclusive of land sales for Oct., 1909, $52,722, against $32,544 for Oct., 1908. Cumulative net profits for four months ended Oct., 31, 1909, $161,278. Traffic receipts for Nov., 1909, $40,860, against $39,424 for Nov., 1908. Aggregate traffic receipts for five months ended Nov. 30, 1909, $175,554.

Atlantic and Lake Superior Ry.—A meeting has been called to be held in London, Eng., Jan. 11, for the purpose of aproving an agreement of sale of the railway.

We were advised Dec. 11 that the Baie des Chaleurs Ry. (Atlantic and Lake Superior Ry.) had not then been taken over, but it is expected that the transfer will be formally made at the end of Jan.

Columbia and Western Ry.—The Supreme Court gave judgment Dec. 13 in the action brought by R. B. Angus and Sir Thomas G. Shaughnessy, against A. Heinze for a partition of the lands forming the C. and W. R. land grant. When this line was acquired for the C.P.R. it was agreed that the lands granted by the B. C. Legislature should be divided in certain proportions. The lower courts held that the agreement obliged the purchasers to hold the title in the lands until Heinze asked for a conveyance of his share. This decision has been upheld by the Supreme Court.

Dominion Atlantic Ry.—Gross earnings for Oct., 1909, $136,400, against $130,515 for Oct., 1908. Aggregate earnings for four months ended Oct. 31, 1909, $610,400, against $469,067 for same period 1908.

Duluth, Rainy Lake and Winnipeg Ry.—A block of the authorized and outstanding $2,000,000 first mortgage sinking fund 5% bonds of 1906-1916, is being offered at Milwaukee, Wis., at 101 to 101½. These bonds are prior in lien to an outstanding issue of $1,525,000 Duluth, Winnipeg and Pacific Ry. second mortgage bonds, guaranteed principal and interest by the Canadian Northern Ry.

Grand Trunk Railway.—Application is being made to the Dominion Parliament for an act authorizing the company to acquire, and dispose of the bonds, debentures or other securities issued by the Ottawa Terminals Ry., and by the G.T. Pacific Terminal Elevator Co.

Grand Trunk Western Ry.—The property of the Pontiac, Oxford and Northern Ry., which has been in the hands of a receiver for about two years, has been acquired by the G.T.R., and will be operated as a part of the G. T. Western Ry. The P.O. & N.R. is 100.2 miles long, and connects Pontiac, Mich., with Imlay City, on the Detroit, Grand Haven and Milwaukee Ry., also controlled by the G.T.R. It owns seven locomotives, 11 pasenger cars and 81 freight cars.

Quebec and Lake St. John Ry.—Traffic receipts for Nov., 1909, $53,251.05, against $57,742.65 for Nov., 1908. Aggregate traffic receipts for 11 months ended Nov. 30, 1909, $550,984.11, against $588,075.37 for same period 1908.

Quebec and New Brunswick Ry.—A meeting has been called to be held at Edmundston, N.B., Jan. 19, for the election of directors; to re-affirm all past resolutions and bylaws, as far as possible, and generally to settle on what shall constitute the records, books and other papers of the company, all of which were destroyed by fire in Apr., 1909; to ratify all past acts of the directors and President; to declare forfeited all shares on which default has been made, and to transact other business.

St. Lawrence & Adirondack Ry.—Quarter ended September 30, 1909, gross earnings $155,893 against $141,247 previous year; net earnings $43,642 against $69,040 previous year, deficit after charges of $8,169 as compared with surplus previous year of $22,329.

Temiscouata Ry.—Net profit on operation for Sept., 1909, $4,566, and for nine months ended Sept. 30, $40,099.

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

8860. Dec. 10.—Re complaint of Grain Growers' Grain Co. of Winnipeg, alleging long delay on the part of railway companies in repayment to shippers of grain for lumber supplied for car doors; and re complaint of J. J. Denman and others of the Province of Alberta, complaining of unjust treatment afforded them by the Canadian Northern and Canadian Pacific Ry. Cos. in compelling complainants to furnish doors or boards for the interior of cars supplied to them for shipments of coal; upon hearing the above complaints in the presence of counsel for the applicants, in so far as the former orders hereinafter referred to are concerned, as well as of counsel for the C.P.R., the C.N.R. and the G.T. Pacific Ry. Cos., and upon counsel representing that serious difficulty is likely to arise in connection with the operation of the orders in these matters, made Feb. 2 and 19, 1909, in so far as they direct at the time of shipment payment to the shipper out of funds of the railway company in the hands of its agent, it is ordered:

1. That the orders of Feb. 2 and 19, 1909, be hereby rescinded.

2. That where shippers upon all or any railways subject to the jurisdiction of the Dominion Parliament are compelled to furnish car doors to enable cars to be used for traffic, allowance therefor to such shippers be made upon the following basis: At and west of Fort William, lower car door, $1; upper car door, 50c.. East of Fort William, upper or lower car door, each, 50c. And that adjustment between the said shipper and the railway company shall be made by the agent of the railway company at or nearest to the point of shipment, by permitting the shipper to deduct from the freight charges, if any, payable by him upon the shipment in such car for which the said door or doors were so supplied, the amount of such bill upon the foregoing basis, the said shipper receipting the same for the amount so allowed and turning the account in to such agent as so much cash.

3. In the event of the shipper not prepaying the freight upon the shipment with reference to which such car door or doors are so furnished, then the railway company shall, within 30 days from the date of such shipment, reimburse to the shipper the sums payable upon the above basis for the door or doors so furnished by him.

Regulations re Locomotives.

The Board of Railway Commissioners passed the following order 8903 Dec. 15. Re order 3245, dated July 4, 1907 (published in the Railway and Marine World Aug., 1907, pg. 577), and re application of Michigan Central Rd. to amend said order, the said order is hereby amended by striking out clause (b) in the second paragraph and substituting therefore the following:

"(b) Overflow pipes from lifting injectors or water pipes from injector delivery pipe or boiler to be put into the front and back part of the ash pans and used during the months of April, May, June, July, Aug., Sept. and Oct. for wetting ash pans."

G.T.R. Betterments, Construction, Etc.

Sherbrooke, Que.—The G.T.R. is reported to be acquiring land at Sherbrooke for yard extensions, with a view, it is said of making a divisional point there. The present divisional point between Montreal and Portland, Me., is at Island Pond, Vt., and the report further states that this divisional point is to be abandoned, and another one established at Groveton, N.H. This would mean two divisional points where there is now one.

Turcot and St. Lambert Improvements.—We are advised that the only work being done at Turcot yards is in connection with the diversion of the Montreal Park and Island Ry., and that there is no other work contemplated at either Turcot or St. Lambert at present.

Sunnyside Crossing, Toronto. — The Board of Railway Commissioners made an order Dec. 10, in regard to the proportionate cost to be borne by the various parties interested in the separation of the grades at the Sunnyside crossing, Toronto. For the crossing at the Humber in Etobicoke tp., the Dominion Government will pay out of the level crossings fund $5,000, and the township $8,000; in York tp. there are three crossings to be eliminated towards which the Dominion will pay $15,000, and the township a like amount; for the work in the city of Toronto the Dominion will contribute $15,000. The balance of the cost is to be divided and paid, one-third by the City of Toronto (so far as the work is in the city) and the remaining two-thirds by the G.T.R. The cost is to be figured out on the basis of a two-track viaduct, and the work has to be completed within two years. The G.T.R. desired to have a proportion of the cost assessed upon the C.P.R. which has running rights over the line, but the Commissioners declined to take any action thereon. The City Engineer of Toronto said the carrying out of the order would mean the doing away of ten level crossings within the limits of the city's authority, for the protection of which it was now paying $3,000 a year.

Bridge at Weston Road.—The City Engineer of Toronto recommends that the bridge over the C.P.R. tracks at Weston Road, West Toronto, be extended so as to cross the G.T.R. tracks also, and proposes to ask for an appropriation to cover the cost of a new bridge.

Waterloo, Ont.—The company proposes to erect an improved station at Waterloo, Ont., during the year.

Electrification of Branch Lines.—The Mayor of Berlin, Ont., had an interview with U. E. Gillen, Superintendent, Middle Division, at Toronto, Dec. 3, with reference to the proposal to electrify the branches from Berlin to Galt and Elmira. Mr. Gillen said the cost of operation proved an obstacle when the matter was under consideration a few years ago. The advent of the Hydro-Electric Power Commission's plant might affect the question. The residents of Berlin are preparing to organize a deputation from the district to wait on the management at Montreal to urge consideration of the matter.

Relaying Track.—The tracks on the lines running into Palmerston, Ont., from Stratford, and other points, was relaid with heavier steel during 1909. It is intended during 1910 to continue the work on the three lines running out of Palmerston northerly and westerly.

London Track Elevation.—The Mayor of London received a communication from the Chairman of the Railway Commission to the effect that the question of the elevation of the G.T.R. tracks in London had been taken up by the Commissioners. It was expected that the question would be fully gone into early in the New Year, and a meeting of all parties arranged for in London. (Dec., 1909, pg. 891.)

ATTENTION, MASTER CAR BUILDERS!

The M. C. B. rules of interchange provide for the use of THE STEEL BACK BRAKE SHOE on your freight equipment.

The use of OUR STEEL BACK SHOE will mean a saving in brake shoe maintenance, brake heads and brake beams.

THE STEEL BACK BRAKE SHOE is an economy on all railway equipment.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Northern Quebec Ry., Canadian Northern Ontario Ry. (Ottawa Section), Quebec and Lake St. John Ry.—S. J. Montgomery has been appointed City Freight and Passenger Agent, Ottawa. He was heretofore chief clerk C.P.R. Ticket Office, Ottawa.

Canadian Northern Ry.—A. Wilcox, heretofore Superintendent Division 3, Dauphin, Man., has been appointed Superintendent Division 1, succeeding M. A. Murphy, resigned. Office, Port Arthur, Ont.

C. D. Fisher, heretofore Chief Dispatcher Division 3, Dauphin, Man., has been appointed Superintendent Division 3, vice A. Wilcox, transferred. Office, Dauphin, Man.

W. E. Roberts, heretofore Trainmaster, Dauphin, Man., has been appointed Chief Train Dispatcher there, vice C. D. Fisher, promoted.

J. C. O'Donnell, heretofore conductor, North Battleford, Sask., has been appointed Trainmaster District 3, with headquarters at Dauphin, Man.

Canadian Northern Ry., Duluth, Rainy Lake and Winnipeg Ry.—W. E. Dunn has been appointed Travelling Passenger Agent, St. Paul, Minn.

G. R. Hall has resigned the position of Commercial Agent at Chicago, Ill., to become Secretary of the Traffic Commission of the Commercial Club of Duluth.

See also Duluth, Rainy Lake & Winnipeg Ry.

Canadian Pacific Ry.—In consequence of the removal of the division point from Woodstock, N.B., to Aroostook Jct., N.B., Locomotive Foreman McIninch will be transferred from Woodstock to Aroostook Jct. in January.

W. A. Cowan, heretofore Resident Engineer, London, Ont., has been appointed Resident Engineer at Farnham, Que., vice A. C. MacKenzie, transferred to Assistant Chief Engineer's office, Montreal.

H. Frawley has been appointed Locomotive Foreman at Three Rivers, Que., vice J. Gregoire, deceased.

L. S. Rudder, heretofore on the Resident Engineer's staff, Toronto, has been appointed acting Resident Engineer there, vice F. W. Cooper, transferred to London, Ont.

F. W. Cooper, heretofore Resident Engineer, Toronto, has been appointed Resident Engineer at London, Ont., vice W. A. Cowan, transferred to Farnham, Que.

R. Armstrong, heretofore General Agent, Fort William, Ont., has been appointed Superintendent of Terminals, Fort William, vice G. E. Graham, transferred to Vancouver, B.C.

J. H. Wilson was on Dec. 18 appointed Locomotive Foreman at Kenora, Ont., vice T. F. Patterson, transferred.

W. A. James has been appointed Division Engineer of Construction Western Lines, vice J. Callaghan, resigned. Office, Winnipeg.

G. Twist, heretofore Locomotive Foreman, Sutherland, Sask., was on Nov. 24 appointed Locomotive Foreman at Minnedosa, Man., vice W. F. Lowe, transferred to the Winnipeg shops. On Dec. 18 A. Crawford was appointed acting Locomotive Foreman at Minnedosa.

J. H. Wilson, heretofore Locomotive Foreman at Moose Jaw, Sask., was on Nov. 24 appointed Locomotive Foreman at Sutherland, Sask., vice G. Twist, transferred to Minnedosa, Man. On Dec. 21 A. Morrison was appointed Locomotive Foreman at Sutherland, Sask., vice J. H. Wilson, transferred to Kenora, Ont.

R. Anthony, has been appointed acting Locomotive Foreman, Moose Jaw, Sask., vice J. H. Wilson, transferred.

W. Price, heretofore Car Inspector at Macleod, Alta., has been appointed Car Foreman, Swift Current, Sask., vice J. A. Jenson, transferred.

J. A. Jenson, heretofore Car Foreman at Swift Current, Sask., has been appointed Car Inspector at Red Deer, Alta.

H. McDonald has been appointed Locomotive Foreman, Macleod, Alta., vice H. Stevenson, assigned to other duties.

G. E. Graham, heretofore Superintendent of Terminals, Fort William, Ont., has been appointed Superintendent District 2, Pacific Division, vice W. O. Miller, on leave of absence. Office, Vancouver, B.C. W. O. Miller will, on his return, be transferred to another district.

J. G. McNab, heretofore Travelling Freight Agent B.C. and Pacific Coast Steamship Service, has been appointed Contracting Freight Agent C.P.R., Vancouver, B.C., vice W. H. Gardiner.

A. Davidson has been appointed Travelling Freight Agent, B.C. and Pacific Coast Steamship Service, Vancouver, B.C., vice J. G. McNab.

Duluth, Rainy Lake & Winnipeg Ry.—D. T. Murphy, heretofore Trainmaster, has been appointed acting Superintendent, succeeding M. A. Murphy, resigned. Office, Virginia, Minn. (See also Canadian Northern Ry.)

Grand Trunk Pacific Ry.—C. H. Nicholson, heretofore Traffic Manager Northern Navigation Co., Sarnia, Ont., has been appointed Manager G.T.P.R. Steamship Lines on the Pacific Coast. He will have supervision of all matters pertaining to marine and steamship business for the company on the Pacific coast, the operation and maintenance of steamers, docks, etc., with such other duties as may be assigned to him from time to time. Office, Vancouver, B.C.

Grand Trunk Ry.—C. M. Hays, heretofore Second Vice President and General Manager, has been elected President, and will also continue to act as General Manager, effective Jan. 1, as announced in our Nov., 1909, issue. We are officially advised that there will be no changes of importance in the official staff as a consequence.

W. Sealy, heretofore machinist charge hand, Stratford shops, has been appointed erecting shop foreman there, vice A. J. Roberts, who has left the service.

W. Davis, heretofore in the Stratford shops, has been appointed machinist charge hand there, vice W. Sealy, promoted.

H. F. Sausser has been appointed General Yardmaster at Black Rock, N.Y., vice G. F. Sullivan, assigned to other duties.

J. Ehrke, heretofore Trainmaster 25th District, Durand, Mich., has been appointed Assistant Superintendent 25th and 26th Districts, Main Line. Office, Battle Creek, Mich.

R. Doyle has been appointed Master of Transportation, Western Division, Durand, Mich., vice X. H. Cornell, resigned to become Manager Michigan Car Service Bureau.

O. F. Clark has been appointed Trainmaster 25th District, Durand, Mich., vice J. Ehrke, promoted.

The following agents have been appointed:—Woodville, Ont., W. R. Dickson; Kirkfield, Ont., H. F. Parks; Thornbury, Ont., T. E. Lord; Harley, Ont., W. G. Baker; St. Polycarpe, Que., L. G. LaBatt (temporary); Carlsbad Spring, Ont., J. A. Marchand.

Grand Trunk Western Ry.—C. M. Hays, President, issued the following circular Dec. 1:—"The Pontiac, Oxford and Northern Rd., having passed under the control of this company, the jurisdiction of all officers of the respective departments of this company are hereby extended over that railway. Their instructions will be obeyed accordingly."

Intercolonial Ry.—N. McNeil has been appointed Foreman of Car Department at Sydney, N.S., vice R. Dunlap.

Northern Navigation Co.—H. H. Gildersleeve, Manager, has assumed the duties hitherto discharged by C. H. Nicholson, Traffic Manager, the latter having resigned to enter G.T.P.R. service. The Manager's office will be changed from Collingwood to Sarnia, Ont.

Toronto, Hamilton and Buffalo Ry.—G. C. Martin, heretofore chief clerk, has been appointed Assistant General Freight and Passenger Agent. Office, Hamilton, Ont.

Trade and Supply Notes

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Large and useful wall calendars have been received from Mussens Limited, Montreal, and the B. Greening Wire Co., Ltd., Hamilton, Ont.

Taylor & Arnold, 404 St. James St., Montreal, have been appointed general sales agents of the Ontario Iron & Steel Co. and the Canadian Railway Equipment Co., whose works are at Welland, Ont. L. S. Hough, heretofore sales agent for the two companies, is now on Taylor & Arnold's staff, and will devote his attention to sales.

The Tallman Brass and Metal Co., Hamilton, Ont., after being located on Wellington St. North for 13 years, have removed to a new factory and foundry on Wilson St., east of Sanford Ave., which are well equipped with the most up-to-date machinery and appliances. They manufacture "Arctic metal" and brass castings and also handle pig tin and lead.

The Canadian Fairbanks Co., Ltd., has been appointed exclusive sales agent for Canada for Dicks' Balata Belting and has purchased J. S. Young's business. Orders should be sent direct to the nearest branch house. Large stocks are carried at present at Montreal and Vancouver, and stocks are on the way to the branches at St. John, N.B., Toronto and Winnipeg.

A powerful self-propelling grab dredge has just been completed to the order of the Egyptian Government for the Upper Nile. This is the third dredge which the Sudan Irrigation Department is placing upon the work of rectification of the Upper Nile upon which it is engaged and by means of which the potentiality of the river for irrigation purposes will be greatly increased. The first dredge is of the dipper type for embanking purposes and is already in service. The second is of the hydraulic type and is now being erected at Khartoum, while the third dredge is intended to deal with the sudd and will be provided with appliances for cutting the sudd as well as removing it. This vessel is built in the form of a light draft river steamer, 160 ft. long by 32 ft. beam and 2 ft. 9 ins. draft. The three dredges have been built to the designs and specifications of A. W. Robinson, M. Can. Soc. C.E., of Montreal, Consulting Engineer to the Sudan Irrigation Department.

An order in council has been passed providing for the imposition of a fine of $20 in the case of anyone found guilty of spitting in any passenger car, on any railway platform or other premises of the Government railways, and for the imposition of a similar penalty for smoking elsewhere than in places or compartments, in stations or cars, designated for that purpose.

Steam Railway Track Laid in 1909.

In accordance with our annual custom, circulars were sent in November to all railway companies in Canada, asking particulars of new track laid during 1909, the circulars being sent out some time earlier than formerly in order to ensure an earlier publication of the figures. The following table has been compiled from returns received to Dec. 20, the mileage given in some cases being estimated, as track-laying had not been completed for the season when the return was made up. The figures show that the total length of new track, exclusive of second track and sidings, laid during the year on the steam railways from which reports have been received was 1,507.02, against 1,505.95 miles in 1908.

*The length of line which the C.P.R. grade revision between Hector and Field supersedes was 4.1 miles, so that the revision adds 4.1 miles to the length of the line.

**On the Canadian Northern Ontario Ry.'s Hawkesbury-Ottawa line 53 miles were laid in 1908 and the balance, 4.08 miles, in 1909. The 53 miles were not included in the figures received from the company a year ago, so the whole mileage is now included in the 1909 returns.

***The figures given of the C.P.R. western lines are subject to revision, as there is a discrepancy in the returns received from two different officials.

\|\|The C.P.R. Lethbridge-Macleod cut-off has a total length of 35.24 miles, and supersedes the original line of 38.66 miles. Track was laid on 14.83 miles in 1908, and on the remaining 20.40 miles in 1909.

The C.P.R. subsidiary lines in the United States laid track as follows:

	Miles.	Miles.
MINNEAPOLIS, ST. PAUL AND S. S. MARIE RY.		
From Moose Lake to Superior and Duluth	49.20	
From Moose Lake west on extension	45.00	
		94.20
DULUTH, SOUTH SHORE AND ATLANTIC RY.		
Three spur lines to mines		7.10
MINERAL RANGE RD.		
Three spur lines to mines		2.87
		104.17

The Great Northern Ry. U.S., constructed extensions of its lines in the U.S. to connect, or with a view to connect with, its Canadian lines, as follows:

	Miles.	Miles.
Blaine, Wash., to International boundary	2.96	
Columbia River to Mansfield, Wash.	60.62	
Nashwana to Grand Rapids, Minn.	20.00	
		83.58

Canadian Northern Ry. Earnings, Etc.

Gross earnings, working expenses, net profits, increases or decreases from 1908-09, from July 1, 1909:

	Earnings.	Expenses.	Net Earnings.	Net Increase or Decrease.
July	$ 843,500	$613,900	$229,600	$26,700+
Aug.	807,100	602,700	204,400	18,300+
Sept.	1,076,800	765,300	311,500	60,400+
Oct.	1,384,200	903,500	480,700	60,600+
Nov.	1,517,600	970,100	547,500	134,000+
	$5,629,100	$3,855,500	$1,773,600	$300,800+
Inc.	$ 921,000	$ 621,100	$300,800	.....

Approximate gross earnings for three weeks ended Dec. 21, 1909, $834,400, against 673,300, for same period 1908.

C.P.R. Earnings, Expenses, Etc.

Gross earnings, working expenses, net profits, increases or decreases over 1908-9, from July 1, 1909:

	Earnings.	Expenses.	Net Profits.	Net Increase or Decrease.
July	7,140,029.93	4,660,159.20	2,479,870.73	205,297.48+
Aug.	7,426,984.62	4,462,926.75	2,964,057.87	385,159.16+
Sept.	8,323,178.03	4,891,288.86	3,431,889.17	1,317,281.40+
Oct.	9,744,596.87	5,358,299.68	4,386,297.19	1,731,030.48+
	$32,634,789.45	$19,372,674.49	$13,262,114.96	$3,638,768.52+
Inc.	$6,182,309.05	$2,543,540.53	$3,638,768.52	.....

Approximate gross earnings for Nov., 8,918,000, and for 2 weeks ended Dec. 14, 3,657,000; against $7,156,000 and $3,071,000 for same periods 1908.

DULUTH, SOUTH SHORE AND ATLANTIC RY.—Operating revenue for Oct., $308,233.87; expenses, $200,500.67; net revenue, $107,733.20, against $252,057.12 operating revenue; $171,419.46 expenses; $80,637.88 net revenue for Oct., 1908. Aggregate operating revenue for four months ended Oct. 31, $1,212,410.17; expenses, $791,793.98; net revenue, $420,616.19, against $938,438.30 aggregate operating revenue; $665,169.34 expenses; $273,268.96 net operating revenue for same period 1908. Approximate earnings for Nov., $263,784, and for two weeks ended Dec. 14, 1909, $101,180, against $233,059 and $102,538 for same periods 1908.

MINERAL RANGE RD.—Operating revenue for Oct., $73,725.1; expenses, $65,842.15; net revenue, $7,883|01, against $77,294.63 operating revenue; $56,384.97 expenses; $20,909.66 net revenue for Oct., 1908. Aggregate operating revenue for four months ended Oct. 31, $298,657.05; expenses, $248,482.65; net revenue, $50,174.40, against $296,176.68 aggregate operating revenue; $230,252.25 expenses; $65,924.43 nt revenue for same period 1908. Approximate earnings for Nov., $70,603, and for two weeks ended Dec. 14, 1909, $30,522, against $70,021 and $31,500 for same periods 1908.

Grand Trunk Ry. Earnings, Expenses Etc.

The following figures give the earnings of the G.T.R., the C.A.R., the G.T. Western Ry., and the D.G.H. & M. Ry., separately, for Oct., as compared with Oct., 1908:

GRAND TRUNK RAILWAY.	1909.	1908.
Earnings	$3,130,000	$3,012,095
Expenses	2,181,000	2,073,159
Net earnings	$949,000	$938,936

CANADA ATLANTIC RAILWAY.	1909.	1908.
Earnings	$203,000	$153,405
Expenses	149,000	170,937
Net earnings	$54,000	*$17,532

GRAND TRUNK WESTERN RY.	1909.	1908.
Earnings	$526,000	$473,364
Expenses	421,500	356,484
Net earnings	$104,500	$116,880

DETROIT, GRAND HAVEN & MILWAUKEE RY.	1909.	1908.
Earnings	$184,700	$149,996
Expenses	140.200	117,367
Net earnings	$44,500	$32,629

*Deficit.

TRAFFIC RECEIPTS OF THE SYSTEM

Aggregate from July 1, to Nov. 30, 1909:

Total	£3,945,764	£3,630,892	£314,872	.....

No Canadian Car Shortage.

In its December issue Canadian Machinery said:—"There is such a shortage of cars on the Canadian railroads that manufacturers and shippers find it difficult to make deliveries. It has been reported to Canadian Machinery that orders placed early this year have not been delivered through lack of rolling stock."

We think our contemporary has been altogether misinformed, and that there is no foundation for the report that orders for goods placed early in 1909 had not been delivered at the end of the year owing to shortage of cars. In the early part of the year, as undeniable statistics show, there was a considerable surplus supply of cars on nearly all Canadian lines. As business improved and as grain began to move there was of course a greater demand for cars, but certainly there has been no general car shortage, although there may have been a few local cases of shortages of equipment for perishable freight, and the highest authority in Canada on car service advises us that Canadian Machinery's statement is not founded on facts. The movement of freight during October and November was very heavy, probably the heaviest in the history of the country, more cars being reported to the Canadian Car Service Bureau than during any previous two months.

As a matter of fact the railway companies made excellent provision for the increased business which they expected during this fall and winter, and how well they succeeded is shown by the report of the directors of the Grain Growers' Association, presented at a meeting at Brandon, Dec. 15, which was attended by 1,500 delegates. The report said: "We are glad to bear testimony to the very satisfactory service the railways supplied this season for the moving of the crops. In former years we had reason to complain not only of the shortage of cars, but of the distribution of cars, and of obstacles placed in the way of farmers loading their grain direct into cars. This year, notwithstanding there was very large increase in the amount of grain offered for shipment as compared to former years, there was no lack of cars in Manitoba and we heard of no complaints as to the facilities offered farmers for loading their grain direct."

G. T. R. Subsidiary Companies.

The following are the officers and directors for the current year of various companies subsidiary to the G.T.R.:—

CHICAGO, DETROIT AND CANADA GRAND TRUNK JCT. RD.—President and General Manager, C. M. Hays; Vice-President, E. H. Fitzhugh; other directors, W. H. Biggar, J. W. Loud, A. B. Atwater; Treasurer, F. Scott; Secretary, G. W. Alexander.

DETROIT, GRAND HAVEN AND MILWAUKEE RY.—President and General Manager, C. M. Hays; Vice-President, E. H. Fitzhugh; other directors, W. G. Brownlee, Jos. Hobson, J. W. Loud, A. B. Atwater, F. W. Egan, J. Pridgeon, jr., A. P. Sherrill; Secretary-Treasurer, G. W. Alexander.

GRAND TRUNK JCT. RY.—President, C. M. Hays; Vice-President, E. H. Fitzhugh; other directors, J. W. Loud, A. B. Atwater, F. A. Howe; Secretary-Treasurer, G. W. Alexander.

GRAND TRUNK WESTERN RY.—President and General Manager, C. M. Hays; Vice-President, E. H. Fitzhugh; other directors, W. G. Brownlee, A. B. Atwater, A. Dixon, L. R. Skinner, A. W. Wright; Secretary-Treasurer, G. W. Alexander.

INTERNATIONAL BRIDGE CO.—President, C. M. Hays; Vice-President, E. H. Fitzhugh; other directors, W. G. Brownlee, H. G. Kelley, J. W. Loud, Jos. Hobson, H. W. Sprague; Treasurer, F. Scott; Secretary, G. W. Alexander.

MICHIGAN AIR LINE RY.—President, C. M. Hays; Vice-President, E. H. Fitzhugh; other directors, W. H. Biggar, J. W. Loud, A. B. Atwater; Treasurer, F. Scott; Secretary, G. W. Alexander.

ST. CLAIR TUNNEL CO.—President, C. M. Hays; Vice-President, E. H. Fitzhugh; other directors, J. W. Loud, Jos. Hobson, W. H. Biggar, W. G. Brownlee, A. B. Atwater; Treasurer, F. Scott; Secretary, G. W. Alexander.

TOLEDO, SAGINAW AND MUSKEGON RY.—President, C. M. Hays; Vice-President, E. H. Fitzhugh; other directors, J. W. Loud, A. B. Atwater, C. W. Middleton, A. F. Temple, F. E. Ranney; Secretary-Treasurer, G. W. Alexander.

Alberta and Great Waterways Ry.

The Alberta and Great Waterways Ry. Co. was incorporated by the Alberta Legislature in 1909, with power to construct and operate a railway from Edmonton to Fort McMurray, and from near the western end of Lac la Biche to the eastern end of the same, with suitable terminals in Edmonton. The Legislature at the same time confirmed an agreement made with the company for the construction of the line and guaranteeing the payment of the principal and interest on the company's bonds to the amount of $7,400,000, or at the rate of $20,000 a mile for 350 miles of railway and $400,000 for the terminals in Edmonton. The security to be taken by the Government is a first mortgage of the line and terminals. The Standard Trust Co., Winnipeg, is trustee for the bonds, which are of the denomination of $1,000, bearing interest at the rate of 5%, each bond being endorsed with the Government guarantee, as provided by the agreement. An arrangement was made with J. P. Morgan & Co., New York, to place the bonds on the London, Eng., market, through its British house, J. S. Morgan & Co. The issue price was 110%, at which the bonds will yield 4½%, allowing for redemption at par on maturity Jan. 1, 1959. The company, however, reserves the right to redeem any or all of the bonds, at any time after Jan. 1, 1919, upon giving six months notice, at the rate of 112½% or £231 3s. 3d. for each $1,000 bond. The subscription list was opened Nov. 10, and closed two days later, the applications received being for an amount considerably in excess of that offered.

W. R. Clarke, President, and E. A. James, General Manager, were in Montreal Dec. 8 arranging for the purchase of rails, etc. for construction. Mr. Clarke stated that the financing had been completed and that contracts for the grading of the whole line, a distance of 350 miles, would be let early in Jan. The contract would call for the completion of 150 miles, which would carry the line as far as Lac la Biche, by the fall, and it was hoped to have a train service in operation over it at that time. The company will do the tracklaying itself, the contract to be let, being for the grading, bridging and structures. Mr. James in an interview, stated that the line will have its northerly terminal at Fort McMurray, 350 miles north-east of Edmonton, and will open out a stretch of country equal to the Edmonton district for farming purposes. At Fort McMurray it will connect with the Peace, Athabaska and Mackenzie Rivers, which together have 3,500 miles of waterway navigable by steamers, stretching to the Arctic Ocean. The road will thus connect the Arctic Ocean by water and rail with the transcontinental railways at Edmonton. As soon as location surveys have been completed, the right-of-way will be cut out on the first 150 miles to Lac la Biche. Ties will be got out this winter.

J. A. L. Waddell, Chief Engineer, while in Winnipeg recently, to secure engineers for surveys on this line, stated that one party was then in the field; that two more would be sent out immediately, and a fourth as soon as engineers could be found. He further stated that construction was commenced Oct. 1, 1909, that 10 miles of grading had been done, and the work would be pushed forward as surveys were completed.

The officials are: President, W. R. Clark, President, United States Trust Co., Kansas City Mo.; Vice-President, Bertrand Clark, Kansas City, Mo.; General Manager, E. A. James, Edmonton, Alta.; Chief Engineer, J. A. L. Waddell, Kansas City, Mo.

Railway Commissioners' Proposed Orders.

At its sittings on Jan. 18 the Board will consider the making of a general order establishing the places at which inspection of carload freight should be made.

The Board has notified all railway companies under its jurisdiction to appear at its sittings in Ottawa, Jan. 4, to show cause why an order should not be made prohibiting brakemen from riding on the top of freight cars and reducing the height of bridges to 17 ft., or to a height sufficient to permit the highest freight car passing thereunder.

On Jan. 4, at Ottawa, the Board will consider a draft order which has been framed on the complaint of the Winnipeg Jobbers and Shippers Association. It proposes to direct that all railways within six months from the passing of the order provide at all flag stations suitable shelters or waiting rooms for freight and passengers, the shelters to be provided with doors and windows and up to the standard of a specification attached to the order. Platforms and approaches to be also provided. Freight to be delivered to such points to be placed in the shelters. At all stations and shipping places where the average earnings are not less than $15,000 a year, stations to be erected and permanent agents to be appointed. At points where the business consists principally of grain shipments which amounted to at least 50,000 bushels in the previous year, temporary agents to be employed during the grain shipping season. Telegraph operators located for the handling of trains to be provided with equipment to enable them to take care of all traffic at their respective points.

Victorian State Railways Report.

The annual report of the Victorian State Railways, Australia, signed by the Commission of which T. Tait, formerly Manager of Transportation C.P.R., is Chairman, for the year ended June 30, 1909, has been received. The gross revenue for the year was $20,532,840, and the working expenses (including a special payment of $340,519, into the railway accident and fire insurance fund) were $11,725,535; the net revenue from the St. Kilda and Brighton Electric St. Ry. was $9,081, making a total net revenue of $8,616,386. The interest charges and expenses were $6,959,547, and pensions and gratuities $513,002, which amounts deducted from the total net revenue leave a surplus of $1,143,837 to be credited to the consolidated revenues of the State.

The special feature of the report is a statement showing the results for the six years operation of the lines to June 30, 1903, compared with the six years to June 30, 1909, during which period the present Commissioners have been in charge. It shows an increase in the gross revenue of $22,443,685, an increase in the working expenses of $7,394,866, and an increase in the net revenue of $15,048,819. Out of net revenue $3,398,715 has been expended on special objects and charges in liquidation of extraordinary liabilities, against $787,706 in the preceding six years. The interest charges and expenses (pensions and gratuities being an addition in the year 1908-09 only) show an increase of $885,226 in the six years. The surplus credited to Consolidated Revenue amounted in the six years to $3,779,047, while in the six years preceding June 30, 1903, the Consolidated Revenue was called upon for $7,767,537 to meet deficits. With a decrease of 2,400,758 train miles run, 99,974,678 passengers, 4,053,817 tons of goods and 480,879 tons of live stock have been carried in excess of the traffic in the six years prior to 1903. The percentage of working expenses to gross revenue has decreased from 59.83% to 54.41%.

Quebec Public Utilities Commission.—Sir Lomer Gouin, Premier of Quebec, when in Toronto recently, announced that his Government had decided to appoint a Public Utilities Commission, the members thereof to be appointed for ten years, which would have jurisdiction over power matters and all corporations operating public utilities under provincial franchise. It would have, in addition, powers similar to those exercised by the Ontario Railway and Municipal Board.

C.N.R. Quebec-Ottawa Line.—The Canadian Northern Quebec Ry. announces the establishment of "the only through passenger service between Ottawa and Quebec, also the improvement of its already excellent trains between Montreal and Quebec. Trains leave Ottawa 8.30 p.m. and Montreal 11.45 p.m., arriving in Quebec 7.20 a.m. daily, and leave Quebec at 11 p.m., reaching Montreal at 6.20 a.m. and Ottawa at 9.45 a.m. The opening of the new Quebec-Ottawa line also provides a short route to the Dominion capital through the Eastern Townships and the lower St. Lawrence via Levis.

Representatives of the New Brunswick Government, the Grand Falls Power Co., and of various industries in the province met the National Transcontinental Ry. Commissioners in Ottawa, Dec. 16, and discussed the question of the operation of the line through the forest region in Quebec and New Brunswick by electricity to be generated at Grand Falls, on the St. John River.

OFFICIAL ORGAN, THE RAILWAY AND MARINE WORLD.

ASSISTANT SECRETARY, Aubrey Acton Burrows, Secretary and Business Manager, Railway and Marine World.

The Winnipeg Electric Ry. Co.'s Power Plant Accident.

The recent accident at the Lac du Bonnet water power plant which is situated on the Winnipeg River about 64 miles from Winnipeg, was remarkable for two features; first, the rapidity with which normal conditions were restored in the face of the damage done, and secondly, as showing the extreme dependence of modern cities upon electrical current not only for mechanical and manufacturing energy, but for all the ordinary comforts of civilized life. On the evening of Nov. 23, the bursting of no. 7 penstock, just as the load was reaching its peak for lighting and extra car service during the rush hours, resulted in a tie up of the system and considerable damage to the apparatus. At about 4.38 p.m. everything was running smoothly as usual, no accident tying up the plant having occurred since it was started in Aug., 1906. The generating station was under a load of about 12,700 kilowatts. No. 7 unit had been put in service at 4.32 p.m., parallel with the other eight units in the plant, and was carrying a load of about 1,500 kilowatts. The switchboard operator had called for more gate on no. 7 as the evening load was coming on. When the load on this unit had reached about 2,000 kilowatts, or about seven-eighths full gate, the penstock burst on the south side, two plates giving way, 12 ft. in length, and opening up about 9 ft. high. The cradle or bed casting of the draft chest on the down stream set of turbines cracked the entire distance through the line of rivet holes where these penstock plates were attached.

The volume of water which immediately issued from this great opening burst in the door and made a huge breach through the wall of the building between wheel units 7 and 8, and flowed directly on to no. 8 generator, filling that end of the generator room above the doors to a depth of about 8 to 10 ft. The force of the water was tremendous, and it spread, flooding the entire building and reaching a depth of from 2 to 4 ft. in the most distant parts of it. The men at the gates of no. 7 at the time of the occurrence had barely time to escape with their lives, one of them in fact being swept out the door at the north end of the building by the rush of water. Very much credit is due to the employes for their foresight and promptness in throwing the current off the machines instantly and preventing the entire destruction of the whole of the machinery in the building. The rush of water was so great that it was impossible for the employes to reach the governor hand wheels to close down the turbines by way of the floor, but they were lowered down by ropes from the windows from the wheelhouse roof and in about 4 or 5 ft. of water managed to stop all wheels except units 8 and 9, which could not be reached owing to the tremendous volume of water which rushed through and completely over them. These two machines were running under water for a couple of days. A staff of men under Superintendent J. Smeaton immediately undertook to lower the headgates, but the flow of water through the burst penstock made such a pressure against the gates that in spite of cranks, props and pries, the gates refused to budge.

Meanwhile at headquarters in Winnipeg the first intimation of trouble was the loss of juice. Cars were just filling up for the evening rush and were left stranded on the street, some of the passengers patiently sitting for over an hour waiting for them to move. All lights and power were, of course, off, and, at first, the general public were under the impression that there had been a serious fire, as a few weeks earlier, a fire near the principal sub-station had caused the firemen to cut the wires and temporarily inconvenience a large portion of the city. For some time Manager Wilford Phillips was as much in the dark as anyone else as to the cause of the trouble. The company has a private telephone to Lac du Bonnet, but owing to everyone of the staff being rushed to the head gates to try and stop the flow of water there was no one left to answer the telephone. As soon as it was realized that the interruption of the service was more than trifling the Manager issued instructions to have the old steam plant, used to generate power before the Lac du Bonnet was built, put into commission at once. Three years previously this plant had worked up to an overload of 8,000 h.p., but although the precaution had been taken of keeping up steam sufficient to turn the wheels over once a day, things there were naturally not in condition to get back to former efficiency, and in any case the power at full capacity was far below the present requirements of Winnipeg. The best that could be done that night was to furnish a partial lighting service, and in the early hours of the morning to take in the cars.

Two hours after the news of the serious nature of the accident reached him, Manager Phillips with C. R. Ross, and D. Ross, the company's Chief Electrician and Civil Engineer, was on his way to the scene of the disaster in a special train. The condition of affairs on arrival late that night (nine miles having to be driven from the station over a corduroy road) was found to be most serious, the attempts to shut off the water having entirely failed. The only means which could be devised for stopping it was driving piles in front of the headgates, and sheeting these in front with brush and canvas and bags of sand, by which means the water was eventually checked sufficiently to enable the headgates to be lowered. The water was closed out of the power house sufficiently by the evening of Nov. 26 to allow examination of the machinery, and work was at once started to get some of the generators again in operation. On the evening of Nov. 29, less than six days after the accident, one generator was sufficiently dried out so that with temporary wiring which was arranged, about 1,500 kilowatts of power was supplied to Winnipeg to assist the overburdened steam plant where one or two minor accidents had been caused by the extraordinary strain on boilers, engines, and generators alike.

The system following in the city was to furnish as full a car service as possible from 6 to 8.30 a.m., and a light service on as many circuits as possible. From 8.30 a.m. to 4.30 p.m., the available juice was placed at the disposition of users of commercial power. From 4.30 to 7.30 p.m., cars and light; from 7 p.m. to midnight a full lighting service, and from midnight to 5 a.m., commercial power. This system was adopted at the request of the Board of Trade and City Council, as it was represented that this would allow the factories to run on practically, full time. The public generally took the accident most good humoredly and appeared to realize that the Company was doing its best under the circumstances, but one of the newspapers which had a supposed mechanical expert on its staff created some amusement by a violent tirade against the company with regard to the steam plant, the capacity of which the reporter judged in true expert fashion by the rating on the name plates on the machines that he saw.

At Lac du Bonnet, Manager Phillips stayed with the work of repairs. All the cables in the building, from the generators and switchboard to the transformers and the switch cells, being in ducts below the floor, were found to be entirely soaked with water, and temporary wiring had to be installed to get the generators into operation after they had been dried. Operations were also hampered by the force of the water having broken the steam connections and done other damage of this character. In inspecting and testing the generators it was found that the most serious damage was near the point where the break occurred. Those farthest away were the least damaged. One generator had to be partially rewound on one side where it took the full force of the water and tore up the insulation. So far as the public was concerned, with a three-quarters car service and a full lighting and power service within a week of the accident, by the steam plant helped out from two generators at Lac du Bonnet, the accident was all over, but the staff still had a very anxious time for another five or six days, and it was not until a fortnight after the trouble occurred that Manager Phillips thought it wise to return to Winnipeg. Great credit is due to everyone concerned for the remarkable recovery which they affected under very adverse conditions in an isolated district where everything had to be brought in by special train. Particular credit is due to J. H. Smeaton, superintendent of the plant, and C. R. Ross, Chief Electrician, for the ability they showed and the rapidity with which they got the plant into operation considering that the cables on the floor were soaked with water and lying under water for three or four days. One generator was started delivering power to Winnipeg on the sixth day after the accident, two inside of a week, and after that the progress was at the rate of one a day. Both from experts and business men, the Manager, Mr. Phillips, has received deservedly high praise for the energy and perseverance he showed in the emergency, and the Winnipeg Electric Ry. Co. is to congratulated on the efficiency of its staff in coping with such an emergency. The company spared neither expense nor trouble to meet the demands of the situation, and to anyone who saw the damage immediately after the break it is hard to understand how everything was practically restored in a fortnight.

The Lac du Bonnet plant has a somewhat unique record, as with this single exception its previous record was that there had been only a total shut down of 25 minutes duration in the three years since it commenced operations, which it is believed cannot be beaten by any other water plant.

As to the cause of the accident, on examination of the gate rigging of no. 7 turbine, it was found that five teeth had been stripped from the hand wheel pinion on the governor, and in the opinion of experts when these teeth stripped the turbine gates were allowed to close very suddenly, and this caused the bursting of the penstock. Mention should be made of the work of Wilson Phillips, brother of the Manager, who was in charge of the Winnipeg end of the works during the crisis. Some assistance was given him by the city's steam plant, but

New Ways To The Woods

The six railways of the Canadian Northern Railway system offer the widest choice of new territories for the fisherman, canoeist, camper and hunter.

IN NOVA SCOTIA the Halifax and Southwestern Railway, from Halifax to Yarmouth, serves seven hundred miles of ocean shore; two score generous trout streams and the famous Rossignol lake system.

IN CAPE BRETON, sixty miles of the Gulf of St. Lawrence shore is skirted by the Inverness Railway, which gives easy access to the Margaree valley—far-famed for its salmon fishing.

IN QUEBEC, the Canadian Northern, Quebec and Quebec, and Lake St. John Railways give easy access to the Saguenay, Upper St. Maurice, the Batiscan, the La Tuque game and fish preserve, and the valleys of the St. Lawrence and Ottawa. All good fishing waters, abounding with ouananiche, trout and bass.

IN ONTARIO, the entire range of the Muskokas, the Georgian Bay hinterland, the French, Pickerel, Still and Maganetawan rivers—well stocked with bass, mascalonge, and pickerel, are best reached by the Canadian Northern Ontario Railway.

IN WESTERN ONTARIO and the prairie provinces, the Canadian Northern Railway serves over three thousand miles of splendid territory. The Rainy River section follows the old Dawson fur trail, which is the finest canoe trip on the continent. There is an amplitude of sporting opportunities for the camera hunter, the fisherman and canoeist.

For literature and general or special information inquire of the information Bureau, Canadian Northern Railway System, Toronto.

added to the other anxieties of the acting Manager, was the fact that on several occasions this assistance failed, necessitating the Company's plant being called upon to carry the entire load. The whole circumstances connected with the emergency reflect great credit on all concerned.

Projects, Construction, Betterments, Etc.

The Berlin and Waterloo St. Ry. has under consideration a proposal to construct an extension of its line in Berlin, Ont., from Albert St. to Water St., 7,400 ft. (Oct., 1909, pg. 769.)

Brandon, Man.—Application has been made to the City Council by E. J. Gifford and H. J. Skynner for a franchise for an electric street railway and a power, light and heating plant in the city. (Sept., 1909, pg. 683.)

British Columbia Electric Ry.—General Manager Sperling on his return to Vancouver, B.C., from England, Dec. 7, stated that the directors had authorized expenditures on the company's various projects to the amount of $6,000,000. One of the large new works to be undertaken will be the erection of a 10,000 h.p. steam auxiliary plant in Vancouver.

The company has agreed with the New Westminster City Council to construct a second track on Columbus St. as far as the Boulevard.

The new line between New Westminster and Cloverdale was put in operation Dec. 20. A gang of men went to work Dec. 7 laying tracks on Eighth St. for the switching of cars from the Vancouver-New Westminster line to the Cloverdale line.

A proposal is under consideration for the construction of a new line from Vancouver through Mission City as far east as Hatzic following the Dewdney trunk road. The line would be about 10 miles long. (Dec., 1909, pg. 929.)

Calgary, Alta.—A bylaw has been approved by the taxpayers authorizing an expenditure of $40,000 for the improvement of the municipally owned street railway. Plans for the extension of the line are being prepared by the City Engineer. They involve the extension of the existing lines to some of the residential sub-divisions. (Sept., 1909, pg. 683.)

Calgary Southwesterly.—Application is being made to the Dominion Parliament to incorporate a company to construct a railway from Calgary southwesterly to Sheep Creek, thence southerly to connect with the railway running through Crow's Nest Pass; to erect telegraph and telephone lines, and to utilize water and steam power for generating electricity. W. L. Walsh, Calgary, Alta., is solicitor for applicants.

Chatham, Wallaceburg and Lake Erie Ry.—During 1909 the company laid four miles of new track, from Plain Court Jct. to Plain Court, Ont. It has under survey an extension of six miles from Cedar Springs to Blenheim. (Dec., 1909, pg. 929.)

Cornwall Electric St. Ry.—An agreement has been signed between the company and the Cornwall township council under which the company receives a franchise to extend its line up the West Front road, over Wood's Hill to the Ottawa and New York Ry. station.

Edmonton Radial Ry.—The city council, owning the E.R.R., laid track on 5.17 miles of its streets during 1909, distributed as follows:—from Alberta Ave. to packing plant, 2.52 miles; from Ninth St. and Jasper Ave. to 21st St., 0.50 mile; from First St. to Eighth St. and Vermillion Ave., one mile; from Syndicate St. to Namayo and Jasper Ave., 1.15 miles. No further construction is contemplated at present. (Oct., 1909, pg. 769.)

Grand Valley Ry.—With a view of improving the line between Brantford and Paris, Ont., the company proposes to do away with its present track at the entrance to the town, where there is a steep hill, and locate it some distance westerly and along the G.T.R. This alteration will effect a saving of about a mile in distance. It is also proposed to erect a new and commodious station in Paris, on the site of the present building. With reference to the projected line from Brantford to Port Dover, the Manager stated Dec. 8 that the company intended to start construction in the spring and to have the line completed by the fall. (Dec., 1909, pg. 929.)

The Guelph Radial Ry., which is owned by the City of Guelph, has been directed by the Ontario Railway and Municipal Board to construct a steel bridge over the Speed River, on the Dundas Road. The work will be done during the winter if the necessary steel can be obtained. (Nov., 1909, pg. 847.)

The Hull Electric Co. laid 2.25 miles of new track during 1909, between Laurier Ave. and Main St. (Dec., 1909, pg. 929.)

The International Transit Co. during 1909 laid new track from Upton Road to Pine St., Sault Ste. Marie, Ont., bringing its total to 4.01 miles.

The Kingston, Portsmouth and Cataraqui Ry. ceased running its cars in the city Nov. 23, following a resolution of the City Council not to enter into a contract for the supply of power for longer than three years, except it had power to cancel the agreement on giving six months' notice in the fourth and fifth year. On the following day the company commenced to take up the tracks at the car barn, with the result that negotiations as to power were resumed. An agreement was finally arrived at on the basis of the city's terms, the new clause providing that the company will pay $500 interest and depreciation if two new boilers are needed in the power house. The car service was renewed Nov. 27. (Dec., 1909, pg. 929.)

Lake Erie to Owen Sound.—A proposition has been laid before the Brantford, Ont., city council for the construction of an electric railway to Lake Erie points and Owen Sound. J. S. Clark, who is interested in the scheme, addressed the council recently, but owing to remarks in his address concerning another railway the matter was adjourned to Dec. 28.

Lethbridge, Alta.—A proposition has been submitted to the city council by the Lethbridge Radial Ry., for a franchise giving it an entrance into the city for its lines. The points to be connected up are Diamond City, Raymond and the Royal Collieries. The company submitted its proposition in the form of a bylaw, among the provisions of which was one under which the council could acquire the lines at cost, less depreciation, at the end of the term. At a meeting of ratepayers, Nov. 27, the bylaw came up for discussion. The general feeling was in favor of the construction of a line in the city by the council, but it was stated that such a line would not pay unless there were radial lines connected with it, which the city could not construct. No decision was reached, but it was decided to hold another meeting to consider the question. (Dec., 1909, pg. 929.)

London and Lake Erie Ry. and Transportation Co.—The bill to incorporate a company with this title for the purpose of taking over the rights of the South Western Traction Co. and extending its lines, has been under consideration by the St. Thomas City Council. The company is asking power to construct its lines through the city of St. Thomas, and to sell or lease electric power, etc. The council decided to oppose the bill, with the object of having clauses inserted protecting the city's rights, as the owner of a street railway line and an electric power plant. (Dec., 1909, pg. 931.)

London and Lake Erie Ry. and Transportation Co.—The transfer of the South Western Traction Co.'s property in accordance with the terms of the recent purchase was completed Dec. 15. It is stated that $150,000 will be spent during the year in correcting grades, improving curves and purchasing additional rolling stock. The following committee of directors has been appointed to manage the line: M. A. Verner, Brantford; W. S. Dinnick, W. K. George, G. B. Wood, S. C. Smoke, Toronto; T. H. Purdom and J. Milne, London, Ont. It is not intended to make any immediate change in the staff, S. H. Mower being retained as Manager. (Dec., 1909, pg. 931.)

Moncton Electric Ry., Heat and Power Co., Moncton Electric Tramway.—At a meeting of the directors, Dec. 2, Dr. Henderson of the New Brunswick Oilfields Co. took up the option he secured a short time previously on the charter for a street railway. The price paid for the charter is said to have been $10,000. It is said that Dr. Henderson is acting for a British company. He left Moncton Dec. 4 for England, and it is said that he will arrange for starting construction in the spring. (Oct., 1909, pg. 769.)

Montreal and Southern Counties Ry.—Five miles of track have been laid to date upon this railway, which mileage is now being operated. Of this 3.5 miles represents the line from Montreal to and over the Victoria Jubilee Bridge to the St. Lambert boundary, and the remaining 1.5 miles the distance from St. Lambert to Montreal South. The company has under construction an extension from St. Lambert to Longueuil, four miles. The contractors for the extension are Bremner and Carriere, Montreal.

The company received notification Dec. 7 that the Lieut.-Governor had signed the bylaw recently passed by Montreal South giving permission for the line to be constructed through that municipality. The work has already been done and cars are being operated.

Application is being made to the Dominion Parliament to extend the time for the completion of the lines authorized by chap. 56 of the statutes of 1897 and acts amending same. (Dec., 1909, pg. 931.)

Montreal Central Terminal Co.—Application is being made to the Dominion Parliament for an extension of time for the construction of the authorized works, and to authorize agreements or amalgamation with other railway, light, heat, power, telegraph and telephone companies, and with municipalities.

The Montreal Park and Island Ry. added 5.33 miles of new tracks during 1909, distributed as follows:—from Henderson's to St. Vincent de Paul, 2.55 miles; on St. Denis, 1.39 miles; on Pie IX., 0.43 mile; and in Cote la Visitation, 0.96 mile. (Dec., 1908, pg. 891.)

The Montreal St. Ry. during 1909 laid 1.60 miles of new track in short lengths on different streets.

The company has been directed to contribute $15,000 towards the construction of a subway under the C.P.R. at St. Lawrence Boulevard, St. Louis de Mile End.

Press reports stated recently that plans had been completed for the construction of shops in the northern part of the city at a cost of $1,000,000, the buildings to consist of car-building, machine, electrical and winding, blacksmith and paint shops, and a large building for stores and material. These reports have not been confirmed. (May, 1909, pg. 367.)

The Nelson Street Ry. Co. was incorporated Sept. 9, 1909, with an authorized capital of $50,000 to carry on a street railway, light and power business in Nelson, B.C. It has secured running powers over the line formerly in existence but which has not been operated for over a year. The line is about two miles long, and it is proposed to extend it about a

THE WILLSON PORTABLE FLARE LIGHT

Brilliant Powerful Economical

Specially adapted for use in all kinds of construction work.

Its candle power varies from 1,000—8,000 according to the size of apparatus. The cost of 8,000 candle power is less than 6c. per hour.

O'Brien & Fowler, Contractors to the G.T.P., say:—

"During the past two or three years we have used various kinds of lights, but none of them have proved the equal of yours, either in the matter of economy or usefulness. The effectiveness of your light is beyond dispute."

TRAINING FOR PROMOTION

The most practical way for ambitious employes to secure promotion is through the Courses of Training of the International Correspondence Schools, of Scranton, Pa. These Schools have special contracts with over 200 American railroad companies for the instruction of their employes. The I. C. S. Railway Courses cost in their preparation over $35,000. These Courses have been written by the best experts in the country and are edited after a manner that 18 years' experience in training ambitious men for promotion has proved to be the most practical and efficient. The I. C. S. own seven special instruction cars which travel over different railroads for the purpose of assisting in the instruction of the I. C. S. student-employes. The Railway Courses contain over 1,200 pages and over 600 illustrations. The following subjects are included:

Air-Brake Pumps, Triple Valves and Brake Valves, Air-Brake Troubles, Operating and Testing Trains, Foundation Brake Gear, Air-Signaling System, High-Speed Brake, Locomotive Boilers, Boiler Attachments, Heat and Steam, The Locomotive, Valves and Valve Gears, Locomotive Management, Breakdowns, Train Rules, Vauclain Compound Locomotives, Cross-Compound Locomotives, Tandem and Balanced Compound Locomotives, New York Air-Brake Pumps, New York Triple Valves and Brake Valves, New York Air-Brake Troubles, Train Operation, New York Foundation Brake Gear, New York Air-Signal and High-Speed Brakes, Car Lighting, Car Heating, Electric Headlight, Arithmetic, Westinghouse Air-Brake.

No other school has the equipment or Courses anywhere equal to the I.C.S. If you really wish to secure promotion make some definite attempt to get it. It puts you under no obligation to use the coupon. The advice and information it brings are free. **MAKE A START NOW.**

International Correspondence Schools, Box 1072, Scranton, Pa.

mile and a half. The company is to raise $25,000 by common stock, and $25,000 by 6% bonds, which are to be guaranteed by the city, in return for which the city will hold a mortgage on the line and all the company's property. A bylaw confirming the agreement has not yet been submitted to the taxpayers. The directors are:—G. W. McBride, W. G. McMorris, W. Waldie, J. E. Taylor, H. Selous, A. Jeffs, W. P. Tierney, R. A. Brown, A. S. Horswell, H. Wright, and E. B. McDermid, the Secretary-Treasurer. (Dec., 1909, pg. 931.)

Niagara Falls to Dunnville, Etc.—Application is being made to the Ontario Legislature to incorporate a company to construct an electric railway from Niagara Falls, through Stamford, Thorold, and Crowland tps., Welland, Humberstone, Wainfleet, Moncton and Sherbrooke tps., to Dunnville, and a branch from the main line through Wainfleet and Pelham tps. to Fenwick village, and through Pelham and Thorold tps. to the main line at Thorold; to manufacture electric power; to erect telegraph and telephone lines, etc. H. A. Rose, Welland, Ont., is solicitor for applicants.

The Niagara, St. Catharines and Toronto Ry.'s new line between Welland and Port Colborne, Ont., is expected to be completed early in the year. The steel rails were received from Sault Ste. Marie, Dec. 17. Surveys are being made for an extension to Fort Erie. The company has changed the schedule on the run between Falls View and Montrose, the cars being now run every hour instead of every 20 minutes as formerly. In consequence of this the Stamford township council has informed the company that unless it restores the former service the tracks must be taken up. (Dec., 1909, pg. 931.)

Ottawa and St. Lawrence Ry.—We are advised that J. McFarlane, referred to in our last issue as being a director of this company promoting the construction of an electric railway from Ottawa to Morrisburg, Ont., is not connected with the O. and St. L. Ry., but with another company. The O. and St. L. Ry. has a charter for the construction of a belt line of railway from Ottawa to the St. Lawrence River through Morrisburg and back to Ottawa, a total distance of about 255 miles. Surveys have been made for about 45 miles from Ottawa South to Arnprior, but no surveys have been made between Ottawa and the St. Lawrence. It is this company for which it is said that the capital has been subscribed in London, England. (Dec., 1909, pg. 931.)

Ottawa, Rideau Valley and Brockville Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title with power to construct a railway, to be operated by electricity or other motive power, from Ottawa to Brockville; to operate a steam ferry across the St. Lawrence River to Morristown, N.Y.; and a branch line or extension of the railway from Ottawa to High Falls, Que. The promoters are also asking authority to generate electrical power and to distribute the same. The bill declares the works authorized to be for the general advantage of Canada. D. H. McLean, Ottawa, is solicitor for the applicants. (See, also Ottawa, Brockville and St. Lawrence Ry., Nov., pg. 829).

People's Ry.—The Stratford, Ont., City Council decided Dec. 6 to defer the further consideration of the proposed bylaw to aid in the construction of this projected electric railway by taking preferred stock to the amount of $90,000. A resolution was passed by the Waterloo, Ont., Board of Trade, Nov. 30, favoring the granting of concessions and financial assistance to the company for an extension of the line from Baden to Waterloo. (Dec., 1909, pg. 931.)

Port Arthur and Fort William Electric Ry.—The commission having charge of this railway laid 2.5 miles of new track during 1909. One mile was laid in Port Arthur, from Cumberland St. to Dawson Ave., and 1.5 miles in Fort William, being the West Fort loop to the Canada Iron Corporation's works. The commissioners have under consideration the construction of an extension from West Fort to the G.T.P.R. terminals. (Dec., 1909, pg. 931.)

Quebec and Saguenay Ry.—Instructions are said to have been given for the revision of the plans for the construction of the projected electric railway from St. Joachim, the terminus of the Quebec Ry. Light, Heat and Power Company's line to Murray Bay. The work will be done by E. A. Evans, General Manager and Chief Engineer of the Q.R.L. and P. Co. The route of the proposed line, for the greater part of its course, is along the bank of the St. Lawrence, and as this is steep and mountainous rock, the ledge for the railway track is to be made on the side of the mountains by blasting off the rock, instead of by tunnelling, if it is found that the ice in winter will not interfere with such a track. For the purpose of ascertaining this, cribwork will be erected in certain localities, upon which the action of the ice can be tested. It is said that the work of constructing the permanent line will be started in the spring. (Sept., 1909, pg. 683.)

The St. John Ry. has under consideration the construction of an extension from the north end of St. John, N.B., to Milledgeville, three miles. In conjunction with the Dominion Engineer, W. Z. Earle, Manager, made an inspection of the suspension bridge, Nov. 24, on which it is desired to lay tracks. It is stated that they found the bridge in rather bad shape, and that considerable repairs will have to be made on it before tracks can be laid. (Sept., 1908, pg. 665.)

St. Thomas Street Ry.—The St. Thomas, Ont., City Council passed a bylaw Dec. 7 asking the taxpayers to vote, at the municipal elections, $25,000 for the improvement of the street railway. Of this it is proposed to spend $12,000 on extensions and improvements. (Dec., 1909, pg. 931.)

The Sarnia St. Ry. during 1909 laid a second track on Front St., and constructed an extension of 1,800 ft. from George St. to Wellington St. (June, 1908, pg. 431.)

Sherbrooke Street Ry.—The city council of Shebrooke, Que., is considering a proposition for granting a new franchise to a new company. The proposition was submitted by B. W. Hibbard, representing a company which is being formed to take over the rights and franchises of the present company, to improve the existing lines and to extend the line to Magog, Bromptonville and Windsor Mills. The new lines in the city would have a length of from eight to 10 miles. A franchise extending over 60 years was asked, the company to be free from taxation for 30 years. The council offered to sell to the proposed company its right over the Westbury power for $22,200. The matter is still under consideration.

Toronto Eastern Ry.—The names of the applicants to the Dominion Parliament for a charter of incorporation with this title to construct an electric railway from Port Hope to Toronto are:—T. E. Kaiser, W. F. Cowan, R. McLaughlin, Oshawa; C. H. Downey, Whitby; R. R. Mowbray, Kinsale. The Toronto City Council has decided to oppose the bill. (Nov., 1909, pg. 831.)

Toronto Tube Railway Plans.—In connection with the plans for the construction of a system of tube railways in Toronto a proposal was made to the City Council Nov. 29 to construct and maintain subway and radial lines according to the plans accompanying the report of the special committee of the council which investigated the matter. The term of the franchise would not be for longer than the term of the franchise of the Toronto Ry. Co. At the expiration of that company's franchise the city would have the option of taking over the property of the tube company at the actual cost with a percentage to the contractors. If the city did not take over the lines the undertaking would be continued by the company. (Dec., 1909, pg. 929.)

The Winnipeg Electric Ry. during 1909 laid 4.037 miles of track as follows:—Dufferin Ave., 13,672 ft.; Academy Road, 2,452 ft.; Osborne St., 1,600 ft.; Marion St., 2,778 ft.; Notre Dame Ave. West, 818 ft.; all double tracks. (Dec., 1909,

Air Brakes for Electric Cars

On Nov. 25 the Board of Railway Commissioners' Secretary notified companies under the Board's jurisdiction that the Board would on Dec. 7 consider the question of air brake equipment on the Hamilton & Brantford Ry. and the Hamilton Radial Electric Ry. and also a proposed order requiring all electric railways subject to the Board's jurisdiction to equip their cars with automatic air brakes as well as hand brakes as an additional safeguard in case of damage or breakage to the air brake equipment. The President of the Canadian Street Rys. Association, Mr. McDonald, wrote the Board's Secretary suggesting that the hearing be deferred and that the question be taken up by one of the Board's officials with the Association, so that it might be thoroughly gone into and some conclusion recommended to the Board. The Board's Secretary replied that the request would be considered when the case came up for hearing.

At the Board's sitting on Dec. 7, Col. H. H. McLean, K.C., M.P., one of the Association's counsel, requested that the hearing be adjourned on account of the short notice given to companies, and that the whole question be referred to the Board's Chief Operating Officer to hold a conference with the Association's Executive Committee, so that it might be fully discussed. The Board granted an adjournment of the hearing to Feb. 4, and in the meantime the Association's Executive Committee will meet the Chief Operating Officer and go into the whole question. The Association believes that air brakes are unnecessary and impractical on single truck cars.

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for Oct., 1909, $264,306; operating expenses, $131,679; net operating earnings, $132,627; renewal funds, $16,394; net earnings, $116,233; approximate income from investments, $16,500; net income, $132,733, against $197,630 gross earnings; $96,075 operating expenses; $101,555 net operating earnings; $14,443 renewal funds; $87,112 net earnings; $13,550 approximate income from investments; $100,662 net income for Oct., 1908. Aggregate gross earnings for four months ended Oct. 31, 1909, $967,172; net earnings, $454,296, against $735,211 gross and $356,210 net for same period 1908.

A dividend at the rate of 8% for the year was paid, Dec. 9, 1909, on the deferred ordinary stock, for the half year ended June 30, 1909.

Edmonton Radial Ry.—Traffic receipts for Nov., 1909, $9,570.31, against $1,613 for Nov., 1908. The number of passengers carried in Nov., 1909, was 229,798 against 37,362 in Nov., 1908.

Halifax Electric Tramway.—Traffic receipts for Nov., 1909, $14,603.57, and for two weeks ended Dec. 14, $6,900.92, against $12,929.44 and $6,400.40 for same periods 1908.

The Hospital for Sick Children

COLLEGE ST., TORONTO.

THIS APPEAL IS TO YOU!

REMEMBER That Every Sick Child in Ontario Whose Parents Cannot Afford to Pay for Treatment is Treated Free.

The Hospital for Sick Children had last year in its cots and beds 1,155 patients—383 of these were from 267 places in the Province. Sixty-five per cent. were children of poor people who could not afford to pay.

TWO CLUB FOOT CASES IN PLASTER.

Since its organization the Institution has treated 15,613 children; 11,550 of these unable to pay and were treated free.

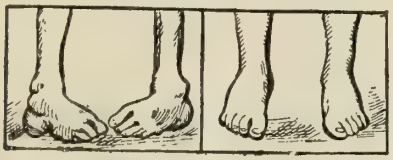
If you know of any child in your neighborhood who is sick or has any deformity send the name of the parent to the Secretary.

GOING HOME IN A WEEK

The Hospital for Sick Children is not a local but a great Provincial Charity for the sick child of the poor man in any part of Ontario has same claim upon its help as the child who lives within the shadow of its walls in Toronto.

MASSAGING A PATIENT.

There were 69 cases of Club Feet treated in the Hospital last year and 67 had perfect correction.



BEFORE AFTER

Just think of it—Your money can help the Hospital to do the good work of straightening the crooked limbs and club feet of little children. Please help us.

Please Send Contributions to J. Ross Robertson, Chairman, or to Douglas Davidson, Sec.-Treas., The Hospital for Sick Children, College St., Toronto.

The Ontario Government received $416,936 from taxes levied on railways in the province during the last financial year, against $400,227 in the previous year. Of this $30,000 is applied towards the expenses of the Ontario Railway and Municipal Board.

PEERLESS

The Fence that saves Expense

It is the best fence you can buy because it is the cheapest, when measured by the years of good service it will give. PEERLESS FENCING is made of all No. 9 hard, springy wire, which is not easily affected by weather, wear or unruly stock. Just the fence suited to railroads. Neat in appearance—conforms to topography of ground and at the same time upright wires are perpendicular. It will pay you to get the free book we are sending to all who write us. A postal will do.

The Hamilton, Waterloo and Guelph Ry. Co. has given notice that in addition to the other powers for which it is applying to the Dominion Parliament, it will ask for powers to increase its capital stock.

London St. Ry.—Gross earnings for Nov., 1909, $18,964.07; expenses, $14,-211.51; net earnings, $4,752.56; deductions, $2,363.05; net income, $2,389.51, against $17,618.26 gross earnings; $13,-414.73 expenses; $4,203.53 net earnings for Nov., 1908. Aggregate gross earnings for 11 months ended Nov. 30, 1909, $221,685.18; expenses, $154,361.38; net earnings, $67,323.80; deductions, $26,-445.81; net income, $40,877.99, against $214,474.24 aggregate gross earnings; $152,718.06 expenses; $61,756.18 net earnings for same period 1908.

Montreal St. Ry.—Passenger earnings for Nov., 1909, $323,446.50; miscellaneous earnings, $11,424.77; total earnings, $334,-871.27; operating expenses, $200,137.56; net earnings, $134,733.71; city percentage on earnings, $11,814.27; interest on bonds and loans, $14,471.85; rent leased lines, $498.67; taxes, $4,000; total charges, $30,784.79; surplus, $103,948.92; expenses per cent. of earnings, 59.76, against $292,848.63 passenger earnings; $8,729.51 miscellaneous earnings; $301,578.14 total earnings; $180,682.03 operating expenses; $120,896.11 net earnings; $10,404.42 city percentage on earnings; $16,113.30 interest on bonds and loans; $444.43 rent leased lines; $2,700 taxes; $29,662.15 total charges; $91,233.96 surplus; 59.91 expenses per cent. of earnings, for Nov., 1908. Aggregate total earnings for two months ended Nov. 30, $688,878.22; operating expenses, $374,872.53; net earnings, $314,005.69; total charges, $61,864.27; surplus, $252,141.42; expenses per cent. of earnings, 54.42; against $630,186.26 aggregate total earnings; $346,106.05 operating expenses; $284,080.21 net earnings; $59,842.43 total charges; $224,237.78 surplus; 54.92 expenses per cent. of earnings; for same period 1908.

Ottawa, Brockville and St. Lawrence Ry.—A new call of 5%, in lieu of a second call of 2% and a third call of 3% improperly made upon the shares of the company, has been made by the directors, to be paid by Jan. 2. The offices of the company are 38 Sparks St., Ottawa, and the Secretary is N. Belanger. (Nov., 1909, pg. 829.)

The Quebec Railway, Light, Heat and Power Co., the incorporation of which was announced in our Dec. issue, has an authorized capital of $10,000,000 with head office at Montreal. In it are merged the Quebec Ry. Light and Power Co., Jacques Cartier Power Co., Quebec Gas Co., Frontenac Gas Co., and the Canadian Electric Co. The President is W. G. Ross, Managing Director Montreal St. Ry., and the Vice President, Frank Ross, of Quebec. The new company will have a substantial amount of cash at its credit to carry out proposed extentions and also a reserve of bonds for future development.

South Western Traction Co.—under the terms of the judgment respecting the sale of the property, bondholders and others claiming to have encumbrances on the S.W.T. Co. were required to produce their bonds or debentures with all unpaid coupons, and any other securities at the offices of the London and Western Trusts Co. by Dec. 31, 1909, for adjudication. The claims will be adjudicated by the Local Master of the High Court at London, Jan. 7. The formal transfer of the property was made Dec. 15 to the recent purchasers, who paid the balance of the purchase money into court. (See also London and Lake Erie Ry. and Transportation Co.)

Toronto Ry.—Gross earnings for Oct., 1909, $332,976; operating expenses, maintenance, etc., $169,067; net earnings, $163,909, against $306,857 gross earnings; $166,027 operating expenses, maintenance, etc.; $140,830 net earnings for Oct., 1908.

Gross earnings for Nov., 1909, $325,-416.70; expenses, $168,112.30; net earnings, $157,304.40, against $286,957.43 gross earnings; $146,643.99 expenses; $140,-313.44 net earnings for Nov., 1908. Aggregate gross earnings for 11 months ended Nov. 30, 1909, $3,515,684.40; expenses, $1,789,199.24; net earnings, $1,726,485.16, against $3,223,036.57 aggregate gross earnings; $1,708,838.23 expenses; $1,514,198.34 net earnings for same period 1908.

Winnipeg Electric Ry.—Gross earnings for Oct., 1909, $247,000; operating expenses, $123,800; net earnings, $123,-200, against $207,100 gross earnings; $102,000 operating expenses; $105,100 net earnings for Oct., 1908. Aggregate gross earnings for 10 months ended Oct. 31, 1909, $2,087,900; net earnings, $1,044,900, against $1,735,400 gross and $869,800 net for same period 1908.

Electric Railway Notes.

W. Murray has been elected President Toronto Street Railwaymen's Union for the current year.

The Hull Electric Co. has ordered two 21 ft. closed vestibule cars from the Ottawa Car Co., Ottawa.

The Nelson, B.C., St. Ry. Co. is asking tenders for two semi-convertible cars, and for station switching equipment.

The B.C. Electric Ry. is reported to have ordered five semi-convertible, pay-as-you-enter cars, 28 ft. long, in the U.S.

The Montreal and Southern Counties Ry. has received two 40 ft. centre aisle interurban cars from the Ottawa Car Co.

J. F. Goodwin has been appointed Superintendent Sherbrooke St. Ry., Sherbrooke, Que., vice P. J. Slattery resigned.

The Dominion Power and Transmission Co. is reported to contemplate purchasing 10 cars for service on the Hamilton St. Ry.

The Port Arthur and Fort William Electric Ry. commissioners have refused the demand of the motormen and conductors for increases in wages for the first and second year men.

The North Toronto town council passed a resolution, Dec. 16, to take a plebiscite on Jan. 1 on the question of a Sunday car service on the Metropolitan Division of the Toronto & York Radial Ry.

The Supreme Court dismissed the appeals of the Ottawa Electric Ry., Dec. 14, in two cases arising out of the accident on its Britannia line in May, 1908.

The London and Lake Erie Ry. and Transportation Co., formerly the South Western Traction Co., is reported to have decided to purchase four additional interurban cars during this year.

The Hull Electric Ry. has ordered three open cars, with centre aisles, walk-over seats, slat construction, air and hand brakes, white ash finish, with bodies 38 ft. long, vestibule at each end, 5 ft. 2 ins. long; wheel base, 6 ft.

The St. Thomas, Ont., Street Ry. Commissioners contemplate the purchase of two new cars, the installation of new motors, and the alteration of some cars, for which a bylaw to provide $13,000 is to be submitted to the taxpayers.

A. J. Macdonald, at one time in the Montreal St. Ry. service, and latterly Superintendent Mexico Tramway Co., has been appointed Superintendent City Division Quebec Railway, Light and Power Co., vice H. L. Bartlett, resigned.

The Board of Railway Commissioners decided Dec. 7 to postpone until Feb. 4 the consideration of the question as to whether electric railways coming under its jurisdiction should be compelled to fit cars with air brakes in addition to hand brakes.

L. Stevens, conductor, and J. Damlancourt, motorman, Montreal St. Ry., were arrested Dec. 3, charged with theft from, and damages to, fare boxes, while in charge of the fare box collecting car, between divisional centres and headquarters.

The Quebec courts refused, Nov. 24, to grant an injunction applied for by the Montreal city council to prevent the Montreal St. Ry. carrying freight on its lines other than for the city. Justice Fortin held that everyone as well as the city was profiting by the street railway carrying freight.

Three consulting engineers from New York spent some time in Montreal early in Dec., and it is said that the object of their visit was to obtain information upon which to prepare plans and estimates either for an elevated or an underground electric railway system in the centre of the city.

W. N. Warburton, ex-manager Windsor, Essex & Lake Shore Rapid Ry., sued the company recently for two months' pay, $250, and for $75 for additional board. The Local Master at Windsor disallowed the claim for board and allowed the company $110 on a counter claim.

Wilford Phillips, Manager Winnipeg Electric Ry., is reported to have stated, Dec. 15, that a satisfactory agreement had been arrived at with the city regarding the erection of poles on Hespeler Ave., and that the company would, in due course, make an arrangement for the use of the conduits now under construction.

During the recent suspension of power production at the Winnipeg Electric Ry.'s power plant at Lac du Bonnet, caused by the breaking of one of the penstocks, a service was operated on the Winnipeg, Selkirk and Lake Winnipeg Electric Ry., by means of the old locomotive, which was retired when the road was electrified.

The Montreal city council has been complaining of the overcrowding of the Montreal St. Ry. cars, and the company in reply states that this overcrowding is aggravated, if not largely caused by the obstruction to traffic by vehicles getting on the tracks. The company asks the council to direct the police to see that its cars have the right-of-way as provided for in the contract.

The Montreal city council finance committee reported recently that all outstanding accounts with the Montreal Street Ry., except the snow cleaning account, had been settled. The last matter to be settled was the tax account, which had been in dispute for six or seven years. The amount paid in settlement was about $100,000, and the amount outstanding on the snow clearing account is about $60,000.

A Vancouver dispatch of Dec. 16 says:—"Two years ago Maynard and Sharman, foremen of the British Columbia Electric Ry., were charged with padding the pay roll list with dead men's names. Both left, and Maynard implicated James Milne, Superintendent of the company. The latter was accused and served 18 months. Yesterday Maynard was re-arrested and confessed, exonerating Milne."

The British Columbia Electric Ry., in pursuance of its bonus scheme for employes, by which an amount equal to one-third of the amount available for dividend, after 4% has been made on the common stock, is distributed among employes who have been in the continuous service of the company, from July 1, of the year previous to the distribution, has this year distributed about $50,000, the number of men participating being

nearly 900, the individual amounts received being $58.10.

The enquiry into the cause of the disaster on the British Columbia Electric Ry., whereby 15 passengers lost their lives recently, was concluded, Dec. 5, 1909, the verdict of the jury declaring that there was no criminal neglect on the part of the train crew, and suggesting that the company adopt increased safeguards until a method is found of keeping the tracks free from freight cars at night, and also that traffic on interurban lines should be governed by standard rules approved by the Board of Railway Commissioners.

The Supreme Court of Montreal recently awarded $57.59 damages against the Montreal St. Ry., for injury to a horse, which was frightened by a band being played on one of the company's cars, and which ran into a plate glass window. The claim was for $115.17, but it was found that there was contributory negligence. In delivering judgment, Justice Bruneau stated that there was no clause in the company's franchise which gave it the right or allows it to operate an electric band car through the streets for advertising purposes.

Electric Railway Track Laid in 1909.

Official reports received by us to Dec. 20, as to new track laid on electric railways during 1909, in several of which the figures were estimates, show that 48.50 miles were laid by 12 companies. The figures for the Winnipeg Electric Ry. represent double track replacing temporary single track.

DIVIDEND NOTICE.

The Northern Navigation Company of Ontario, Limited

The Board of Directors have to-day declared a yearly dividend at the rate of 8 per cent. per annum, payable January 15th, 1910, to shareholders of record as of January 10th, 1910.

Transfer books will be closed from the 11th day of January, 1910, until the 25th day of January, 1910.

The Annual General Meeting and a Special General Meeting will be held in the Board Room of the Traders Bank of Canada in the City of Toronto on Tuesday, the 25th day of January, 1910, at 2.30 o'clock in the afternoon.

H. H. GILDERSLEEVE,
Manager.

Toronto, December 29th, 1909.

Telegraph and Cable Matters.

W. M. Manchester, formerly C.N.R. telegraph operator at Rainy River, Ont., has been sentenced to two years imprisonment, for manipulating tickets and cash.

The Michigan Central Rd. is reported to have granted a 14% increase in wages to its telegraph employes, and the Pere Marquette Rd., is stated to be following suit.

D. G. Sturrock, Manager C.P.R. Telegraphs, Toronto, accompanied by his wife and family, left Toronto at the end of Nov., for a trip to the Pacific coast for the benefit of his health.

The Illinois Central Rd., has declined to increase the wages of its telegraph operators, and by consent, the matter is being submitted to the Chairman of the Interstate Commerce Commission and the Federal Labor Commissioner.

The C.P.R. Telegraph Department has opened offices at Deleau, Kelloe, Melbourne, Niverville, Purvis, Man.; Beaucage, Delamere, Moffat, Ont.; Adanac, Keeler, Kelso, Killaley, Phippen, Rokeby, Stockholm, Vandura and Wynyard, Sask.

The Temiskaming and Northern Ontario Ry. telegraphers have been granted increases in wages, for the current year, amounting to from 10 to 15%. Negotiations between the Commissioners and the employes have been in progress during the past six months.

A board of conciliation has been appointed, consisting of J. E. Atkinson, Chairman, W. Nesbitt, K.C., and W. T. J. Lee, all of Toronto, to enquire into the differences between the G.T.R. and its telegraphers and station agents stationed east of Detroit.

The Board of Railway Commissioners has dismissed the appeal against the telegraph rates which go into effect July 1, providing that code words used in messages of more than five letters shall be charged at an increased rate. Under the present rates, the limit is 10 letters.

Wireless telegraph messages were exchanged between the dual ports, Fort William and Port Arthur, Ont., and Duluth, Minn., Dec. 2, communication being established with the latter city's station by means of the steamboat H. P. Bope. It is stated that negotiations are in progress for the establishment of wireless telegraph stations at the head of the lakes.

The British and Colonial Press Service, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $100,000 and office at Montreal, to receive and transmit news from, and to, all points in the British Empire. For this purpose, it is stated, a contract has been entered into with the Marconi Wireless Telegraph Co., covering a number of years.

The Dominion Government wireless telegraph station at Ikeda, B.C., is being operated regularly, and with success, transmission to Victoria being made, for the most part, over land. Material is being assembled at Triangle Island for the construction of another station, similar to those at Pachena and Gonzales Hill. The Prince Rupert station was expected to be ready and in operation by the end of 1909.

The Marine Department report for the year ended March 31, 1909, which has been issued recently, shows that 20 wireless telegraph stations were operated by the Department. They are situated at Cape Race and Cape Ray, Nfld.; Heath Point, Anticosti; Whittle Rocks, Point Amour, Belle Isle, Point Rich, in the Gulf of St. Lawrence; Father Point, Clarke City, Fame Point, in the River St. Lawrence; Sydney, Cape Sable, Pictou, N.S.; Cape Bear, P.E.I.; Partridge Island, N.B.; Point Grey, Victoria, Pachena, Estevan and Cape Lazo, B.C.

Grain Elevator Notes.

The Vancouver Milling Co. has commenced work on the construction of an elevator of 50,000 bush. capacity at Granum, Alta. This will make five elevators at that point.

A bill to amend the Inspection and Sale Act by striking out the words "or cargo" in sections 98 and 99, and by reconstituting the Grain Survey Board, was given a first reading in the House of Commons, on Nov. 29, but the Minister of Agriculture announced its withdrawal.

The Dominion Millers' Association is applying to Parliament for amendments to its charter, to add to its powers for holding real estate; to enable it to manufacture and deal in grain products, own and operate grain elevators, vessels, wharves and shares in vessels in connection with its business, and for other purposes.

The Goderich Elevator and Transit Co., proposes to construct a cement and steel annex to its present elevator at Goderich, Ont., thus increasing its capacity by 500,000 bush. A by-law is being submitted to the ratepayers for the exemption of the company's present plant and the proposed additions, from all municipal taxation for ten years from Jan., 1911.

The Grand Trunk Pacific Elevator Co.'s elevator at Tiffin, Ont., which was fully described in our Dec., 1908, issue, has made some exceedingly good records. During Nov., 1909, the Chicago and St. Lawrence Steam Navigation Co.'s steamboat, E. B. Osler, with 528,000 bush. was unloaded in 21 hrs., an average of 25,143 bush an hour. This is stated to be a record for unloading at any Canadian elevator, and also the largest load of grain ever carried on a Canadian vessel. Several other quick unloadings took place throughout the season, averaging from 21,000 to 25,000 bush. an hour. The figures quoted include the cleaning up of all grain in the holds. From figures given on another page, it will be seen that over 10,000,000 bush. of grain were received at this point, from the head of the lakes. The elevator was constructed by the John S. Metcalf Co., of Montreal and Chicago.

Among the Express Companies.

The Dominion Ex. Co., is suing the city of Brandon, Man., in respect of the local business tax, claiming that as it pays the provincial corporation tax, it should not be called upon to pay a local business tax in addition.

W. L. Rutledge and W. J. Burgess, the latter formerly a Canadian Ex. Co. employe, are being charged with complicity in the recent robbery at the company's office at Truro Station, N.S., when money and money orders to the value of $15,000 were stolen.

The United States Ex. Co., has issued writs against R. W. Hulbert and O. J. B. Yearsle, Toronto, to recover $622.91, freight on certain goods, or for the return of the goods, and for damages for wrongful conversion, and also to set aside as fraudulent, a bill of sale on the goods made by the former in favor of the latter.

An application by the city of Chatham, Ont., to commit E. Fremlin, Agent Dominion Ex. Co., there, for his refusal to produce books and records of the company in his custody, under a subpœna, in relation to the sending of large sums of money to China by Chinese laundry keepers who are attacking the by-law fixing taxation for such laundries, was dismissed at Toronto, Dec. 7, 1909.

MARINE DEPARTMENT.

The Shipping Federation of Canada.

PRESIDENT, H. A. Allan, Montreal; MANAGER, AND SECRETARY, T. Robb, 526 Board of Trade, Montreal.

Dominion Marine Association.

PRESIDENT, C. J. Smith, Montreal; COUNSEL, F. King, Kingston, Ont.

Canadian Association of Masters and Mates.

GRAND MASTER, Capt. F. Scott, Collingwood, Ont.; GRAND SECRETARY-TREASURER, Capt. H. O. Jackson, 376 Huron St., Toronto.

Dominion Marine Association.

Many matters of deep importance to marine interests were considered at the meeting of the Executive Committee of the Dominion Marine Association in Toronto, Dec. 14. It was decided to send a strong deputation to appear before the Senate Committee on Banking and Commerce to oppose the provisions of the insurance bill in so far as it relates to marine interests. It is held that the bill would render it impossible for ship owners to secure insurance, as it is not possible to secure it in licensed companies in Canada. The association maintains that if the bill becomes effective it will mean that all grain would be sent from Duluth to Buffalo. The view of the association as set forth in the Montreal resolution maintained the right of the individual to insure in any quarter he desired, and this, it was held, should be the first principle of any legislation. It was also held that in any insurance the party to be penalized should be only the company soliciting insurance or carrying on business through an established agency in Canada without license.

For many years Ontario boats entering Montreal have been discriminated against in respect to pilotage dues. Any boat from this province entering Montreal has to pay a pilotage charge of $5, and this irrespective of the fact that the pilot's services are never brought into requisition. In regard to boats arriving from any port in Quebec or the Maritime Provinces no such charge is exacted, and the Ontario marine men urge the passing of legislation that will place Ontario in the list of the exempted provinces in respect to pilotage dues. A bill to this end has been introduced in the House of Commons by Mr. Edwards.

Opposition is urged to the tonnage tax imposed this year by U.S. Congress on all boats entering the United States, starting from a Canadian port. For some years the United States Department of Commerce and Labor has been endeavoring to have some such legislation enacted with special reference to ocean-going vessels. Failing in this a clause was slipped in the new tariff and the provisions now apply to lake vessels as well as ocean liners. F. King, Counsel for the Association, has had the matter in hand with counsel for the lake carriers of the U. S., and has had interviews with the Commissioner of Navigation at Washington. Legislation is expected at this session of Congress to exempt the Great Lakes from this law. It is realized that retaliation by Canada would come hard on the heavy U. S. tonnage on the lakes.

The committee considered at length the pending legislation now before the Dominion Government. The association is not opposed to Mr. Sinclair's bill regarding steamboat inspection certificates, and Mr. Brodeur's bill in regard to water carriage of goods also finds favor. This bill corresponds with the Harter Act of the United States, and results from a conference of all interests in the Senate at a previous session of Parliament.

In respect to bill 10, requiring load lines on vessels, the association is not opposed to the measure but to the method of application. If some uniform system of rules for fixing the location of the "Plimsoll mark" is adopted, it would meet with the approval of vessel owners. The proposal to require all steamers to furnish a list of passengers and crew to the Customs officer before leaving port was condemned as impracticable, as was the suggestion in the same bill that two-thirds of the cargo should be in the lower hold.

Bill 11, requiring wireless telegraph installation on lake steamers over 400 tonnage, was opposed, it being held that lake navigation should be exempt from this exaction, as the trips are short and the ships close together. In similar legislation introduced in the U.S. Congress recently, it was held that lake vessels should be exempt.

Bill 54, introduced by Mr. Fisher abolishes the official weighing of grain into vessels at Upper Lake ports. This accords with previous resolutions of the Association, faulty certificates being found more embarrassing than useful.

It was decided to continue to oppose the building of the Long Sault dam near Cornwall, and to require the complete plans and specifications to be submitted in accordance with the undertaking given by the promoters at the last session of the International Waterways Commission on this subject.

Resolutions were adopted thanking the authorities and officials and men for the excellent services given vessels this season on the Lachine Canal—asking for men to handle lines on the following additional locks—the paper mill lock in the Cornwall Canal—the lower entrance of the Morrisburg and Farran's Point Canals, and the head of the Soulanges Canal. Asking for signal lights on Lachine Canal lock gates to indicate whether gates open or closed. Asking for better protection against bad weather at the head of the Soulanges Canal.

The association commends the use of pointed and square top buoys to assist in distinguishing starboard and port painted spar buoys in bad lights; and recommends the method of lighting the Williamsburg Canals on the St. Lawrence, the Morrisburg, Farran's Point and Rapide Plat.

The Empress of Ireland's Disaster.

The cause responsible for the damage sustained by the C.P.R. steamship Empress of Ireland near Ste. Felicite, on the south shore of the Gulf of St. Lawrence, on Oct. 14, while en route to Quebec, has been investigated by Capt. L. A. Demers, acting Wreck Commissioner, with Capt. Jas. Bain and C. Von Koenig as assessors. At the first sitting on Oct. 26 the Captain, Second and Third officers, Quarter Master and Chief Engineer were examined, as well as Capt. Walsh of the C.P.R. Marine Service, and Diver Begin. The evidence showed that the ship's draft at the time of the casualty was 25 ft. forward and 26½ ft. aft, while her speed of 18½ knots an hour, after taking into consideration the strong head wind effect, was estimated to have actually been reduced to 16½ knots over the water. Hazy and foggy weather prevailed from the Straits to Anticosti, but thence forward to the happening it was clear and fine. Cape Magdalen was passed at a distance of 4½ miles, ascertained through a four point bearing, and a course was then set which brought the vessel two miles off Martin River, which distance was also authenticated through a four point bearing, but from Martin River to Cape Chatte the Captain declared that courses steered necessarily varied in accordance with bend of the river and that a distance of two miles from shore was maintained. Off Cape Chatte, however, the distance was found to be 1¾ miles, and as the vessel proceeded, cross bearings were taken on points of land in the vicinity of Les Mechins.

When off Ste. Felicite at 11.04 a.m. a shock was experienced, followed by a rumbling and a grating sound, the vessel heeling slightly to starboard under effect of impact, which listing remains, however, uncorroborated by testimony of some of the witnesses. Although the shock was insufficient to cause serious apprehension the Captain nevertheless ordered helm put hard to port, but immediately countermanded it by the order "Keep your course," the vessel having, it is estimated, in the meantime, swung three points to starboard. Simultaneously with alteration to helm, the speed of ship was reduced to slow, and cross bearings off Matane lighthouse and Ste. Felicite fog station placed the vessel two miles from shore and one mile from Roix Rock, while "no bottom" was reported following a cast of the lead at 17 fathoms. An examination of the ship after she had cleared the obstruction disclosed the fact that leakage was confined to one compartment, and she therefore proceeded on her journey to Quebec harbor, where she was berthed without further mishap. The evidence elicited was unanimous in setting forth that the vessel was navigated with customary skill and precaution, while it was the consensus of opinion in declarations made that the nature of the shock justified the belief that the vessel struck a submerged object—presumably wreckage. Diver Begin, who made a thorough examination of the ship's bottom, and who has had 20 years' experience in similar work, emphatically stated that the damage sustained was not caused by rock but by the vessel coming in contact with submerged wreckage. Taking into consideration the nature of evidence adduced, the Minister of Marine directed that a survey be made of the place where the ship struck, and Commander Miles, R.N., under whose immediate supervision the survey was conducted, submitted a plan indicating soundings taken as well as a report wherein he states that soundings made within a radius of two miles from Roix Rock, embracing position of ship at time of mishap, are exactly as represented on the chart, and furthermore that he has failed to trace even the slightest vestige of a submerged or sunken wreck.

At a second sitting, Oct. 23, counsel representing the owners produced documents and affidavits from experts who had examined in England the nature of the damage to ship, and reported thereon, as follows: Geo. Hepburn & Son, consulting engineers, naval architects and technical referees; Flannery & Given, consulting engineers; H. Smith of H. & C. Grayson, shipbuilders and engineers. These gentlemen after a thorough examination of the ship's bottom, unanimously assert that damage was caused by vessel coming in contact with or passing over a submerged wreck, held in suspension, or some object other than rock. H. Mowatt, Marine Superintendent C.P.R., and H. Butterworth, C.P.R. Supt. Engineer, both made declarations that upon making an examination of the vessel's bottom a small piece of old wood measuring 5 or 5½ inches long was found jammed hard in one of the butt straps on the port side. R. Fayle and W. Braine, who were waiters on the Empress at the time of the mishap, testified to having seen floating wreckage near the ship's side a minute or so subsequent to the shock, which wreckage consisted of a spar approximating 20 ft. long seen on the starboard side, as well as several pieces on the port side, one of which appeared to be part of a deck. J. Lepage, foreman of repair for G. T. Davie & Sons,

C.P.R. LANDS

The Canadian Pacific Railway Company have 9,000,000 acres of selected lands for sale in Manitoba, Saskatchewan and Alberta.

Maps, as enumerated below, showing these lands in detail, will be sent free on application.

Map No. 1—Winnipeg to Second Meridian	$ 8.00 to $15.00 per acre.
Map No. 2—South-Eastern Saskatchewan, 2nd to 3rd Meridians	10.00 to 25.00 per acre.
Map No. 3—Main Line, 3rd Meridian to Range 10, W. 4th Meridian (generally)	8.00 to per acre.
Map No. 5 South-Western Alberta	8.00 to 15.00 per acre.
Map No. 6—Part of Alberta, Edmonton, Battle and Saskatchewan Rivers Districts—4th Meridian to Range 7, West 5th Meridian	10.00 to 25.00 per acre.
Map No. 7—Part of Western Saskatchewan, 3rd to 4th Meridians	10.00 to 25.00 per acre

All prices are subject to change without notice.

TERMS OF PAYMENT

An actual settler may purchase not more than 640 acres on the ten instalment plan by paying a cash instalment at time of purchase, interest at six per cent. on the unpaid purchase money at the end of the first year, and the balance of the principal, with interest, in nine equal instalments annually thereafter, as shown in the following table:

160	Acres at	$ 8.00	per acre,	cash payment	$191.70	first year's interest	$ 65.28	and nine instalments of	$160.00
"	"	9.00	"	"	213.70	"	"	"	73.46	"	"	180.00
"	"	10.00	"	"	239.70	"	"	"	81 62	"	"	200.00
"	"	11.00	"	"	263.60	"	"	"	89.78	"	"	220.00

"	"	15.00	"	"	359.50	"	"	"	122.44	"	"	300.00

Purchasers who do not undertake to go into residence on the land are required to pay one-sixth of the purchase money down, balance in five equal annual instalments with interest at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

F. T. GRIFFIN, Land Commissioner, Winnipeg.

CANADA NORTH-WEST LAND CO.

This Company has 525,000 acres of selected lands in Manitoba and Saskatchewan which offer excellent opportunities to settlers and investors who desire to secure good lands in well-selected districts. These lands are on sale at the Company's Office at Winnipeg, and at the various land agencies of the Canadian Pacific Railway Company.

F. T. GRIFFIN, Land Commissioner, Winnipeg.

H. G. THORLEY,
PASSENGER AGENT FOR ONTARIO
41 KING ST. EAST, TORONTO.

testified that he had superintended the temporary repairs made to the Empress, and it was his opinion, after a lengthy service in similar work, that the nature of the damage justified him in reaching the conclusion that it could only have been caused by a submerged wreck.

On Nov. 5 the Minister of Marine cabled the High Commissioner for Canada, requesting that the Board of Trade have an examination made of the vessel's hull. T. Miller, Principal Officer of the Board of Trade Surveyor's Office, expresses some doubt as to the nature of the object which caused the damage, and it does not appear to him that the injuries sustained could have been inflicted by the vessel passing over a submerged derelict, but he states that the damage may have been caused by the vessel passing over a very smooth boulder like surface. A. H. F. Young, Principal Officer, states that he failed to detect the slightest indication that the object struck was of a rocky nature. W. Archer, Principal Ship Surveyor of Liverpool, declares that the result of his inspection is not conclusive either way, but he is inclined to the belief that the Empress struck a waterlogged iron vessel. W. Howell, Assistant Secretary of the Board of Trade, states that in accordance with instructions from the Board of Trade the examination of the Empress had been made by the Surveyor of the Department, and as it appeared difficult to form a really definite opinion as to cause responsible for damage sustained, the services of the Principal District Officer as well as those of the Principal Ship Surveyor were called into requisition, and extracts from their individual reports have been cited above.

At a third sitting on Dec. 18 the court decided that in view of the almost unanimous opinion of various experts who thoroughly examined the damaged hull, setting forth that the injuries were incurred by vessel coming in contact with the submerged hull of a derelict probably held in suspension, the Court is of opinion that no blame can be attached to any one for the casualty.

Notices to Mariners.

The Department of Marine has issued the following:—

No. 112. Nov. 17. 292.—Ontario, Lake Huron, entrance to Georgian Bay, Devil Island channel, day beacons established. 293.—Ontario, Georgian Bay, northeast end chart of Key Harbor and its approaches issued. 294.—Ontario, Lake Superior, Otter Island, hand fog horn at light station.

No. 113. Nov. 18. 295.—Ontario, River St. Lawrence, Galops Canal to North Channel, changes in buoyage. 296.—Ontario, Georgian Bay, south end, Mary Ward ledges, intended change in position of westerly buoy. 297.—United States of America, Lake Erie, Detroit River mouth, Bar Point shoal, light vessel moved.

No. 114. Nov. 22. 298.—Ontario, Georgian Bay, south side, Collingwood harbor, shoal spots in dredged channel, caution. 299.—Ontario, Georgian Bay, east side, Victoria harbor, hydrographic information.

Dec. 3. 312.—Quebec, Ottawa River, Lower Allumette Lake, Allumette Island, Supple point, lighthouse established. 313.—Ontario, Ottawa River, Lower Allumette Lake, Spence Island, light pole replaced by tower. 314.—Ontario, Georgian Bay, south side, Collingwood harbor, front range light improved. 315.—Ontario, Lake Huron, north channel, Cockburn Island, Tolsmaville, light discontinued. 316.—Manitoba, Lake Winnipeg, Gimli, lighthouse established.

No. 121. Dec. 7. 317.—Nova Scotia, Bay of Fundy, Minas Basin, Parrsboro, light improved. 318.—Nova Scotia, Bay of Fundy, Grand Passage, Peter Island, new lighthouse. 319.—Nova Scotia, Cape Breton Island, west coast, Port Hood, character of light.

No. 122. Dec. 15. 320.—British Columbia, Vancouver Island, southeast coast, Esquimalt harbor, electric cable crossing. 321.—British Columbia, Vancouver Island, Scotts Islands, Triangle Island, intended light and wireless telegraph station.

The Future of The Allan Line.

The Montreal Star's London, Eng., correspondent cabled, Dec. 9, in relation to the presence of Sir Thos. G. Shaughnessy, President C.P.R., in England, that it was understood that one object of his visit concerned the completion of arrangements, whereby the C.P.R. was to secure control of the Allan Line, the Glasgow interests of the firm, which held about three-quarters of the working capital, having been purchased with that end in view.

When interviewed in Montreal, Dec. 10, on the subject, Sir H. Montagu Allan, is reported to have said, "It seems perfectly useless to keep on denying these rumors, but there is absolutely no truth whatever in the story. Sir Thos. Shaughnessy's visit to England has nothing whatever to do with the completion of arrangements whereby the C.P.R. secures working control of the Allan Line. The new working arrangement between the two companies is of the most complete and satisfactory character, but everything was arranged before Sir Thos. Shaughnessy left. The control of the Allan Line is now on this side of the ocean, and this has enabled us to make arrangements with the C.P.R., under which we are able to greatly facilitate matters between ourselves and that company."

Grounding of the s s. Athabaska.

An investigation was held at Collingwood, Ont., Nov. 17, 1909, by Capt. L. A. Demers, acting Wreck Commissioner, assisted by Capts. Nash, Montreal, and C. Coles, Collingwood, to enquire into the causes of the grounding of the C.P.R. s.s. Athabaska, Oct. 13, 1909, at Flower Pot Island, near Owen Sound. Following are extracts from the judgment: It was shown that the Athabaska was fully and well equipped with all the necessary instruments for navigation, two good efficient compasses which had been adjusted in the spring, and that the officers all held appropriate certificates.

The Captain, A. Brown, deposed that on Oct. 13, he left Owen Sound for Fort William with general cargo; the weather at the time and up to the casualty was stormy and clear, but, at intervals, a little hazy by snow flurries and rain. It would appear, that after rounding Cove Island and entering Lake Huron, he found the sea so heavy, that he put back, passing again by Cove Island, to get under the lee of Flower Pot Island; that he never lost sight of the Cove Island light and saw the Flower Pot light a minute or so before the ship went ashore, it then becoming obscured. He did not express that his intention was to anchor, but to wait under the lee of Flower Pot Island to see if the weather would become more favorable. When a quarter of a mile or thereabout from Flower Pot Island, a squall came on, which obscured the light and the island partly. The vessel was going half speed, or, about six knots an hour, and shortly afterwards struck on the rocks one ship's length from the lighthouse. It is said that previous to her striking, the Captain ordered the man at the wheel to starboard the helm, but instead the helm was ported, but, the mistake was seen at once and with the help of the second mate, the helm was starboarded, but too late, and, at the same time the telegraph was rung full speed astern to no avail, the ship remaining fast on the rocks, and sustaining serious damages. The second officer and the wheelsman corroborated this.

On the other hand, upon examining the Flower Pot lighthouse keeper, he emphatically stated that, at no time, from half past eight till after the ship stranded, was the light obscured, and, even the light at Cove Island, which is some 12 miles distant, was visible throughout. He remarked that the vessel appeared to be much closer to the island than usual and that he stood at the station watching its movements. Shortly afterwards he saw her coming ashore and grounding. He hailed the vessel, being at a short distance from her, asking if any assistance was required, but, no answer was vouchsafed, although he could see two men on the navigating bridge.

The evidence tended to show that the captain does not seem to understand the workings of the compass, and the only way he assured himself that his compass was correct, was, when in sight of ranges; moreover, he even ignored the name of the maker of the navigating compass, though he had been in command of the vessel for three years. The lead line was not resorted to, in fact it does not appear that the ordinary precautions were taken to avoid apparent dangers. The entries in the scrap log and the official log books, are written in lead pencil, and the Court noticed that, on the day of the mishap, some erasures were made and other observations and notes entered in the official log book. This fact alone, in the Court's view would be sufficient to condemn the master of the vessel, even if proofs of carelessness were wanting. The spelling in the official log book, is execrable. In fact, the way of keeping the logs may be considered as farcical and valueless. After weighing carefully the evidence adduced, the Court is of opinion that the casualty was due to careless navigation on the part of the master, and orders that his certificate be suspended for nine months from Nov. 17, 1909, to Aug. 17, 1910. The other officials are exonerated.

Lake Grain Shipments, 1909 Crop.

The following statement, prepared by F. E. Gibbs, Grain Inspector, Fort William, Ont., shows the bushels of grain shipped from the different elevators at Fort William and Port Arthur, of the 1909 crop, Sept. 1 to close of navigation, Dec. 10, with the ports of destination. The last two figures in each column represent lbs.

Pending Marine Legislation.

A number of bills affecting the mercantile marine interests are under consideration by the Dominion Parliament. One bill provides for the fixing of a load-line on all vessels registered in Canada of 50 tons gross and over used in inland navigation. Every barge of 100 tons and over proceeding to sea from any Atlantic or Pacific port, as well as from inland ports, shall be similarly marked.

Another bill, provides that every seagoing and coasting passenger vessel over 400 tons gross, and every freight vessel over 1,200 tons gross shall be equipped with wireless telegraph apparatus. The penalty for noncompliance is fixed at not less than $100 and not exceeding $1,000 or imprisonment for not exceeding 12 months, or a fine and imprisonment.

Another bill provides for the repeal of sec. 588 of chap. 113 of the revised statutes, which regulates the inspection of vessels, and the substitution of a secdor of the saloon fittings and their quartion providing that where a vessel holds a certificate of inspection by Lloyds it shall not be required to be inspected by Canadian inspectors the same year.

Another bill affects the inspection of vessels. The first four sections make barges and vessels, not now inspected, subject to inspection; another section provides for the inspection of steam yachts under five tons; section six provides that fishing boats under a certain tonnage shall carry either a life boat, life raft or other appliance for the saving of human life; the last section provides that steamships towing other barges shall be provided with a rocket gun and a heaving line so that a derelict tow may be picked up.

The Minister of Marine has introduced a bill respecting the water carriage of goods. The object is to declare illegal, conditions put in bills of lading by which shipowners can free themselves from any liability arising out of their fault and negligence. The bill was before the Senate two years ago and made the subject of an investigation. It was passed through the Senate last session, but reached the House of Commons too late to be taken up. Other provisions concern losses in case of accidents or force majeure. It also provides that shipowners shall have the right to remove inflammable and explosive goods which may have gone on board without their consent.

Another bill, introduced in the Senate, provides for the protection of navigable waters by prohibiting the deposit of sewage, offal or refuse animal or vegetable matter therein.

Steamer Oscar, Ltd., has been incorporated under the B.C. Companies Act, with a capital of $8,000, to purchase the steamboat Oscar and the business of the Butler Freighting and Towing Co., Ltd., to acquire steam and other vessels, and carry on a general freighting and carrying business. The Oscar was built at Victoria in 1897, and is a screw driven vessel with engine of 8 n.h.p Her dimensions are: length, 81 ft.; breadth, 21 ft.; depth, 7 ft.; tonnage, 95 gross.

The A.B.C. Elevator and Wharf Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $3,000,000 and office at Vancouver, B.C., to carry on the businesses of grain growers and buyers, grain elevator and warehousemen, and in connection therewith to build, purchase or otherwise acquire steam and other vessels, to carry on a general transportation business and act as lightermen, stevedores, etc. The provisional directors are: E. H. Heaps, T. H. Worsnop, J. W. Heaps, R. L. Reid, Vancouver, B.C.; L. P. Strong, Calgary, Alta.

Grounding of the s.s. Montezuma.

An investigation into the causes of the grounding of the s.s. Montezuma at Cap a la Roche, Oct. 28, has been held at Montreal, before Capt. L. A. Demers, acting Wreck Commissioner, with Capt F. Nash and C. Gauthier of the Corporation of Pilots, as assessors. The court found that the pilot was guilty of an error of judgment, but taking in consideration his long and efficient service, reprimaneded him and warned him to be more careful in the future. It was also stated that in the court's opinion, the captain forgot for a moment the responsibility with which he is invested, by leaving his post when his vessel was entering one of the most intricate parts of the river, and admonished him to be more careful in the future.

Capt. Walsh, Superintendent C.P.R. steamships, asked to be allowed to place on record his protest against the system adopted by the pilots in taking the wheel themselves, pointing out that it is impossible in vessels of large width, with bridges a great height from the water line, for a person stationed amidships to estimate approximately the distance of an object or buoy from the bow, and in fact such object or buoy actually disappears from the range of visability of a person so placed, nor can he view any aids to navigation which may be astern, especially is such the case when the wheel is within a wheel house. The court partly agreed that it would be preferable for the pilots to request that the best quartermaster be given them, especially when entering intricate places, so that they would be free to go from one side of the bridge to the other and assure themselves of the exact position and bearing of the various aids to navigation.

Canadian Northern Steamships Ltd.

In our November issue we give full particulars of the incorporation under this title, with a capital of $2,000,000 and office at Toronto, of another subsidiary company of Mackenzie, Mann & Co. This company will enter the Atlantic steamship service in the spring, and has already acquired three steamships as the nucleus of a fleet. The two principal vessels which have been bought are the Heliopolis and the Cairo, which were built in 1908 at Glasgow, Scotland, for the Egyptian Mail S.S. Co.'s Marseilles-Alexandria service, and have the following dimensions: Length over all, 545 ft.; breadth, 60 ft. 3 in.; depth to shelter deck, 38 ft.; tonnage, 11,000; i.h.p., 18,000. They are fitted with the latest devices for the safety and comfort of passengers, having special regard for the high-class of traffic they were designed to handle. In addition to the features found only on the very latest transatlantic steamers, the Heliopolis and Cairo embody many new ideas in interior fittings, which will give them a quite distinct place when they begin service in the transatlantic trade. There are huge stores, hairdressers' shops, a dispensary, and ample room for passengers' spare baggage, so arranged that the passengers' access to their baggage is easy. Ventilation is regulated by means of thermo-tanks able to maintain the air at 60 deg. Fahr., with a surrounding atmosphere at zero. In addition to this, the ship has been furnished with scores of little electric exhaust fans. The refrigerating plant for the preservation of provisions is the best that can be got, while the electric light plant is so complete that every stateroom is fitted with ladies' electric curling tongs. To prevent fires a Clayton fire-extinguisher is installed on each of the two steamers and a constant supply of water, salt and fresh, hot and cold, has been laid on all over the vessels. The accommodation for officers and crew is on a scale commensurate with the splendor of the saloon fittings and other quarters provide a measure of comfort that are to be found on but few high-class liners. The machinery consists of three sets of Parsons' compound steam turbines, one h.p. turbine in the centre and two l.p. turbines on either side, having a collective power of 18,000 i.h.p. at 340 shaft revolutions. Vibration and noise have been reduced to a minimum and in spite of the enormous power developed, there is practically no throb or jerk whatever. In their trials they developed a speed of almost 21 knots an hour, and while running between Marseilles and Alexandria they maintained a speed of over 19 knots. Both vessels have been taken to Glasgow, where considerable alterations will be made. They already have splendid first-class accommodation and some second-class and large refrigerator accommodation. The latter feature will be retained; the second-class accommodation will be increased, and third-class accommodation will be provided. The two boats will be renamed.

The Canadian Northern Steamships, Ltd., has also bought the s.s. Volturno, which has been running between Rotterdam, Halifax and New York in the Northwest Transport Line, an enterprise in which Wm. Mackenzie is interested. The Volturno has accommodation for about 65 first-class passengers, 1,300 third-class, and 7,000 tons of freight. She will be placed on the same route as the Heliopolis and Cairo, and another freight boat will probably be bought in the near future. The ports of call have not been decided on, but it is probable that the Canadian ports will be Quebec in summer and Halifax in winter, and that Southampton and Cherbourg will be the European ports.

Capt. G. Gregory. R.N.R., who has been in command of the Heliopolis, was in Toronto recently in consultation with the management. He has been appointed acting Marine Superintendent, with headquarters for the present at the Canadian Northern Ry.'s London, Eng., office. He sailed from New York on the Mauretania, on Dec. 22, and will supervise the changes which are to be made in the boats.

D. D. Mann stated recently that before the C.N.R. line to the Pacific coast is completed the C.N.S. Co. will have a steamship line in operation on the Pacific ocean.

Atlantic and Pacific Ocean Marine.

The Allan Line s.s. Corinthian, in avoiding the running down of a schooner, ran aground on George's Island, near Halifax, N.S., Dec. 19.

The Quebec Steamship Co. has chartered the s.s. Oceana, for service in conjunction with its s.s. Bermudian in the West Indies service, commencing Jan. 15.

The reports for the St. Lawrence navigation season show that there was a falling off of export grain business, as compared with the previous year, of 3,461,678 bush. The total shipments of grain of all kinds were 27,959,396 bush.

A dispatch from Paris, France, states that the Compagnie Transatlantique will operate a special mail steamship line between France and Canada, for which it is to receive an annual subsidy of 3,000,000 francs from France and Canada jointly.

The s.s. Tropea sailed from Sydney, N.S., Dec. 4, 1909, for Prince Rupert, B.C., via Cape Horn, with 6,900 tons of steel rails, supplied by the Dominion Iron and Steel Co., for the G.T.P.R. This is stated to be the largest cargo yet shipped from that port.

The Elder-Dempster Co., is reported to have made an offer to operate eight vessels between St. John, N.B., and Sydney, Australia, in connection with its

The current issue of "Reactions" has just made its appearance and is brim full of interesting and helpful articles on marine and locomotive repairs. There is also an account of the welding of a 48-ton fly-wheel in the wilds of North Carolina, U.S.A. It illustrates what can be done nowadays when hard pressed for facilities. This paper is sent free of charge and it will be well worth your while to write for a copy.

present South African fleet of six vessels, making 14 vessels in all, calling at South African ports, in return for a subsidy on the usual basis.

The Steamship Mantinea Co.'s s.s. Mantinea, managed by W. Thomson and Co., St. John, N.B., has been sold to foreign purchasers. The vessel, no. 105,-398, registered at St. John, N.B., was built at Glasgow, Scotland, in 1896, and is a screw driven steamer with engine of 250 n.h.p. Her dimensions are: length, 309 ft.; breadth, 42.6 ft.; depth, 23.1 ft.; tonnage, 2,372 gross, 1,737 register.

During the St. Lawrence navigation season of 1909, which was closed Dec. 16, 364 ocean going steamships were inspected at the Grosse Isle quarantine station, against 355 for the 1908 season, and 145,000 passengers from Europe were passed against 105,000. Of these, 553 were detained in quarantine, of which 11 died, against 250 detained, and no deaths for the previous year.

At the recent launching of the G.T.P.R. s.s. Prince Rupert, in England, F. B. Girdlestone of the Bristol Dock Committee, is reported to have said he hoped to have the co-operation of the Great Western Ry. of England and the G.T.R., for the provision of a service of high speed passenger steamers between Bristol and Montreal. He considered it would form the shortest route between London and Montreal.

In answer to a question in the House of Commons, Dec. 7, the Premier said that an application had been received from the Imperial Export Co. for assistance in establishing a fast freight service to Australia and New Zealand from Canada. Communications in regard to the matter had been received from Australia and New Zealand, and papers in connection with the proposal would be laid before the House at an early date. A deputation, which recently waited on the Premier, in this connection, included R. H. Dana, Toronto; W. McMaster, Montreal Rolling Mills Co., Montreal; J. P. McNaughton, Dominion Iron and Steel Co., Sydney, N.S.; J. Near, Guelph, Ont., and H. B. Smith, Owen Sound, Ont. A subsidy of $250,000 a year was asked for six trips, three to be made from Montreal, and three from St. John or Halifax.

In connection with the future of the C.P.R. Atlantic service, Sir Thos. G. Shaughnessy is reported to have said in England recently:—"There is really nothing to say about the rumors of building new C.P.R. liners for the Atlantic service. We are willing to do our part, the remainder depends on the support that will be given by the Governments. With 21-knot steamers we could make the Atlantic passage in the same time as the Cunard boats, with a 21-knot service we could equal the Lusitania, and with 22-knot boats we could beat her. With the assistance of the two Governments I hope to see such boats, but there are no definite plans final for them as yet. The idea of starting boats from Blacksod Bay, Ireland, does not seem practical. It would cost as much to carry emigrants from Liverpool to Blacksod as we now receive for the entire journey."

Maritime Provinces and Newfoundand.

T. G. Taylor has been appointed Agent for the Marine Department at Charlottetown, P.E.I.

The Dominion Iron and Steel Co., is reported to have decided to order two steamships of about 10,000 tons each, specially designed for the carriage of ore from its mines at Wabana to Sydney.

G. J. Desbarats, Deputy Minister of Marine, Rear-Admiral C. E. Kingsmill, Commander Canadian Fleet, and Col. Anderson, Chief Engineer, Department of Marine, were reported to have visited Halifax recently, to inspect the dockyard there, with a view to its utilization in connection with the projected naval programme.

The Dominion Government icebreaking steamship Earl Grey received the final touches to her equipment early in Dec., before taking up her service on the Northumberland Straits. She is in charge of Capt. Brown, formerly of the s.s. Stanley, with P. W. Lyon as chief engineer. Her equipment includes a Marconi wireless telegraph installation.

The ferry steamer Halifax was destroyed by fire at Halifax, N.S., Dec. 9. She was formerly known as Annex No. 2, was built at New Baltimore, Mich., in 1878, and was a paddle wheel steamer with engine of 48 n.h.p. Her dimensions were, length, 116.3 ft.; breadth, 30.9 ft.; depth, 11.5 ft.; tonnage, 338 gross, 169 register. She was operated by the Ferry Commission, Dartmouth, N.S., and had recently been renovated. She was valued at $25,000, and was insured for $5,000.

Province of Quebec Marine

The Quebec and Levis Ferry Co., is reported to have placed a contract for the construction of two summer boats for its service. It is stated that they are to be ready by May.

The Chairman of the Quebec Harbor Commission was in conference with the Dominion Premier, during Dec., in connection with the proposed improvements in Quebec harbor, a plan of which, on an extensive scale, is being prepared.

The Montreal Harbor Commission's revenue from local, export and import traffic for the season of 1909, was $350,-883, against $333,123 for 1908. Of the former amount, imports realized $202,-500; exports, $93,500; local traffic, $54,883.

The Montreal Harbor Commissioners waited on the Dominion Premier and the Minister of Marine, Dec. 6, to urge the continued co-operation of the Government by way of debenture guarantees to assist them in the carrying out of the plans of extension and betterment arranged for 1910. Assurance was given that the aid would be continued as formerly.

Ontario and the Great Lakes.

The St. Lawrence and Chicago Steam Navigation Co., Ltd., has declared a dividend of 8% for the year 1909.

The Pere Marquette Rd., is reported to have let a contract for the equipment of its car ferry steamboats with wireless telegraph apparatus.

The Richelieu and Ontario Navigation Co., has purchased 9-11 Victoria Sq., Montreal, for use as a city ticket office and general office building.

A press report states that the Richelieu and Ontario Navigation Co. will carry out its proposed operations on the south side of the great lakes, under the name of the International Inland Navigation Co.

The Welland Canal was officially closed for the season, Dec. 15, the steamboat Glen Allen being the last vessel to pass through. It was, however, expected that one or two grain vessels would come down later on.

In reply to a question in the House of Commons, Dec. 2, the Minister of Railways and Canals, said that the cost to the Government, of the break in the Canadian canal at Sault Ste. Marie, in Sept., 1909, was $867,000.

The Western Dry Dock and Shipbuilding Co., Ltd., is making application to the Governor in Council, for approval of plans for the construction of a dry dock at Port Arthur, which have been deposited with the Public Works Department, and duplicates at the District Registry, Port Arthur.

A meeting of the Ottawa Board of Trade was held Dec. 13, to consider a memorial to be presented to the Dominion Government emphasizing the prior claims of the Georgian Bay canal scheme over any other possible water route, and asking that the work be commenced at an early date.

The Pennsylvania and Ontario Transportation Co.'s car ferry steamboat Ashtabula ran ashore at Port Burwell, Ont., Dec. 12, during a storm. The crew were taken ashore safely, after remaining aboard for several days in the hope of being able to get her off by her own power. She was re-floated Dec. 23.

At the annual meeting of the Hamilton Steamboat Co., at Toronto, Dec. 18, the report showed that the past season was a prosperous one. Following are the officers and directors for the current year: President, J. C. Eaton; Vice President, R. Y. Eaton; Secretary Treasurer, J. J. Vaughan; Manager, W. E. Bishop; other directors, H. McGee, C. Booth and A. McCrea.

James Richardson and Sons, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $750,-000 and office at Kingston, Ont., to carry on a general elevator and warehouse business, to erect and operate grain elevators, and to own and operate steam and other vessels. The provisional directors are: H. W., J. A., G. T., A. M., A., and K. M. Richardson, Kingston.

The U. S. Lake Survey reports the levels of the Great Lakes for Nov., 1909, in feet above tidewater, as follows: Superior, 602.25; Michigan and Huron, 580.13; Erie, 571.60; Ontario, 245.35. It was anticipated that, during Dec., 1909, Superior would fall 0.3 ft., Michigan and Huron, 0.2 ft.; Erie, 0.1; Ontario, 0.1 ft. Compared with the average Nov. stage for 10 years, Superior was 0.73 ft. below; Michigan and Huron, 0.41 ft. below; Erie, 0.24 ft. below and Ontario, 0.04 ft. below.

Application is being made to the Dominion Parliament to incorporate The International Waterways, Canal and Construction Co. with power to construct a canal from Thunder Bay, on Lake Superior, or from the Pigeon River to the Lake of the Woods, thence to the Red River, or from the Lake of the Woods to the Winnipeg River, and thence by the said river to Lake Winnipeg; thence to Cross Lake, so as to create a navigable waterway to the head waters of the Saskatchewan River, and its branches, together with all subsidiary and necessary powers.

The Marquette and Bessemer Dock and Navigation Co.'s steam car ferry, M. & B. No. 2, was lost, together with the whole of the crew, on Lake Erie, during a storm in the early part of Dec. The ferry operated between Conneaut, Ohio, and Port Stanley, Ont., and had a capacity for 30 loaded cars. It is surmised that the cars broke loose during the storm, causing the vessel to sink immediately. It has not been definitely ascertained as to how many were on board, and only a few of the bodies have been recovered. The M. & B. No. 2, was 2,514 tons gross, 1,484 tons register, her dimensions were, length, 338 ft.; breadth, 54 ft., and she was equipped with triple expansion engines, with cylinders 19, 31 and 52" diar., by 36" stroke. She was built in 1905.

In answer to inquiries in the House of Commons, Dec. 7, in reference to the surveys for the construction of a channel from the Devil's Elbow on Holland River to Bradford station, the Minister of Railways and Canals said: "The Bradford survey was begun on the west branch

of Holland river at the junction of the Newmarket canal, 4.9 miles from Cook's bay, and carried up the west branch of the river to about 3 miles above the Bradford and Holland Landing road. The channel leading to the proposed basin in front of the G.T.R. station, Bradford, would leave the west branch at the Devil's Elbow, 7 miles from Cook's bay, and the Bradford basin would be at 8.2 miles, or in other words the canal would be 1.2 miles long with a bottom width of 50 ft. The proposed Bradford basin is estimated for 200 ft. width, enclosed with concrete dock walls. No work is required in the 2.1 miles of river between the junction of the Newmarket canal and the Devil's Elbow. The estimated cost is $52,947."

Manitoba, Saskatchewan and Alberta.

The Winnipeg Fish Co., Ltd., has been incorporated under the Manitoba Companies Act, with a capital of $40,000, and office at Winnipeg, to carry on a general fishing business, and in connection therewith to own and operate steam and other vessels, and when same are not required for the carrying of the company's produce, to carry freight and passengers for hire. The provisional directors are: G. E. Richards, R. G. Affleck, J. Allen, W. P. Fillmore, Winnipeg, and T. J. Jones, Selkirk, Man.

The International Waterways Canal and Construction Co. is applying to the Dominion Parliament for incorporation, to construct a canal from Thunder Bay, Lake Superior, or from Pigeon River, to the Lake of the Woods, thence to the Red River, or from the Lake of the Woods to the Winnipeg River and thence to Lake Winnipeg, and on to Cross Lake, and so create a navigable waterway to the headwaters of the Saskatchewan River and its branches. Among other powers desired are: the erection of telegraph and telephone lines, electrical transmission lines, the carrying on of a general forwarding and manufacturing business, and for such purposes to exercise all the powers and rights as granted by the Railway Act, with power to amalgamate with other companies. Smith and Johnston, Ottawa, are solicitors for applicants.

B.C. and Pacific Coast Marine.

A report from Victoria states that debentures for $2,000,000 are being placed in England for the purpose of building a floating dock at Esquimalt.

Capt. J. W. Troup, Manager C.P.R. Pacific Coast Service, sailed from St. John, N.B., Dec. 4 on the s.s. Empress of Britain for Great Britain, where he will make arrangements for the construction of two vessels for the Pacific coast trade.

A stern wheel steamboat named Helen M. Scanlon was recently constructed at Vancouver for the Brooks-Scanlon Lumber Co., and is at Victoria having her machinery installed. She will be used for logging work on the Fraser River and Harrison Lake.

The G.T.P.R. is asking for tenders for the construction of wharves at Victoria, at an approximate cost of $100,000. It is also reported that the company has leased the Flyer dock, Seattle, Wash., and that it will erect a large pier there at a cost of $250,000.

The G.T.P.R. s.s. Prince Rupert was launched at Wallsend-on-Tyne, Eng., Dec. 19. This is the first of the company's vessels to be built for the Pacific Coast service. On completion, she will be sent to Prince Rupert, by way of Cape Horn, and it is anticipated, will be placed in service in the spring. A second vessel to be named Prince George is under construction.

The International Steamship Co., Victoria, is reported to have under consideration plans for the construction of a twin screw vessel to be named Sioux, which it proposes to have ready for service, either between Victoria and Seattle or Vancouver and Seattle, early in 1911. The plans provide for a vessel 215 ft. long, 36 ft. beam, and engines of 3,500 h.p. for a maximum speed of 20 knots an hour, with accommodation for about 1,500 passengers.

Steamer Forager, Ltd., has been incorporated under the B.C. Companies

APPLICATION TO PARLIAMENT

Notice is hereby given that application will be made to the Legislative Assembly of the Province of Ontario at its next session for an Act incorporating the Wahnapitae Railway Company, with power to construct a line of railway from a point on the line of the Canadian Northern Ontario Railway Company, in the Township of Hutton or Creelman, thence in a generally northerly direction, passing near Burwash and Welcome Lakes, to a point on the Wahnapitae River above the outlet from Welcome Lake, such line traversing one or both of the said Townships of Hutton and Creelman and unsurveyed territory in the District of Nipissing to the north, and also fixing the limit of securities which may be issued in respect of such line, and authorizing agreements for sale or amalgamation with other Companies, and with other usual and customary powers.

GERARD RUEL,
Solicitor for the Applicants,

NOTICE is hereby given that the Grand Trunk Pacific Branch Lines Company will apply to the Parliament of Canada, at its present session, for an Act further amending the Act incorporating the Company, chapter 99 of the statutes of 1906, as amended by chapter 86 of the statutes of 1909, by authorizing the construction of the following additional lines of railway:—

(1) From a point on the Western Division of the Grand Trunk Pacific Railway between the east limit of Range 12 and the west limit of Range 17, west of the third meridian, thence in a southwesterly and westerly direction to a point in the vicinity of Calgary, or to a point on the line which the Company is authorized, under paragraph 14 of clause 11 of said chapter 99, to construct to Calgary;

(2) From a point on the proposed line mentioned in paragraph (1) between the east limit of Range 20 and the west limit of Range 28, west of the third meridian, thence in an easterly and southeasterly direction to Regina or to a point in the vicinity thereof;

(3) From a point on the proposed line mentioned in paragraph (2) between the east limit of Range 24 and the west limit of Range 27, west of the Second Meridian, to Moose Jaw, or to a point in the vicinity thereof;

(4) From a point on the Western Division of the Grand Trunk Pacific Railway between Artland and Wainwright, thence in an easterly and southeasterly direction to a point on the line which the Company is authorized, under paragraph 13 of clause 11 of said chapter 99, to construct to Battleford;

(5) From Regina, or a point in the vicinity thereof, thence in a southwesterly and westerly direction to Lethbridge, or to a point in the vicinity of Lethbrdge on the line which the Company is, under paragraph 14 of clause 11 of said chapter 99, authorized to construct from Calgary to the southern boundary of the Province of Alberta at or near Coutts.

(6) From a point on the main line of the Western Division between Moose Lake and Tete Jaune Cache, thence through the drainage of the Clearwater River, Bonaparte River, Seton and Anderson Lakes, and the Lilloet River or the Squamish River, or between the last two rivers, to Vancouver, British Columbia; authorizing an issue of bonds to the extent of $30,000.00 a mile of the said lines of railway, numbered (1) to (5) inclusive and comprising the said lines within what are defined by the said Act as the "Manitoba, Saskatchewan and Alberta Extensions"; authorizing an issue of bonds to the extent of $50,000.00 a mile of the said line of railway numbered (6), and comprising the said line within what is defined by the said Act as the "British Columbia extensions"; and also amending paragraph 11 of clause 11 of the said Act, as regards the southern terminus of the line thereby authorized.

Dated at Montreal this 29th day of November, 1909.

W. H. BIGGAR,
Solicitor for Applicants.

Act, with a capital of $8,000, to purchase the steamboat Forager and the business carried on therewith, by the Butler Freighting and Towing Co., Ltd., to acquire steam and other vessels, and carry on a general freighting and carrying business. The Forager was built at Victoria in 1904, and is a screw driven vessel with engine of 13 n.h.p. Her dimensions are: length, 84 ft.; breadth, 18.8 ft.; depth, 6.6 ft.; tonnage, 90 gross, 57 net.

The New Columbia River Lumber Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $5,000,000 to carry on the general business of lumbermen, and in conection therewith to own and operate steam tugs and vessels of all descriptions.

Capt. C. H. Nicholson, heretofore Traffic Manager Northern Navigation Co., Sarnia, Ont., has been appointed Manager G.T.P.R. Pacific Coast Steamship Lines, with headquarters at Vancouver. He will have supervision of all matters pertaining to the company's marine and steamship business on the Pacific coast, the operation and maintenance of steamers, docks, etc., and such other duties as may be assigned to him.

A vessel is under construction at New Westminster for Anglican Church mission work in Northern British Columbia and along the Pacific coast. The dimensions of the vessel are given as: length, 100 ft.; breadth, 17 ft.; depth, 10 ft. It is being built of fir, with oak ribs and oak stern post, and will be equipped with two gasoline engines of 100 n.h.p. each, and carrying a small gasoline launch. It will be steam heated and lighted by electricity, and fitted up with all the requirements of a modern hospital.

We are advised that the contract which the Dominion Government has entered into with the G.T.P.R., for a steamboat service on the Pacific coast, calls for a fortnightly service from Nov. 1 to Mar. 31, and a weekly service from Apr. 1 to Oct. 31, each year, and that it expires Mar. 31, 1915. For this service, the G.T.P.R. has chartered Mackenzie Bros.' s.s. Henriette, which it hopes to replace by one of its own vessels about March. The Henriette, which was formerly a sailing vessel, has an engine of 32 n.h.p. driving a screw. Her dimensions are: length, 160 ft.; breadth, 30 ft.; depth, 18 ft. 9 ins.; tonnage, 763 gross, 518 net.

NIAGARA NAVIGATION CO., LIMITED

Notice is hereby given that a dividend of four per cent., being at the rate of eight per cent. for the year, has been declared upon the capital stock of this Company, and the same will be payable on the 3rd January, 1910.

The transfer books will be closed from the 17th of December to the 31st of December, 1909, both days inclusive.

The annual meeting of the shareholders will be held on Tuesday, the 11th of January, 1910, at 12 o'clock noon, at the head office of the Company, Room 910, Traders Bank Building, Toronto.

B. W. FOLGER,
General Manager.

Toronto, December 10, 1909.

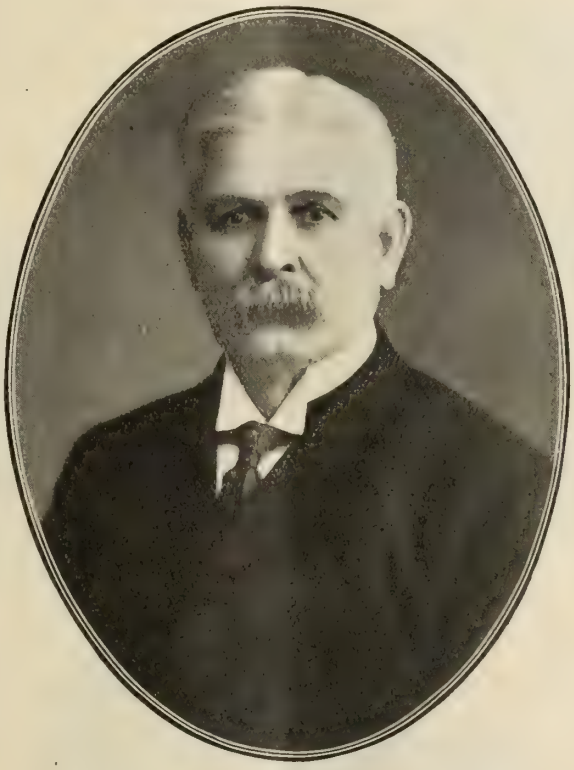
Fuel Economy on Testing Plants and Railways.

By H. H. Vaughan, Assistant to Vice President, Canadian Pacific Ry.

Most of us have at one time or other been confronted with the statement that there was a terrific waste in the operation of a steam engine, something like 5% of the heat developed by the coal burned under the boiler, being all that was transformed into useful work. That such a statement is true is easily shown by comparing the coal consumption of an ordinary engine, taking say 4 lbs. of coal per h.p. hour, and the work that is the equivalent of the heat in the coal. A horse power is 33,000 foot pounds of work per minute, so that a horse power hour is 1,980,000, or very nearly two million foot pounds of work. Four pounds of coal will develop about 60,000 b.t.u. of heat and as the mechanical equivalent of heat is 778 foot pounds per b.t.u., the total work that is the equivalent of the heat contained in the four pounds of coal is about 46,000,000 foot pounds. As only 2,000,000 or under one-twentieth of this is developed useful work, the statement that 95% is wasted is entirely true and cannot well be denied. As is well known, the larger part of this 95% is not waste at all in the proper sense of the word, but is the necessary result of the natural laws governing the action of heat engines. We are very much in the position of trying to utilize sea water, pumped into a tower at Winnipeg, for power purposes. If the tower were 200 ft. high and the discharge were into the river at a height of 750 ft. above sea level, the best possible efficiency that could be obtained would be by using 200 ft. out of the total head of 950 ft. available, or about 21%. The 79% that was lost on account of the impossibility of utilizing the total down to sea level would not be waste, but power rendered unavailable on account of the conditions under which it was supplied. While not by any means an exact simile, such a case does to a certain extent resemble the conditions under which heat can be used in the heat engine. The heat that can possibly be utilized depends on the proportion of the range of temperature through which the engine works to the initial temperature, and the initial temperature, like the height of the water tower, is not measured from the level at which we can use it, but from the absolute zero of temperature, about 465 degrees below zero Fahrenheit. The most perfect form of heat engine therefore working between a temperature of 390 degrees, or that of steam at 200 lbs. pressure, and 60 degrees, the temperature of the atmosphere, could then only have an efficiency of 330/855 or 38%. It is needless to say that nothing approaching this could practically be realized, not only because such extreme efficiency would be more expensive than the results would justify, but also because any such engine would have to be of a totally different type to the existing steam engine, which cannot work under the conditions demanded for the most economical heat engine. In order, therefore, to afford a practical working comparison, the definition of an ideal steam engine has been adopted, as follows:—



WILLIAM DOWNIE,
General Superintendent, Atlantic Division, Canadian Pacific Railway.

"A perfect engine receiving steam at its upper limit of pressure equal to that measured close to, but on the boiler side of the engine stop valve, and continuing this pressure and temperature up to cut-off. Beyond cut-off the steam is assumed to expand adiabatically in the cylinder down to a pressure equal to the back pressure against which the engine is working. The steam is then exhausted from the cylinder at constant pressure corresponding to the lower limit of temperature."

This definition, while it may appear rather complicated, really specifies a perfect steam engine, working as a steam engine does, with steam at boiler pressure and an exhaust pressure determined by conditions, but with perfect expansion and an entire absence of all the losses due to the cylinder condensation, compression, and the various other causes which prevent an actual engine from obtaining the greatest possible economy. Such losses are however, more or less avoidable, and it is the aim of the steam engineer to reduce them by compounding, superheating, and other means, so that the ideal engine thus set up may be fairly taken as a standard which may be approached, although never equalled, by an actual steam engine.

It is interesting to examine the degree to which the steam locomotive has so far approximated this ideal engine, and for the information in connection with steam locomotives we can use the results obtained in the tests conducted on the testing plant at the St. Louis Exposition in 1906. The conditions under which these engines worked may be taken as a boiler pressure of 200 lbs. and an exhaust pressure of 6 lbs., and with these limits the ideal engine would require about 250 b.t.u. per h.p. per minute, or 12.8 lbs. of steam per hour at boiler pressure. The simple locomotives tested required from 23.6 to 28.9 lbs., while the compounds required from 19.0 to 27.0 lbs., so that compared to an ideal steam engine under the same conditions, the efficiency of the simples was 54 to 44%, and of the compounds 67 to 47%.

The ideal engine taking 250 b.t.u. per h.p. per minute, or 15,000 b.t.u. per hour has an efficiency of 17%. This is obtained by multiplying 15,000 by 778, which gives the work that is the equivalent of that amount of heat, 11,670,000 foot pounds, and dividing this by 1,980,000, the foot pounds equal to the work of one h.p. hour. As the engines on the testing plant may be said to have had an efficiency of about 50% for the simples, and 60% for the compounds, we see that the actual heat efficiency was from 8½ to 10% based on the total heat delivered to them in the steam, so that even in the case of these particular engines there is 90 to 91½% of the heat in the coal that cannot be used, that the fireman cannot be blamed for.

The efficiency of the engine is however, only one of the factors determining the proportion of the heat in the coal that can be developed as useful work. The boiler, while not limited by the same conditions as the engine, is still unable to deliver in the steam the full amount of heat that is generated by the coal

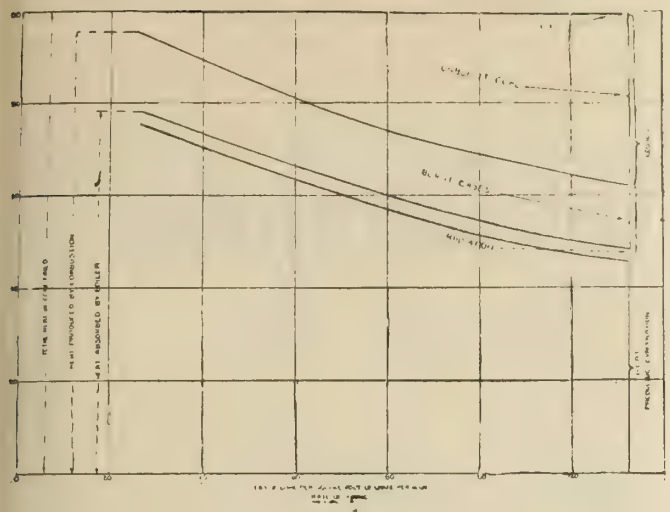

FIG. 1.

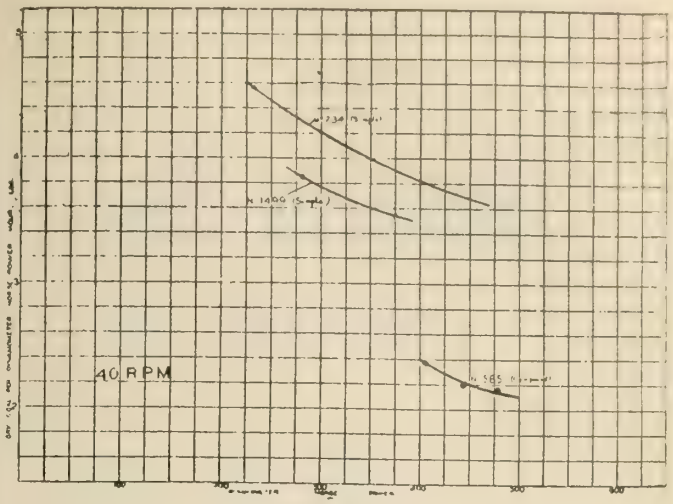

FIG. 2.

burned. The losses are however, nothing like as serious as those which take place in the conversion of the heat in the steam into work, and are only due to the combustion not being entirely perfect, the radiation of heat from the boiler, and to the heat contained in the gases that pass away into the stack. Under favorable conditions the sum of these losses may only amount to about 20%, so that 80% of the heat developed by the fuel may be actually present in the steam delivered by the boiler. In locomotive practice, however, boilers are not worked under as favorable conditions as are stationary boilers, on account of the enormously larger amount of steam that has to be generated by a boiler of a given size. In place of evaporating 3 lbs. of water per square foot of heating surface per hour and burning 15 lbs. of coal per square foot of grate, as much as 16 to 18 lbs. of water are evaporated and 120 to 140 lbs. of coal burnt.

This increase in capacity, while necessary in order to obtain the output from a locomotive boiler that would require a whole battery of stationary boilers, is only rendered possible by a sacrifice of economy, or in other words the efficiency of the locomotive boiler is generally considerably less than the 80% mentioned above. The reasons for this loss in efficiency in the boilers at the St. Louis Exposition were thoroughly investigated by Lawford H. Fry, and figure 1 shows one of the results of the caluculations made by him, which is exceedingly interesting. It is one of several which he presented in his paper on "Combustion in Locomotive Fireboxes" before the Institute of Mechanical Engineers, and refers to the trial of the New York Central balanced compound engine no. 3000. The diagrams for the other engines are generally similar, with some exceptions that will be mentioned later.

The efficiency of the boiler, which is shown by the lowest line, is slightly over 70% when coal is burnt at the rate of 30 lbs. per square foot per hour, and is gradually reduced to about 46% as the rate is increased to 120 lbs. per square foot per hour. The space between the lowest line and the next above it represents the heat radiated away by the boiler, so that this line shows the total heat absorbed by the boiler from the coal. The space above this represents the heat escaping in the hot gases passing out through the front end, while the space between the two upper lines is the loss from unburnt coal. The loss from imperfect combustion, or from the formation of carbon monoxide, is represented by the space between the highest line and the top of the diagram. This diagram is very interesting. In the first place it shows that at low rates of combustion the locomotive boiler is just as efficient as any, as the line showing the heat utilized would evidently be about 80% at a rate of 20 lbs. per square foot per hour, and in the next place, the losses from imperfect combustion are exceedingly small. This loss was not, however, as small as this in all the engines tested, as in one of them it became about 16% at the maximum rate of combustion. This is thought to have been due to insufficient ashpan openings, and it attracted general attention to that detail of the engine.

On most engines, however, this loss was small, and it is evident that from the cause, there need not be very much loss on a locomotive. It must be remembered that the firing at St. Louis was about as perfect as possible and the running conditions uniform, but from the fact that insufficient air causing a dull fire ran this loss up to 16% in place of 2 or 3%, it is evident how easily a loss in efficiency may be caused by heavy or intermittent firing which does not keep the fire in a clean bright condition. The heat wasted by the burnt gases is almost constant. This peculiar fact due to the decreased amount of air per pound of coal required at the higher rates of combustion which compensated for the increased temperature at which the gases passed into the front end. The same thing occurrs in all the tests and shows how well the fires were kept free from holes and the grates properly and uniformly covered.

The important loss, which increases as the rate of combustion increases, is that from unburnt coal. This loss is not entirely explained. The larger part of it is accounted for by the sparks and coal pulled through the tubes and stack without being burnt, but this is not sufficient to account for the entire loss. The loss from sparks is known to be about 20% of the total coal burnt, at the highest rate of combustion, and the balance of the loss is accounted for in different ways. Mr. Fry considers a large portion of it is due to unconsumed hydro-carbons, but it is not definitely known whether this is really the correct explanation. It is possible that the line showing the heat lost from the burnt gases should be rather higher, which would decrease the loss shown as unburnt coal. There is also a loss due to good coal shaken down into the ashpan, but with the care taken in

Galena-Signal Oil Company

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY

Galena Railway Safety Oil

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT

carrying out these tests, this also is comparatively small. All we can say is that after the various known factors have been taken into account, that a portion of the loss due to unburnt coal is from an undetermined cause, and that the explanation offered by Mr. Fry is possibly correct, namely, that it is due to unconsumed hydro-carbons passing away into the front end. He considered that this may be produced by the partial distillation of the particles of coal which are carried off the grate by the draught, or that there may be unconsumed free hydrogen in the flue gases. Evidence supporting this view is furnished by the fact that the gas analysis shows more nitrogen than can be accounted for by the other products of combustion, and that if this excess of nitrogen is assumed to be a hydro-carbon gas, the heat contained in it, together with the expected loss by sparks and a reasonable ashpan loss, make up very closely the total loss through unburnt coal. There is here possibly a chance for better economy, that we have hitherto not suspected, but it may be stated that so far as can be learned from the tests, it will not be obtained from the use of a brick arch as it was found that its value consisted in the reduction of the loss by imperfect combustion, due to the formation of carbon monoxide. The engine from which this diagram of heat balances was obtained was fitted with an arch and, as it shows, the loss from carbon monoxide was exceedingly small. On the engines not having a brick arch there was a considerable loss from this cause, amounting to as much as 16% at higher rates of combustion, and although it so happened that these same engines were subject in each case to unfavorable conditions, there is still good evidence to support the claim made that a properly proportioned brick arch will effect a saving in coal of 5 to 10%.

These points however, while interesting, do not affect the main information given by this diagram, which it may be stated, is from the most efficient boiler tested at St. Louis. It shows that, under the most perfect conditions of testing, uniform work, economical firing and a boiler in as good condition as possible, the heat accounted for in the steam is from 50 to 70% of the heat in the coal, as the rate at which the coal is burnt decreases from 110 to 40 lbs. per square foot of grate per hour. If this efficiency is combined with that of the engine, which as previously stated varied from 8½ to 10%, we find that the total efficiency of the locomotive, under testing plant conditions varies from 4½ to 7%, so that we see that the general statement of a loss of 95% of the heat present in the coal, is confirmed by the best results that have so far been obtained from locomotives.

We also see to what a large extent this loss is unavoidable as long as we are forced to transform heat into work by means of any form of steam engine, and the high degree of perfection that has already been reached by our present locomotives when the limiting efficiency which they could possibly attain is properly considered.

The figures so far discussed have entirely referred to efficiency on the basis of indicated horse power. Before this power reaches the rail, it is reduced by the friction losses in the cylinders, motion and axles, and the resultant power is what is termed the dynamometer horse power. Figs. 2, 3 and 4, which are reproduced from the report of the St. Louis tests, show the coal per dynamometer horse power hour for three freight locomotives tested at St. Louis, at 40, 80 and 160 revolutions per minute respectively. It will be seen that the most economical results were obtained from no. 585, a Michigan Central Rd. cross compound, which at low speeds showed a fuel consumption of only 2¼ lbs. per h.p. hour. This corresponds to a total efficiency of 7.5% , and is an exceedingly economical result for any type of non-condensing steam engine. As shown on the diagrams the fuel consumption increased at higher speeds, and at 160 revolutions per minute, which corresponds to 30 miles an hour for a 63 inch wheel, it amounted to 3½ lbs. Fig. 5 shows roughly the coal consumption of these different engines as the speed increased, and is interesting when their varying types are considered. No. 1499 is a Pennsylvania Rd. simple consolidation, 22 by 28 inch cylinders, 56 inch drivers, 205 lbs. boiler pressure. Heating surface 2844 sq. feet, grate area 49.2 sq. ft. No. 734 is a Lake Shore & Michigan Southern Rd., simple consolidation, 21 by 30 inch cylinders, 63 inch drivers, 200 lbs. boiler pressure. Heating surface 2858 sq. feet. Grate area 33.7 sq. feet. No. 585 is a Michigan Central Rd. compound consolidation, 23 and 35 by 32 inch cylinders, 63 inch drivers, 210 lbs. boiler pressure. Heating surface, 31681 square feet. Grate area 49.4 square feet.

The compound engine is evidently far more economical than the simples, but it should be remembered that the conditions on a testing plant are more favorable to this type of engine than are those in regular road service. On the testing plant, they are working absolutely uniformly, everything is maintained as constant as possible during the time the test is conducted, and it is under these conditions, as we know, that the best results from a compound engine can be obtained. The boiler efficiency of no. 585 was also exceedingly good, and in fact a large proportion of the economy is due to this, as no. 734 showed only from 70% to 82% of the boiler efficiency of 585, and that of no. 1499 showed very poor results at the higher rates of evaporation, due to the insufficient air supply. Still while there may be reasons why the simple engines showed so much greater fuel consumption than the compound, there are no reasons why the compound should show more, and the fact remains that a steam locomotive under the best conditions, has developed a dynamometer horse power hour at a coal consumption of 2¼ to 3½ lbs., corresponding to a total efficiency of 4.9 to 7.5%.

We have found therefore that in order to realize what are avoidable and what are unavoidable losses in the conversion of heat into work by a steam engine or locomotive, it is necessary to consider first what degree of economy could be obtained by an ideal steam egine working under certain limiting conditions, and then consider with what perfection our existing locomotives approach that ideal. Locomotives do not however, operate upon testing plants, but in hauling trains, and the real point we are interested in is the extent to which our locomotives in actual service approach the best results which it is possible to obtain. We know that on the testing plant the machinery was in the best possible condition, the boiler was not leaking, the valves and pistons were as tight as they could be made, and the firing was as good as it could possibly be. To what extent do we approximate the testing plant results and how does our actual efficiency compare with that obtained upon them?

Unfortunately when we are dealing with road conditions there are a number of factors to be considered that cannot be accurately allowed for. In place of constant conditions there are exceedingly variable ones, part of the time the engine is running and part of the time standing, and any comparison that can be made must necessarily be more or less approximate. No estimate can be made that is a reasonable one for determining the exact consumption of the engines in pounds of coal per dynamometer horse power hour, but one figure can be obtained with reasonable accuracy, namely, the efficiency of the equipment and organization as a whole If in place of the ideal steam engine we consider the best results obtained upon the testing plant as the ideal of locomotive efficiency, we can determine fairly closely the degree to which such an ideal is approached by our locomotive and operating departments. To do this some particular section or division must be selected and for this purpose I will refer to the results obtained on district 1 of the Central Division on the C.P.R. during the last few months. On that district the fuel consumption has for several months been below 80 lbs. per thousand equivalent gross ton miles. In one month it was 75 and in another 76, and these figures are not taken from any particular test but represent the total consumption on the division, averaging over 7000 tons of coal a month. When it is considered that, although the difference in level of the two ends of this division of 420 miles is small, only 150 ft., the heavier tonnage is uphill, it is doubtful whether this result has ever been equaled in this or any other country, especially where the large amount of traffic which it includes is taken into account. It is therefore a good example to consider for comparison with an ideal engine, but on account of the hill condition on the east end, the section from Ignace to Winnipeg is preferable in place of the entire district.

The coal records available on the road show the total coal consumed per 1000 equivalent gross ton miles, and cannot therefore be directly compared with the coal per dynamometer h.p. hour. Supposing, however, a train had an average resistance over a division of 5 lbs. a ton, so that 1000 tons gave a resistance of 5000 lbs. This 5000 lbs. pulled one mile or 5280 ft. would equal 26,400,000 foot pounds. A horse power hour is 1,980,000 foot pounds, so that 1000 ton miles with a train having a resistance of 5 lbs. per ton is the equivalent of 12.8 h.p. hours. This is evidently proportional to the resistance, so that if the average resistance of the train were 10 lbs. per ton, 1000 ton miles would equal 25.6 horse power hours and so on. I cannot give the exact figure for the resistance of a train from Ignace to Winnipeg, but the figure obtained for a very similar district, Outremont to Smith's Falls, was 4.50 lbs. eastbound and 7.00 lbs. westbound. The difference in level is 2.6 ft. per mile which accounts for 1 lb. per ton from an average of 5½. From other figures we have, I believe the figure of 7 lbs. per ton is slightly high and that figure for a level undulating road with short grades not exceeding 0.5 or 0.6% would be about 5½ lbs. The difference in level would increase this to 6½ tons up hill and reduce it to 4½ lbs. down. Now from Ignace to Kenora the grade averages 2.7 ft. per mile down west bound, and from Kenora to Winnipeg 2.53 ft. per mile down west bound, so that with very little danger of inaccuracy we may say that the average resistance is 4½ lbs. per ton west and 6½ lbs. per ton east bound on these two sections. 1000 ton miles is therefore the equivalent of 11.5 and 16.6 h.p. hours respectively, and if we assume that when working, the ideal engine has a speed of 20 miles per hour corresponding to a coal consumption of 2.7 lbs. per dynamometer h.p. hour, the coal required per 1000 e.g. ton miles would be 31 and 44½ respectively. Taking the month of July this corresponds with actual results of 61 and 86½ lbs., or an efficiency of 51% in both cases, and this in a sense may be said to be the efficiency of the operation as a whole. This

Branch Offices:

PITTSBURG AND NEW YORK

however is not exactly fair, it does not mean that the ideal engine could possibly do the work on 51% of the coal. On the testing plant, the fire is in good condition when the test is started and finished, the engine does not have to turn a wheel except the drivers, there are no air pumps or electric headlights to run, while on the road every pound of coal has to be accounted for, and the resistance of the engine is, even when the machine friction is deducted, certainly equal to that of the train. Suppose we consider our ideal engine under these conditions. The average length of the sections is 139 miles, the amount of coal lighting up, and that which must be knocked out at the end of the run, is about 2000 lbs. If we assume that the average length of trip is 10 hours and the air pump takes 30 double strokes a minute during that time, on a full train, the air pump will take about 2000 lbs. of coal west bound, and 1100 lbs. east bound. The headlight requires 60 lbs. of coal per hour and if burned 6 hours out of 24 or 25% of the time will average 150 lbs. per trip. We have therefore 4150 lbs. west bound and 3250 lbs. east bound per trip required by the road engine or 30 and 23 lbs. per mile respectively. We have in addition to allow for the power required to draw the weight of the engine, so that making these allowances the coal required by an ideal engine would be as follows:—

WESTBOUND.

Per 1,000 ton miles for actual power developed	31.0 lbs.
Additional for weight of engine	2.1 lbs.
Additional for air pump, etc.	13.9 lbs.
Total	47.0 lbs.

EASTBOUND.

Per 1,000 ton miles for actual power developed	44.5 lbs.
Additional for weight of engine	5.3 lbs.
Additional for air pump, etc.	18.8 lbs.
Total	68.6 lbs.

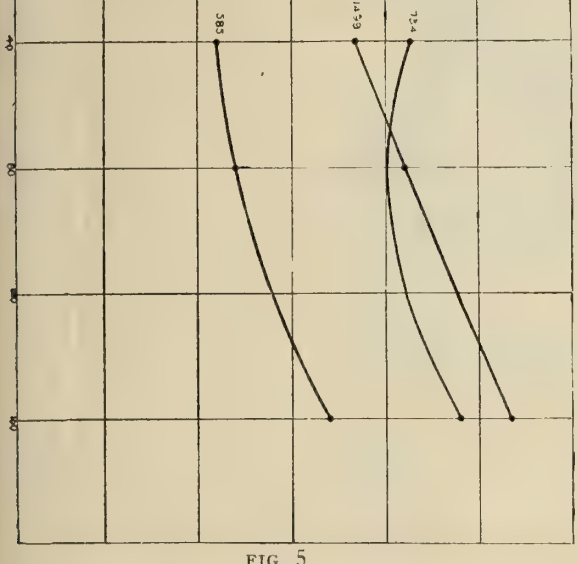

FIG. 5.

The net efficiency obtained therefore is 77% and 79% respectively, or considering the roughness of this calculation about 75 to 80%. This appears to be a very creditable record. We do not of course know whether the engine is as economical as that at St. Louis, but we have had almost exactly similar engines on this road and have found that under favorable conditions their economy is practically the same as that of the D 10 class which were in use on this district while under other conditions the D 10 were superior. We may safely say therefore that this district has come within 25% of testing plant conditions, so far as we know them, and to you, members of this Club, who are also engaged in this work, I can only say that you have done well, but let us get after that other 25%.

The foregoing paper was read before the Western Canada Railway Club recently.

Steam-Turbine Electric Locomotive.

Some particulars were given in our last issue respecting a new type of locomotive which is being constructed in Scotland. It is described as a steam-turbine electric locomotive; and as a turbo-electric combination. In general design it will not differ very materially from the ordinary locomotive now in use. Steam is raised in a boiler of the usual locomotive type, fitted with a superheater, the supplies of water being drawn from tanks disposed on either side of the boiler, and the coal is carried in side bunkers. The steam is led from the boiler to a high-speed impulse turbine running at 3,000 revolutions per minute, to which is directly coupled a continuous-current, variable-voltage dynamo. With this generator electrical energy ranging from 200 to 600 volts is supplied to four series-wound traction motors, the armatures of which are built on the four main or driving axles of the locomotive.

The exhaust steam from the turbine is passed into an ejector condenser, and is finally, with the circulating condensing water, discharged into the hot well. Owing to the steam turbine requiring no internal lubrication, the water of condensation is free from oil, and can consequently be discharged from the hot well direct into the boiler by means of a feed pump. In this manner the water can be used over and over again, and the water carried in the supply tanks actually serves as circulating water in the condensing operations. Circulation is effected in a closed cycle by means of small centrifugal pumps, driven by auxiliary steam turbines, placed alongside the main turbine and dynamo. The water thus flows from the tanks through the first pump, by means of which it is forced through the condenser, where it serves to condense the exhaust steam from the turbine, then to the hot well, from which it is pumped to a cooler at the front of the engine, where it comes in contact with a blast of cold air caused by the movement of the locomotive and a fan which serves to cool it, and then it returns to the tank for further use. In so cooling the water, however, the usual exhaust blast which induces the draft through the furnace and boiler tubes is lost. To remedy this deficiency, a forced draft is supplied by means of a small turbine-driven fan, placed withinthe radiator or cooler, so that while it serves to cool the circulating water it also induces a blast of hot air to the fire. The cab of the locomotive carries a small switchboard, on which are mounted the controller for grouping the four motors, according to what draw-bar pull is required, in series or parallel, as well as the regulator for controlling the electrical circuit voltage, and consequently the speed of the train. The whole of this main and auxiliary machinery is mounted upon a strong underframe, carried on two eight-wheeled compound bogies, to facilitate negotiation of curves at high speed. Each bogie carries two of the four driving motors, as already mentioned. It will thus be seen that in reality an articulated system is adopted.

The first engine to be built on these lines is approaching completion, and its performances are awaited with great interest. The experiments which have already been made upon an extensive scale lead the builders to believe that such a locomotive as this would possess great possibilities and offer a complete solution to the traction question of to-day. In any large well-equipped locomotive establishment an engine can be produced for a low figure in comparison with the electric locomotive, and by the adoption of the new combination it is not anticipated that the prime cost will be very appreciably enhanced.

Enormous Purchases Imminent.

"Rodolphe Forget, M.P., President of the Richelieu and Ontario Navigation Company, estimates that $500,000,000 will be spent this year throughout Canada by the Dominion Government, the railways, large corporations, mergers, traction systems and in other operations of the larger business houses. He anticipates that the Ottawa Government will spend about $100,000,000, and is of opinion that the money required for the consummation of the mergers now in sight and others to follow will foot up to about $150,000,000, while several more hundreds of millions will be required to meet expansion in all avenues of trade and commerce, which will be felt from one end of the Dominion to the other."

The largest buyers of equipment supplies and other goods for carrying out the works referred to above will be the steam and electric railway and steamship companies, railway and canal contractors, etc., the people who subscribe for and thoroughly read the Railway and Marine World, who depend on it for information relating to their business and who look to its advertising pages when they are in the market for goods.

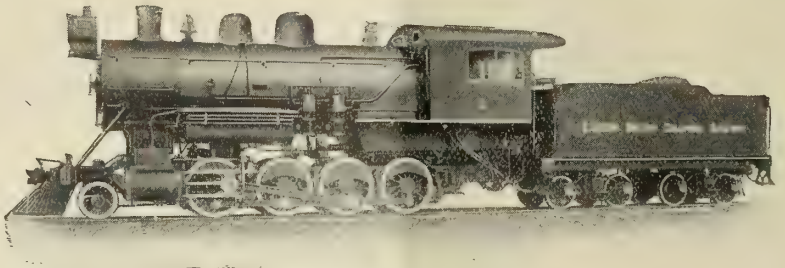
The National Transcontinental Commissioners are reported as expecting to have the road from Moncton to Winnipeg completed during 1912.

The Ontario Court of Appeal has denied the C.P.R. the right of appeal to the Privy Council from the order of the Railway Committee of the Privy Council for the construction of a bridge across the tracks at Yonge St., Toronto.

In the Victorian (Australia) Parliament the Minister of Railways said, during a recent debate: "I think Victoria is to be congratulated on the possession of three railway commissioners who are good business men. Our railways are managed, not perhaps as well as they might be, but as well as they can be under the circumstances. The improvement that has been effected since Mr. Tait came here, by himself and his colleagues, is a matter for congratulation, not only to parliament, but to the people generally."

The Temiscaming and Gowganda Transport Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $40,000 and office at Toronto, to transport in the Nipissing district and elswhere in Ontario, passengers and merchandise, "whether alive or dead," and to own and utilize the necessary vehicles, horses, etc., for such transport, and to carry on a general express business; to enter into contracts with the Ontario Government, the T. & N.O.R. Commissioners, and any railway or other company, and to deal in grain and supplies generally. The provisional directors are:—J. H. Gauthier, Gowganda; J. D. McMurrich, J. Harris, J. S. McLean, Toronto; T. G. Ferriss, Windsor; V. E. Taplin, S. Willows, New Liskeard, and W. Jamieson, Renfrew, Ont.

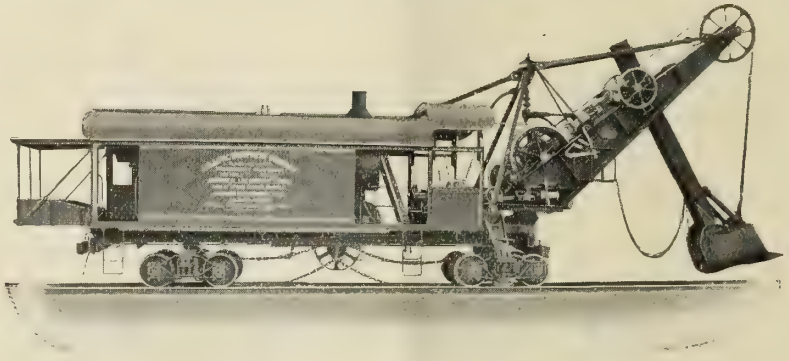
LOCOMOTIVES FOR ALL CLASSES OF SERVICE



Consolidation Type Freight Locomotive, Built for Eastern British Columbia Railway.

Total weight of engine in working order, 186,310 pounds. Weight on driving wheels, 166,100 pounds. Diameter of driving wheels, 51 inches. Boiler pressure, 210 pounds. Cylinders, 20 x 28 inches. Maximum tractive power, 39.200 pounds.

ATLANTIC STEAM SHOVEL



Direct wire rope hoist with but one sheave, instead of chain hoist with from five to seven sheaves, reduces delays and loss of time due to breakdowns, increases the efficiency of the engines, and reduces repair bills as well as fuel consumption.

Finished, interchangeable spare parts always on hand at works.

MONTREAL LOCOMOTIVE WORKS, LIMITED

BANK OF OTTAWA BUILDING, MONTREAL, CANADA

Weighing Coal in Ontario.

The Board of Railway Commissioners passed order 8982, dated Nov. 22, 1909, as follows: Re application of Retail Coal Dealers' Association for order that all railway companies weigh all coal carried by them received from foreign countries at the port of entry, and for other matters; it is ordered as follows:—

1. In the event of the consignee of any car or cars of bituminous coal shipped from the United States for final delivery at a point in Ontario, desiring to have such car or cars weighed at the port of entry, he shall be at liberty to give a written notice to the local agent of the railway company receiving such car or cars at such port of entry for delivery or furtherance, that he wisnes to have any or all the cars weighed, such notice to be given before the coal is received by such railway companies; and upon the receipt of such notice, it shall be the duty of the company to weigh, free of charge, at such port of entry, all cars covered by the notice.

2. Any consignee may give a general or continuing written notice that he wishes to have all such cars consigned to him weighed as above provided.

3. For the purpose of such weighing at the port of entry, the cars to be weighed may remain coupled one to another in a train.

4. The weighing of coal at the port of entry, under the provisions of this order, shall be under the supervision and control of a Government weigh-master, to be appointed or named by the Minister of Customs, whose duty it shall be to prepare in triplicate a certificate of the weight of the coal in each car weighed.

5. The Government weigh-master shall deliver one of the originals of such certificate to the railway company, if desired; attach another to the way-bill, or send it by mail to the consignee; and preserve the third in his possesion for further reference if required.

6. In case of dispute between the railway company and the consignee as to the weight of coal in cars weighed as hereinbefore provided, the certificate of the weight of such coal by the Government weigh master shall be binding upon the railway company.

7. It shall be the duty of the local agent of the railway company at such port of entry to notify the Government weigh-master of the probable hour of arrival from day to day of all cars of coal required to the weighed, in sufficient time to enable the weigh-master to supervise and control the weighing of such coal without unduly delaying the said cars in transit.

8. If the railway company has established weigh scales at the point of destination of such coal, the company shall there weigh such car or cars as may be specified in a written notice delivered by the consignee to the agent of the railway company at such point of destination, within 24 hours after the arrival of the coal.

9. If the railway company has not established weigh scales at the point of destination of such coal, the company shall, at the weigh-scale point nearest to such point of destination in the direct route, weigh such car or cars as may be specified in a written notice delivered by the consignee to the agent of the railway company at such point of destination, a reasonable time before such car or cars shall have reached the said weigh-scale point.

10. For the services required to be performed by the railway company under clauses 8 and 9 hereof, the railway company may charge and collect from the consignee 5c. for every ton of coal in the car, with a minimum of $1 and a maximum of $2 per carload; but no charge shall be made and no amount collected for such service, if the weight of the coal be more than 500 lbs. less than the weight of the coal at the port of entry, or if, the coal not having been weighed at the port of entry, the weight be more than 500 lbs. less than the weight shown by the weigh bill to be in the car at the time of shipment, plus the weight of the car itself as shown by the tare.

11. On notice in writing that he wishes to have the empty car weighed, being given by the consignee of any such coal to the agent at the point of destination of the railway company hauling the same to such point (if a weigh-scale point) within five hours from the unloading of any car containing such coal, the company shall weigh the car at such point, and for such service may charge and collect from the consignee $1 per car; but no such charge shall be made and no amount be collected for such service if the actual weight of the car exceeds the tare marked on it by more than 500 lbs.

12. This order shall apply only to ports of entry and points of delivery in Ontario.

13. Any person or company affected by this order may, after one year from the date hereof, apply to the Board to vary or rescind it.

Order 7261, dated May 31, 1909, is rescinded.

A Veteran Railway Official's Opinion

Wm. Whyte, Second Vice-President of the Canadian Pacific Railway is one of the very ablest, best known and most popular railway officials in Canada. He has risen to his present commanding position by untiring industry, exceptional ability and the valuable faculty of having the confidence of the entire public. His jurisdiction covers the whole of the company's affairs throughout the vast territory extending from the head of Lake Superior on the east to Vancouver Island on the west and embraces Northwest Ontario, Manitoba, Saskatchewan, Alberta and British Columbia. The circular announcing his appointment, issued by Sir Thomas G. Shaughnessy in December, 1903, was one of the most sweeping which ever emanated from a railway office. It read as follows:—

"Wm. Whyte has been elected Second Vice-President, with office at Winnipeg, in general charge of the maintenance and operation of the Company's western lines, and, under the President's direction, of the administration of the Company's affairs in the territory between Lake Superior and the Pacific coast. Officers of departments will report to their respective chiefs, as heretofore, but they will consult with the Second Vice-President, and keep him fully informed about all matters affecting the territory in his charge."

The opinion of a man occupying such a position on any matter relating to the railway interests is of the greatest importance and we therefore especially value and appreciate Mr. Whyte's opinion of our paper which was conveyed to our Managing Director some little time ago in the following letter:—

Canadian Pacific Railway,
Winnipeg, March 8, 1909.

Dear Mr. Burrows,—In your letter of the 27th ultimo you asked me for my impressions of the Railway and Marine World published by you.

I have much pleasure in stating that your periodical contains matter regarding the railway and marine field of a most comprehensive and accurate character, which is strong and clear evidence of the great care exercised by you in collcting the information. I have no hesitation in saying that I receive a great deal of benefit and information from reading the Railway and Marine World, and I express the hope that it may long continue to be the useful periodical of information that it is.

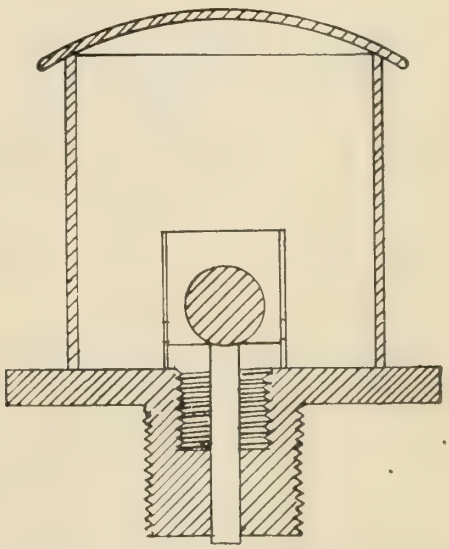
Yours very truly,
W. WHYTE,
Second Vice-President.

The accuracy of our reading matter is similarly recognized by railway officials generally, this accuracy ensures the paper being thoroughly read and therefore greatly enhances the value of the advertising pages.

Automatic Oil Cup for Locomotive Guide Bars.

By H. J. Varlow, General Foreman C.P.R., Fort William, Ont.

The consumption of oil on a railway is of serious importance but it is necessary that it should be watched closely to avoid all waste possible. I have noticed engines arrive at the round houses with the oil dropping on the guide bars. Owing to the needle not being closed the oil that remains in the cup drops on the floor and is wasted, I do not say the closing of the needle is omitted wilfully, but it does occur. The engineer may possibly have his attention fixed on some important work to report and forgets to close the needle in the cup. The accompanying sketch shows how this may be



remedied. It is not necessary to make a new cup. Remove the needle in your old cup and bore a hole half an inch deep in the bottom for a five-eighths screw. Take a piece of brass, turn one end down and screw five-eighths of an inch, bore a three-sixteenths hole through, bore out the top three-quarters of an inch in diameter, and one inch deep, put six holes a quarter inch round the bottom so the oil can flow on the centre, put a half inch diameter ball inside, bore the bottom to a slight radius. You will find the ball will sit over the centre of the three-sixteenths hole and prevent any leak of oil when the engine is at rest. As soon as the engine moves vibration will cause reciprocal motion on the ball and the oil will drop. By using this device the waste of oil on the guide bars can be reduced to a minimum.

A public subscription list for the construction of an opera house at Victoria, B.C., includes the following: C.P.R. $15,000; G.T.P.R. $10,000; Mackenzie, Mann and Co. $10,000; B.C. Electric Ry. $5,000.

Cap Rouge Viaduct, N. T Ry.

The Cap Rouge viaduct, which has been built on the National Transcontinental Railway near Quebec, is a single track structure about 3,345 ft. long over all with a maximum height of nearly 173 ft. from low water to base of rail. It contains about 4,500 tons of steel and has thirty-one 40 ft. towers and one single bent supporting thirty-three 40 ft. and twenty-nine 60 ft. plate girder spans and one 150 ft., one 160 ft., and one 125 ft. riveted truss deck spans.

Several comparative estimates were made considering the longitudinal force specified, and indicated that the maximum rigidity and minimum total cost would be secured by the adoption of comparatively wide towers and moderate length connecting spans, which were finally fixed of the dimensions already stated, but which it was considered by the contractors would have been substantially as economical if the lengths of the towers had been increased 10 ft. more. The standard of 40 ft. was, however, adopted in deference to the general attitude taken by the engineers of proportions of high viaducts and it has proved very satisfactory in construction and operation.

The towers are of special construction and are interesting on account of the make up of the columns and the system of bracing, which avoids all intermediate horizontal transverse struts and eliminates them from the centre panels in the longitudinal faces of the towers. This column design has been somewhat modified in subsequent structures proportioned by the same designers to provide better for the transportation and erection stresses and to reduce the wide painting area in the interests of maintenance.

CAP ROUGE VIADUCT, NATIONAL TRANSCONTINENTAL RAILWAY.

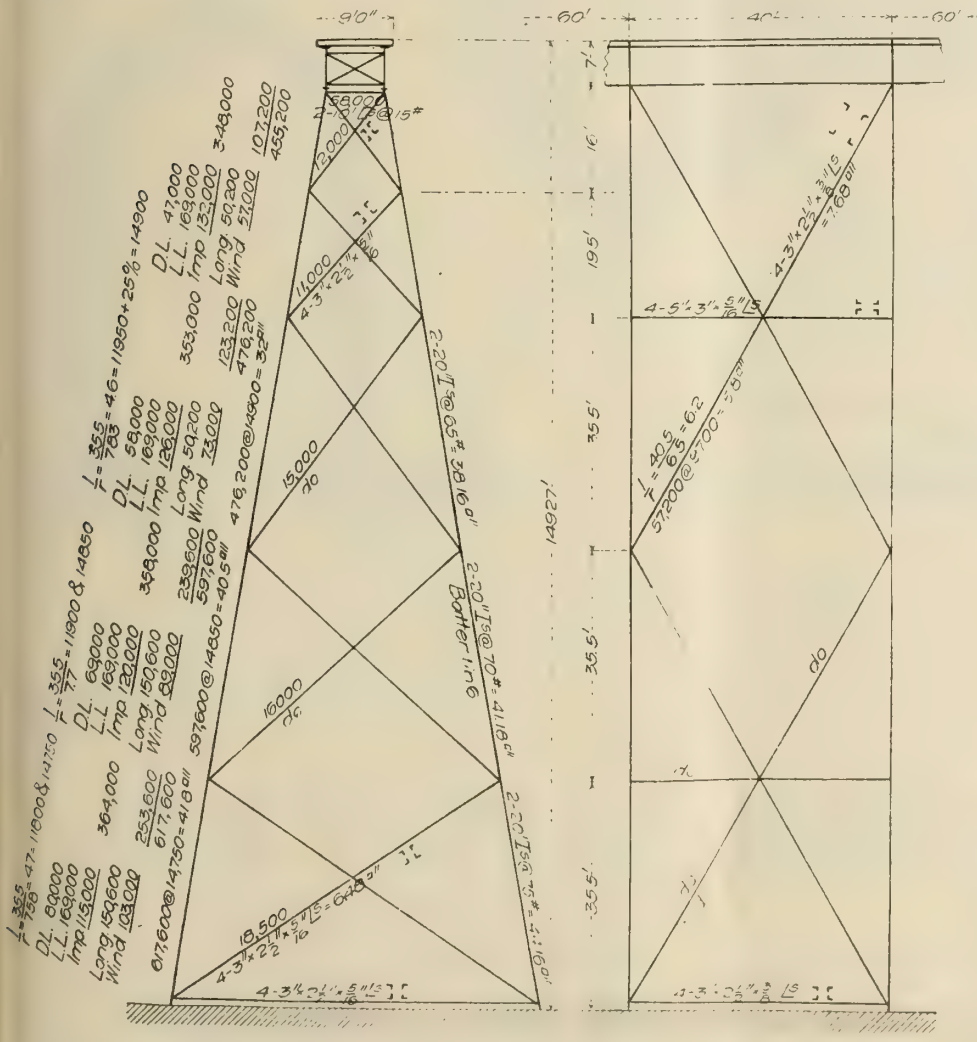
The structure is designed for dead loads of 1,350 lbs., 1,500 lbs., and 3,000 lbs. per linear foot of the 40 ft., 60 ft. and 150 ft. spans respectively, and for the "class heavy" live load and unit stresses conforming to the Dominion government specifications of 1905 which provide for two 180 ton engines 48 ft. long followed by a train load of 4,750 lbs. per linear foot. Wind pressure is assumed at 30 lb. per square foot of exposed train and viaduct surface and impact is allowed for by the formula $(l.\ l.)^2 \div (d.\ l. + l.\ l.)$.

All plate girders have a uniform depth of 6 ft. and sustain maximum calculated stresses of 158,800 lbs. direct shear plus 115,000 lb. impact increment, equals 273,800 lb. for the 60 ft. span, requiring a sectional area of 27.38 sq. in. The corresponding moments give a net flange stress of 2,119,000 lbs., which, increased by the impact increment, 1,465,000 lbs. gives a total of 3,584,000 lbs., for which gross cross sections of 44.26 and 40.12 sq. in. are provided in the top and bottom flanges respectively. For the 40 ft. spans, the shear plus increment is 226,800 lbs. with a 22.68 sq. in. net web section and the flange stress 1,963,400 lbs. with net and gross sections of 21.5 and 23.06 sq. in. respectively to both top and bottom flanges.

The maximum stresses in the tallest bents are given in the accompanying diagram, which also shows the materials used for the members. In bents 110 ft. high to base of rail, the maximum column stress is reduced to 557,300 lbs. with a required sectional area of 34.1 sq. in., and the columns are made with 18 in. I-beams weighing 60 lbs. for the two lower stories and 55 lbs. for the upper stories. The horizontal and diagonal bracing is the same as for the maximum bent.

The height of the viaduct does not fall below 100 ft., except near the ends, at one of which is located the 125 ft. span and the single bent. At the other end there are three towers with their pedestals from 53 to 95 ft. below the base of rail. In all of them the columns are made with 18-in. 55 lb. I-beams. The columns are battered 1:6, which increases the uniform transverse distance 9 ft. apart on centres at the top to from 24 ft. 4 in. to 56 ft. 4 in. at the base.

The column posts are made in lengths of about 32 ft. for the upper stories, which are uniform and vary according to the irregularity of the ground for the lower story. Each section is made with a pair of 18 in. I-beams spaced 15 in. apart on centres with their webs transverse to the axis of the viaduct and their flanges connected by double latticing with flat bars. Successive sections are spliced with double web and flange cover plates, the latter being made about 3 ft. long and extending beyond the inner edges of the columns to serve as jaws receiving the field riveted ends of the horizontal and diagonal longitudinal

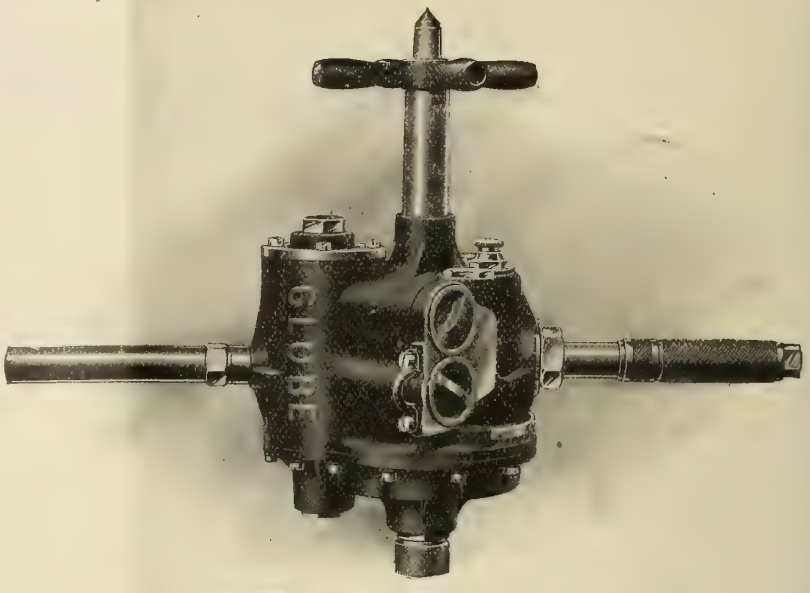


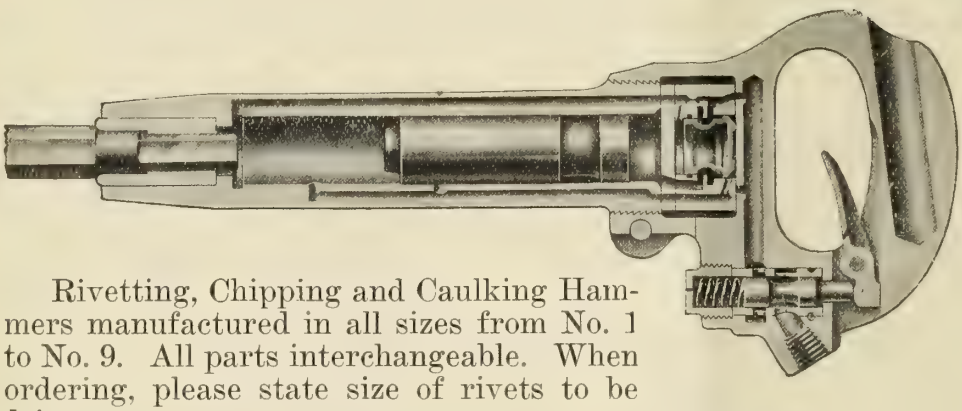
TYPICAL STRAIN SHEET OF TALL TOWER, CAP ROUGE VIADUCT.

GLOBE PNEUMATIC ENGINEERING CO., LTD.

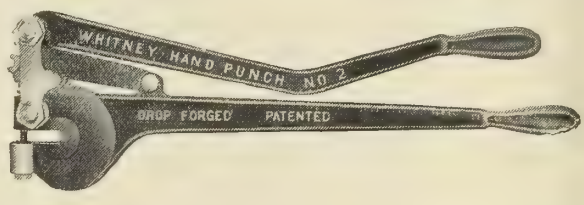
LONDON, ENGLAND

Globe Drills. These tools are patented and manufactured by J. W. Tierney exclusively for the Globe Pneumatic Engineering Co. The workmanship and material is of the very best. Sizes and capacities from 9-16 in. to 3½ in. Reversible or Non-Reversible Drills, reciprocating type. Air pressure required, 60 to 100 lbs. per sq. inch.

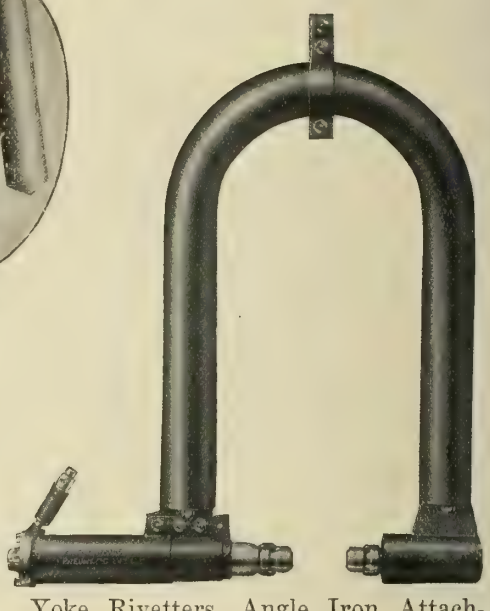




Rivetting, Chipping and Caulking Hammers manufactured in all sizes from No. 1 to No. 9. All parts interchangeable. When ordering, please state size of rivets to be driven.



WHITNEY HAND PUNCH. The most modern and labor-saving tool of its kind on the market for manufacturing plants and general repair of outside construction work, drop forged, total length 23 in.; length of lower level, 22 in.; weight, 11 lbs.; capacity, ¼ in. hole in ¼ in. plate or its equivalent, punches up to ½ in. in lighter material. Write for price. We also carry a complete line of Machine Tools generally; High Speed Steel, special twisted High Speed Drills, Ultra Rapid Water Hardening Steel and Steel for all purposes. Write for prices.



Yoke Rivetters, Angle Iron Attachments, Holder-ons, Deck Rivetting Machines, Jam Rivetters, Pneumatic Stone Cutting Plants and other appliances.

Greatest efficiency, accessibility, lightness coupled with rigidity and strength are a few of the leading features of these pneumatic tools. We solicit enquiries.

Composite Bearings Manufactured under Canadian Patent No. 115784

Vancouver, 614 Hastings St., W.

braces. Pairs of 8 x 3 in. angles about 4 ft. long are riveted to the flange splice plates on the inner sides of the columns to form jaws for the field connections of the transverse X-braces and also serve to add considerable resistance to flexure for the columns at these points.

All diagonal members in the tower bracing have rectangular cross sections made with four 3 x 2½ in. angles latticed on all sides. All diagonals are cut to clear at intersections and are spliced together and with double flange cover plates which, in the case of the top and bottom panels of the longitudinal bracing, connect them also to the continuous horizontal struts which have I-shape cross sections made with two pairs of 5 x 3 in. angles back to back latticed. The column bases are seated on separate concrete pedestals and pairs of vertical distribution angles are riveted to the column webs at the lower end and have bearing plates on top, thus forming pockets and seats for two 2¼ in. anchor bolts 11 ft. long at each column footing of the high towers.

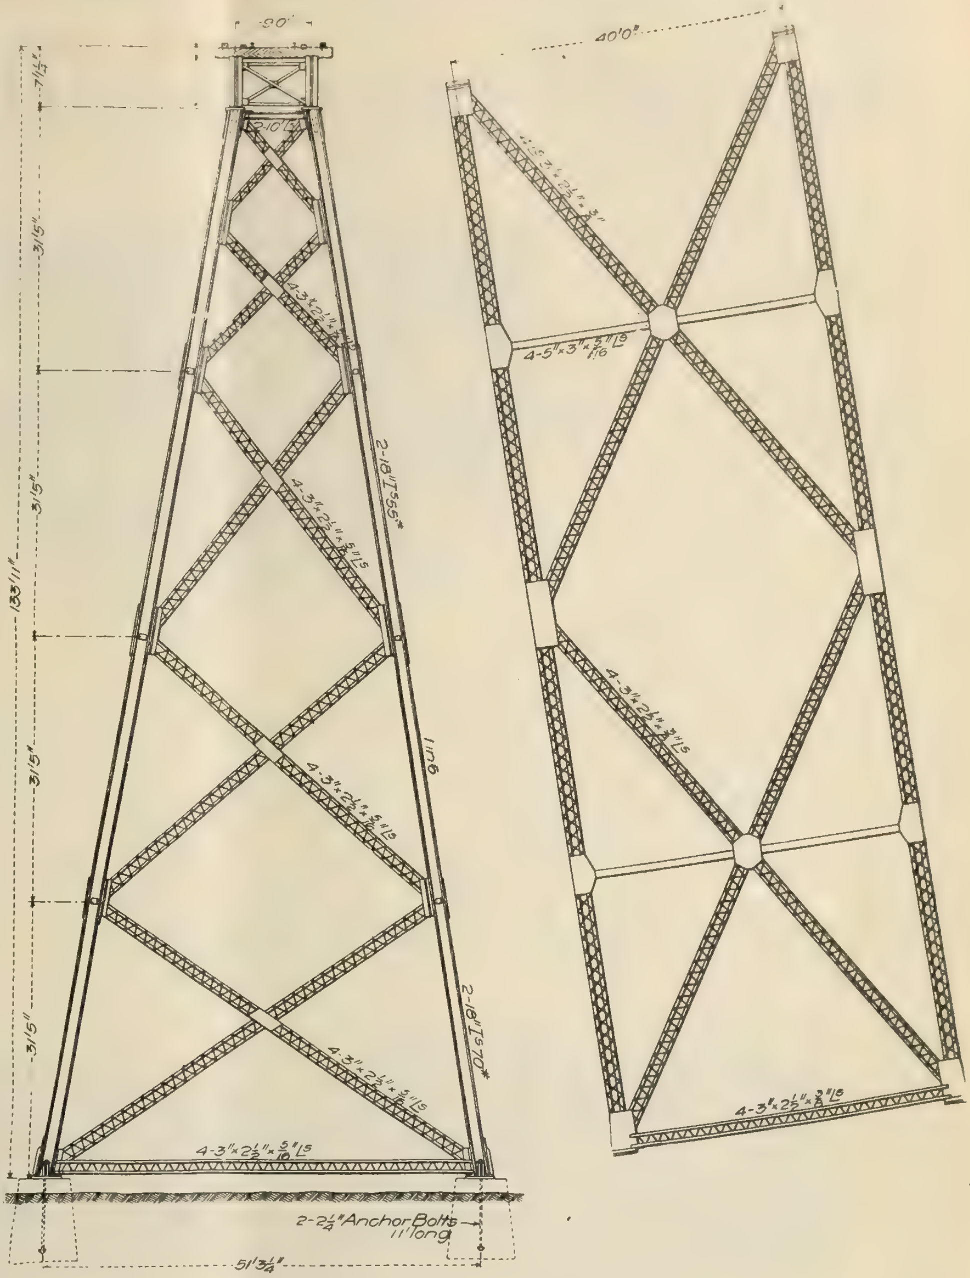
At the upper end of the column, the webs of the I-beams are connected by longitudinal diaphragms which are made with vertical 18 in. I-beams 3 ft. long reinforcing the 36 x ¾ x 38 in. cap plates which, at the ends of the long spans, have guide strips riveted on both edges to engage a cast-iron bed plate with a spherical upper surface finished to a radius of 36 in. A corresponding cast steel bearing plate is finished with a concave surface between which and the convex iron casting there is interposed a sheet lead filler 1-16 in. thick and 21 in. in diameter. The horizontal upper surface of the concave casting is grooved to receive the lower one of a pair of polished Tobin bronze plates 22 in. square and 5-16 in. thick. The upper plate is countersunk riveted to the 1⅞ in. sole plate on the bottom flange of the girder. The girder is thus free to slide longitudinally on the bronze bearings and to be deflected in any direction on the convex casting without materially disturbing the concentric application and distribution of its load on the column top. The cast fillers are bolted between the longitudinal edges of the shoe plate on the girder and the cap plate on the column and are cored for 1 15-16 in. turned bolts which engage round holes in the fixed ends of the girders and slotted holes in the expansion ends.

The 60 ft. girders have 72 x ⅜ in. web plates with top flanges made with a pair of 8 x 8 x ¾ in. upper angles and two 6 x 6 x ¾ in. lower angles riveted over them with their horizontal flanges downwards, making an H-shape cross section which, with one-eighth of the web, gives a gross section of 44.26 sq. in. The bottom flanges have T-shape cross sections, are made with a pair of 8 x 8 x¾ in. angles and two 17 x 9-16 in. flange cover plates. The 40 ft. girders also have 72 x ⅜ in. web plates. Their top and bottom flanges are the same and are each made with two 8 x 8 11-16 in. angles. All girders are divided into panels 6 to 7 ft. long by pairs of 5 x 3½ in. intermediate vertical web stiffener angles and 6 x 6 in. end vertical angles. The 60 ft. spans have top and bottom flange X-bracing of single 3½ x 3 in. angles. The 40 ft. spans have top lateral bracing only. Both spans being provided with the usual transverse vertical sway bracing frames at the ends and at alternate panel points.

The 150 ft. span has trusses 25 ft. deep, proportioned for a maximum top chord stress of 768,700 lbs., for which a sectional area of 45.4 sq. in. is required, and is made up with four 6 x 3½ x 9-16 in. angles, two 18 x 7-16 in. web plates and one 2 x 1½ in. cover plate. The truss is divided by vertical posts into six panels, each with a single diagonal member. The 125 ft. span corresponds to the 150 ft. span, except that it has only five panels. The maximum chord stress is 522,000 lbs., and a sectional area of 37.6 in. is provided by two 15 in., 50 lb. channels and one 18 x ½ in. cover plate. Both spans have top and bottom lateral X-bracing, made, in the end panels, with four angles each. The vertical posts are braced transversely with sway frames composed of 3½ x 3½ and 6 x 3½ in. angles. The trusses are spaced 16 ft. 11 in. apart and the track is carried on 54 in. floor beams and 48 in. stringers.

The viaduct is being erected with an overhead two-boom traveler. All field rivets are driven by pneumatic hammers.

The viaduct was designed and constructed under the direction of R. F. Uniacke, Bridge Engineer National Transcontinental Ry. Commission. The steel was fabricated and erected by the Dominion Bridge Co., Ltd., of Montreal, Phelps Johnson, Manager.



TYPICAL TOWER, CAP ROUGE VIADUCT.

S. R. Jecks, messenger Dominion and Western Express Cos., Montreal, writes: "I can assure you I would not be without your very interesting and valued paper, the Railway and Marine World."

Canadian Railway Activity. — Geo. Paish, editor of the London, Eng., Statist, who paid an extended visit to Canada recently, is contributing a series of articles to that paper. In the first one he says:—"A third factor of great import is the ability and far-sightedness of Canada's statesmen. They recognize that the essential thing to be worked for is to open up the country and to admit population to the natural wealth. All the energies of the statesmen of the entire country, Dominion and Provincial, are at the moment directed to the extension of railways. This is the platform upon which the Ministries have been returned to office, and it is this policy they are pledged to carry out. Everything possible is being done to encourage and to stimulate railway construction, both in the prairie districts and between the prairies and the sea coast, east, west and north."

The Ontario Government received $416,936 from taxes levied on railways in the province during the last financial year, against $400,227 in the previous year. Of this $30,000 is applied towards the expenses of the Ontario Railway and Municipal Board.

The Silliker Car Co., Ltd., Halifax, N.S., in its report for the past year showed a net profit of $4,000, which with a balance of $14,000 brought forward from the previous year, made $18,000 carried forward to the current year's accounts. The company's capital stock is to be increased to $750,000, by the issue of $250,000 5% cumulative preferred stock, of which it is proposed to issue one-half at once.

Exhaust Nozzle for Locomotives.

By H. J. Warlow, General Foreman C.P.R., Fort William, Ont.

There are a great many different opinions on this subject. Engineers frequently raise discussions and I have heard some remark that certain locomotives will not steam without a bridge in the nozzle. It is almost impossible to convince some engineers that the engine will steam without the bridge. My opinion is that putting a bridge or bar across a nozzle is not the proper plan; in the first place, it will cause back pressure. This is not the only obstruction caused. When the exhaust strikes the bridge it is split and destroys the vacuum in the smoke box and the fire does not burn evenly. I am inclined to think there is much more work put in the front end of a locomotive than is beneficial and that does not do all that is claimed for it. The accompanying sketch figure 1 shows an exhaust nozzle with bridge. When steam strikes this the exhaust is split and does not go straight up the stack. It will be seen this nozzle is below the centre of the boiler which I believe is a disadvantage and I do not consider a number of petticoats improve the steaming qualities. The other sketch figure 2 shows an exhaust nozzle without a bridge which will give far better results. The nozzle is level withthe centre of the boiler and has one petticoat. I would suggest for an engine with 21½ inch cylinder and 28 inch stroke a nozzle bored parallel 3½ inches and 5 inch diameter, with one petticoat. This can be lowered or raised as required to suit. There will be less back pressure with this nozzle than with one with the bridge and a much better vacuum will be obtained. Care must be taken that the exhaust is set central with the stack.

The commissioners and officers of the Victorian (Australian) railways, of which T. Tait is Chairman, sent out a very attractive Christmas card, illustrated with views of a standard train, the Commission's head offices, the Melbourne central station, the railway yards at North Melbourne, and a beautiful Victorian fern scene.

F·H·Hopkins & Co SUCCESSOR LATE JAMES COOPER **Montreal**

A Railway to Hudson's Bay.

The surveys for the proposed railway to Hudson Bay have been made under the charge of Jno. Armstrong, C.E., and the instructions for the preliminary surveys were conveyed to him in a letter from the Deputy Minister of Railways dated July 10, 1908. Four parties were organized at Winnipeg, the first two being despatched to Pas Mission, Aug. 30, and the other two Sept. 19. A small additional party was organized to undertake the exploratory work, and for the collection of general information as to the country through which the proposed line will run. The first party completed its field work, Mar. 11, 1909; the second 13 days later; the third April 6, while the two other parties completed their work on the railway route, April 1, and were engaged until July on survey work on the harbors at Port Nelson and Fort Churchill. The chiefs of the staffs worked out the plans and estimates after the withdrawal of the parties from field work.

THE CHURCHILL ROUTE.—The first section of approximately 120 miles is through a comparatively level country, affording easy grades and cheap construction. The territory is underlaid with limestone in horizontal or flat beds, rarely rising above the general level to any extent, and when it does so it is in such a way as to be easily avoided by the railway line. Owing to this condition the rock cutting on this section will be practically nil. The balance of the grading on this section will largely be in clay loam material, probably 70%, the remainder being of sand, gravel and swamp or muskeg. What is called muskeg in this country is not a true muskeg, but would be more properly defined as swamp. Good bottom is usually obtained at a depth of 3 or 4 ft., and very seldom exceeds 7 or 8 ft. The stream crossings will be light, with the exception of the Saskatchewan river crossing. Frog River, the connection between Moose Lake and Cormorant Lake, is a navigable stream for small boats, and as crossing is low down it will probably be necessary to provide a swing span of some kind. As a 50 or 60 ft. opening will do, the sum required will not be large. The second section of 120 miles is through granite country, and although the same general characteristics are preserved the granite ridges are more abrupt, and will necessitate some rock cuttings, although fortunately most of them will be small. All the streams and lakes throughout these two sections possess more or less valuable timber. From mile 240 to 360 is the roughest country encountered, and considerable exploratory and extra preliminary work has failed to find any better route than that adopted. In this territory is included the rise between the basin of the Nelson River and that of the Churchill. The actual height of the summit between the two rivers is not very great, but both approaching and leaving this summit a heavily rolling or undulating country is encountered, and requires the development of a considerable length of line, and the introduction of much curvature to secure the grades adopted, at a reasonable cost. On the Nelson River side of this ridge a considerable amount of heavy work will be necessary, but on the Churchill slope although the yardage to be moved will be heavy it is not anticipated that much rock will be encountered. The fourth section, extending from mile 36 to Port Churchill will require the moving of only a light yardage, but the northern 70 miles being over the tundra, or barren lands, may prove to be a more expensive piece of work than the profile would indicate. W. J. Clifford made a trip through this section in June to examine it after the snow had disappeared. He does not anticipate any serious difficulty or danger in construction, the chief drawback being from the fact that although the material is such as would usually be classified as common excavation, so much frost will be encountered that probably a considerably greater price will have to be paid for its handling than for common excavation. The timber over sections 3 and 4 is not of very much value. A few ties and some timber for temporary work may be obtained but only in small quantities. The bridging on the whole will average light, the only two bridges of great importance being the Saskatchewan crossing and the Deer river crossing about mile 350. The curvature as estimated from the projected location averages 9° 55′ per mile. The grades adopted, viz.: 0.4 northbound and 0.6 southbound, have been obtained without great effort, and although some development was required on section 3, the ease with which they were obtained on the remaining sections seems to justify their use all through for the sake of uniform grades on all engine divisions.

THE NELSON ROUTE.—The route selected towards Port Nelson follows the Churchill route for some 150 miles or thereabouts. Unlike the Churchill route, the Nelson route does not resolve itself into natural divisions each presenting different characteristics peculiar to itself, but throughout maintains a generally uniform appearance so that the description given for the first division of the Churchill route may be applied in a general way to the whole of the Nelson route. It is not expected that the rock work will amount to very much, the major portion of the grading being in clay loam with smaller percentages of sand, gravel and swamp. The tundra is not encountered on this route, the whole line being through timber not appreciably different from that described on the first 200 miles of the Churchill route. It may be mentioned that sand and gravel has been found sufficiently often to justify the belief that ballast may be had without unduly long hauls, except on the northern 70 or 80 miles of the Churchill route. It may be found there, but as yet it has not been noticed. The curvature has been estimated to average about 5° 30′ per mile over this route. A grade of 0.4 both ways may be had on this route. The adoption of 0.6 against southbound traffic would not help alignment nor save grading. There are three important bridges on the Nelson route, viz.: the Saskatchewan, the crossing of the Nelson at Manitou rapids, and the second or lower crossing of the Nelson. The Manitou crossing of the Nelson is a particularly favorable crossing, the river here being confined in one channel of less than 350 ft. wide, the banks being of merely perpendicular granite rock and so situated as to make it possible to choose almost any desired elevation between 50 and 100 ft. above the water, which here is of course very deep, and has a current of from six to eight miles per hour, making it necessary to cross with either a single span or an arch. The lower crossing will be much longer, probably 3,000 ft., from grade to grade, with a waterway of 1,500 ft. with the grade line approximately 80 ft. above the water. The balance of the bridging will be light, trestles being sufficient in all cases with the exception of Frog River.

The waterways susceptible of development in connection with the railway system are indicated on a general map, prepared by the engineers. The waterways have all been recently navigated by vessels of considerable size. Trips have been made between Winnipeg and Edmonton, on the North Saskatchewan; between Medicine Hat and Saskatoon on the South Saskatchewan, and between Grand Forks, N.D., and Winnipeg, on the Red River. These river routes are open to the navigation system touched by the proposed railway. The Nelson River has a discharge of approximately 150,000 cubic feet per second, at Lake Winnipeg, and as it is fed by a number of other rivers, the discharge at Port Nelson is estimated at about 200,000 cubic ft. per second. The discharge of the Churchill River at Fort Churchill is estimated at 40,000 cubic ft. per second at low water, and there is no possibility of improving it so as to give inland communication by water. The only available site for docks is out near Cape Merry, with the railway terminals from two to three miles up stream. At Port Nelson, not only is there open a great stretch of improvable waterways inland, but there is a good site for docks and terminals adjoining an easily accessible supply of stone, etc., for construction, and the defence of the port would be comparatively easy.

THE ESTIMATES are based on right of way 150 ft. wide with the necessary allowances added for sidings and terminals. A few miles of heavy clearing will be encountered, but the average over the whole line will be comparatively light. The first 200 miles will be through spruce and jack pine with a small proportion of poplar and tamarack. The northern 100 miles of the Churchill route will have practically no clearing. The northern 200 miles of the Nelson route will be through spruce with a small proportion of jack pine and tamarack and will probably have from 12 to 15 acres per mile to clear. A large portion of the clearing on both routes could probably be done for $25 or $30 an acre, but owing to the heavier clearing encountered at intervals an average price of $40 an acre has been decided upon. It is somewhat difficult to estimate the cost of grubbing without an actual location profile. One and a half acres per mile has been used for 400 miles of both lines, using the price $100 an acre which seems to be the price bid by contractors almost universally. The work will class as light, a large proportion of it being such as can be done with heavy grading or breaking ploughs. Grading being the chief item in the estimate, considerable care has been taken with it. The quantities submitted are taken from the projected profiles, and the greater portion of these being very close to the preliminary lines, should be as accurate as is possible without cross sections. Engineers in the field were instructed to take out these quantities liberally, and the estimates submitted by them are probably at least 10% in excess of what the profile actually shows. In addition to this, 25% has been added to all quantities to cover drainage, settlement, &c., so that the quantities reported are approximately 35% in excess of what the profile actually shows. This should provide for all possible contingencies, especially as one of the main causes of swelling of estimates, viz.: road and farm crossings, is not met with here. In addition, 1,100,000 cubic yards are added to Churchill route and 900,000 cubic yards added to Nelson route for sidings and terminals. At present not one single road or farm crossing exists between The Pas and Hudson Bay. The prices adopted, $1.80 for solid rock, 65c. for loose rock and 30c. for earth approximate closely to the prices obtained on the Transcontinental Ry. in what may be termed similar country. The portion from The Pas to Hudson Bay Junction of the Canadian Northern Ry., a much worse proposition, was done at a profit, for 25c. during the high wage period of 1906 and 1907. These prices quoted are of course the average. The accessibility of the work will not be so difficult as supposed. The first section has rail communication to The Pas with a fairly

good steamboat connection already established to Moose Lake, 50 miles along the route. The construction of wagon or sleigh roads from this point on will be easy. The second section, with communication from Winnipeg via Lake Winnipeg and the Nelson River, can be made quite adequate for the comparatively small sum of $15,000 or $20,000. In case the Churchill route is selected this will be more expensive. The third section may be supplied from Churchill or Nelson if so desired. In the case of Nelson good water connection being possible for 60 or 70 miles inland. In case the Churchill route is selected probably steam shovels will be required on a section of about 35 miles near Split Lake. These water routes suggested are not recommended for the transport of such plant as this, but will be useful for all lighter supplies and materials. On the Nelson route no steam shovel work is anticipated, except blasting—the plant for which will follow along behind the track.

On the Churchill route a sufficient amount of timber for ties, piles, and temporary work may be had convenient to the line on the southern portion as far as mile 240, but beyond this point none can be had. For this reason piling has been quoted as 50c. per foot on the Churchill route, as against 40c. on the Nelson route, where timber may be had all the way to the bay. With the exception of the Saskatchewan River crossing and the crossing of the Deer River on the Churchill route all waterways have been estimated for, as temporary wooden structures. On the Nelson route the Saskatchewan crossing and the two crossings of the Nelson are to be steel and concrete, all others wood. The expedition is practically the first which has obtained definite and specific information of the country through which it is proposed to run, but inasmuch as practically all the work was done in the winter months with everything frozen solid and under 3 or 4 ft. of snow it is perhaps too much to expect that a proper estimate of water openings could be made. For this reason temporary wooden structures of such a nature as will suffice for from seven to 10 years has been estimated for. During this period close observation of the waterways will enable the engineers to specify with more certainty the style and size of opening required. With this closer knowledge of what is required, and with the increased facilities for handling cement and other materials for permanent structures, the final cost will probably be less than if an attempt were made to construct them now. Cedar timber for culverts may be had f.o.b. cars in Winnipeg for $18 and $20 a thousand, and with freight added is worth $22 to $25 at The Pas. The price of $40, thus leaving from $15 to $18 for framing and contingencies, is probably high enough to cover the cost of what little excavation may be needed. If timber native to the country can be used, such as spruce and tamarack, a considerable saving may be effected.

The iron for bridge and other work, steel rails and ties are estimated at current prices; tracklaying at about $500 a mile; ballasting at $1,000 a mile; and water tanks, etc., in accordance with the general practice, altered to suit the special requirements of the line. A 5,00 ft. side track is estimated for at every eight miles, with a station-house, and accommodation for two section crews at every alternate siding. On the Nelson route, 410 miles, there will need to be four sets of divisional buildings, and the same on the Churchill route of 477 miles.

The estimates as submitted by Mr. Armstrong were:—

	Churchill Route.	Nelson Route.
Clearing	$280,000	$280,000
Grubbing	60,000	60,000
Grading	1,870,000	3,000,000
Piling	90,000	80,000
Timber in culverts	130,000	112,000
Timber in bridges and trestles	220,000	176,000
Iron in bridges and culverts	130,000	105,000
Steel rails, 0 lb.	2,160,000	1,820,000
Angle bars	134,000	114,000
Bolts and nuts	36,000	31,200
Spikes	132,600	113,100
Ties	850,000	580,000
Track-laying	283,500	241,500
Switches	75,000	60,000
Water tanks	150,000	125,000
Steel bridges, steel	185,000	650,000
Steel bridges, concrete	90,000	180,000
Ballasting	567,000	483,000
Telegraph lines	143,100	123,000
Total	$10,586,520	$8,333,800

The Deputy Minister of Railways has increased the estimate for the actual tuting 80 lb. for 60 lb. steel, thus adding to the cost, in the case of the Churchill route, $720,000 for steel rails and $45,000 for fastenings, bringing the total cost up to $11,351,520; and in the case of the Nelson route, $600,000 for steel rails and $40,000 extra cost of fastenings, bringing up the estimated cost to $8,981,800. The estimated cost of station buildings, shops, etc., are as follows:—

	Churchill Route.	Nelson Route.
Station buildings, telegraph stations, section houses, round houses, shops, etc.	$1,700,000	$1,647,600
Two 4,000,000 bush. elevators	4,000,000	4,000,000
Yard facilities at terminals	320,000	320,000
Engineering, law costs and 10% for contingencies.	1,737,152	1,476,940
	$7,757,152	$7,444,540

The cost of harbour works, piers, dredging, exclusive of lighthouses and buoying channels, is estimated at $6,675,000 in the case of Fort Churchill, and $5,065,000 in the case of the Port Nelson. These estimates show a total estimated cost of railway from The Pas to Fort Churchill, with all the necessary buildings, and the provision of harbor works for the accommodation of coastwise and ocean vessels, of $19,108,672; and for a railway from The Pas to Port Nelson with all the accommodation as in the case of Fort Churchill of $16,426,340.

The southern terminus of the railway as planned, whichever point may be selected as the terminus on Hudson Bay, is at the Pas Mission, to which point the Canadian Northern Ry. has already a line in operation. The Chief Engineer of the present surveys suggests the possibility of constructing lines southerly from The Pas to Saskatoon, and another from Etomimi, the point of divergence of the C.N.R., Prince Albert and Pas Mission lines to Yorkton. The first line, Mr. Armstrong says, would open up a very fertile country along the Carrot River and give an outlet for the valuable timber areas along the northern slope of the Pasquia Hills. This line would be through open prairie country and a first-class road could be constructed for $20,000 a mile. The second suggested line would give communication over the lines of other companies to Regina and other centres in eastern Saskatchewan and western Manitoba. This line will also be prairie work, and its cost should not exceed $20,000 a mile.

A. R. Macdonnell, a contractor for the construction of a large mileage on the Temiskaming and Northern Ontario Ry., and the Commissioners having failed to agree in the final settlement of the construction accounts, the matter was referred to arbitration. The arbitrators sat Jan. 11, but counsel on both sides disputed the scope of the reference, and the contractor decided to apply to the Attorney-General for a fiat to enable him to take proceedings against the Commission in the courts.

Alberta and Great Waterways Railway.

In our last issue, in giving a summary of the prospectus of the company's bonds issued in England, we stated that an arrangement had been made with J. P. Morgan & Co., of New York, to place the bonds on the London market through its British house, J. S. Morgan & Co. We are advised that the arrangement was made direct between the A. & G.W.R. Co. and the London house.

We are advised that two reconnaissance surveys have been made from Edmonton, Alta., to Fort McMurray, 350 miles. About 90 miles have been located from Edmonton, with an alternative survey; three parties are in the field, and it is hoped to complete location to Lac la Biche by the end of April. Further location surveys to Fort McMurray or its vicinity will be gone on with during the season. It is said that the selection of Fort McMurray as the northern terminus would necessitate a 2½ pusher gradient and that consequently there may be a change in the proposed route at that end. Last year work was started about 15 miles north of Edmonton, and some 10 miles were graded by E. Manders, sub-contractor. Further contracts for grading will be sub-let in the near future and we are advised that it is hoped to complete the line from Edmonton to Lac la Biche, 150 miles, this year. A telegraph or telephone line, or possibly a combination one, will be built concurrently with the railway.

The President, Chief Engineer and General Manager were in Montreal together in January, and a contract was given the Algoma Steel Co. for between 30,000 and 40,000 tons of 56 lbs. rails for delivery this year and next. Orders for other material were given as follows:—Bolts, Toronto Bolt & Forging Co.; spikes, Peck Rolling Mills; fish plates and angle bars, Nova Scotia Steel & Coal Co. The Canada West Construction Co., contractors for construction, will buy some locomotives and flat cars and a steam shovel. Press reports from Edmonton state that sub-contracts have been let to the MacInnes Lumber Co., Edmonton, and to J. Walker, Fort Saskatchewan, for timber for culverts, bridges and for the line as far as Lac la Biche.

The company's officers are:—President, W. R. Clarke, President United States Trust Co., Kansas City, Mo., who for the present has headquarters at Edmonton and Montreal; Chief Engineer, J. A. L. Waddell, of Kansas City, Mo., who has his present headquarters at Edmonton; General Manager, E. A. James, formerly Manager Canadian Northern Ry., who now lives at Victoria, B.C., but will establish his headquarters at Edmonton in the spring; General Counsel, G. D. Minty, Winnipeg. Mr. Clarke is in general charge of all the company's interests; Mr. Waddell has charge of surveys and construction. In our last issue Bertrand R. Clarke, of Kansas City, was erroneously mentioned as Vice President of the A. & G.W.R. Co. He is President of the Canada West Construction Co., Ltd., which has the contract to build the railway.

The construction of this line will open up a tremendous mileage of interior navigation from Fort McMurray, or its vicinity, via the Athabasca River, Athabasca Lake, Slave River, Great Slave Lake and Mackenzie River to the Arctic Ocean, and bring the whole of the 3,500 miles of waterways in the Mackenzie basin into connection with the Dominion railway systems. It is probable that the A. & G.W.R. Co. will place steamboats on the river and lake routes.

The C.P.R. is reported to have completed plans for a $100,000 hotel to be built at Arrow Lake, B.C.

Pintsch Light Steam Heat

Most brilliant illumination made possible by the Pintsch System using perfected Mantle Lamps and Safety Axle Driven Dynamo Electric System a product of sixteen years experience and now operating successfully on leading roads

The Safety Car Heating and Lighting Co.

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

CONCURRENCE IN JOINT TARIFFS.

8984. Dec. 11.—Whereas notices of concurrences in joint tariffs are not required by secs. 335 and 336 of the Railway Act relating to international traffic, traffic from Canada through a foreign country into Canada, and from a foreign country through Canada into a foreign country; and whereas the Railway Act, sec. 333, provides "that where traffic is to pass over any continuous route in Canada operated by two or more companies, the several companies may agree upon a joint tariff for such continuous route, and the initial company shall file such joint tariff with the Board, and the other company or companies shall promptly notify the Board of its or their assent to and concurrence in such joint tariff; it is ordered that the following form of certificate shall be used in notifying the Board of assent to and concurrence in a joint tariff, or in a supplement thereto, applicable between points in Canada, that has been published and filed by another company, and to which the company giving assent and concurrence has been made a party; the certificate to be used for one schedule only, to be printed on paper eight inches wide by eleven inches long, and to be mailed to the Chief Traffic Officer of the Board:—

(Name of concurring company in full)
.....Department
(Place and date).....
No. C. C. (from 1 progressively).

THE BOARD OF RAILWAY COMMISSIONERS FOR CANADA.

This is to certify that the (name of concurring company in full) assents to and concurs in the publication and filing of the joint tariff (or joint supplement) described below, and hereby makes itself a party thereto and bound thereby.

(Full title and C.R.C. No. of schedule concurred in.)

Date effective .....
Issued by.....(Company.)

This certificate to be signed with the name and title of the official of the concurring company appointed by by-law of the company to prepare and issue tariffs, or by some person duly authorized to sign for him, such person to affix his name in full and his name and authority for the purposes of this Order to be communicated to the Board. And it is further ordered that in lieu of the individual certificate hereinbefore prescribed, the Board is prepared to receive a general certificate of concurrence in the following form, in all joint tariffs and supplements thereto, applicable between points in Canada, that have been published and filed by other companies named therein, and to which the company giving assent and concurrence has been made a party; the certificate to be mailed to the Chief Traffic Officer of the Board:

(Name of concurring company in full)
.....Department
(Place and date).....
No. G.C. (from 1 progressively).

THE BOARD OF RAILWAY COMMISSIONERS FOR CANADA.

This is to certify that the (name of concurring company in full) assents to and concurs in all joint tariffs and supplements thereto, that may hereafter be published and filed by (the name of company in full), in which this company is named as a party thereto, in so far as such schedule contains rates which apply, within Canada, to or via (not from) this company's points.

This certificate to be signed in person by the official of the concurring company appointed by by-law of the company to prepare and issue tariffs. And it is further ordered that the company which prepares and issues the joint tariff shall, against the name of each of the other concurring companies, show in small type the C.C. or G.C. number, as the case may be, of the certificate of concurrence of such company in such joint tariff. That two copies of all certificates of concurrence shall be filed with the Board, one marked "duplicate," which will be stamped with the date of receipt by the Board and returned to the sender; and it is further ordered that under sec. 323 of the Railway Act, the only procedure in the case of objection to any joint tariff shall be by formal application by the objecting company to the Board for an order disallowing the said tariff. The circular re concurrence certificate issued by the Board September 16, 1904, and Feb. 15, 1905, are rescinded. This order shall come into effect on Feb. 1, 1910.

MILLING-IN-TRANSIT PRIVILEGES.

9032. Dec. 21.—Re application of W. S. Tilston, Manager Transportation Bureau Montreal Board of Trade, under sec. 323 of the Railway Act, for an order directing the C.P.R. to publish tariffs covering the milling-in-transit privilege on corn received at Montreal by rail from its Georgian Bay elevator ports and from Detroit, which is ground at Montreal, and the product of which is re-shipped thence to C.P.R. points east in the Provinces of Quebec and New Brunswick for domestic consumption and for furtherance by water to outports; and re application of the Canada Flour Mills Co., of Chatham, Ont., for an order directing the G.T.R. and the C.P.R. to restore the milling-in-transit privilege on United States corn enjoyed by the applicant company under an arrangement with the said companies, the said arrangement having been withdrawn some years ago. Upon hearing the application, Mr. Tilston appearing in person for the Montreal Board of Trade, and in the presence of counsel for the C.P.R. and the G.T.R. Companies, no one appearing for the Canada Flour Mills Co., and what was alleged; it is ordered that the said applications be dismissed.

RATES ON IRON AND STEEL FROM ST. JOHN, N.B.

9099. Dec. 21. Re complaint of James Pender & Co., the Maritime Nail Co., and the Portland Rolling Mills, St. John, N.B., complaining against increase in rates on coarser articles of iron and steel from St. John to points on the Quebec Central Ry., via Megantic, from 16½c. per 100 lbs. on carloads and 25c. per 100 lbs. on less than carloads, to 22 and 33c. per 100 lbs. on carloads and less than carloads respectively; and applying for an order directing the C.P.R. to restore the former rates: Upon hearing the complaint, Mr. McDonald, Manager of the Maritime Nail Co., appearing for complainants, and W. B. Bulling, Assistant Freight Traffic Manager C.P.R. for that company, it is ordered that Supplement 3 to Special Tariff C.R.C. no. 937, increasing said rates be disallowed, and the railway company is directed to restore, not later than Jan. 10, 1910, the former rates on the said traffic.

METALLIC SHINGLE RATES FROM EASTERN POINTS.

9128. Dec. 21.—Re application of Kemp Manufacturing and Metal Co. and Winnipeg Ceiling and Roofing Co., both of Winnipeg, under sec. 315 of the Railway Act, for an order directing the railway companies to equalize their freight rates on metallic shingles and metallic siding from eastern points to Manitoba, Saskatchewan and Alberta, as against the freight rates charged on the unmanufactured material. It is ordered that order 653, July 5, 1905, made upon the application of the Canadian Manufacturers' Association and the manufacturers of metallic shingles, directing the C.P.R., the G.T.R., the C.N.R., and such other railway companies as are represented by the Canadian Freight Association, to establish commodity rates on metallic shingles, in carloads, equal to the rates at which metallic shingles, in carloads, were carried immediately before the change of classification in March, 1901, and to apply the same rates on metallic siding, and directing mixed carloads of the two articles to be carried at the rates charged on straight carloads,—in so far as it relates to or has affected shipments to points west of and including Port Arthur, from points in Canada east thereof, and from Winnipeg and St. Boniface, Man.—be rescinded. It is further ordered that order 1004, dated March 24, 1906, in so far as it relates to shipments between and within the territories hereinbefore described, be rescinded. And it is further ordered that order 6188, dated Feb. 2, 1909, made herein, dismissing the application, be rescinded.

LUMBER RATES, B.C. TO ALBERTA.

9187. Jan. 7.—Re complaint of J. A. Maddaugh, of Vancouver, B.C., of an overcharge of $52.18 on a shipment of four carloads of lumber from Maddaugh siding, B.C., on the Vancouver, Westminster & Yukon Ry., to Stony Plains, Alta., on the C.N.R., applying for an order to extend the operation of order of 7277, of June 16, 1909, to cover points on the C.N.R.; and for an order directing the V. W. & Y., the C.P., and the C.N.R. Companies to refund to complainant $52.18. It is ordered that the Great Northern Ry. Co., operating the V., W. & Y. R., forthwith publish and file joint rates on lumber and other articles covered by the joint tariff hereinafter mentioned, from points on the V., W. & Y. R. between Vancouver and New Westminster, not inclusive, to points on the C.N.R., via Vancouver, or New Westminster, and the most convenient and practicable points of interchange between the C.P. and C.N. Railways,—the said joint rates to be 1c. per 100 lbs. higher than the joint rates from Vancouver and New Westminster to the points shown in the C.P.R. Joint Tariff C.R.C., no. W. 847, or as it may be amended; the V., W. & Y. R. to be allowed 2½c. per 100 lbs.; the C.P. and the C.N. Railways to agree upon the apportionment of the balance of the joint rates. And it is further ordered that the V., W. & Y., the C.P., and the C.N. Railways, be authorized to refund to the complainant $52.18 on said shipment of lumber from Maddaugh siding, B.C., to Stony Plains, Alta.

WOOD PULP RATES FROM THOROLD.

Re application of J. Davy, of Thorold, Ont., for an order directing the Niagara, St. Catharines and Toronto Ry. to refund $219.83, alleged excess freight charges collected from applicant on shipments of wood pulp from Thorold to Suspension Bridge, N.Y.; and for an order directing the N. St. C. and T.R. to restore and maintain a rate of 2c. per 100 lbs. on further shipments between the said points. It is ordered that that part of the application directing the N. St. C. and T. R. to refund $219.83, being the additional 1c. per 100 lbs. paid on 42 carloads shipped from Nov. 15, 1908, when the 3c. rate went permanently into effect, to Sept. 29, 1909, the date of this application, be dismissed. And it is further ordered that the joint rate of 3c. per 100 lbs. at present in force on wood pulp, in carloads, from Thorold to Suspension Bridge, via the N., St. C. and T. R. and the M.C.R. be, disallowed, and the N., St. C. and T. R. is required by Jan. 15, 1910, to restore the joint rate of 2c. per 100 lbs. which was in effect on the said traffic prior to Feb. 1, 1908, and Nov. 15, 1908.

The action brought by M. A. Pigott, against the Guelph and Goderich Ry., for a sum approximating $500,000 for work done on construction, after being in hearing before the Ontario Courts for 28 days, was withdrawn, a settlement having been reached. The court dismissed the action, directing each party to pay their own costs.

STEAM RAILWAY STATISTICS FOR YEAR ENDED JUNE 30, 1909.

In the following table the column headed gross earnings includes passenger and freight earnings, as well as miscellaneous earnings; the next four columns give the operating expenses classified under their various headings, while the last gives the net earnings, which is arrived at by deducting the totals of the four columns referred to from the figures in the gross earnings column. The minus mark (—) before figures in the net earnings column shows that there was a deficit in the operations of the line to the extent of the figures given. The numbers in brackets—thus (1)—after the name of a railway refer to notes on page 105. The cents have been omitted in all cases, and the figures in the totals show the aggregate earnings, etc., including the cents, omitted from the detailed items.

Name of Railway	Mileage	Passenger Earnings	Freight Earnings	Gross Earnings	Maintenance of Way and Structures	Maintenance of Equipment	Traffic and Transportation Expenses	General Expenses	Net Earnings
Alberta Ry. & Irrigation Co. (1)	111.82	$ 80,991	$ 200,588	$ 294,278	$ 84,266	$ 29,868	$ 71,312	$ 21,029	$ 87,801

THE ELECTRIC HEADLIGHT

The following letter was received under date of May 8, 1908, from Mr. J. W. Cleary, Travelling Engineer Pyle-National Electric Headlight Co.:

"I learn from_____the Master Mechanic here, that an engineer running between_____ and_____discovered a broken rail with the Pyle-National Electric Headlight and made the stop without ditching his train. One or two pairs of wheels got off, but that was a small affair to what it would have been where a foot of the rail was broken off. Also an engineer running east of here found some cars shoved out on the main line. He saw them with the 'Electric' and made the stop without hitting them."

Notes to Steam Railway Statistics

(1) The Alberta Railway and Irrigation Co.'s lines include the lines of the Alberta Ry. and Coal Co., and the St. Mary's River Ry. It is all standard gauge, but there is a third rail on 20 miles, making a gauge of 3 ft. It has trackage rights over 1.60 miles of C.P.R. tracks.

(2) The Algoma Central and Hudson Bay Ry. and the Manitoba and North Shore Ry. are owned by the Lake Superior Corporation.

(3) The Atlantic, Quebec and Western Ry. has under construction an additional 82 miles. It has trackage rights over 1.75 miles of the lines of other companies. It has power to acquire the Atlantic and Lake Superior Ry., formerly the Baie des Chaleurs Ry.

(4) The Bay of Quinte Ry. has trackage rights over 19 miles of another company. The Thousand Islands Ry. is also owned by the same interests.

(5) The Great Northern Ry. owns and operates the following lines in Canada: Brandon, Saskatchewan and Hudson Bay Ry.; Midland Ry. of Manitoba; Crow's Nest Southern Ry.; Kaslo and Slocan Ry.; Red Mountain Ry.; Nelson and Fort Sheppard Ry.; Vancouver, Victoria and Eastern Ry. and Navigation Co.; New Westminster Southern Ry.; Victoria Terminal Ry. and Ferry Co., and Victoria and Sidney Ry. The Midland Ry. of Manitoba has trackage rights over 0.99 mile of another company's line. The Bedlington and Nelson Ry. mileage includes 8.67 miles operated under lease. The Nelson and Fort Sheppard Ry. mileage includes 5.42 miles of leased lines. The New Westminster Southern Ry. and the Vancouver, Victoria and Eastern Ry. have each trackage rights over 1.48 miles over the Fraser River Bridge owned by the Britsh Columbia Government.

(6) The British Yukon Ry. is the Canadian portion of the line operated as the White Pass and Yukon Route, connecting with steamers on the Yukon River to Dawson in summer, and with stages in the winter.

(7) The Buctouche and Moncton Ry. is the charter name of the railway operated as the Moncton and Buctouche Ry.

(8) The Campbellford, Lake Ontario and Western Ry. is reported as having 40 miles under construction.

(9) The Intercolonial Ry. mileage does not include the Windsor branch 32 miles, operated by the Dominion Atlant'c Ry. It has 16 miles of second track. It operates its trains into Montreal over the G.T.R., its trackage rights over foreign lines being 40.36 miles.

(10) Mackenzie, Mann & Co. (Ltd.) interests own or control and operate the following railways:—Canadian Northern Ry.; Canadian Northern Ontario Ry.; Canadian Northern Quebec Ry.; Edmonton, Yukon and Pacific Ry.; Halifax and South Western Ry.; Inverness Ry. and Coal Co.; Quebec and Lake St. John Ry.; Schomberg and Aurora Ry. and the Qu'Appelle, Long Lake and Saskatchewan Ry. The Canadian Northern Ry. figures include the statistics relating to traffic over the Manitoba Ry., which it operates under a lease from the Government of Manitoba. The lines included in the Manitoba Ry. are the Northern Pacific and Manitoba Ry., Winnipeg Transfer Ry., Portage and North Western Ry., and Waskada and North Eastern Ry. Its earnings, etc., also include those of the Qu'Appelle, Long Lake and Saskatchewan Ry., and of the Edmonton, Yukon and Pacific Ry., which report mileage separately. The Canadian Northern Ontario Ry. has trackage rights over 3.80 miles into the Union Station, Toronto. The Halifax and South Western Ry. has 2.30 miles of trackage rights over the Intercolonial Ry. into Halifax.

(11) The Canadian Pacific Ry. mileage includes 2,905.90 miles of main line and 3,053.10 miles of branch lines owned; and 3,649.30 miles of leased lines. It has 385.10 miles of second track; and has trackage rights over 37.30 miles of other companies. The C.P.R. returns include the earnings and expenses of the Esquimalt and Nanaimo Ry. The lines operated by the C.P.R. include the Montreal and Atlantic Ry., which has 6.40 miles of second track, and a leased line—Lake Champlain and St. Lawrence Junction Ry. The C.P.R. also owns with the New York Central and Hudson River Ry., the Toronto, Hamilton and Buffalo Ry.

(12) The Caraquet Ry. operates the Gulf Shore Ry.

(13) The Central Ontario Ry. operates the line owned by the Marmora Ry. and Mining Co. (formerly the Ontario, Belmont and Northern Ry.).

(14) The Cumberland Ry. and Coal Co. also owns the Springhill and Oxford branch, 14 miles, but it is not being operated.

(15) The Dominion Atlantic Ry. operates under agreement the Windsor branch of the Intercolonial Ry., 32 miles, which is included in the D.A.R. mileage, but not in that of the I.C.R. It has also trackage rights over 14.42 miles of other lines.

(16) The G.T.R. mileage includes the Buffalo and Lake Huron Ry., 161.30 miles, leased and partly owned. The G.T.R. figures include the earnings, etc., of the Magnetawan River Ry. It has 706.48 miles of second track, and has

STEAM GOODS

Fairbanks' Renewable Disc Valves

are well and simply made and have many excellent features. They are tight and remain tight under the most severe service. The disc is loose on the spindle, allowing it to come to an even bearing on the seat, and it can be easily replaced in a few minutes, making the valve as good as new. The valves are heavy and doubly strong owing to correct distribution of metal. These points all count after the valve has been in service and mean the difference between a leaky, wasteful valve and a Fairbanks' Economical Valve.

trackage rights over other lines totalling 13.71 miles. I also owns the Canada Atlantic Ry. and the St. Clair Tunnel Co., which report separately, and the G.T. Pacific Ry., which reports 945 miles of track laid, but does not report any earnings or expenses for the year under review. It also controls the Central Vermont Ry. which operat s the Montreal and Province Line; the Montreal and Vermont Jct. Ry. and the Stanstead Shefford and Chambly Ry. The Canada Atlantic Ry. mileage includes the Ottawa, Arnprior and Parry Sound Ry.; it also operates under lease the Central Counties Ry., and the Pembroke Southern Ry., which report mileage separately.

(17) The Hereford Ry. is owned and operated by the Maine Central Rd., which also owns the Princeton branch, Washington County Ry.

(18) The International Ry. of New Brunswick was origin lly known as the Restigouche and Western Ry. Although 80 miles are reported completed it had not been opened for public traffic.

(19) The Kent Northern Ry. earnings and expenses include those of a leased line. The St. Louis and Richibucto Ry., which reports its mileage separately, whenever it has been operated of recent years it has been by the Kent Northern Ry.

(20) The London and Port Stanley Ry., practically owned by the City of London, Ont., is leased to the Lake Erie and Detroit River Ry., which is owned and operated by the Pere Marquette Rd., a U.S. company. The P.M.R. has trackage rights over 136.78 miles of other Canadian lines.

(21) The Maritime Ry., Coal and Power Co., owns the line formerly owned by the Canada Coals and Ry. Co.

(22) The Massawippi Valley Ry. has trackage rights over 2.95 miles of another company's lines. It is operated by the Boston and Maine Rd.

(23) The Morrissey, Fernie and Michel Ry. includes 5.03 miles of leased lines. It is owned by the Crows Nest Pass Coal Co.

(24) The New Brunswick Ry. and Coal Co. owns and operates the old Central Ry. of New Brunswick. It is operated by a commission appointed by the New Brunswick Government.

(25) The New York Central and Hudson River Rd., owns the Ottawa and New York Ry., and the St. Lawrence and Adirondack Ry. It also controls the Toronto, Hamilton and Buffalo Ry.; the Rutland Rd., which owns the Rutland and Noyan Ry.; and the Michigan Central Rd., which controls the Canada Southern Ry. This line has 226.18 miles of second track on main lines, and 16.80 miles of second track in branches and spurs. The Ottawa and New York Ry. operates 1.90 miles under trackage rights. The St. Lawrence and Adirondack Ry. mileage includes 13.30 miles of leased lines, and it has also trackage rights over 8.92 miles of other companies lines.

(26) The North Shore Ry. owns the line formerly known as the Beersville Coal and Ry. Co.'s line.

(27) The Quebec and New Brunswick Ry. is reported as having three miles of its total length of 135 miles, under construction.

(28) The Quebec Bridge is reported as having 10 miles of approaches under construction.

(29) The Quebec, Montmorency and Charlevoix Ry., reports as to the section of the Quebec Ry., Light and Power Co.'s lines upon which steam trains are operated. There are 6.00 miles of second track.

(30) The Quebec, Montreal and Southern Ry., includes the old East Richelieu Valley Ry., the United Counties Ry., and the South Shore Ry. It is owned by the Delaware and Hudson Co., which also owns the Napierville Jct. Ry.

(31) The St. John Valley and Riviere du Loup Ry. is reported as being projected from Fredericton to Woodstock, N.B. Six miles are reported as constructed.

(32) The Sydney and Louisburg Ry. is owned by the Dominion Coal Co. It has trackage rights over 1.20 miles of other lines.

(33) The Temiskaming and Northern Ontario Ry. is owned by the Province of Ontario and is operated by a Commission.

(34) The Toronto, Hamilton and Buffalo Ry., is owned by the New York Central and Hudson River Rd., and the C.P.R. It has 2.04 miles of second track and has trackage rights over 4.36 of foreign lines.

(35) The Trans-Canada Ry. is reported as being projected from Roberval, Que., to Port Simpson, B.C. Sixty miles are said to be under construction westerly from Roberval. We question the accuracy of this statement.

(36) The Wabash Rd. does not own any track in Canada, but operates over G.T.R. tracks under lease.

(37) The gross earnings of the Kingston and Pembroke Ry., Napierville Jct. Ry. and Quebec Montreal and Southern Ry. are given as less than the totals of the figures given in the columns for passenger and freight earnings. In the column of the statistical tables for other earnings from operation the figures for these three companies are preceded by "Cr." and the amount of the figures—$3,610, $1,058 and $190, respectively—deducted from the total freight and passenger earnings give the total gross earnings.

(38) The Albert Southern Ry., Bruce Mines and Algoma Ry., Lenore Mount Sicker Ry., Pontiac and Renfrew Ry., are not being operated.

Great Northern Ry. Construction, Etc.

Ayr to International Boundary.—Surveys are reported to have been completed for the construction of a line from Ayr, Cass County, N.D., to Surrey, Ward County, about 140 miles. Ayr is about 20 miles west of Fargo, and Surrey about six miles east of Minot, from near which point a line runs to Crosby, just south of the International Boundary between Montana and Saskatchewan.

Vancouver, Victoria and Eastern Ry.—The construction force on the section of the line between Keremeos and Princeton, was paid off just before Christmas, 1909, and the boarding cars converted into flat cars. A train service was put on to Princeton, Dec. 27.

The Dominion Parliament is being asked to authorize a further extension of time within which the company may construct the lines authorized by its original act, British Columbia Statutes, chap. 75, 1897; Dominion Statutes, 1898, chap. 89, and 1905, chap. 172.

Tenders have been asked for the construction of a section of the line from Princeton to Tulameen, and for a section easterly from Abbottsford to Hope, 78 miles. These sections will complete the line with the exception of the section through the Hope Mountains. In reference to this section the engineers are undecided whether to adopt a route involving eight miles of tunnel work,, or 25 miles of open work. The tunnel route is the shorter and more direct, but it is also the more expensive, and the question is whether the saving in cost of operation will compensate for the extra cost of construction. Representatives of several firms of contractors have gone over the two sections for which tenders are asked, and it is expected that contracts will be let at an early date, and that construction will be started in the spring. (Jan., pg. 29.)

Canadian Northern Ry. Earnings, Etc.

Gross earnings, working expenses, net profits, increases or decreases from 1908-09, from July 1, 1909:

	Earnings.	Expenses.	Net Earnings.	Net Increase or Decrease.
July	$ 843,500	$613,900	$229,600	$26,700+
Aug.	807,100	602,700	204,400	18,300+
Sept.	1,076,800	765,300	311,500	60,400+
Oct.	1,384,200	903,500	480,700	60,600
Nov.	1,517,600	970,100	547,500	134,000
Dec.	1,160,300	825,.00	334,400	49,300+
	$6,789,400	$4,681,400	$2,108,000	$350,100+
Inc.	$ 1,154,300	$ 804,200	$350,100	

Approximate earnings for three weeks ended Jan. 14, 1910, $360,600, against 262,500, for same period 1909.

C.P.R. Earnings, Expenses, Etc.

Gross earnings, working expenses, net profits, increases or decreases over 1908-9, from July 1, 1909:

	Earnings.	Expenses.	Net Profits.	Net Increase or Decrease
July	7,140,029.93	4,660,159.20	2,479,870.73	205,297.48+
Aug.	7,426,984.62	4,462,925.75	2,964,057.87	385,159.16+
Sept.	8,324,178.03	4,891,288.86	3,431,889.17	1,317,281.40+
Oct.	9,744,535.87	5,358,249.68	4,386,297.19	1,731,030.48+
Nov.	9,075,963.93	5,383,625.98	3,692,337.95	1,471,258.60+
	$41,710,753.38	$24,756,300.47	$16,954,452.91	$5,110,027.12+
Inc.	$7,954,959.78	$2,844,942.66	$5,110,027.12	

Approximate gross earnings for Dec., 1909, $8,118,000, and for 2 weeks ended Jan. 14, $2,657,000, against 6,878,000 and 2,068,000 for same periods 1908-09.

DULUTH, SOUTH SHORE AND ATLANTIC RY.—Operating revenue for Nov., 1909, $270,967.59; expenses, $193,187.57; net revenue, $77,780.02; against $232,191.27 operating revenue; $158,755.54 expenses; $73,435.73 net revenue for Nov., 1908. Aggregate operating revenue for five months ended Nov. 30, 1909, $1,483,377.76; expenses, $984,981.55; net revenue, $498,396.21, against $1,170,629.57 operating revenue; $823,924.88 expenses; $346,704.69 net revenue for same period 1908. Approximate gross earnings for Dec., 1909, $235,080, and for two weeks ended Jan. 14, $91,877 against $223,671 and $86,620 for same periods 1908-09.

MINERAL RANGE ROAD.—Operating revenue for Nov., 1909, $70,838.12; expenses, $59,705.72; net revenue, $11,132.40, against $66,326.16 operating revenue; $54,726.52 expenses; $11,599.64 net revenue for Nov., 1908. Aggregate operating revenue for five months ended Nov. 30, 1909, $369,495.17; expenses, $308,188.37; net revenue, $61,306.80, against $362,502.84 operating revenue; $284,978.77 expenses; $77,524.07 net revenue for same period 1908.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RY.—Total operating revenue for Oct., 1909, $1,915,981.22; expenses and taxes, $835,702.09; operating income, $1,080,279.13, against $1,518,210.31 total operating revenue; $781,279.73 expenses and taxes; $736,930.58 operating income for Oct., 1908. Aggregate operating revenue for four months ended Oct. 31, 1909, $5,934,041.26; expenses and taxes, $3,098,764.76; operating income, $2,835,276.50, against $4,928,144.43 aggregate operating revenue; $2,831,222.11 expenses and taxes; $2,096,922.32 operating income for same period 1908. Approximate earnings for Nov., $2.121,623; for Dec., 1909, $1,586,725, and for two weeks ended Jan. 14, 1910, $682,846 against $1,730,385; $1,481,910 and $586,184 for same periods 1908-09.

Grand Trunk Ry. Earnings, Expenses, Etc.

The following figures give the earnings of the G.T.R., the C.A.R., the G.T. Western Ry., and the D.G.H. & M. Ry., separately, for Nov., 1909, as compared with Nov., 1908:

	1909.	1908.
Earnings	$2,965,000	$2,786,127
Expenses	2,209,000	1,986,473
Net earnings	$756,000	$799,654

CANADA ATLANTIC RAILWAY.

	1909.	1908.
Earnings	$209,000	$175,807
Expenses	143,000	130,029
Net earnings	$66,000	$45,778

GRAND TRUNK WESTERN RY.

	1909.	1908.
Earnings	$492,000	$437,813
Expenses	392,000	352,101
Net earnings	$100,000	$85,712

DETROIT, GRAND HAVEN AND MILWAUKEE RY

	1909.	1908
Earnings	$173,000	$148,535
Expenses	123,500	122,237
Net earnings	$49,500	$26,298

Approximate earnings for Dec., 1909, $3,564,380, and for 2 weeks ended Jan. 14, $1,379,910, against $3,185,257 and $1,181,458 for same periods 1908-09.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Algoma Central and Hudson Bay Ry.—We are advised that it was expected to have the survey completed by Jan. 20, for the connection between the company's existing line and the C.P.R. main transcontinental line. As soon as the quantities, etc., can be worked out, it is expected to ask for tenders for the construction of the line. No further progress has been made with the proposal for the completion of the line between the present end of track and Hawk Lake Jct. (Jan., pg. 19.)

Anglo-Newfoundland Co.—At the annual meeting of the shareholders of the Amalgamated Press in London, England, Dec. 15, Lord Northcliffe made a lengthened reference to the progress of the Anglo-Newfoundland Co., in which it is largely interested. After referring to the development work on the pulp mills, etc., he said: "You have been informed that we have constructed a railway from Grand Falls to our harbor at Botwood, which must not be confused with our railway from Millertown Jct. to Millertown. Our new railway reflects great credit on our engineers, who carried out the work in the short space of nine months. We have purchased our rolling stock in parts, and are setting it up ourselves on the spot, and I think it will compare favorably with that turned out by the great English and American railway companies."

We are advised that the company has constructed and has in operation 22 miles of railway, from Grand Falls, via Bishop's Falls, to Botwood Harbor. The gauge is 3 ft. 6 in. The company is not now constructing any further lines, and has no present intention of constructing any more. W. Scott, Grand Falls, Nfld., is Chief Engineer.

Millertown Jct., referred to in Lord Northcliffe's report, is a station on the Reid-Newfoundland Ry. 310 miles from St. Johns, and some maps of Newfoundland show a line running from that point to Millertown at the north-easterly end of Red Indian Lake. Millertown is situated 56 miles from Grand Falls, and Grand Falls itself is 270 miles from St. Johns.

Atlantic, Quebec and Western Ry.—Application is being made to the Board of Railway Commissioners for permission to construct a branch line of half a mile from near the terminal station at Gaspe to the wharf proposed to be constructed by the Department of Public Works at Adam's Bluff, Gaspe. (Jan., pg. 19.)

British Columbia and Manitoba Ry.—See Northern Empire Ry.

Bruce Mines and Algoma Ry.—Application is being made to the Ontario Legislature to extend the time for the construction and completion of its authorised railway and branches for five years from May 1, 1910, and to declare the act incorporating the company in force notwithstanding any neglect or default in complying with the provisions of the amending acts passed in 1903 and 1905. (July, 1909, pg. 475.)

Burrard Inlet Tunnel and Bridge Co.—The Dominion Parliament is being asked to incorporate a company with this title to construct a tunnel under the first narrows of Burrard Inlet and a bridge over the second narrows, with the necessary approaches, from the south shore at Vancouver to the opposite shore to connect with present and future line of street railways and railways, and to construct one or more lines of railway not exceeding 10 miles long. The bridge and tunnel to be constructed to provide steam and street railway tracks as well as for all kinds of ordinary traffic. Power is also asked to construct a railway from the northern ends of the bridge and tunnel easterly along the shore line of the municipality of North Vancouver to Deep Cove, on the north arm of Burrard Inlet, and westerly along the shore line of the city of North Vancouver to Horse Shoe Bay on Howe Sound. It is asked that the works be declared to be for the general advantage of Canada. Burns and Walkem, Vancouver, B.C., are solicitors for applicants.

Calgary and Fernie Ry.—Application is being made to the Dominion Parliament to extend the time for the construction of the railway authorized by chap. 71, of the statutes of 1906, as amended by chap. 89 of the statutes of 1908, and for such other powers as may be necessary. Pringle and Guthrie, Ottawa, are the solicitors. (July, 1909, pg. 475.)

Central Ontario Ry.—Application is being made to the Dominion Parliament to authorize the company to enter into agreements, for any of the purposes specified in section 361 of the Railway Act, with the following companies or any of them:—C.P.R.; G.T.R.; Brockville, Westport and North-Western Ry.; Irondale, Bancroft and Ottawa Ry.; Canadian Northern Ontario Ry., and the Marmora Ry. and Mining Co. (Dec., 1909, pg. 881.)

Comox Harbor to Campbell Lake, B.C.—The British Columbia Legislature is being asked to incorporate a company to construct a railway from 750 ft. east of the south-east corner of lot 8 on the fore shore of Comox Harbor, northwesterly for about 20 miles to the southeast end of Campbell Lake. Power to construct branch lines is also asked. The line is to be used mainly for logging purposes. Davis, Marshall and MacNeill, Vancouver, are solicitors for applicants.

Diamond Coal and Ry. Co.—Application is being made to the Alberta Legislature to incorporate a company with this title to construct "all conveniences of transportation," to construct railways, tramways, or roads of any kind, and in particular to construct a railway from the C.P.R. or one of its branches to the vicinity of Diamond City, with power to acquire, sell to, or amalgamate with similar companies. Johnstone and Ritchie, Lethbridge, Alta., are solicitors for applicants. (Jan., pg. 19.)

Eagle Lake to Barkerville, B.C.—Application is being made to the British olumbia Legislature to incorporate a company to construct a railway from the projected line of the G.T. Pacific Ry. at Eagle Lake, following the watershed of the Willow River to the Cariboo road at Barkerville, B.C., and to construct branch lines to any point within 25 miles of the main line. D. S. Tait is solicitor for applicants.

Erie, London and Tillsonburg Ry.—The Dominion Parliament is being asked to extend the time within which the company may construct the lines authorized by its act of incorporation, chap. 90 of the statutes of 1906, and the amending act, chap. 106, of the statutes of 1908. (Nov., 1909, pg. 829.)

Farmers' Ry.—A press dispatch from Prince Albert says D. W. Hines, President of this projected railway, was given the option of leaving the country within a fixed time or being taken to the Brandon Asylum, and that he has chosen to return to his home in Hannah, N.D. The despatch adds that he says he will continue the work of promoting the railway. (Dec., 1909, pg. 881.)

Ha Ha Bay Ry.—Under the heading of the Chicoutimi Pulp Co., on page 847, of our issue of Nov., 1909, it was stated that the pulp company proposed to construct an electric railway from its mills to the River du Moulin district, Que. We are advised that this is incorrect, and that the pulp company has no intention of constructing any railway, either now or later. The charter for the construction of a railway through the territory named is held by the Ha Ha Bay Ry. Co., which has under construction a line from deep water at Ha Ha Bay to Mathias station, on the Quebec and Lake St. John Ry., with a branch to Chicoutimi. The roadbed and culverts are practically completed, and the work of construction is being proceeded with. It is expected that track will be laid early in the summer and that by the end of the summer a regular train service will be in operation over the whole line, which is to be operated by steam. J. F. Grenon, Chicoutimi, Que., is Chief Engineer. The President of the company is Senator Choquette, Quebec, and the Vice President is J. E. A. Dubuc, Director General and Secretary of the Chicoutimi Pulp Co. (Jan., pg. 19.)

Howe Sound, Pemberton Valley and Northern Ry.—Application is being made to the British Columbia Legislature to authorize the company to connect the terminus of the line at Newport, at the head of Howe Sound, with Vancouver, and any intermediate point by telephone or telegraph, and to extend the northern terminus of the line from Anderson Lake to Lillooet. The company is also asking authority to increase its capital stock to $2,500,000, and its bonding powers from $20,000 to $25,000 a mile of railway. McEvoy, Whiteside and Robertson, Vancouver, are the solicitors. (June, 1909, pg. 413.)

Indian River Ry.—During the past year the Maine Central Rd. had a survey made for a line from Grant's Pond, Me., to Megantic, Que., with a 1% equated gradient. The route is covered by the charters of the Rangeley Lake and Rumford Falls Ry. Co. in Maine and the Indian River Ry. Co. in Quebec, both charters being now held by the Maine Central Rd. Co. The I. R. Ry. located a line 18.1 miles long, between the boundary line and Megantic, some six or seven years ago. The survey made last fall was for the purpose of ascertaining whether or not a more favorable location could be obtained. The only village through which either the original location, or the line run last fall, would pass is Woburn. According to the survey made last fall the distance from the boundary line to Megantic is 26.1 miles. It is not probable, we are advised, that construction will be commenced during the current year. T. L. Dunn, Chief Engineer of the Maine Central Rd., is also Chief Engineer of the I. R. Ry. (Sept., 1909, pg. 649.)

Intercolonial Ry.—The extensions and branches under survey are: Diversion of line at Chatham, N.B., and branch to wharves, 8.5 miles; cut-off east of Moncton to new transportation yard, 1.5 miles; diversion of line, George's River to Leitche's Creek, near Sydney, N.S., 13.5 miles. (Jan., pg. 19.)

International Ry. of New Brunswick.—We are advised that 85 miles of track have been laid and ballasted from the Campbellton end of this line, and that all the grading has been completed to St. Leonards, N.B. The total length of the line is 114 miles. It is expected that a regular train service will be placed in operation over the first 57 miles of the line from Campbellton at an early date, the company having the necessary rolling stock on hand. (Jan., pg. 19.)

Iron Range Ry.—The Ontario Legislature is being asked to extend the time within which the company may commence and complete the railway, the construction of which was authorised by chap. 127 of the statutes of 1908. Dowler and Dowler, Fort William, Ont., are the solicitors. (May, 1908, pg. 331.)

Khutze Inlet Easterly.—The British Columbia Legislature is being asked to

incorporate a company to construct a railway from the head of Khutze Inlet, near the mouth of the Khutze river, easterly along the course of the river for about six miles, and branch lines. Burns and Walkem, Vancouver, are solicitors for applicants.

Lac Seul, Rat Portage and Keewatin Ry.—Application is being made to the Ontario Legislature to extend the time within which the company may commence and complete the railway the construction of which was authorised by chap. 102 of the statutes of 1903 and the amending act, chap. 128 of the statutes of 1908. Dowler and Dowler, Fort William, Ont., are the solicitors. (May, 1909, pg. 357.)

London and Port Stanley Ry.—At a meeting of directors, Jan. 17, the question of the electrification of the line was considered, and it was decided to have a conference with Hon. A. Beck, Chairman of the Hydro-Electric Power Commission, with a view of obtaining information as to the supply of electric power. A committee consisting of Aldermen Richter, Eckert, Jeffries, and Ex-Mayor Stevely (directors for the London city council) was appointed to consider the matter. (Jan., pg. 19.)

Manitoulin and North Shore Ry.—We were advised Jan. 18, that a party was in the field making a survey between what is known as Krean Hill and Espanola, at which point the line crosses the C.P.R. Sault Ste. Marie branch. The work is well under way, and it is expected that a favorable route will be obtained. Construction between Krean Hill and Gertrude Mine, which is a 10-mile extension of the line already completed from Sudbury to Gertrude is progressing very satisfactorily, and it is anticipated that tracklaying will be started as soon as the snow is gone. (Jan., pg. 21.)

Michigan Central Rd.—A press report states that plans for the remodelling and enlargement of the shops, the reconstruction of the roundhouse, and the rearrangement of the yards, at St. Thomas, Ont., are almost completed. The only work which is likely to be taken in hand during the current year is the roundhouse. The new structure, it is proposed, will be erected on the vacant property between the present shops and First Avenue. This will make way for the shop improvements. The present suggestion is that the existing main shop be enlarged and turned into a boiler shop, and that a new machine shop be erected on the site of the existing roundhouse. The question of the supply of electric power of these shops came up at a meeting of the city council's power committee, Jan. 14. (Dec., 1909, pg. 883.)

Monarch Ry.—Application is being made to the Ontario Legislature to incorporate a company to construct a railway, to be operated by steam, electricity, or other motive power, from the northerly limits of Toronto northerly to Barrie, thence north-westerly to Orillia, and northerly to Penetanguishene, with a branch from Barrie to Owen Sound and Wiarton. Power is also asked to construct branch lines and to make connections with the G.T.R., the C.P.R., and the Canadian Northern Ry. Corley, Price and Co., Toronto, are the solicitors.

Northern Empire Ry.—British Columbia and Manitoba Ry.—Press dispatches from Edmonton, Alta., Dec. 16, stated that at a meeting of shareholders the charters of these two projected railways were transferred to a new company "capitalized at $4,500,000 subscribed and deposited in the Bank of Montreal, which was to be used to commence immediate construction of the line." The Northern Empire Ry. has its offices at Edmonton and its officers and directors were elected there. The dispatch gave their names as follows:—President, H. S. Crawford, broker, Ottawa; other directors: J. H. McKinnon, wholesale grocer, Sudbury, Ont.; C. Brown, capitalist, Montreal; C. B. Price, Sudbury; W. E. Brown, Ottawa; Chas. Patton, broker, Montreal; J. W. Gamble, capitalist, Ottawa; Henry Roy, Ottawa. The party then proceeded to Lethbridge, Alta., the official headquarters of the British Columbia and Manitoba Ry., and organized that company. The officers elected were:—President, D. L. McKinnon, Sudbury, Ont.; Frist Vice President, M. J. Fagan, Ottawa; Secretary-Treasurer, C. Brown, Ottawa.

The dispatch outlined the company's plans as follows:—On May 1 a party of engineers will leave the city to run the preliminary surveys north to Fort McMurray, and through the mountains to the Yukon. It will be their object to also search for a feasible pass through the mountains. The probability is that the Pine pass will be the one used. Construction will be proceeded with both north and south of Edmonton. The line runs from boundary to boundary, and will parallel the Calgary and Edmonton Ry. from the International boundary as far as Edmonton to the west of that line. From Edmonton the line will proceed to Lac la Biche and Fort McMurray, and from there across country to Peace River crossing and thus into the mountains and to Dawson. A branch is also projected east from Fort McMurray to Fort Churchill on Hudson Bay.

Later press despatches, dated Jan. 11, state that Lord A. E. F. Somerset, brother of the Duke of Beaufort, and J. E. Leiter, of Chicago, Ill., are among those interested in the construction of these two railways. Lord Albert Somerset, while in Vancouver, B.C., stated that the syndicate had secured the whole of the interests represented by the two former companies, that a new company was in process of formation, and that it was not anticipated that there will be any difficulty in raising the capital necessary for this enterprise.

It may be pointed out that the route from Edmonton via Lac la Biche to Fort McMurray is the same as that of the Alberta and Great Waterways Ry, some grading on which was done last year, and for the further construction of which arrangements are already well under way. Much of the matter in the press dispatches above quoted should probably not be taken seriously

The Dominion Parliament is being asked to extend the time within which the company may construct it authorized railway.

Pacific and North Western Ry.—The Dominion Parliament is being asked to incorporate a company with this title to construct a railway from the International boundary between British Columbia and Alaska, between the 136th and the 137th degree of west longitude, generally westerly to the International boundary between Yukon and Alaska, near the 63rd parallel of north latitude. W. J. Boland, Toronto, is solicitor for applicants. The starting point of this projected line is the vicinity of the Chilcot Pass.

Prince Edward Island Ry.—The branch line under construction between Harmony and Elmira, P.E.I., will be 10 miles long. The contractors are Whitehead Bros., Grand Falls, N.B. (Dec., 1909, pg. 885.)

Quebec Central Ry.—The new line from St. George to St. Justine, Que., was recently inspected by the Director of Railways for the Provincial Government, and a certificate was issued authorising its opening for traffic Jan. 1. (Jan., pg. 23.)

Reid Newfoundland Ry.—The principal business which will be discussed at the current session of the colonial Legislature will be the extension of the railway lines on the island, in connection with which an agreement has been made between the Government and the Reid Newfoundland Co. (Jan., pg. 23.)

Rural Ry. Co. of Manitoba.—Application is being made to the Manitoba Legislature to incorporate a company with this title, to construct a railway on the east side of the Red River from St. Boniface to the International boundary at Emerson, and on the west side of the river from Winnipeg also to the International boundary together with power to construct a railway in the municipalities of Springfield and Macdonald, with all powers usually conferred upon railway companies. Bernier, Knott and Bernier, Winnipeg, are solicitors for applicants.

Saskatchewan and Southern Ry.—The Saskatchewan Legislature is being asked to incorporate a company with this title to construct the following lines of railway: From Estevan westerly to near Romford, thence north-westerly to Moose Jaw; from Moose Jaw north-westerly to tp. 23, range 5, west of the third meridian, thence to the Elbow of the Saskatchewan River; from near Estevan, on the first mentioned line, northerly to Stoughton, on the C.P.R. Arcola branch; and from between tps. 2 and 4 in ranges 13 and 14, northerly to Francis, on the C.P.R. Arcola branch. Balfour, Martin, Casey and Brown, Regina, Sask., are solicitors for applicants.

Southampton Ry.—The New Brunswick Legislature is being asked to incorporate a company with this title to construct a railway from the C.P.R. to the Pokiok bridge in York county. The provisional directors named are:—J. E. Stewart, Andover, N.B.; J. K. Pinder, M.L.A., Southampton, N.B.; H. H. McNally, M.D., P. A. Guthrie, Fredericton, N.B.; D. Gilman, Dumfries, N.B.; W. E. Triles, Salisbury, N.B.; A. C. Hagerty, M.D., Ellsworth, Me.

Temiskaming and Northern Ontario Ry.—The discovery of gold in the Porcupine Lake country, to which this line gives the nearest railway point of access, has led the Commissioners to investigate the possibilities for traffic. F. Dane, one of the commissioners, accompanied by the Chief Engineer and other officials, left Toronto Jan. 13, for the purpose of making a visit of inspection. They intended to leave the railway at mileage 222 and strike across country for the Porcupine Lake.

As a result of Mr. Dane's visit, it is said that a new station will be established at mileage 225, or 20 miles north of Matheson, from which a road to the Porcupine district may be developed. The people of Matheson, said Mr. Dane, have already spent $3,200 fixing up a route into the Porcupine country, and have a four-horse stage running daily. A telephone line is being constructed into the country by local enterprise.

The Toronto City Council is asking the Ontario Legislature to amend section six of the Corporation's act of 1906 as to the construction of railway tracks on roads or lands of corporations to provide sidings to manufacturing industries in Ashbridge's Bay neighborhood.

Toronto, Haliburton and Pembroke Ry.—Application is being made to the Ontario Legislature to incorporate a company with this title with power to construct a railway from Barry's Bay, southerly to Haliburton, Ont.; or, as an alternative, from the intersection of the Ottawa, Arnprior and Parry Sound Ry. (Canada Atlantic Ry.), with the boundary between Lyall and Jones tps., thence westerly to Haliburton. Thomson, Tilley and Johnston, Toronto, are solicitors for applicants.

Western Canadian Collieries.—We are advised that the Western Canadian Collieries, owning the Frank and Grassy Mountain Ry., has laid 8,200 ft. of new sidings at its Bellevue colliery, Blairmore, Alta. At present it is not contemplated to make any improvements on the F. and G.M.R. (Dec., 1909, pg. 887.)

Railway Statistics for 1908-1909.

In submitting his annual report of the steam railway statistics for the year ended June 30, 1909, J. L. Payne, Comptroller of Railway Statistics, refers to the expansion and betterment in statistical data made possible by the system which has been in effect for the past three years. In 1907 the foundation may be said to have been laid; in 1908 a commencement was made on the superstructure; this year the new edifice will be seen to be taking definite shape. Analytical comparisons are now possible which in the past could not even have been attempted. The time limit for sending in the statistical information was placed at Aug. 31 so as to have the statistics completed as soon as possible after the assembling of Parliament. The returns reached Ottawa earlier than in any preceding year, and, while there was not a single delinquent, the Schomberg and Aurora Ry. and the Kettle River Valley Ry. returns were so meagre as to be of no practical value.

The total railway mileage in Canada on June 30, 1909, was 24,104, an addition of 1,138 miles as compared with 514 for the year ended June 30, 1908. The total mileage given does not include the trackage of the National Transcontinental Railway, of which 675 miles was opened for traffic during the year, although officially returned as being still under construction. It is not possible to say how many miles of line were under construction in the Dominion on June 30, 1909, the term being wholly relative. It is estimated, however, from information received that at least 3,300 miles were in process of construction on the date indicated. The distribution of railway mileage with the increase for the year, by provinces, is as follows:—

		Increase.
Ontario	8,229.11	296.21
Quebec	3,662.94	89.29
Manitoba	3,205.30	94.39
Saskatchewan	2,631.34	550.04
Alberta	1,321.52	.....
British Columbia	1,795.94	63.11
New Brunswick	1,547.25	37.89
Nova Scotia	1,350.53	6.48
Prince Edward Island	269.33	1.83
Yukon	90.91	.....

In Alberta there has been considerable railway construction in progress during the past two years, but it was all returned as being still under construction on June 30. The mileage of second track increased from 1,211 on June 30, 1908, to 1,464 on June 30, 1909, while the mileage of yard and siding tracks increased from 4,546 to 4,761. This growth of second track and yard and siding track has a direct bearing on transportation facilities. Adding together the first, second and yard and siding tracks a total of 30,330 miles is obtained. With the exception of less than 100 miles, all tracks in the Dominion are laid with steel rails. Compared with other countries Canada has the largest railway mileage in proportion to population, while in relation to area it has the smallest.

The capital invested is $1,308,481,416, of which $647,534,647 is represented by stocks and $660,946,769 by bonds and other funded debt. These figures show an increase of $40,109,298 in stocks, and of $29,077,105 in bonds, etc. The report says:—"The capital obligations arising out of these stock and bond issues amount to $54,285 per mile of line. But that result is quite misleading, since, before such a calculation can properly be made, certain facts have to be taken into account. For example, the total of $1,308,481,416 includes the stock and bond liability of the G.T. Pacific, while the mileage of that line is not embraced in the total of 24,104 miles forming the divisor. On the other hand, the mileage of government owned lines in Canada forms a part of the 24,104, against which there is not any issue of either stock or bonds. Therefore, in dealing primarily with corporation railways the capital liability of the G.T. Pacific must be eliminated, along with the mileage of government owned lines. This process reduces the money side of the equation to $1,222,089,976 and the mileage to 21,965. On this basis the result is $55,638, which correctly represents the stock and bond liability of Canadian corporate railways per mile." The Great Northern Ry. (U.S.) has constructed eight lines in the Western provinces, aggregating 527 miles, in respect of which a capital liability of $11,110,600 has been recorded. The mileage of government owned and operated lines, with their capital cost is as follows:—

	Mileage.	Cost.	Per mile.
Intercolonial	1,447	$88,006,989	$60,820
Prince Edward Island	269	7,707,259	28,651
Temiskaming and Northern Ont.	265	13,867,015	52,329
New Brunswick Coal and Ry. Co.	58	1,964,640	33 873
Total	2,039	$111,545,903	.....

It was stated in the report for 1907-08 that an effort would be made to revise the capital statements of the railways. Serious obstacles were interposed, however, and it was not found practicable to complete the task. The inquiry was carried to a point of establishing a basis for the reporting of the capital liability for 1909-1910, and it is anticipated the revision will be brought to a satisfactory issue in the next report. The object of this revision will be to eliminate dead and duplicate liability, of which the aggregate is very considerable—probably exceeding $200,000,000. This inaccuracy has been due to the system—rather than to any intention to misrepresent, and in part it came about from the ignorance of the facts in the Department. This situation is not, however, peculiar to Canada. It exists in all countries where the controlling interest in lines has changed hands, or where the transfer of operating rights has taken place in any considerable degree.

The subsidies paid to railways during the year were, $3,291,601, contributed as follows:—By the Dominion, $2,500,612; by the provinces, $397,111; by municipalities, $393,878. Since 1876 the Dominion has aided railway construction to the extent of $135,549,987.71; the provinces to the extent of $35,588,526.15, and municipalities to the extent of $17,824,823.60. The Dominion Government had also expended to June 30, 1909, $30,301,342.15 upon the construction of the National Transcontinental Ry., between Moncton, N.B., and Winnipeg. In addition to cash subsidies paid, the Dominion and Provincial Governments have guaranteed bonds of several railway companies, and have voted 55,116,017 acres of land in aid of construction.

The number of passengers carried during the year was 32,683,309, against 34,044,992 in 1907-08; the number of passengers carried one mile was 2,033,001,225 against 2,081,960,864; the number of passengers carried one mile per mile of road was 84,342, against 90,654, a decrease in the density of traffic of 6,312; the number of passengers carried per mile of railway was 1,355 against 1,482, a falling off of 127; the average receipts per passenger per mile were 1,921 or within .001 of the figure for the previous year; the average number of passengers in each train was 51, a decrease of three; the average passenger journey was 62 miles or one mile more than in the previous year.

The number of tons of freight handled was 66,842,258, an increase of 3,771,091 tons; the number of tons hauled one mile was 13,160,567,550, against 12,961,512,519; the number of tons hauled one mile per mile of line was 545,991, a decrease of 18,383; average receipts per ton mile, 0.727c.; revenue freight train mileage, 40,304,900 against 40,476,370; mixed train mileage, 7,061,370; mileage of traded freight cars, 775,543,414; mileage of empty freight cars 281,175,615; average haul of freight, 197 miles against 206; average number of loaded cars per freight train 16.37 against 16.04; average number of tons per loaded freight car, 16.98, against 17.33; average receipt per ton per mile .727c. against .723c. The commodities carried were classified as follows:—

	1908-09.	1907-08.
Products of mines	23,921,061	22,636,227
Products of agriculture	11,963,263	9,396,967
Products of forests	11,595,007	12,912,226
Manufactures	7,902,592	6,655,719
Miscellaneous	6,234,372	6,938,135
Products of animals	2,807,487	2,472,359
Merchandise	2,393,285	2,008,067
Total	66,830,019	63,019,900

Of this tonnage 36,075,101 tons originated on the various lines reporting, and 30,754,918 were received from connecting lines and other carriers.

The aggregate earnings for the year were $145,056,336.19, a decrease of $1,861,977.42. The distribution was as follows:—Passenger service, 31.21%; freight service, 66.65%; station and train privileges, 0.35%; telegraphs, rents and other sources, 1.79%. The operating expenses were $104,600,084.43 or $2,704,058.08 less than the previous year; the net revenue, therefore, being $40,456,251.76, an increase of $842,080.66. The net earnings were equal to $1,678.40 per mile of railway, or $46.50 less than in the previous year, and represented 3.09% on a capitalization of $1,308,481,416. Thirty-six railways reported a deficit for the year, and this has been the case with these same railways for years. The gross earnings per mile of railway amounted to $6,017.93, against $6,397.21; net earnings per mile of line, $1,678.40, a decrease of $46.50; average revenue per passenger, $1.195; average receipts per ton of freight, $1.432; earnings per passenger train mile, $1.150 against $1.228; earnings per freight train mile, $2.041, against $2.008; earnings per train mile for all trains, $1.816, against $1.868.

The proportion of operating expenses to gross earnings was 72.11 against 73.04 in the previous year. The distribution of operating expenses was:—Way and structures, 20.22%; equipment, 20.56%; traffic expenses, 3.63%; transportation expenses, 51.89%; general expenses, 3.70%. The multiplication of items and subdividing of accounts has, for the time being, made it difficult, in some cases impossible, to carry out close comparisons with the figures of previous years. The operating expenses represent $4,339.53 per mile of line, as compared with $4,672.30 in the previous year; the cost of running a train one mile, using the mileage of all trains as a basic factor, was $1.309 against $1.254.

Eastern Canadian Passenger Association.—At the annual meeting in Montreal, Jan. 4, the following were elected: Chairman, C. Hartigan; Executive Committee, G. W. Vaux, W. Stitt, Thos. Henry; Rules Committee, G. W. Vaux, W. Stitt, G. Tombs, J. W. Hanley, E. O. Grundy, F. F. Backus, W. H. Underwood, J. M. Lyons, N. Mooney; Secretary, G. H. Webster.

The Royal Trust Co., Montreal, has entered an action in the New Brunswick Courts against the Alexander Gibson Railway and Manufacturing Co., Marysville, N.B., for the foreclosure of a mortgage of $440,000 and interest from Nov. 18, 1899, at 6%. The company owned the old Canada Eastern Ry., extending from Fredericton to Chatham, N.B., about 125 miles, which was taken over in 1904 by the Dominion Government, and is now operated as part of the Intercolonial Ry.

Position of Semaphore Banner is always absolutely indicated to operator.

THE McAVITY ELECTRIC RAILWAY SIGNAL

SIMPLE RELIABLE ECONOMICAL

The McAvity Electric Signal can be used either in a Block System, as a Semaphore for Station, Yard, Junction and Drawbridge Protection, or as a Train Order Signal.

The banner in a horizontal position signifies "STOP." When current is applied the banner comes to position of "CLEAR," or perpendicular, as shown by dotted lines; this brings lever A down, making contact with point B, which contact must be made before Office Indicator will operate, and as the Semaphore only works to "CLEAR" electrically, therefore, in case there should be any derangement of the wires, **the banner instantly assumes the position of "STOP" by gravity,** where it will remain until the cause of the disturbance is discovered and removed.

Passenger Meetings at Buffalo.

Three important passenger meetings were held at the Hotel Lafayette, Buffalo, N.Y., in Jan. The rate clerks met on Jan. 18 and 19, to prepare the rate sheets, which were approved at the general meeting on Jan. 20.

President C. F. Bielman, T.M., White Star Line, Detroit, Mich., took the chair at the International Water Lines Passenger Association meeting.

A. A. Heard, General Passenger Agent Delaware & Hudson Co., on behalf of Capt. C. H. Nicholson, ex-Traffic Manager Northern Navigation Co., of Ontario, and now Manager Grand Trunk Pacific Ry. Pacific Coast Steamships, presented Mr. Bielman with a silver mounted gavel made from wood used in the construction of the Northern Navigation Co.'s s.s. Hamonic.

The executive committee having reported in favor of the admission of the following lines, they were elected members:—Chicago & South Haven Line, Eastern Steamship Co., Plant Line.

The Secretary reported that at the end of 1909 there were 39 member companies, one had retired and three joined, making the present membership 41.

T. J. Kennedy, General Superintendent Algoma Central S.S. Co., sent notice of the company's withdrawal from passenger business, and tendered its resignation of membership.

C. H. Nicholson sent notice of his resignation from the Northern Navigation Co.'s service and appointment as Manager G.T.P.R. Pacific Coast Steamships, and resigned as chairman of the audit committee.

Messrs. Kennedy and Nicholson were nominated for honorary membership, to be voted on at next year's meeting.

A resolution of condolence with the family of R. Maxwell, Traffic Manager Star Cole Line, who died Aug. 30, 1909, was adopted.

The constitution was amended by providing that any transportation line of North America, performing a regular passenger service, is entitled to representation in the Association. This eliminates the words "east of and including the Mississippi River."

The following were elected by acclamation:—President, W. M. Lowrie, G.P.A., Northern S.S. Co.; Vice President, T. H. Henry, T.M., Richelieu & Ontario Navigation Co.; Secretary, M. R. Nelson, C.C., P.D., Northern Steamship Co.; Executive Committee, A. A. Heard, G.P.A., Champlain Transportation Co., and Lake George S.B. Co.; J. J. Cheesman, T.M., United States and Dominion Transportation Co.; Capt. F. Elliot, Supt. Ottawa Division, Ottawa River Navigation Co.; Auditing Committee, E. E. Horsey, T.M., Lake Ontario & Bay of Quinte S.S. Co.; C. C. Brown, G.P.A., Eastern S.S. Co.; R. C. Davis, G.P.A., Goodrich Transportation Co.

President-elect Lowrie having taken the chair, it was decided to hold the next meeting on the same date and at the same place as the Niagara Frontier Summer Rate Committee.

The Niagara Frontier Summer Rate Committee's meeting was presided over by the Chairman, A. A. Heard, G.P.A., Delaware and Hudson Co., who stated that it had been called to compile for the information of interested lines summer fares from Niagara Falls, Toronto, Montreal, Quebec, Detroit, Port Huron and miscellaneous points for season of 1910.

On behalf of the committee, T. Henry, T.M., Richelieu & Ontario Navigation Co., presented for W. J. Lynch, P.T.M., Michigan Central Rd., who was chairman in 1908, a gavel made from wood used in the construction of the s.s. Rochester, the first R. & O.N. vessel under the U.S. flag, and which will go into service next season between Youngstown and Ogdensburg, N.Y.

A. A. Heard was presented with a gavel which D. A. Loomis, General Manager Champlain Transportation Co., had had made from wood from the hull of the schooner, Royal Savage, flag ship of General Arnold, commander of the "American" flotilla on Lake Champlain, which was sunk near Valcour Island, Oct. 11, 1776, where a part of her hull has since lain. In 1886, a diver secured relics from the wreck, consisting of cannon balls and pieces of lumber.

J. F. Fairlamb, G.P.A., New York Central & H.R. Rd., was elected Chairman for the current year, Jas. Morrison, C.R.C., Canadian Pacific Ry., being re-elected Secretary.

Mr. Fairlamb having taken the chair, the Secretary reported that fares had been compiled by the rate representatives on Jan. 18 and 19, and they were adopted.

The Maine S.S. Co. and the Memphremagog S.S. Co. were elected members.

It was decided to issue the meeting's proceedings for the information of interested lines as usual.

Rochester, N.Y.; Detroit, Mich.; New York City and Montreal were proposed for the next place of meeting, the ballot being in favor of Rochester by a large majority.

In the absence of Chairman C. H. Nicholson, T. Henry, T.M. Richelieu & Ontario Navigation Co., presided at the Great Lakes & St. Lawrence River Rate Committee's meeting.

E. E. Horsey, G.M. Lake Ontario & Bay of Quinte S. B. Co., was elected Chairman for the current year and took the chair.

The representatives of the various steamship lines announced their rates for the ensuing season and the Canadian railway companies gave notice of their routing rates to shore ports on upper lake business, all of which will be embodied in the rate sheets.

It was decided to hold the 1911 meeting at Rochester, N.Y., immediately following the Niagara Frontier Summer Rate Committee meeting.

Railway Rolling Stock Statistics.

During the year ended June 30, 1909, there were added to the rolling stock of the various Canadian railways 97 locomotives, 2,070 freight cars and 166 passenger cars. On that date there were in service 3,969 locomotives, 117,779 freight cars, and 4,192 passenger cars. In addition to these there were reported to be 65 locomotives and 9,345 cars under lease and 7,859 other cars in the companies' service. The available motive power was equivalent to 165 locomotives for every 1,000 miles of line, a decrease of four. This reduction is largely due to the fact that the new mileage had not been brought up to the standard of the older lines in regard to equipment. The average tractive power of locomotives has been steadily rising for years, so that the 97 locomotives added may be considered to represent a hauling capacity sufficient to compensate for the loss of motive power per 1,000 miles as expressed in number of engines. The passenger car supply is equivalent to 174 cars for every 1,000 miles of line, and the freight car supply 4,887 cars for every 100 miles of line. Although the number of cars showed an increase the additions to stock did not keep pace with the expanding mileage. The total carrying capacity of the freight cars was 3,385,313 tons, an increase of 107,919 tons over the previous year. The aggregate car supply was equal to one car for every 567 tons of freight, against 545 tons; the average carrying capacity of the cars was 28.70 tons, against 28.28 in the previous year.

Shelters. Stations and Agents.

The Board of Railway Commissioners passed the following order, 9160. Jan. 6.—Re complaint of Winnipeg Jobbers and Shippers Association alleging unsatisfactory service rendered by railway companies in connection with shipments of freight to flag stations and applying for an order directing the companies, where the traffic warrants, to appoint permanent agents to take charge of business at such stations. It is ordered:

1. That all railway companies subject to the Board's jurisdiction within six months from the date of this order, do construct and maintain, upon their lines of railway, in Manitoba, Saskatchewan and Alberta, at stations (other than regular agency stations) from or to which freight (l.c.l.) and passenger traffic is carried, suitable shelters or waiting rooms for the accommodation of freight and passengers, the said shelters to be provided with proper doors and windows and not to be below the standard of the plans and specifications attached, no. 1 (A or B, as may be decided upon).

2. That appurtenant to the said shelters and at proper and convenient locations, shall be erected within the time aforesaid, proper and convenient platforms and approaches.

3. All freight traffic delivered to such points shall be placed in the said shelter, and the carrier shall not be relieved from liability under the release approved by order 6242, unless this direction is complied with.

4. That at all stations or shipping places upon the said railway from or to which the total freight and passenger earnings of the company for the last fiscal year, or where the average earnings for the last three fiscal years, amount to not less than $15,000, of which $2,000 shall represent inward traffic, the said railway companies shall forthwith construct and equip suitable and proper stations, not to be below the standard of plans and specifications attached, no. 2, and shall likewise forthwith appoint and continue a permanent agent at such point or points.

5. That at all non-agency points where the business of the company consists solely or principally of grain shipments and the same amounted to at least 50,000 bush. for the previous year, temporary grain agents shall be appointed and continued during the grain shipping season, being from September 15th to December 31st, in each year.

Capital Seeking Investment in Steam and Electric Railways, Etc.

A well known transportation official in London, Eng., who is an old subscriber to the Railway and Marine World, has written our Managing Director, as follows:—

"An agent of a very influential and strong syndicate here has asked me if I know of any railway charters, either steam or electric, cold storage plant, docks, or other similar propositions in Canada which require financing. He states that his principals are ready to take up any good proposition of this kind and finance it, and I immediately thought that you would be the best one to know if there was anything of the kind offering, as you seem to have a bigger grasp of all things pertaining to railways than any other man in Canada. If you know of one or two propositions, I would be glad if you would give me particulars of them."

Holders of charters of undoubted value and promoters of any enterprise referred to in our correspondent's letter are invited to communicate with us, giving full particulars, and in the case of any proposition we would feel justified in recommending, we would put them in communication with the syndicate referred to.

VANADIUM

Contrary to the custom of things, Vanadium won immediate success in the highest branches of Metallurgy—in the manufacture of armor plate, marine forgings, locomotive and automobile parts.

Tests tell; and the tests which instantly admitted Vanadium Steels to these important fields are revolutionizing results all over the metal world.

This space is too short for the story. It is a story that vitally affects the success of every man, every machine, and every mill that uses iron, steel, brass, bronze or aluminum.

Vanadium, the "Master Alloy," is now in use all over the world. Get the complete story from our books.

Railway Finance, Meetings, Etc.

Alberta Ry. and Irrigation Co.—Approximate net profits from all sources, exclusive of land sales, for Nov., 1909, $52,211, against $50,870 for Nov., 1908. Cumulative net profits for five months ended Nov. 30, 1909, $213,489. Approximate traffic receipts for Dec., $31,523, against $28,432 for Dec., 1908. Aggregate traffic receipts for six months ended Dec. 31, 1909, $203,986.

Canadian Pacific Ry.—The Dominion Parliament is being asked to authorize the issue of bonds for $25,000 a mile in respect of the construction of certain branch lines and to authorize the company to issue debenture stock in lieu of the bonds. The bill also authorizes the company to make by-laws providing for the election of two or more vice presidents, who need not be members of the board of directors, and defining their duties. Provision is made one-fifth instead of one-fourth of the directors retiring each year. Another section provides that the intent of sec. 2 of the C.P.R. Act, 1893, in so far as it relates to the aggregate amount of preferred stock which the company may issue, is to fix a definite limit to the company's power to issue such stock, and that notwithstanding any other provision relating to such stock the amount of such preferred stock outstanding may equal but shall not exceed at any time one-half of the aggregate amount of the ordinary stock then outstanding.

Dominion Atlantic Ry.—Gross earnings for Nov., 1909, $110,200, against $96,868 for Nov., 1908. Aggregate earnings for five months ended Nov. 30, $720,000, against $701,235 for same period 1908.

At a meeting of the Halifax, N.S., Board of Trade, Jan. 18, the President stated that it was understood that the Canadian Northern Ry. interests had acquired the Dominion Atlantic Ry. together with its steamships. The D.A.R. Co.'s stock is owned in Great Britain, and a Halifax barrister has recently been in London, Eng., carrying on some negotiations with the company.

Grand Trunk Pacific Ry.—The Supreme Court gave judgment recently in the case of the G.T.P.R. Co. and the Dominion Government arising out of the issue of guaranteed stock. In 1903, by statutory agreement, the bonds were guaranteed to the extent of 75% of the cost of construction of the western division, but not to exceed $13,000 per mile of the prairie section and $30,000 per mile of the mountain section. During the next year it was found that these bonds would not realize 75%, and a new agreement was made, striking out the limitations as to the mountain section, and providing that the Government implement its guarantee in such a manner as may be agreed upon, so as, to make the proceeds equal to 75% of the cost. The company claimed to be entitled to sell the bonds, and if they realized less than 75% the Government should pay them the difference. The Government contended that it was only obliged to be surety for payment, and not to pay cash. The Governor-General in council submitted a number of questions to the Judges of the Supreme Court, upon which the judgment is based. In effect the court holds that the Government is not bound to make good any difference between the sale price of the bonds and 75% of their face value.

London and Port Stanley Ry.—The report of the Treasurer presented to the directors recently showed the total receipts to be $15,976.39, as follows:—Rental, $10,000; interest on rental, $2,596.60; percentages from Pere Marquette Rd. (leased), $3,379.79. The expenditures for the year were $211. The falling off is in the percentage on earnings. In 1908 the city of London received $6,706.21 from the Pere Marquette Rd., $3,326.42 more than in 1909. The President pointed out that the right to place in a switch had been granted to the Michigan Central Rd., and a similar request from the P.M. Rd. was now under consideration. The question of the extension of the lease to the P.M. Rd. had been taken up, but after some negotiations had been dropped.

The annual meeting of the shareholders was held Jan. 17. The officers and directors for the current year are:—President, Mayor Beattie; Vice President, Alderman Eckert; other directors: Aldermen Richter, Stevenson, Morgan, Jeffries, Underwood, Ashplant, Ex-Mayor S. Steveley; Secretary, — Baker.

New Brunswick Coal and Ry. Co.—Hon. W. Pugsley, Dominion Minister of Public Works, has filed a bill of complaint in the Supreme Court of Equity, against the New Brunswick Coal and Ry. Co., for an investigation of certain matters arising out of the report of a Royal Commission on the affairs of the Company. The papers filed ask for an accounting of receipts and expenditures of subsidies and moneys received by the company from the Dominion and Provincial Governments, and also all expenditures and appropriations of the proceeds of debentures, bonds, etc., guaranteed by the province, and of the dealings of the company. Mr. Pugsley was Premier of New Brunswick when the transactions investigated took place, the railway being managed by a commission appointed by the New Brunswick Government.

Northern Securities Co.—In the annual report to the shareholders J. J. Hill says the reduction of the dividend rate, as compared with former years, has been occasioned by the fact that in 1909 the company received no income from its holdings in the Crow's Nest Pass Coal Co. Of the 62,108 shares in the C.N.P.C. Co. the Northern Securities Co. holds 27,552. The C.N.P.C. Co. owns the Morrissey, Fernie and Michel Ry.

Orford Mountain Ry.—Application is being made to the Board of Railway Commissioners for a recommendation to the Governor in council for the sanction of a lease of the company's railway to the C.P.R. for 999 years.

Quebec Central Ry.—Gross earnings for Oct., 1909, $102,764.35; expenses $68,-921.28; net earnings, $33,842.37, against $78,244.82 gross earnings; $57,055.25 expenses; $21,189.57 net earnings for Oct., 1908. Aggregate gross earnings for four months ended Oct. 31, $413,-870.31; expenses $264,489.78; net earnings, $149,380.53, against $413,788.30 gross earnings; $20,696.65 expenses; $143,091.65 net earnings for same period 1908.

Temiscouata Ry.—Net profit on operation for Oct., 1909, $4,835, and for 10 months ended Oct. 31, $44,934.

Toronto City and C.P.R. Lines.—At the time of the construction of the Credit Valley Ry., the Toronto, Grey and Bruce Ry., and the Ontario and Quebec Ry., now included in the C.P.R. system, the City of Toronto provided certain amounts in aid of construction in return for which the council was given the right to nominate certain directors. These have been appointed from year to year but it appears that no reports are received from them by council. The Mayor has been investigating the matter and as a result the City Treasurer has been directed to present a report on the whole question. The report will also cover the position of the city with reference to its representation on the directorate of the company which constructed the line from Toronto northerly, forming part of the G.T.R. Northern Division.

White Pass and Yukon Ry.—Aggregate gross earnings for five months ended Nov. 30, 1909, $829,086.

Q. and L. St. J. Railway Bonds

The Railway Share Trust and Agency Co. of London, Eng., trustees for the Quebec and Lake St. John Ry. prior lien, 1st mortgage, and income bondholders, issued the following circular in Dec.:—The trustees have been informed by the Q. and L. St. J. R. Co. that it will be unable to pay the coupon for interest on the first mortgage bonds falling due Jan. 1, 1910. A proposal has been submitted to the trustees for the reorganization of the company's bonded capital on the following lines:—That a new 4% consolidated perpetual debenture stock of the Q. and L. St. J. R. Co., absolutely guaranteed both as regards principal and interest by the Canadian Northern Ry. Co. should be created sufficient in amount:—To exchange the outstanding prior lien bonds at the rate of £100 of the new stock for every £100 of prior lien bonds. To exchange the first mortgage bonds at the rate of £60 of the new stock for every £100 of first mortgage bonds. To exchange the income bonds at the rate of £10 of the new stock for every £100 of income bonds. To exchange the bonds (£10,000) issued by the Lake St. Joseph Hotel Co., and guaranteed by the Q. and L. St. J. R. Co. at the rate of £100 of the new stock for every £100 of hotel bonds. To provide for the present floating indebtedness of the company, and to provide for additional rolling stock and equipment now required. Interest on the new stock to be payable half-yearly, on Feb. 1 and Aug. 1; the first payment for the period from Feb. 1, 1910, to Aug. 1, 1910, being made on the latter date. That in addition to the Canadian Northern Ry. Co.'s guarantee the new stock will be secured by a trust deed constituting it a first mortgage on the whole of the property and undertaking of the Q. and L. St. J. R. Co. including the Lake St. Joseph hotel property. That power be reserved to the company:—To create charges on any new line of railway hereafter constructed ranking in front of the new stock, provided such charges are guaranteed by the Dominion or by one of the Provinces. To create additional new stock (ranking pari passu with the new stock to be issued as above mentioned) to provide for the purposes following:—To an amount equal to $30,000 per mile of line of railway hereafter constructed or contracted to be constructed, after deducting therefrom any amount not exceeding $30,000 per mile for the time being outstanding of any mortgages or securities guaranteed by the Dominion or any Province, and for the time being ranking on such line of railway in priority to the new stock. To an amount equal to the amount by which any mortgages or securities guaranteed by the Dominion or any of the Provinces that may hereafter be secured on the company's railways or any part thereof in priority to the debenture stock exceed $30,000 per mile of the line on which they are secured as a first mortgage or charge. To an amount equal to the cost price to the company of any rights of way, or land purchased or to be purchased by the company for terminals or any other purposes in connection with the construction, operation and maintenance of the company's lines of railway or any of them. To an amount equal to the cost price to the company of any bonds, stocks, shares or securities of any other company which may hereafter from time to time be deposited with the trustees and specifically mortgaged by way of first mortgage as additional security for the new stock.

The foregoing proposals were submitted at a meeting of bondholders in London, Eng., Jan. 14, but were so strongly opposed that they were withdrawn.

BOWSER

SYSTEMS FOR RAILWAY OIL STORAGE

are backed up by twenty-five years of experience in the manufacture of Self-measuring Pumps and Tanks.

The Tanks are made of any capacity, either cylindrical or rectangular, may be buried underground and connected with the pumps which are placed any distance away, wherever most convenient. No danger from FIRE.

The Pumps measure accurately, and by means of a Gallon Meter, keep an accurate record of all oil drawn. OVER FIFTY RAILROADS ARE USING BOWSER EQUIPMENT. Drop a card for BULLETIN 18.

S. F. BOWSER & COMPANY, LTD.

TORONTO, ONT.

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them.

8902. Dec. 13.—Authorizing C. S. Hyman & Co. to lay heating pipes on Richmond St., London, under C.P.R.

8903. Dec. 15.—Amending order 3245, July 4, 1907, regulations re locomotives. This order was published fully in our Jan. issue, pg. 47.

8904. Dec. 2.—Authorizing C.N.O.R. to place tracks across G.T.R. near Port Hope, Ont.

8905. Dec. 7.—Authorizing C.P.R. to construct spur for Spietz Furniture Co. and Hanover Portland Cement Co., Hanover, Ont.

8906. Dec. 9.—Authorizing C.P.R. to install half-interlocking with derails, on Richmond St., London, Ont.

8907. Dec. 13.—Ordering C.P.R. to carry highway between Springer and Caldwell tps., Ont., over its tracks.

8908. Dec. 15.—Authorizing G.T.R. to construct sidewalk over Maitland River, Wingham, Ont.

8909. Dec. 8.—Authorizing G.T.R. to construct branch north of Ontario St., Port Hope, Ont.

8910. Dec. 12.—Refusing W. Knetchel & Sons' application for spur to mill at Hanover, Ont.

8911. Dec. 2.—Authorizing G.T.R. to reconstruct highway bridge over its tracks at Margaret St., Berlin, Ont.

8912, 8913. Dec. 15.—Authorizing Peck Rolling Mills, Montreal, to operate an overhead carrier and rail line over Montreal and Southern Counties Ry., at Mill St.

8914. Dec. 15.—Approving highway crossing and road diversion between secs. 15 and 22, tp. 33, r. 28, w. 2 m. of G.T.P.R. District, Saskatoon, Sask.

8915. Dec. 15.—Authorizing G.T.P.R. to build across diverted highway through s.e. ¼ sec. 20, tp. 42, r. 25, w. 3 m., Sask.

8916. Dec. 15.—Approving C.N.O.R. location in Pickering tp., Ont.

8917. Dec. 15.—Approving C.N.R. standard plan of overhead highway crossing.

8918. Dec. 15.—Authorizing Winnipeg corporation to place transmission lines across C.P.R. in s.e. ¼ sec. 7, tp. 13, r. 7, e.p.m., Man.

8919. Dec. 15.—Authorizing Bell Telephone Co. to place wires across G.T.R. near Courtland station, Ont.

8920. Dec. 15.—Authorizing Coldstream Telephone Co. to place wires across G.T.R. between Komoka and Strathroy, Ont.

8921. Dec. 15.—Authorizing A. McMichael, Jr., Melfort, Sask., to place wires across C.N.R. at Government Rd.

8922. Dec. 15.—Authorizing C.P.R. to construct spur to the end of its Kootenay Lake wharf, Nelson, B.C.

8923. Dec. 15.—Authorizing G.T.R. to construct spur to Goderich Lumber Co.'s premises, Southampton, Ont.

8924. Dec. 15.—Ordering G.T.P.R. to place two more wires along fences on both sides of its right of way in sec. 2, tp. 12, r. 11, w. 1 m., Man.

8925. Dec. 16.—Approving C.N.R. location through tp. 24, r. 17-15, w. p. m., mile 0 to 14.02, Man.

8926. Dec. 10.—Approving Toronto, Niagara & Western Ry. location from Davenport station to Jane St., Toronto.

8927. Dec. 4. Ordering G.T.R. to remove not later than July 1, additional track crossing King St., Sherbrooke, Que.

8928. Dec. 15.—Authorizing Guelph, Ont., Board of Light and Heat Commissioners to place wires across C.P.R. at Norwich St.

8929. Dec. 16.—Authorizing Bell Telephone Co. to place wires across M.C.R. at Wellington St., Windsor, Ont.

8930 to 8932. Dec. 16.—Authorizing People's Telephone Co. to place wires across G.T.R. near Jericho, and near Forest, Ont.

8933. Dec. 16.—Authorizing town of Waterloo, Ont., to lay water main under G.T.R. at John St.

8934. Dec. 7.—Dismissing G.T.P.R. application for order for connection with Canada Iron Corporation's tracks at Mountain Ave., Fort William, Ont.

8935. Dec. 7.—Ordering C.P.R. to fill in with plank space between rails along John and Water Sts., Eganville, Ont.

8936. Dec. 7.—Ordering C.P.R. to construct station with proper facilities for traffic at Eganville, Ont.

8937. Dec. 7.—Authorizing Georgian Bay & Seaboard Ry. to cross G.T.R. mileage 50.5, Victoria Harbor, Ont.

8938. Dec. 2.—Authorizing C.P.R. to construct spur near Sutton station, Que.

8939. Dec. 16.—Authorizing C.P.R. to construct spur near Smelter Jct., B.C.

8940. Dec. 16.—Approving C.N.O.R. location through Frontenac co., mileage 61 to 96, west from Ottawa.

8941. Dec. 7.—Ordering Montreal Park & Island Ry. to stop cars to allow passengers to get off and on at six points in Mount Royal Ward, Montreal.

8942. Nov. 30.—Ordering M.C.R. and P.M.R. to file plans showing location of towers, gates, etc., where they intersect side road running between lots 6 and 7, con. 5, at Highgate and Muirkirk stations, Ont.

8943, 8944. Dec. 17.—Approving plans of Atlantic, Quebec & Western Ry. stations at L'Anse aux Gascons and Newport, Que.

8945. Dec. 17.—Authorizing C.N.R. to place wires under Kaministiquia Power Co.'s wires near Kakabeka, Ont.

8946 to 8957. Dec. 17.—Authorizing Nipissing Power Co. to place transmission lines across Bell Telephone Co.'s wires at 12 points in Ontario.

8958. Dec. 13.—Authorizing C.P.R. to open for traffic its double track on main line between Fort William and Winnipeg.

8959. Dec. 18.—Authorizing village of Eganville, Ont., to construct highway across C.P.R.

8960. Dec. 18.—Authorizing C.P.R. to divert crossing of Salvage Ave. to proposed crossing of its tracks by Chapman Ave., Grassy Lake, Alta.

8961. Dec. 15.—Authorizing Daly & Morin to lay pipe under G.T.R. at Lachine, Que.

8962, 8963. Dec. 17.—Approving C.N.R. location from mileage 88 to 119, up North Thompson River from Kamloops, and from mileage 0 to 7, Lytton, B.C.

8964. Dec. 17.—Authorizing Manitoba Government Telephones to place wires across C.P.R. west of St. Boniface.

8965, 8966. Dec. 17.—Authorizing C.N.O.R. to place wires across Bell Telephone Co.'s wires at stations 2928-06 and 2924-54.

8967, 8968. Dec. 18.—Authorizing Berlin, Ont., Light Commissioners to place wires across G.T.R. at Waterloo and St. Leger Sts.

8969. Dec. 9.—Authorizing C.P.R. to lay pipe under C.N.R. along Boyne Ave., Morris, Man.

8970. Dec. 18.—Authorizing C.P.R. to construct extension of Eureka Mineral Claim spur, Yale District, B.C.

8971. Dec. 18.—Authorizing C.P.R. to construct two spurs in Weyburn, Sask.

8972. Dec. 18.—Authorizing C.P.R. to construct two spurs at Calgary, Alta. for Y. Shaw and Crown Lumber Co.

8973. Dec. 18.—Authorizing C.P.R. to construct spur for Leitch Collieries, Ltd., mileage 87.11, Crow's Nest Pass Branch.

8974, 8975. Dec. 18.—Authorizing C.P.R. to construct spur near Galloway station, B.C., and for La Compagnie Jobin, St. Augustin Parish, Que.

8976. Dec. 20.—Authorizing C.N.O.R. to use for construction purposes only the crossing by its line of the G.T.R. near Brooklin.

8977. Dec. 20.—Authorizing C.P.R. to construct spur through blocks 200 and 201, Regina, Sask.

8978. Dec. 18.—Authorizing Berlin, Ont., Light Commissioners to place wires under G.T.R. at King St.

8979. Dec. 18.—Authorizing Bell Telephone Co. to place wires under M.C.R. at Chippawa St., Chippawa, Ont.

8980. Dec. 18.—Authorizing C. Hudson, Lambton station, Ont., to work steam shovel on coal dump on the C.P.R. on Sunday, Dec. 19, on account of emergency.

8981. Dec. 20.—Authorizing G.T.R. to construct bridge over Chaudiere River at mile post 164.1, 3rd district, near Chaudiere Jct., Que.

8982, Nov. 22.—Ordering all railway companies in Ontario to weigh coal carried by them received from foreign countries at the port of entry if so required. This order is given fully on another page.

8983. Dec. 20.—Approving C.N.O.R. crossings at four streets in Parry Sound, Ont.

8984. Dec. 11.—Prescribing form of certificate to be used by railways in notifying the Board of assent to, and concurrence in, a joint tariff, or supplement, applicable between points in Canada. This order is given fully on another page.

8985. Dec. 20.—Authorizing Ridgetown Fuel Supply Co. to lay gas pipe under P.M.R. in Highgate, Ont.

8986. Dec. 22.—Authorizing Ottawa Electric Co. to place wires across C.P.R. at Billings Bridge, Ont.

9226. Jan. 8.—Refusing Western Associated Press application for order directing C.P. and G.N.W. Telegraph Co.'s to furnish telegraph matter at rates established by them for delivery to and publication in one newspaper, and directing that tariffs of tolls covering all this class of telegraph service be filed with the Board not later than Feb. 1.

9227. Jan. 10.—Authorizing Hydro-Electric Power Commission of Ontario to place conduit system under M.C.R. in Stamford tp.

9228. Jan. 11.—Ordering G.T.R. to deepen existing culvert at mile post 1, from Palmerston, Ont.

9229. Jan. 10.—Authorizing C.P.R. to use eight bridges on the New Brunswick Southern Ry.

9230. Jan. 10.—Approving C.N.R. proposed location from mileage 0 to 14 down the Fraser River from Yale, B.C.

9231. Jan. 11.—Authorizing C.P.R. to construct extension across Timmins St., North Bay, Ont.

9232 to 9235. Jan. 11.—Authorizing Bell Telephone Co. to place wires across G.T.R. at four points near Hamilton, Ont.

9236. Jan. 11.—Authorizing Seymour Power & Electric Co. to place transmission line across Central Ontario Ry. in Rawdon tp.

9237. Jan. 4.—Authorizing Montreal Light & Power Co. to place wires across C.N.Q.R. and Montreal Terminal Ry. at Laurier Ave., Tetreaultville, Que.

9238. Jan. 11.—Authorizing R. S. Hudson to place wire across G.T.R. at Queenston quarry siding, Stamford tp., Ont.

9239. Jan. 7.—Refusing C.N.O.R. application for order directing G.T.R. and C.P.R. within a specified time to file tariff from U.S. frontier points to non-competitive points on C.N.O.R. in connection with passenger traffic from Pittsburg, Pa., to Muskoka district.

9240. Jan. 10.—Amending order 9026, Dec. 20, 1909, directing T.H. & B.R. to construct highway bridge over its line, at Garth St., Hamilton, Ont., by providing that the city of Tamilton be responsibble, pay land damages, if any, caused by raising the grade.

9241, 9242. Jan. 12.—Recommending to Governor in Council for sanction, Red Mountain Ry. and Nelson and Fort Sheppard Ry. by-laws re expectorating in and around station premises.

9243. Jan. 10.—Authorizing C.N.O.R. to construct sidings from G.T.R. main line to its right of way near crossing in con. D., Scarborough tp.

9244. Jan. 12.—Authorizing J. P. Edwards for Ontario Public Works Department, to construct overhead crossing of C.P.R. Sault Ste. Marie branch in lot 5, con. 1, Drury tp., Ont.

9245. Jan. 10.—Authorizing C.P.R. to construct spur for Byers & Anglin, Outremont, Que.

9246. Jan. 12.—Amending order 9031, directing N. St. C. & T.R. to restore joint rate of 2c. per 100 lbs. on wood pulp in carloads from Thorould, Ont., by extending time for its restoration.

9247. Jan. 12.—Ordering G.T.R. to install electric bell at Wallace Ave. crossing, Toronto.

9248 to 9250. Jan. 12.—Authorizing Bell Telephone Co. to place wires across P.M.R. at three points near Chatham station, Ont.

9251. Jan. 12.—Authorizing Seymour Power & Electric Co. to place wires across Bell Telephone Co.'s wires, at Stirling, Ont.

9252. Jan. 12.—Authorizing Bell Tele-

MORISON Suspension Furnaces

phone Co. to place wires across C.P.R. near London, Ont.

9253. Jan. 12.—Authorizing Maidstone municipality, Ont., to place telephone wires across C.P.R. near Elmstead, Ont.

9254. Jan. 12.—Authorizing Bell Telephone Co. to place wires across C.P.R. at Waubeck St., Parry Sound, Ont.

9255. Jan. 13.—Approving G.T.P.R. crossings in Yorkton and Saskatchewan districts, Sask.

9258. Jan. 13.—Authorizing C.N.O.R. to build across public road between lot 6 and east half of lot 7, con. A., Hamilton tp.

9259. Jan. 12.—Authorizing Lindsay, Bobcaygeon & Pontypool Ry. to cut off bank of n.w. corner Galbraith's crossing, north of Burkton Jct., Ont.

9260. Jan. 5.—Authorizing T.H. & B.R. to construct two spurs for F. W. Bird & Son, Hamilton, Ont.

C.P.R. Betterments, Construction, Etc.

St. John to Halifax.—C. J. Willis, Amherst, N.S., writing to the daily papers, Jan. 6, says public meetings have been held in numerous municipalities in Nova Scotia with a view to securing an extension of the C.P.R. from its present terminus at St. John, N.B., to Halifax, and that the movement is meeting with public favor. A Halifax paper suggests that the Citadel be acquired by the city and offered to the C.P.R. as an inducement to the company to extend its line to Halifax.

St. John, N.B.—It has been decided by the City Council to send a deputation to Montreal to interview Sir Thos. G. Shaughnessy on the proposed sale to the company of the west side wharves. The construction of these wharves cost the city about $1,250,000.

Tobique and Campbellton Ry.—A contract has been signed, under the Act granting aid to certain railways, between the Dominion Government and the company, for the construction of a line from Plaster Rock, the terminus of the C.P.R. Tobique Valley line, to Riley Brook, a distance of 28 miles.

Windsor St. Station, Montreal.—The addition to this building, the foundations for which are now being put in, will extend from the present building down Windsor St. to St. Antoine St., 290 ft., with a frontage of 170 ft. on St. Antoine St.

Place Viger Station and Hotel, Montreal.—Plans have been completed for an extensive addition and alterations to be made to this building. The waiting rooms, ticket offices, &c., are to be removed from the present building, which fronts on Craig St., so that the whole of it may be utilized for hotel purposes. At the north end on the ground floor will be a dining-room 85 x 45 ft., a banqueting hall 60 x 35 ft., and kitchen 45 x 65 ft. In the centre of the building will be a rotunda 55 ft. in diameter. There will also be writing rooms, barber shop, lavatories, baggage room, news and cigars stands, parcel room and various offices, and the basement will be devoted to servants' dining rooms, locker rooms, laundry, machinery, &c. An octagonal entrance will be provided at the northwest corner of the present building to lead to the midway, and a four-story wing will be built, extending from the rear of the west end of the present building and running along Berrie St. for 300 ft., with a width of 50 ft. The basement will be utilized for storage, baggage, &c., and the whole of the ground floor for station purposes, including a waiting room 112 x 57 ft., with ticket, telegraph, telephone, agent's and other offices, a ladies' waiting room 30 x 30 ft., men's smoking room 35 x 15 ft., baggage room 70 x 83 ft., express room 95 x 25 ft., sleeping and dining car room 65 x 15 ft., lavatories, &c. The three stories above the ground floor will be devoted entirely to bedroom accommodation, each bedroom having a bath attached. On the second floor, which will include the present hotel dining-room space, there will be 52 bedrooms on the third floor 44 and on the fourth floor 26. At the rear of the hotel and station there will be nine passenger tracks and several storage tracks. These will run parallel with the back of the present hotel building instead of at an angle of about 45 degrees as at present. From the midway steps will be built to the level of Notre Dame St., and a new overhead foot bridge will be erected.

The Montreal City Council has finally adopted a report authorizing the closing of a number of street ends in the vicinity of Place Viger station, on property acquired by the company for yard extension. Under the agreement proprietors of certain other properties have the right of selling to the company at the city's valuation plus 30%, and the company is to build a bridge on Notre Dame St. from Lacroix St. to Montcalm St., continuing the present bridge at its present width.

Montreal to Toronto Second Track.—We are advised that the second track work from Montreal to Smith's Falls, Ont., has been completed, the portion between Vaudreuil, mileage 23.8, and Finch, mileage 79.1, being completed during 1909. The grading between Vaudreuil and St. Lazare, mileage 28.5, where some heavy grade revision work was done, was handled by the company's own forces. From St. Lazare to mileage 44.8, near Dalhousie Mills, the work was done by J. P. Mullarkey, Montreal; and from mileage 44.8 to Finch the work was done by Macdonald and Keefer, Monklands. The culverts and bridge superstructures for the entire distance were built by J. P. Mullarkey. The tracklaying, ballasting and surfacing was done by the company's own forces. C. W. P. Ramsey, Assistant Engineer, had charge of the work.

Toronto Sidings.—The C.P.R., as lessee and exercising the franchises of the Ontario and Quebec Ry., is making application to the Board of Railway Commissioners for authority to construct a branch line of railway along the east side of the Don river to Ashbridge's Bay, Toronto.

Guelph Station.—On a recent visit to Guelph, Ont., General Superintendent Oborne stated that a new station would be built there during this year.

London Roundhouse Improvements.—We are advised that the company has under consideration two or three schemes for roundhouse improvement at London, Ont., but that no decision has been reached. No proposition was made to Sir Thos. G. Shaughnessy on the matter on the occasion of his recent visit there, and consequently he did not make any statement, as reported in the daily press.

Georgian Bay and Seaboard Ry.—Application is being made to the Ontario Legislature by Tiny tp., Ont., for an act confirming a bylaw providing for a fixed assessment on the properties of the company in the township.

Souris, Man., Shops.—A press report states that the company has purchased 400 acres of land adjoining the town, presumably for a shop site to serve the southwestern lines which converge there.

Western Branch Lines.—The company is applying to the Dominion Parliament to authorize a change in the location of the branch line from Killam, Man., power to construct which was granted by sec. 1, chap. 95, of the statutes of 1908, by striking out range 13 and substituting therefor range 12, the starting point of the branch now being some point in tp. 44, ranges 12 or 14, west of the fourth meridian; and to construct the following additional branch lines:—from tp. 22, range 2, east of the principal meridian, northerly or northwesterly to tp. 34, ranges 5, 6 or 7, west of the principal meridian, and from near Asquith on the Pheasant Hills branch, Sask., to tp. 38 or 39, range 10, 11 or 12, a distance of about 20 miles. An extension of time for the construction of the branch authorized by sec. 1, chap. 55, of the statutes of 1900, sec. 2, chap. 73, of the statutes of 1905, and sec. 1 of chap. 95 of the statutes of 1908 (as amended by this act) is also asked.

Branch Line Plans Approved.—The Minister of Railways has approved plans for the construction of the company's Aldersyde branch, and for the Sedgwick and Ellerslie branch. The first named is under construction from Kipp, Alta., and the second starts from near Wetaskiwin and extends to Ellerslie, also on the Calgary and Edmonton Ry., about five miles from Strathcona, Alta. This branch is projected in connection with the high level bridge to give connection with Edmonton.

Calgary and Edmonton Ry.—Application is being made to the Dominion Parliament to extend the time within which the company may construct the branch lines authorized by chap. 89 of the statutes of 1903 and to authorize the construction of an extension of the Lacombe branch from its terminal point, as authorized by sec. 6, chap. 89, of the statutes of 1903, to a junction with the C.P.R. branch terminating at Outlook, Sask., a distance of about 200 miles.

Strathcona-Edmonton High Level Bridge.—Several contractors have had representatives in Edmonton recently looking over the ground with a view to tendering on the construction of the projected high level bridge over the Saskatchewan River from Strathcona to Edmonton. A deputation arrived in Ottawa Jan. 21 to interview the Dominion Government on the subject of a grant in aid of the project for the construction of general traffic facilities on the bridge.

Edmonton Land Purchases.—Reports from Edmonton, Jan. 11, stated that the company had purchased from the Hudson Bay Co. a considerable area of land in the vicinity of 18th and 29th streets.

Kootenay Central Ry.—It is reported that at a recent conference of C.P.R. officials in the west it was decided, subject to the approval of the directors, to provide for the construction of 50 miles of the K.C.R. during this year. If the plan is approved in Montreal, the report states that tenders will be asked for in Feb. and work will be started in March. The starting point, it is reported, will be at Warder, on the Crow's Nest Pass line, and the terminal at Golden, the length of the line being 160 miles. The surveys have been completed for this line for several years and show a maximum gradient of 0.4%.

Kootenay Lake Hotel.—We are advised that the company proposes to construct a small tourist hotel at Proctor, but that no plans or estimates have been prepared. Proctor is situated between Kaslo and Nelson, B.C., on one of the C.P.R. steamer routes on Kootenay Lake.

Empress Hotel, Victoria.—A new wing, 116 x 48 ft., is to be built over the present kitchen. It will contain 68 bedrooms, with 47 bathrooms.

Lytton to Hope, B.C.—Press reports state that the company has completed plans for the straightening of the line and the reduction of the gradients on the line between these two points. The location surveys, said to have been just completed, covered a distance of between 65 and 70 miles on the Thompson and Cascade sections. The principal part of the reconstruction will be in the Fraser Canyon, through which the railway runs for about 60 miles.

Canadian Northern Ry. Construction, Etc.

Quebec and Lake St. John Ry.—A contract has been signed, under the act granting aid to certain railways, between the Dominion Government and the company for the construction of a line from the 35th mile of the La Tuque branch to La Tuque Falls, not to exceed five miles.

Canadian Northern Quebec Ry.—During 1909 the company completed its cut-off from Garneau to Quebec, 78 miles, thus giving it its own independent entrance into that city. It also constructed a branch from St. Jacques to Rawdon, Que., bringing into communication with Montreal one of the oldest settled districts to the north. A railway connection with Rawdon was first promoted in 1856, but nothing was done, and the district lay unopened. The company is operating a train service over the line from Hawkesbury to Ottawa, about 58 miles, which line, however, forms part of the mileage of the Canadian Northern Ontario Ry.

Canadian Northern Ontario Ry.—In connection with the company's line from Hawkesbury to Ottawa application was made Jan. 5 to the Board of Railway Commissioners for authority to divert the Ottawa and Montreal road at 29 miles west of Hawkesbury. It was pointed out that the company was seeking to divert a road which it did not have power to cross. The matter was adjourned in order that the township council might have an opportunity of looking into the situation.

The ballasting on the line has been completed and the Ottawa yards are being laid out. The station at Henderson Ave. is only a temporary one, and is being utilized until all the questions with regard to the entrance into the city are settled. The temporary roundhouse which is being erected at the foot of Henderson Ave. is expected to be completed early in Feb. It will accommodate 12 locomotives, and will have a repair shop attached.

The C.N.O.R. at present enters the Union Station, Toronto, by the Don Valley over the C.P.R., and it is reported in real estate circles that recent purchases of land indicate that the company is desirous of securing a line so that an entrance can be obtained on the west. The report states that the land secured will enable the company to construct a line which will connect with its present right of way for the Toronto-Buffalo line at the junction of Davenport Road and Dupont St. The project, however, is in the rumor stage yet.

In connection with the Toronto-Buffalo line the Hamilton City Engineer reported Jan. 14 that the company's engineers were staking out the property of the Electric Development Co.'s power line in the vicinity of Burlington Beach. A Hamilton press report states that Engineers Hanning and Wright are in charge of C.N.O. Ry. survey parties working in the neighborhood. The surveys now being made indicate a line "which will skirt Burlington and run parallel with the G.T.R. to the inlet at the Valley inn. The surveys have been made for low ground which would mean that the C.N.R. would pass underneath the G.T.R. a short distance west of the high level bridge where the G.T.R. tracks are built high. It would than head around in the direction of the marsh, crossing the Dundas canal on a low swing bridge. A short sharp grade would bring the line in connection with the C.P.R. tracks east of the canal and the C.N.O.R. would probably use those tracks for the western entrance into the city."

The reports circulated in St. Catharines Jan. 11 that a site had been purchased there for a station were, on the following day, stated to be without foundation.

The Board of Railway Commissioners issued an order, Jan. 1, authorizing the placing in operation of the line between Sellwood and Gowganda Jct., Ont., about 30 miles. A train service was put in operation Jan. 3.

Duluth Winnipeg and Pacific Ry.—The extension of the Duluth, Rainy Lake and Winnipeg Ry., from Virginia, Minn., southerly to Duluth, is to be constructed under the above title. The line has been located between the points named, 75 miles. It does not pass through any places of importance, but runs within a short distance of Eveleth. The work is generally heavy clay and gravel cuttings with about five miles of heavy rock work, including a tunnel of 500 ft. on the south 45 miles. The north 30 miles is lighter work, but passes through a number of swamps and muskegs, which will require draining. The bridging is generally light, excepting where the line enters Duluth, where a number of streets are crossed overhead. It is proposed to construct ore docks at West Duluth, which will require a fairly long trestle approach. D. B. Hanna, Third Vice President C.N.R., is President, and R. P. Ormsby, of Mackenzie, Mann & Co.'s Toronto legal office, is Secretary. H. T. Hazen, Duluth, is Chief Engineer. (Jan., pg. 43.)

The Canadian Northern Ry. has under construction a cut-off of about six miles at Kakabeka Falls, and in connection therewith is carrying out some grade revision work, which will have the effect of facilitating the movement of traffic between Port Arthur and Winnipeg. It is expected that the work will be completed this year.

Work on the Fort Garry station in Winnipeg is well advanced. This station will be used by the National Transcontinental Ry. as the terminus of its line from Moncton N.B., and by the G.T. Pacific Ry. as its terminus for the line to the Pacific coast.

The Winnipeg Board of Control was informed, Jan. 12, that a contract had been let to T. Kelly for the construction of the Pembina St. subway. The work will cost about $60,000.

A delegation representing the city council of Brandon, Man., had a conference with the C.N.R. officials at Winnipeg Jan. 12, with respect to the erection of the proposed station and hotel there.

A branch line has been completed into Dundee, Man., a distance of four miles, track being laid in 1909.

On the Oak Point branch a further distance of 36 miles has been graded, and is ready for the track. This it is expected will be laid early this year. Plans have been approved by the Minister of Railways for the revision of the route of this branch.

A line has been completed to St. Rose du Lac, southeast of Lake Dauphin, Man., a distance of 15 miles.

A further distance of 10 miles has been graded on the branch through the Turtle Mountain country, Man.

The branch from Hallboro, Man., has been constructed through Rapid City to the boundary of Saskatchewan, a distance of about 50 miles.

The Saskatchewan Legislature has under consideration a bill authorizing the Government to guarantee C.N.R. bonds for the construction of 575 miles of branch lines, of which 175 miles are to be constructed during next season. These lines include one from Moose Jaw, southeasterly to the provincial boundary, where it will join the branch from Maryfield, Man., about 100 miles; from the Brandon-Regina line westerly and northwesterly to Swift Current, 135 miles; from Humboldt to Melfort, 60 miles; from the Goose Lake branch southward, 60 miles; from the Prince Albert-Battleford line to Crooked Lake, about 60 miles.

The Rossburn branch has been extended from Russell, Man., for 50 miles, and it is proposed to further extend it to a junction with the Winnipeg-Edmonton line at Buchanan, mileage 318 from Winnipeg.

The Thunderhill branch has been extended from the Manitoba boundary for about 10 miles into Saskatchewan. It is proposed to extend this line to a junction with another projected line extending from near Aberdeen on the Winnipeg-Edmonton line to Fenton on the Prince Albert line.

During 1909 the company graded about 165 miles on the line projected from Maryfield near the Manitoba boundary, southern Saskatchewan and southern Alberta, to Lethbridge, and laid steel on 90 miles. The Saskatchewan Legislature proposes to guarantee the company's bonds in respect of the construction of this line through the province. Track was laid during 1909 on a spur line at Bienfait, Sask., 16.4 miles, and connecting with the Maryfield-Lethbridge line.

Track was laid during 1909 on the Goose Lake Branch for a further distance of 55 miles. A train service was put in operation over this branch in Oct., 1909, from Saskatoon to Rosetown, 72 miles. The grading is completed for 25 miles beyond Kindersley, which will be the divisional point on the line to Calgary. The Saskatchewan Government proposes to guarantee the company's bonds for the construction of this line.

During 1909 the company graded, according to a statement made by the Saskatchewan Minister of Public Works, 26.77 miles of the branch from Prince Albert; and the Chief Engineer reported, Jan. 13, that to Dec. 31, 1909, track had been laid on 12.5 miles. This line, it is intended, will be carried on to Battleford, from near the present end of track. A branch will be constructed northwesterly to Crooked Lake, on which the Minister of Public Works recently told the Saskatchewan Legislature that 45.37 miles of grading had been done. This latter line is one of those for which the Saskatchewan Government is asking authority to guarantee a bond issue.

The Saskatchewan Department of Public Works gives the following information respecting the combination railway and traffic bridge at Prince Albert: "This is a steel bridge on concrete piers consisting of five fixed spans of 150 ft. in length and one swing span 260 ft. in length over the navigable channel. The bridge connects Prince Albert with the north bank of the North Saskatchewan river to which point all roads from the north converge. The central portion of the bridge is devoted to the C.N.R. right of way. The highway traffic portion of the bridge consists of two 12 ft. roadway brackets situated on the outside of each truss."

The branch from Vegreville southerly has been completed for 20 miles, and is under construction for a considerable further mileage. It is intended ultimately to connect up this line with the line now under construction from Saskatoon, Sask., to Calgary, Alta., at a point about 80 miles from the latter point.

On the line from Edmonton to Athabasca Landing Alta., a further distance of 22 miles was graded during 1909. Track will be laid on this mileage during the current year. A despatch from Edmonton states that the Alberta Government has received assurances from the company that the line will be completed to Athabasca Landing, a further distance of 36 miles, during this year.

W. Mackenzie, President, reached Edmonton, Jan. 14, on his return from Victoria, B.C., and in the course of an interview stated that work on the main line west will be rushed next season and supplies are being pushed to the front now. The company is also preparing to build into Grand Prairie country next

summer and surveyors are now in the field running preliminary lines. The Alberta government has guaranteed bonds for this section.

With respect to the surveys for the extension of the line westerly from Edmonton to the Pacific coast, B. S. Scott, an engineer in the employ of the Pacific Pass Coal Co., is quoted as stating that the C.N.R. location surveys are being made in the vicinity of the McLeod River, and that the parties are working westerly to the Yellowhead Pass. These surveys are being made for the purpose of securing a route in place of that formerly located, which has been in part taken by the G.T. Pacific Ry.

W. Mackenzie, President; D. D. Mann, Vice President; A. D. Davidson, Land Commissioner, and F. H. Phippen, General Counsel, arrived in Victoria, Jan. 6, for the purpose of completing the agreement with the British Columbia Government for the construction of the section of the line from the western boundary of Alberta to Vancouver. Speaking at a dinner given by the Canadian Club, Jan. 6, Mr. Mackenzie said the C.N.R. had long aimed at reaching the Pacific coast, and now there was every assurance that this policy would be carried into effect. The Premier of British Columbia, who also spoke, said the Government would aim at securing for the people of the province competition with the existing line, and if this competition was secured by the construction of the C.N.R., as he believed would be the case, there would be a complete transformation in the province within five years. A deputation from the Boards of Trade of Vancouver and Victoria waited on the C.N.R. officers, Jan. 11, to discuss rates, and asked that a clause be inserted in the agreement with the Government with regard to freight and passenger rates. The negotiations were brought to a conclusion Jan. 12, and on the following day the Premier said the building of the line was assured.

A report from Vancouver, Jan. 12, states that the entire line between Hope and the Yellowhead Pass, via Kamloops, has been located, with the exception of a stretch of 50 miles between Tete Jaune Cache and the pass. The surveys for this section are being proceeded with under C. F. Hannington. A party under W. K. Gwyer completed a traverse survey of the proposed line through the Fraser River valley between Hope and the New Westminster bridge, about 70 miles. The results, T. H. White, Chief Engineer in charge, is quoted as saying, are very satisfactory. The maximum gradient is 0.4%, and this occurs at only two or three points near Hope. At other points it has been possible to obtain 0.1% gradient. Two small tunnels may have to be driven, one 15 miles below Hope, and the other at Sumas mountain. The first location survey was commenced Jan. 17. (Jan., pg. 43.)

Portland Canal Short Line Ry.—The charter for the construction of this railway is reported to have been secured by Canadian Northern Ry. interests. The line to be constructed will be about 15 miles long, and will connect up some collieries with tidewater on Portland canal, B.C. D. D. Mann, Vice President C.N.R., is reported to be interested in some of the mines which have been developed in the district. (Aug., 1909, pg. 575.)

Victoria and Barkley Sound Ry.—In an interview Jan. 6, W. Mackenzie, President, is reported to have stated that the C.N.R. interests would probably purchase this charter. Negotiations have been in progress between M. B. Carlin, representing the V. and B.S.R., and C.N.R. interests for the sale of the charter. The company has completed surveys for about 40 miles of its projected railway from Victoria. (Aug., 1909, pg. 577.)

Railway Rolling Stock Notes.

The Temiscouata Ry. has received one conductor's van and four box cars from Rhodes, Curry Co., Amherst, N.S.

The Ha Ha Bay Ry., Chicoutimi, Que., will be in the market shortly for two locomotives. J. F. Grenon is Chief Engineer.

The Montreal Locomotive Works has delivered one switching locomotive to the Michigan Central Rd., details of which we have already published.

The C.P.R., between Dec. 15, and Jan. 14, placed orders for the following rolling stock, at its Angus shops, Montreal:—five dining cars, three second class cars, one official car, one box baggage car, four stock cars and 40 box cars.

The I.C.R., between Dec. 12 and Jan. 17, received the following additions to rolling stock:—30 Hart-Otis steel dump cars from the Canadian Car and Foundry Co., Montreal, and six box baggage cars from Rhodes, Curry Co., Amherst, N.S.

The I.C.R., between Dec. 12 and Jan. 17, ordered five first class passenger coaches from the Preston Car and Coach Co., Preston, Ont.; two sleeping cars, three mail cars, two baggage cars, and three colonist cars from the Silliker Car Co., Halifax, N.S.

The 30 coal cars, mentioned in our Nov., 1909, issue as having been ordered from the Dominion Car and Foundry Co., Montreal, by the Intercolonial Ry., are of the Otis bottom drop door type, of 50 tons capacity and are being built under the Hart-Otis Car Co.'s patents.

Owing to an error in the specification supplied to us, of the two locomotives ordered from the Canadian Locomotive Co., Kingston, Ont., by the Quebec Central Ry., they were described in our last issue as moguls, whereas they should have been mentioned as ten-wheelers.

The C.N.R., between Dec. 15 and Jan. 15, received the following additions to rolling stock:—five snow plows from Rhodes, Curry Co., Ltd., Amherst, N.S.; 12 consolidation locomotives from Canadian Locomotive Co., Kingston, Ont., and two second class cars from Preston Car and Coach Co., Preston, Ont.

The C.P.R., between Dec. 15 and Jan. 14, received the following additions to rolling stock:—four M-4 locomotives, five sleeping cars, 68 box cars, 62 flat cars, five vans, 20 stock cars, two flangers, four snow plows, from its Angus shops, Montreal, and one wrecking crane from the U.S.

The 20 coal cars, mentioned in our Nov. issue as having been ordered from the Dominion Car and Foundry Co., Montreal, by the Esquimalt and Nanaimo Ry., are of the Otis bottom drop door type, and are being built under the Hart-Otis Car Co.'s patents. Their dimensions are:—length inside, 36′ 9½″; width inside, 9′ 7″; height 7 ft.; capacity 50 tons.

The G.T.P.R., between Dec. 16 and Jan. 15, received the following additions to rolling stock:—one large rotary snow plow, no. 395075, from Mussens, Ltd., Montreal; 175 box cars, nos. 310125 to 310299, and eight first class coaches, nos. 2018 to 2025, from the Canada Car Co., Montreal; three wide side door baggage cars, nos. 700 to 702, and two wide side and end door baggage cars, nos. 725 and 726, from Rhodes, Curry Co., Amherst, N.S.

In giving dimensions, etc., in our last issue, of the Pacific type locomotive which the Intercolonial Ry. recently ordered from the Montreal Locomotive Works, we quoted from two sources of information. In one case, the weight in working order was given as 198,500 lbs., and on drivers as 133,500 lbs., while in the other case, the weight in working order was given as 187,000 lbs., and on drivers as 126,000 lbs. The former two weights are the correct ones.

The C.N.R., between Dec. 15 and Jan. 15, ordered the following rolling stock:—1,000 box cars, 10 first class cars and two cafe-parlor cars, from the Canadian Car and Foundry Co., Montreal; 300 box cars, 50 stock cars, 25 cabooses and four parlor cars, from the Crossen Car Mfg. Co., Cobourg, Ont.; 300 box cars, three first class cars, five second class cars, and four combination passenger and baggage cars, from the Silliker Car Co., Halifax, N.S.; and 100 logging cars from the Russel Wheel and Foundry Co., Detroit, Mich.

Following are the chief particulars of the 1,000 forty ton steel frame box cars, which the Canadian Car and Foundry Co., Montreal, is building for the C.P.R., mention of which was made in our last issue:—

Length inside	36′ 0″
Width inside	8′ 6½″
Height inside	8′ 0″
Centre to centre of truck	26′ 10″
Length over buffers	38′ 1¼″
Side door opening	5′ 0″
Wheel base of truck	5′ 4″
Top of rail to top of floor	4′ 2″
Top of rail to top of running board	13′ 4¾″
Top of rail to top of brakemast	13′ 10″

The Temiskaming and Northern Ontario Ry. has ordered 12 cinder cars of the Otis bottom drop door type, which are being built under the Hart-Otis Car Co.'s patents, by the Canadian Car and Foundry Co., Montreal. Following are chief particulars:—

Length inside	36′ 9½″
Width inside	9′ 6″
Height inside	3′ 10″
Centre to centre of truck	26′ 0″
Length over end sills	38′ 10″
Height top of rail to top of side	8′ 3″
Air brakes	Westinghouse.
Couplers	Tower, 5″ by 7″
Draft springs	M.C.B. Class G.
Truck wheel base	5′ 6″
Truck bolsters	Simplex.
Side bearings	Susemihl frictionless.
Brake beams	Simplex.
Wheels	Cast iron.
Axles	Steel.
Journals	5″ by 9″
Journal boxes	McCord M. I.

Following are details of the 100 Otis bottom drop door steel ore cars, which are being built, under patents of the Hart-Otis Car Co., Ltd., Montreal, by the Canadian Car and Foundry Co., Montreal, for the Canadian Northern Ontario Ry., as mentioned in our last issue:—

Length inside	19′ 1″
Width inside	9′ 6″
Height inside	4′ 6″
Height from rail to top	8′ 11″
Height from rail to floor	4′ 5″
Centre to centre of truck	11′ 11″
Wheel base of truck	5′ 6″
Centre to centre of coupling	24′ 0″
Height from top of rail to top of sides	8′ 11″
Height from rail to top of floor	4′ 5″
Capacity	50 tons.
Brasses	Canadian Bronze Co.
Journal boxes	McCord & Co.
Bolsters and brake beams	Simplex.
Side bearings	Susemihl.
Couplers	Janney
Air brakes	Westinghouse.
Brake shoes	Steel back.

The three steel snow plows, which were mentioned in our Nov., 1909, issue, as having been ordered by the C.P.R. at its Angus shops, Montreal, are similar to the standard wooden plows in use by the company. The frames for these plows were made by the Dominion Car and Foundry Co. Following are the chief particulars:—

Length	53′ 6″
Width	10′ 0″
Height, at eaves	11′ 6½″
Height at cupola	14′ 10½″
Distance between truck centres	18′ 0″
Front truck wheel base	4′ 2″
Rear truck wheel base	5′ 3″
Frame	Structural steel
Outside sheathing	Steel plate
Inside lining and floor	Wood
Truck bolsters	Simplex
Side bearings	Susemihl.
Air brakes	Westinghouse
Hand brakes	Inside (hung) and outside
Couplers	Simplex steel
Headlight	Pyle National Electric
Weight complete	63,240 lbs.

PROPRIETORS

ARTHUR M. GRANT,
MANAGER

MAINLY ABOUT PEOPLE.

Sir William C. VanHorne spent a short time at his St. Andrews, N.B., home, early in Jan.

Mrs. A. E. Killam, wife of the I.C.R. Bridge Inspector, Moncton, N.B., died there recently.

R. Forget, Montreal, and A. E. Ames, Toronto, have been elected directors of the Duluth-Superior Ry.

W. D. Reid, President Reid Newfoundland Co., was a visitor to New York, during the early part of Jan.

R. W. Reford was elected Second Vice President of the Montreal Board of Trade, by acclamation, Jan. 14.

C. T. Long, at one time Manager of the Northern Navigation Co., of Ontario, died at Calcutta, India, Jan. 10, aged 47.

The engagement is announced of Miss Clara Hays, daughter of the President of the G.T.R. and G.T.P.R., to H. C. Scott.

Sir Thos. G. Shaughnessy, who has been spending a short holiday in Europe, is expected to return to Montreal, Feb. 11.

G. M. Bosworth, Fourth Vice President C.P.R., left Montreal early in Jan., for England, to meet Sir Thos. G. Shaughnessy.

Jas. A. McAvity, a director of T. McAvity & Son, Ltd., manufacturers of railway supplies, etc., St. John, N.B., died there Jan. 16, aged 72.

H. R. Hammond, son of the late H. C. Hammond, President Northern Navigation Co., was married at Winnipeg, Jan. 5, to Miss A. M. Lemon.

W. Magee, formerly chief clerk Department of Marine, Ottawa, died at Ottawa, Jan. 7, aged 70. He retired from active service Apr., 1908.

Miss Margaret Haney, second daughter of M. J. Haney, Contractor, Toronto, was married there, January 6, to Dr. A. H. Spohn, of Penetanguishene, Ont.

Mrs. and Miss Bosworth sailed for England Jan. 14, to join G. M. Bosworth, Fourth Vice President C.P.R., who sailed a week or two previously.

The following ticket agents have become members of the Canadian Ticket Agents Association recently:—E. C. Higginson, C.N.Q.R., Hawkesbury, Ont.

R. Laurence, who died in Toronto, Jan. 20, aged 71, was in early life engaged in contracting work and constructed a section of the old Northern Ry.

W. D. Matthews, President St. Lawrence & Chicago Steam Navigation Co., left Toronto Jan. 5, with Mrs. and Miss Matthews, for a Mediterranean trip.

J. McCullough, father-in-law of J. W. Norcross, Managing Director Montreal Steamship Co., died at the latter's residence in Toronto, Jan. 4, aged 75.

A. R. Creelman, K.C., General Counsel C.P.R., and the Misses Creelman, returned to Montreal, Jan. 12, from Bermuda, where they had been spending a few weeks.

W. R. Baker, Secretary, and Assistant to the President C.P.R., and Mrs. Baker, were among the Governor General's guests at Government House, Ottawa, Jan. 12.

B. D. D. Rorison, an engineer employed on the construction of the Detroit River tunnel, fell into a shaft at the approach on the Canadian side, Jan. 8, and was instantly killed.

W. Downie, General Superintendent C.P.R. Atlantic Division, St. John, N.B., was presented with an address by officials and employes of the division recently on the occasion of his wedding.

F. H. McGuigan, of the F. H. McGuigan Construction Co., Toronto, and formerly Fourth Vice President G.T.R., has been elected President of the St. Lawrence Power Co., Cornwall, Ont.

W. Stitt, General Passenger Agent C.P.R., Montreal, was one of the principal speakers at the recent annual dinner of the Boston Railway and Steamship Agents' Association in Boston, Mass.

Lord Strathcona has contributed $5,000 towards a fund of $100,000, which is being raised to meet the expenses of the proposed Eucharistic Congress to be held in Montreal, towards the end of this year.

Dr. J. Richardson, who died in Toronto, Jan. 15, was father of Dr. W. A. Richardson who has charge of the medical work in the Grand Trunk Pacific Ry. construction camps west of Edmonton, Alta.

F. E. Barbour, who recently resigned the General Passenger Agency of the Rutland Rd. to enter commercial life, has been elected an honorary member of the Eastern Canadian Passenger Association.

E. H. Pepper, formerly Toronto agent Niagara, St. Catharines & Toronto Navigation Co., died, Jan. 24, at Saskatoon, Sask., having removed to the northwest on account of ill health. He was buried at St. Thomas Ont.

M. McGlade, a C.P.R. locomotive engineer, was fined $100 and costs, or six months' imprisonment, by the Police Magistrate at Perth, Ont., Jan. 7, for being intoxicated while in charge of a freight train.

M. Leggat, who died at Hamilton, Ont., Jan. 2, aged 81, was, at various times, associated with the Hamilton and Northwestern Ry., and the Hamilton Steamboat Co., for some years being President of the latter.

C. H. F. Plummer, Manager Canadian Lake Transportation Co., Toronto, died there, Jan. 3, aged 32, after an illness lasting about three months, during which he underwent two operations for appendicitis.

D. B. Dover, for 14 years agent G.T.R., at Berlin, Ont., was presented with $500 and a signet ring by a number of residents recently, on his leaving for Winnipeg, where he has been appointed local freight agent G.T.P.R.

J. D. Barnett, formerly Master Mechanic in charge of the G.T.R. shops at Stratford, has been re-elected a member of the Water Commission for Stratford. He was Chairman of the commission during the past year.

R. Wilson, roundhouse foreman I.C.R., Truro, N.S., was presented with a gold watch, chain and locket by the employes recently, for his work in connection with the establishment of a school of instruction for employes there.

A Steele, General Superintendent Quebec Central Ry., died at Sherbrooke, Que., Jan. 10, suddenly, while engaged in his office, aged 65. He was one of the company's oldest employes, and had been General Superintendent since 1875.

W. Gillespie was presented recently by the G.T.R. car shop employes at Stratford, Ont., with a fur-lined coat on the occasion of his transfer from the position of general car foreman there, to a similar position in the company's shops at Ottawa.

G. H. Webster, consulting engineer, Vancouver, and formerly Division Engineer Pacific Division C.P.R., has been appointed Consulting Engineer for the Port Alberni extension of the Esquimalt & Nanaimo Ry. on Vancouver Island, B.C.

A. L. Lyle was presented recently with a purse of gold by the employes on giving up the position of foreman of the Central Vermont Ry. boiler shop at St. Albans, Vt. He has returned to Stratford, Ont., where his wife has been ill for some time.

H. Wallace, recently appointed General Agent C.P.R., Fort William, Ont., was presented with an address, accompanied by a silver and pearl dessert set, a cut glass bowl and fern centre piece, Jan. 1, by the local freight department staff, Winnipeg, where he was Assistant Local Freight Agent.

A. A. Wiley, President of the Canadian Northwest Steamship Co., which owns the s.s. Neebing, died at the Prince George Hotel, Toronto, Jan. 15, of pneumonia, after four days' illness, aged 50, and was buried at Port Arthur, Ont. He was the surviving partner of T. Marks & Co., steamship and real estate owners.

C. W. Carey, Air Brake Instructor, C.P.R., Montreal, and T. Hay, C.P.R. Claims Agent, North Bay, Ont., were two of those who lost their lives in the accident on the C.P.R. at Webbwood, Ont., Jan. 21, when the train left the track at the entrance to the bridge across the Spanish River. The latter died Jan. 27, as the result of injuries received.

G. E. Graham, who has been appointed Superintendent District 2, C.P.R. Pacific Division, Vancouver, B.C., was presented with a silver service by the business men of Port Arthur, and an illuminated address and $300 by the business men of Fort William, Ont., recently, on his leaving the dual ports, where he had been Superintendent C.P.R. Terminals.

R. Seeman, of London, Eng., who was largely interested in land development in the western provinces, and who acquired a large tract of land from the Manitoba and Northwestern Ry., of which he subsequently disposed, died recently, at St. Boniface, Man. D. B. Hanna, Third Vice President C.N.R., acted as agent for him there for some time.

G. Robinson, a well known C.P.R. agent, recently retired, died suddenly in Vancouver, B.C., Jan. 8, aged 60. He was first employed by the C.P.R. as chief clerk in the Auditor's office, Montreal, and was subsequently agent at Quebec, Que., Morden, Reaburn, Otterbourne, Stonewall, Emerson and Selkirk, Man. Two of his sons are at present in C.P.R. employ and one with the C.N.R.

C. Hartigan, recently appointed General Passenger Agent, Rutland Rd., St. Albans, Vt., and formerly General Agent, Passenger Department, New York Central Lines, Montreal, was entertained to dinner, Jan. 12, by officials of various lines centred in Montreal. In the course of the evening a set of cut glass table ware and a bouquet of roses were presented to Mrs. Hartigan on behalf of Montreal transportation men, by W. E. Davis, Passenger Traffic Manager G.T.R.

T. B. Hawson, who died in New York, Dec. 31, aged 71, was for some years in the G.T.R. service. He came to Canada in 1861, from England, with W. Wainwright, now Second Vice President G.T.R., where both had been in the Manchester, Sheffield and Lincolnshire Ry. service. He was general Auditor of the G.T.R., and was subsequently connected with one of the fast freight lines, with headquarters in Chicago, Ill. He retired from active service some years ago.

M. M. Reynolds, who has been appointed Third Vice President G.T.R., was for 11 years prior to Jan., 1892, Auditor Mexican National Rd., Mexico, at which date he was appointed General Auditor Central Vermont Ry., St. Albans, Vt., which position he held for a number of years, subsequently returning to Mexico, on the amalgamation of several Mexican railroads under the name of the National Lines of Mexico, as Comptroller. He was appointed Fifth Vice President G.T.R., and Third Vice President G.T.P.R., in Apr., 1908, the former position being held to Jan. 7, 1910.

real, was born Feb. 13, 1864, and was educated in the public schools, St. Louis, Mo. He entered railway service in 1885, with the Receivers of the Wabash, St. Louis and Pacific Ry., as clerk in the General Manager's office, since when he has been, Dec. 1, 1890, secretary to General Manager Wabash Rd.; July 1, 1896, secretary to General Manager G.T.R.; Jan. 1, 1901, Assistant to General Manager G.T.R.; Mar. 15, 1901, Vice President and General Manager Central Vermont Ry.; Mar. 17, 1902, to Jan. 7, 1910, Assistant to Second Vice President and General Manager G.T.R.

A. W. Campbell, who has been appointed Deputy Minister of Railways and Canals and Chairman Government Railways Managing Board, was born at Wradsville, Ont., in 1863, and was admitted to membership in the Canadian Society of Civil Engineers in 1888. He was appointed city engineer of St. Thomas, Ont., in 1891, and was for some years one of the editors of the Municipal World. From 1896 to 1902 he was Provincial Commissioner of Highways, and in the latter year was appointed Deputy Minister of Public Works for Ontario, which position he held to the date of his present appointment. He has also acted as supervising engineer of the Temiskaming & Northern Ontario Ry. construction.

Lord Strathcona has contributed $25,000 to the emergency fund which was started recently to deal with an epidemic of typhoid fever at Montreal. He has also offered to contribute $100,000 toward the cost of a water filtration scheme, should such be adopted by the city council. Among other subscribers to the fund are: J. Ross, ex-President Dominion Coal Co., $1,000; Sir Wm. C. VanHorne, Chairman C.P.R. Board, $500; Hugh Paton, President Shedden Forwarding Co., $500; H. and A. Allan, $500; C. M. Hays, President and General Manager G.T.R., $250; Sir Thos. G. Shaughnessy, President C.P.R., $1,000; C. R. Hosmer, director C.P.R., $1,000; Mrs. Hosmer, $500; A. A. Allan, $50.

W. H. Biggar, K.C., who has been appointed General Counsel G.T.R. and G.T.P.R., at Montreal, was born at the Carrying Place, near Trenton, Ont., Sept. 19, 1852, and was educated at Trenton Grammar School and Upper Canada College. He began the study of law in 1875, after having engaged for a short time in mercantile pursuits, and was called to the bar in 1880. He became associated with John Bell, Q.C., then General Counsel G.T.R., in general practice in 1881, and was appointed Assistant General Counsel G.T.R., at Montreal, Jan., 1903, and General Solicitor, Dec., 1904. He was elected Mayor of Belleville, Ont., in 1887, represented West Hastings in the Ontario Legislature from 1890 to 1897, and was made a Q.C. in 1900.

Dr. H. T. Bovey, F.R.S., has resigned the Rectorship of the Imperial College of Science and Technology, England. Before receiving this last mentioned appointment, he was for many years resident in Canada, having been appointed Professor of Civil Engineering and Applied Mechanics at McGill University, Montreal, in 1887. At that time the engineering courses in the University were managed as a branch of the Faculty of Arts, and were without buildings or equipment. The following year, however, a department of applied science was constituted, with Professor Bovey as dean, and to his management and advice the science department owes its development. He was one of the founders of the Canadian Society of Civil Engineers.

E. H. Fitzhugh, who has been appointed First Vice President G.T.R., was born in Montgomery County, Mo., Feb. 1, 1853. He entered railway service in 1873, as clerk in the Master Car Builder's office, St. Louis, Kansas City and Northern Ry., since when he has been consecutively, in car mileage office, same road; to 1889, chief clerk to Superintendent, Western Division, Wabash, St. Louis and Pacific Ry.; 1889 to Jan., 1896, Master of Transportation, Wabash Rd., successors to the W., St. L. and P. Ry., Moberley, Mo.; Jan., 1896, to May, 1899, Superintendent Middle Division G.T.R. Toronto; May, 1899, to Dec., 1904, Vice President and General Manager Central Vermont Ry., St. Albans, Vt.; Dec., 1904, to Jan. 7, 1910, Third Vice President G.T.R., Montreal, and Vice President Central Vermont Ry.

G. McL. Brown, who has been appointed European Manager C.P.R., London, Eng., was born at Hamilton, Ont., Jan. 29, 1865, and entered railway service in 1882, since when he has been sucessively: 1882 to 1885, freight department Northern and Northwestern Ry.; 1885 to 1887, Superintendent's office and other departments G.T.R.; Sept., 1887, to 1902, C.P.R. service at Vancouver as ticket agent, district passenger agent, and executive agent; July, 1902, to Nov., 1905, Superintendent Dining, Sleeping and Parlor Cars and News Service, Montreal; Nov., 1905, to Dec., 1908, General Passenger Agent C.P.R. Atlantic Steamship Lines, Montreal, and from Dec., 1908, General Traffic Agent, London, Eng., in which position he will also continue to act.

R. Armstrong, who has been appointed Superintendent C.P.R. Terminals at Fort William, Ont., was born at Kingston, Ont., Jan. 27, 1865, and entered railway service July 4, 1886, since when he has been, to June 1, 1894, consecutively, operator and agent at Calabogie Ont.; Agent at Lavant, Ont.; ticket and billing clerk at Kingston, Ont., and Agent at Renfrew, Ont., for the Kingston and Pembroke Ry. After two years in private business, he was from June 9 to 30, 1896, operator on the C.P.R. at Weyburn, Sask.; for four years, operator and agent Mountain Section, Pacific Division C.P.R.; two years relieving agent and dispatcher Kootenay Section; four years yard agent, Vancouver; one year agent Vancouver Wharf; and to June 1, 1908, agent, same road, Vancouver; June 1, 1908, to Dec. 31, 1909, General Agent same road, Fort William, Ont.

W. Downie, General Superintendent C.P.R. Atlantic Division, St. John, N.B., whose portrait appears on the first page of this issue, was born at Rock Currie, Ireland, Nov. 12, 1850, and entered railway service 1869, since when his record has been: 1869 to 1870, telegraph messenger Northern Ry. of Canada; 1870 to 1871, telegraph operator same road; 1871 to 1876, train dispatcher same road; 1876 to Oct., 1879, Assistant Superintendent same road; Oct., 1879, to July, 1886, Chief Train Dispatcher Northern and North Western Ry.; July, 1886, to May, 1887, Assistant Superintendent Pacific Division C.P.R. Port Moody, B.C.; May, 1887, to 1897, Assistant Superintendent Pacific Division C.P.R., Vancouver, B.C.; 1897 to Mar., 1901, Superintendent C.P.R. at Vancouver, B.C.; Mar., 1901, to May, 1903, Superintendent C.P.R. lines and steamers in the Kootenay district, Nelson, B.C. He was appointed to his present position in May, 1903.

W. Wainwright, who has been appointed Second Vice President G.T.R., was born in Manchester, Eng., April 30, 1840, and entered railway service Jan., 1858, with the Manchester, Sheffield and Lincolnshire Ry. (now the Great Central Ry.) Manchester, serving successfully as junior clerk Chief Accountant's office, senior clerk same office, and secretary to Assistant General Manager and General Manager. In 1862 he joined the staff of the G.T.R., serving one year as senior clerk in Accountant's office; three years as Managing Director's Secretary; six years as senior clerk to Managing Director and in charge of the car mileage department; eight years and five months General Passenger Agent; May, 1881 to Jan., 1891, Assistant Manager; Jan., 1891 to May 1896, Assistant General Manager; Apr., 1883, to Sept., 1895, also General Manager North Shore Ry.; May, 1896, to July, 1907, General Assistant; Dec., 1900, to July, 1907, also Comptroller; July, 1907, to Dec. 31, 1909, Fourth Vice President. He is also Second Vice President G.T.P.R.

Archer Baker, European Manager C.P.R., London, Eng., whose death occurred Jan. 15, from bronchial pneumonia, after an illness of a few days, was born at York, Eng., June 21, 1845. He entered railway service, Sept. 24, 1869, since when he had been, to Nov. 1870, clerk to President Missouri Valley Rd; Nov., 1870, to Mar., 1871, clerk to Superintendent Brockville and Ottawa Ry.; Mar., 1871, to July, 1873, Accountant same road and Canada Central Ry.; July, 1873, to Dec., 1876, Secretary and Treasurer same companies; Dec., 1876, to Apr., 1878, Secretary and Treasurer Brockville and Ottawa Ry.; Apr. to July 1878, Assistant General Manager same road and Canada Central Ry.; July, 1878, to June, 1881, General Manager Canada Central Ry.; June, 1881, to May, 1885, General Superintendent C.P.R. eastern Division; May, 1885, to Aug., 1904, European Traffic Agent C.P.R., London, Eng.; Aug., 1904, to July, 1905, European Traffic Manager, same road; and from July 1, 1905, European Manager. The funeral took place at Eltham, Kent, where he resided, and was attended by Sir Thos. G. Shaughnessy and other officials. On instructions, flags were flown at half mast at every C.P.R. chief point from the European continent to Hong Kong He leaves a widow and one son, A. D. Baker, who is in the C.P.R. Stores Department, Toronto, also two brothers, W. R. Baker, Secretary, and Assistant to the President, Montreal, and F. Baker, Paymaster C.P.R. Pacific Division, Vancouver, B.C.

Randolph Macdonald, who died at Toronto, Jan. 21, was born at Drummondville, Ont., Mar. 30, 1849, and was educated at Galt Grammar School, and at Hellmuth College, London, Ont. He went into railway service in connection with the construction of the Cleveland and Mahoning Branch Rd., in Ohio. Then he was associated with his father and brother in a contract on the Jamestown and Franklin Ry., in Pennsylvania. In 1870 he became a partner with his brother under the firm name of W. E. Macdonald & Co. They built sections of the Intercolonial Ry., sections 1 and 2 of the Lachine canal, the Wellington basin near Montreal, and the Fenelon Falls part of the Trent Valley canal. In 1887 he was awarded the Don improvement contract by the city of Toronto and continued this work in partnership with Alex. Manning under the firm of Manning & Macdonald. From 1891 to 1903 they built the Port Dalhousie harbor works the G.T.R. Midland Division to Campbellford, Ont., the Toronto Esplanade works, the C.P.R. section of the Don River, the Toronto Belt Line Ry., section 13 of the Soulanges canal, at Coteau Landing, and section 9 at Coteau du Lac, these two sections costing $1,200,000, and the St. Lawrence River improvements at Cornwall, Ont. Mr. Macdonald bought out Mr. Manning's interests and carried out a harbor contract at Three Rivers, Que., and in 1907-08, built a 40-mile section of the Walkerton and Lucknow Ry. for the C.P.R., from Proton to Walkerton, Ont., under the firm of Randolph Macdonald Co., which at present holds contracts for the Rosedale section and Rice Lake division of the Trent Valley canal, and for the Cobourg harbor works, Ont.

PROVINCIAL STEEL CO., LTD.

COBOURG, ONT.

National Transcontinental Railway.

Reports from New Brunswick, Jan. 5, stated that track had been laid west to Nappadoggan Lake; that work was then going on, and would be continued throughout the winter, unless the weather became too severe. On the section from Moncton westerly for 50 miles, work was closed down Jan. 5. On this section only 10 miles more track has to be laid to complete it. Ballasting will be commenced early in the spring, and it is expected to have everything fully completed by Aug. 18, when the line has to be handed over to the original contractor, the G.T. Pacific Ry. Co.

Replying to a question in the House of Commons, Jan. 19, the Minister of Railways stated there was no record of the amounts claimed by the contractors on District A, but the amounts returned by the engineers, from Dec. 13, 1908, to Jan. 13, 1910, under the terms of the respective contracts, and paid by the Commissioners were shown in the statement following:—

	Contract	Name of Contractor	Solid Rock	Loose Rock	Common Excavation.	Total Amount Paid.
			$ cts.	$ cts.	$ cts.	$ cts.
1.	Mileage 0-50 from Moncton,	Grand Trunk Pacific Ry.	49,963 50	294,851 21	10.176 30	894,732 22
2.	Mileage 50 to 58	J. W. McMannus & Co.	26,500 50	12,971 25	1,053 68	153,227 55
3.	Mileage 58 to 164	Grand Trunk Pacific Ry.	47,813 63	99,425 70	33,608 97	454,714 35
4.	" " "	Grand Trunk Pacific Ry.	514,435 58	228,989 84	39,443 04	1,113,723 82
5.	Mileage 164 to 195	Willard Kitchen & Co.	549,937 40	71,955 14	1,879 20	1,235,677 62
6.	Mileage 195 to 255	Lyons & White	99,623 25	110,667 60	18 850 05	519,171 51

J. D. McArthur, contractor, stated in Ottawa recently that the section of the line between Winnipeg and Lake Superior Jct., Ont., would be handed over to the Commisioners July 1. Considerable ballasting and incidental work has still to be done.

Quebec Bridge.—The contract for the clearing of the debris of the collapsed uncompleted central span of the projected bridge near Quebec, has been let by the Department of Railways to Capt. Koenig, the work to be completed by Mar. 1. The steel work overhanging the shore piers, and in the bed of the river where it fell, has to be removed. Work was commenced clearing away the steel on the south side of the river Jan. 4.

In the meantime M. P. and J. T. Davis are engaged in getting ready all their material and plant for the changes in piers. It will be some little time before they will be able to get at the piers themselves, as the fallen steel work has first to be cleared away.

The alternative plans prepared by the Commission of Engineers for the reconstruction of the bridge, have been on exhibition at the offices of the Commission, in Montreal, since Jan. 3, to enable representatives of bridge building firms to obtain the necessary data to prepare for tendering. It is expected that it will take two or three months for the plans to be thoroughly examined and prices worked out.

Replying to questions in the House of Commons, Jan. 17, the Minister of Railways said the total cost of the commission in connection with the inquiry into the collapse of the Quebec bridge was $31,765.44; and the total cost to Dec. 31, 1909, of the board of engineers in preparation of plans, etc., was $123,469.03.

Quebec Terminal Station.—S. N. Parent, Chairman National Transcontinental Ry. Commission, in an interview in Quebec, Jan. 8, said that owing to the recent fire which destroyed the Harbor Commissioners' properties, a change of plan in connection with the proposed terminal station had been decided on. In connection with this matter he decided to consult the representatives of the various interests concerned. The building of the station and its approaches would necessitate the expenditure of about $5,000,000. A proposal made is that the property owned in the city by the Richelieu and Ontario Navigation Co. be acquired as part of the terminals site.

GRAND TRUNK PACIFIC RY.

The Board of Railway Commissioners has issued an order allowing the company to withdraw its filed plans for right of way within the Winnipeg city limits. These plans were filed before the arrangement was made for the use by the G.T.P.R. of the joint terminals at Fort Garry, now being constructed by the Canadian Northern Ry.

H. H. Brewer, General Superintendent, returned to Winnipeg from a trip of inspection over the line, Jan. 10. He stated that 40 miles of steel had been laid west of the Pembina River, and if the weather continued favorable, track would be laid to Edson, the crossing of the Macleod River, by the end of Jan. Edson is 65 miles west of the Pembina River, and 130 miles west of Edmonton. The crossing of the Pembina River is at Entwhistle, the bridge being 900 ft. long, and 213 ft. above water level. As soon as track has been laid to the Macleod River, material will be rushed forward for the construction of the bridge, and to enable the grading for the next section of 150 miles to Tete Jaune Cache to be pushed forward.

With respect to the line under construction easterly from Prince Rupert, it was reported Jan. 9, that it was expected to start tracklaying by the end of Feb. Steel for tracklaying and bridge building is being delivered, and rolling stock is on the way. A tunnel about 400 ft. long is being drilled near Ominica, on the Upper Skeena River, and at all other sections of the line inland, the rock work is being pushed ahead. Contracts for clearing the right of way to Moricetown, 30 miles up the Bulkley Valley, have been let, the work to be completed during the winter.

Speaking recently in the Saskatchewan Legislature, the Minister of Public Works said the Government had already guaranteed the bonds of the G.T.P. Branch Lines Co. for the construction of about 200 miles of branch lines in the province. Of these, about 50 miles had been completed, and some miles of grading had been done on which track had not been laid. Unavoidable delays had arisen in connection with the starting of work on the line from Battleford to Biggar, which should have been completed in 1909.

The Saskatchewan Legislature has under consideration a bill authorizing the Government to guarantee the G.T.P. Branch Lines Co.'s bonds for the construction of 375 miles of branch lines in the province, of which 50 miles must be constructed during next season. The lines to be constructed are:—From Regina southeasterly to the International boundary, about 150 miles; from Waterous to Prince Albert, about 110 miles; and from Moose Jaw northwesterly for about 110 miles.

With reference to the projected line from Prince Albert and Waterous, Sask., we are advised that the surveys have not been completed, and the company has not yet started to purchase the right of way. The construction of the line will involve the erection of a bridge over the south branch of the Saskatchewan at St. Louis. It is not certain whether this line will be constructed this year or not.

A Winnipeg press report states that right of way has been purchased for the projected line from Regina, southerly to the International boundary. This line will be a continuation of the branch now under construction northerly and southerly from Melville. It is expected that construction will be started this year.

The Minister of Railways has approved of general route plans for the following branch lines:—From Apollo, on the main line west of Pembina River, crossing southwesterly towards the headwaters of the Little Pembina River, Alta. (Jan., pg. 31.)

G.T.R. Betterments, Construction, Etc.

Sherbrooke Yards.—We are advised that the company does not contemplate making any change in its yards at Sherbrooke, Que., and that it is not proposed to make any changes, as stated in press reports, involving the abandonment of the divisional points at Island Pond, Vt.

Montreal East End Improvements.—R. S. Logan, Assistant to the President, stated Jan. 8, that the company proposed to seek from the city council power to close up the ends of Lafontaine, De Montigny and Logan Streets, as it was in negotiation for the acquisition of the land fronting on these streets. So far as level crossings are concerned, Mr. Logan added that there would be only one of these in a street which is comparatively little used, and even now the engineers were working on a plan which would obviate even this level crossing. In the outlying districts where there are farm lands on either side it might be found necessary in one or two instances to overcome grades with crossings, but so far as the thickly settled portions of the city were concerned, there was no intention of having level crossings. Some part of the work projected is in connection with the Lachine, Jacques Cartier and Maisonneuve Ry.

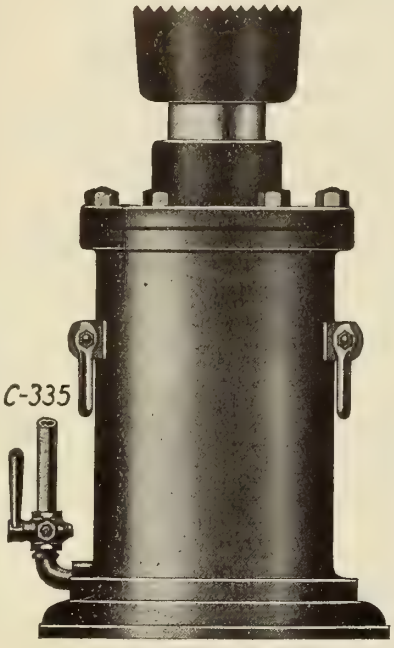
Ottawa Station and Hotel.—At a meeting of directors in London, Eng., it was reported that it was expected to have the new passenger station at Ottawa completed this year, and that good progress would be made with the erection of the Chateau Laurier Hotel near the station.

Kingston, Ont.—E. H. Fitzhugh, Vice President, met the Kingston Board of Trade, Jan. 12, and discussed the question of better facilities. He stated that with the construction of the Kingston, Smith's Falls and Ottawa Ry., which it was hoped would be undertaken at an early date, Kingston would be made a divisional point, and it would then be possible to make improvements. He could not promise that the construction of the line would be started this year.

London, Ont., Improvements.—G. A. Mountain, Chief Engineer Board of Railway Commissioners, and E. L. Cousins, Resident Engineer, Middle Division, G.T.R., were in London, Jan. 13, and made an inspection of the company's lines in the city for the purpose of preparing a preliminary report respecting level crossings. The elimination of the level crossings brings up the question of the elevation of the tracks, which has been agitated for some years. (Jan., pg. 47.)

Dominion Subsidy Contracts.—Agreements have been entered into between the Dominion Government and the following companies under the act granting aid to certain railways:—Dec. 14. Tobique and Campbellton Ry., for a line from the C.P.R. Tobique Valley line at Plaster Rock, N.B., to Riley Brook, 28 miles. Jan. 10. Quebec and Lake St. John Ry., for a line from mileage 35 of the La Tuque branch, on the River St. Maurice, to La Tuque Falls, Que., not exceeding five miles.

Compressed Air-Jacks



For short lifting around car and repair shops and manufacturing plants.

Rand Jacks are built in several styles from 4 to 30 thousand pounds capacity.

All of the latest construction, fitted with safety check valves for holding the load if the hose becomes detached or burst.

We carry in stock or can make quick delivery of all compressed air appliances and Rand Air Compressors.

New Ways To The Woods

The six railways of the Canadian Northern Railway system offer the widest choice of new territories for the fisherman, canoeist, camper and hunter.

IN NOVA SCOTIA the Halifax and Southwestern Railway, from Halifax to Yarmouth, serves seven hundred miles of ocean shore; two score generous trout streams and the famous Rossignol lake system.

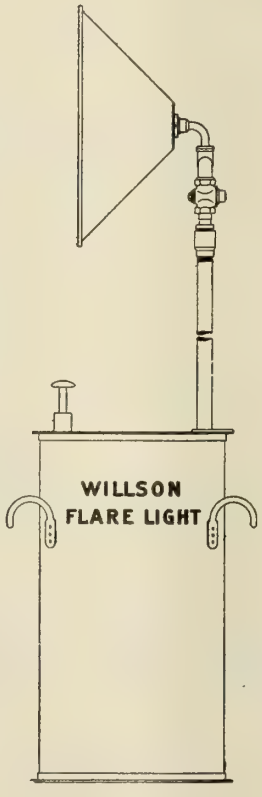
IN CAPE BRETON, sixty miles of the Gulf of St. Lawrence shore is skirted by the Inverness Railway, which gives easy access to the Margaree valley—far-famed for its salmon fishing.

IN QUEBEC, the Canadian Northern, Quebec and Quebec, and Lake St. John Railways give easy access to the Saguenay, Upper St. Maurice, the Batiscan, the La Tuque game and fish preserve, and the valleys of the St. Lawrence and Ottawa. All good fishing waters, abounding with ouananiche, trout and bass.

IN ONTARIO, the entire range of the Muskokas, the Georgian Bay hinterland, the French, Pickerel, Still and Maganetawan rivers—well stocked with bass, mascalonge, and pickerel, are best reached by the Canadian Northern Ontario Railway.

IN WESTERN ONTARIO and the prairie provinces, the Canadian Northern Railway serves over three thousand miles of splendid territory. The Rainy River section follows the old Dawson fur trail, which is the finest canoe trip on the continent. There is an amplitude of sporting opportunities for the camera hunter, the fisherman and canoeist.

For literature and general or special information inquire of the information Bureau, Canadian Northern Railway System, Toronto.



THE WILLSON PORTABLE FLARE LIGHT

Brilliant Powerful Economica

Specially adapted for use in all kinds of construction work.

Its candle power varies from 1,000—8,000 according to the size of apparatus. The cost of 8,000 candle power is less than 6c. per hour.

O'Brien & Fowler, Contractors to the G.T.P., say:—

"During the past two or three years we have used various kinds of lights, but none of them have proved the equal of yours, either in the matter of economy or usefulness. The effectiveness of your light is beyond dispute."

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Board of Railway Commissioners.—J. H. Shinnick, heretofore brakeman on the G.T.R., Brockville, Ont., has been appointed an inspector in the Operating Department.

Canada Atlantic Transit Co.—See Grand Trunk Ry.

Canadian Northern Ry.—W. I. Munroe has been appointed Chief Dispatcher, District 3, Dauphin, Man., vice C. D. Fisher promoted.

Canadian Pacific Ry.—E. E. Lloyd, heretofore chief clerk to Auditor of Stores and Mechanical Accounts, has been appointed Assistant Auditor of Stores and Mechanical Accounts. Office, Montreal.

H. C. Grout, heretofore Assistant Superintendent District 3, Ontario Division, West Toronto, has been appointed Assistant Superintendent District 1, Ontario Division, vice D. Carmichael transferred. Office, Havelock, Ont.

D. S. Taylor, heretofore Locomotive Foreman at Port Burwell, Ont., has been appointed Locomotive Foreman at Havelock, Ont., vice E. J. Murphy transferred.

F. G. Martyn, heretofore Assistant Superintendent District 2, Ontario Division, London, Ont., has been appointed Assistant Superintendent District 3, Ontario Division, vice H. C. Grout transferred. Office, West Toronto.

E. J. Murphy, heretofore Locomotive Foreman at Havelock, Ont., has been appointed Assistant Foreman at West Toronto, vice W. H. Kirkby transferred.

D. Carmichael, heretofore Assistant Superintendent District 1, Ontario Division, Havelock, Ont., has been appointed Assistant Superintendent District 2, Ontario Division, vice F. G. Martyn transferred. Office, London, Ont.

W. H. Kirkby, heretofore assistant foreman at West Toronto, has been appointed Locomotive Foreman at Port Burwell, Ont., vice D. S. Taylor transferred.

H. Wallace, heretofore Assistant Local Freight Agent, Winnipeg, has been appointed General Agent at Fort William, Ont., vice R. Armstrong promoted.

A. G. Hebb, heretofore road foreman, has been appointed District Master Mechanic, District 2, Central Division. Headquarters, Winnipeg. This is a new position.

G. Self has been appointed Assistant Local Freight Agent, at Winnipeg, vice H. Wallace promoted.

L. Fisher, heretofore Road Foreman, has been appointed District Master Mechanic, District 4, Central Division. Headquarters, Souris, Man. This is a change in title only.

T. F. Patterson, heretofore Locomotive Foreman at Kenora, Ont., has been appointed District Master Mechanic at Moose Jaw, Sask., vice L. E. W. Bailey assigned to other duties.

F. D. Warner, heretofore Locomotive Foreman at Field, B.C., has been appointed night foreman at Revelstoke, B.C.

G. McL. Brown, heretofore General Traffic Agent, London, Eng., has been appointed European Manager, vice Archer Baker deceased. Office, London, Eng. He will continue in charge of traffic matters.

E. J. Armstrong, heretofore agent at Manchester, Eng., has been appointed Travelling Freight Agent, with office at 62 Charing Cross, London, Eng., reporting to the General Freight Agent there. The Manchester, Eng., office has been closed. All correspondence hitherto addressed there should be sent to 24 James St., Liverpool, Eng.

Central Vermont Ry.—See Grand Trunk Ry.

Dominion Atlantic Ry.—R. U. Parker, heretofore acting General Passenger Agent, has been appointed General Passenger Agent. Office, Kentville, N.S.

W. J. Johnson has been appointed Assistant Marine Superintendent.

Great Northern Ry.—F. Bell, heretofore Superintendent St. Cloud and Fergus Falls Division, Melrose, Minn., has been appointed Assistant General Superintendent Eastern Division. Office, St. Paul, Minn.

M. Nicholson, heretofore Superintendent Butte Division Great Falls, Mont., has been appointed Superintendent St. Cloud and Fergus Falls Division, vice F. Bell promoted. Office, Melrose, Minn.

C. O. Jenks has been appointed Superintendent Butte Division, vice M. Nicholson transferred. Office, Great Falls, Mont.

Grand Trunk Ry.—E. H. Fitzhugh, heretofore Third Vice President, has been appointed First Vice President.

W. Wainwright, heretofore Fourth Vice President, has been appointed Second Vice President.

M. M. Reynolds, heretofore Fifth Vice President, has been appointed Third Vice President.

R. S. Logan, heretofore Assistant to the Second Vice President and General Manager, has been appointed Assistant to the President.

W. H. Biggar, K.C., heretofore General Solicitor, has been appointed General Counsel. Office, Montreal. The office of General Solicitor is abolished. All reports, etc., formerly addressed to the General Solicitor, will, in future, be addressed to the General Counsel.

M. K. Cowan, K.C., heretofore Assistant Solicitor, has been appointed Solicitor. Office, Montreal.

H. M. Baker has been appointed Commercial Agent G.T.R. Portland route, and Central Vermont Ry., New London route, and will also represent the National Despatch Fast Feight Line, Great Eastern Fast Freight Line and Canada Atlantic Transit Co. Office, 82 Wall St., New York.

F. G. Bement has been appointed Trainmaster districts 25, 27 and 28, vice O. F. Clark, transferred. Office, Durand, Mich.

O. F. Clark, heretofore Trainmaster, Durand, Mich., has been appointed Trainmaster District 29 and Pontiac, Oxford and Northern Ry. Office, Pontiac, Mich.

The following agents have been appointed:—Berlin, Ont., J. Milhausen; Walkerton, Ont., N. J. Dore; St. Polycarpe, Que., J. A. Francoeur; Greenfield, Ont., F. O. Parent; Admaston, Ont., G. F. Pepper; Rock Lake, Ont., J. T. Boss.

Grand Trunk Pacific Ry.—W. H. Biggar, K.C., heretofore General Solicitor, has been appointed General Counsel. Office, Montreal. The office of General Solicitor has been abolished.

D'Arcy Tate, heretofore Assistant Solicitor, has been appointed Solicitor. Office, Winnipeg.

D. B. Dover, heretofore agent G.T.R., Berlin, Ont., has been appointed local freight agent G.T.P.R., Winnipeg.

Government Railways.—A. J. Tingley has been appointed Special Agent I.C.R. and P.E.I.R. Office, Moncton, N.B.

Intercolonial Ry.—See Government Railways.

Michigan Central Rd.—F. E. Robson has been appointed General Attorney, with charge of litigation and of such other matters as may be referred to him by the Vice President or the General Counsel. Assistants in the general offices will report to him. Office, Detroit, Mich.

J. W. Dohany has been appointed Attorney at Detroit, Mich. He will perform such duties as may be assigned to him by the General Counsel or the General Attorney.

T. E. Eisman has been appointed Chief of Tariff Bureau. Office, Detroit, Mich.

R. M. Huddleston has been appointed General Auditor. Office, Chicago, Ill.

National Despatch Fast Freight Line, Great Eastern Fast Freight Line.—See Grand Trunk Ry.

New York Central and Hudson River Rd.—N. Mooney has been appointed General Agent Passenger Department, Montreal, vice C. Hartigan, resigned to enter the Rutland Ry. service.

New York Central Lines.—B. B. Mitchell, heretofore General Freight Traffic Manager, Chicago, Ill., has been appointed Assistant to Vice President. Office, New York. The office of General Freight Traffic Manager has been abolished.

Northern Navigation Co.—C. A. Macdonald, heretofore Comptroller, has been appointed Assistant Manager. Office, Collingwood, Ont.

E. W. Holton, heretofore chief clerk Sarnia office, has been appointed Eastern Passenger Agent. Office, Sarnia, Ont.

R. V. Robinson, heretofore chief clerk Claims Department, has been appointed Eastern Freight Agent. Office, Sarnia, Ont.

W. J. McCormack, heretofore agent at Point Edward, Ont., has been appointed agent at Sarnia, Ont.

Prince Edward Island Ry.—See Government Railways.

Quebec Central Ry.—The position of General Superintendent being vacant owing to the death of A. Steele, Jos. Fortin, heretofore agent at Levis, has been appointed acting Superintendent. It is probable that a Superintendent of Transportation and a Superintendent of Permanent Way and Structures will be appointed in the near future.

Quebec Ry. Light and Power Co.—C. E. A. Carr, heretofore Assistant General Manager, has been appointed General Manager, vice E. A. Evans, General Manager and Chief Engineer, who has resigned the former position.

E. A. Evans, heretofore General Manager and Chief Engineer, having resigned the former position, has been appointed Chief Engineer over all the Company's interests.

Railways and Canals Department.—M. J. Butler, Deputy Minister and Chief Engineer of Railways and Canals, and Chairman Government Railways Managing Board, has resigned to become General Manager Dominion Iron and Steel Co., and Dominion Coal Co., Sydney, N.S., the resignation to become effective Feb. 5. A. W. Campbell, heretofore Deputy Minister of Public Works for Ontario, has been appointed Deputy Minister of Railways and Canals and Chairman Government Railways Managing Board, effective Feb. 5. The position of Chief Engineer of the Department of Railways and Canals had not been filled up to Jan. 28.

Rutland Rd.—C. Hartigan, heretofore General Agent Passenger Department New York Central and Hudson River Rd., Montreal, has been appointed General Passenger Agent, Rutland Rd., Rutland, Vt., vice F. E. Barbour, resigned.

Temiskaming and Northern Ontario Ry.—A. J. Parr, heretofore Assistant Freight and Passenger Agent, has been appointed Freight and Passenger Agent, vice W. D. Cunneyworth, resigned. Office, North Bay, Ont.

West Shore Rd.—E. A. Cousino has been appointed General Western Agent, Chicago, Ill., vice Neil Mooney, promoted to Montreal.

The Canadian Pacific Ry. Co. has given notice of calls on all shareholders who subscribed to the recent issue of $30,000,000 new stock, authorized Oct. 7, 1908, and upon which 20% has been deposited, as follows:—20%, or $25 a share, on Mar. 9; 20% on May 9; 20% on July 8, and 20% on Sept. 7.

PEERLESS
The Fence that saves Expense

Because it saves repairs. It does not sag, bag, snap, or break, and when once put up it stays in good shape. Adjusts itself to all irregularities of the ground and resists weather—wear and stock especially well. Makes the best railroad fence you can possibly put up, both in appearance and lasting qualities. You can do no better than to erect Peerless Fencing. It will always be a standing example of your good judgment. The free book we are sending out is very interesting to people in your field. Shall we send you a copy—a postal request will bring one promptly.

STRONGER
Than Stock-Weather and Wear

Are YOU One of the Hands?

There are two classes of workers—head workers and hand workers. Are you one of the hands? The man who works with his hands does imitative manual labor, which thousands of others can do as well. He is hired at will and may be discharged on a minute's notice. If he loses his time he loses his earnings. The man who works with his head holds a permanent position at a high salary and loses no salary on account of sickness.

But it is by no means a difficult thing for a hand worker to become a head worker. The I. C. S. for the last 18 years have been training hand workers to hold the high-salaried positions of the head workers. If you will mark and mail the coupon below this great institution will take up your individual case and tell you how it can help you in your spare time at home to gain a better position, increased earnings, and a successful future.

Send it today.

Steam Railway Track Laid in 1909.

In our last issue we gave a preliminary statement of the steam railway track laid in Canada in 1909. The figures given for the Canadian Northern Ry., and the Canadian Pacific Ry. have been revised and completed. These figures show that 1588.47 miles of new track were laid during the year by the different companies against 1505.95 in 1908. The mileage laid by the different companies is as follows:—

	Miles.	Miles.
ALBERTA RY. AND IRRIGATION CO.		
From Raley to Wolford		8.00

Of this mileage 1376.48 miles were laid in connection with three systems as follows, the second column showing the mileage laid by the same lines in 1908:—

Transcontinental Ry.	312.00	170.00
G. T. Pacific Ry.	309.00	460.50
	621.00	630.50
Canadian Northern Ontario Ry.	90.49	11.50
Canadian Northern Que. Ry.	28.10	60.90
Canadian Northern Ry.	303.05	167.80
	421.64	240.20
Canadian Pacific Ry.	323.84	389.88
Total of the three systems.	1,376.48	1,260.58

Divided by provinces, the track laid during the year compares with that laid in 1908, as follows:—

	1909. Miles.	1908. Miles.
Saskatchewan	457.80	659.70
Alberta	373.17	74.90
Ontario	288.63	238.04
Quebec	171.24	227.14
Manitoba	136.23	166.30
New Brunswick	87.00	67.00
British Columbia	74.40	56.87
Nova Scotia		9.00
Yukon		7.00
	1,588.47	1,505.95

(1) On the Canadian Northern Ontario Ry.'s Hawkesbury-Ottawa line 53 miles were laid in 1908 and the balance, 4.08 miles, in 1909. The 53 miles were not included in the figures received from the company a year ago, so the whole mileage is now included in the 1909 returns.

(2) The C.P.R. Lethbridge-Macleod cut-off has a total length of 35.24 miles, and supersedes the original line of 38.66 miles. Track was laid on 14.83 miles in 1908, and on the remaining 20.40 miles in 1909.

The length of line which the C.P.R. grade revision between Hector and Field supersedes was 4.1 miles, so that the revision adds 4.1 miles to the length of the line.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Northern Engineering Works, Detroit, Mich., has purchased additional land near its present premises for extensions of its northern cranes plant.

The Falls Hollow Staybolt Co., Cuyahoga Falls, Ohio, has issued its January calendar, the first of a series of 12 subjects by Stuart Fraser, which it intends to send out monthly during the year.

Tate Bifunctional Accumulators have been specified for the electric lighting of the private car now under construction by the Preston Car & Coach Co. for the Temiskaming & Northern Ontario Railway Commission.

The American Locomotive Co. has issued a bulletin on Mallet articulated compound locomotives, illustrating a number of different designs built by the company for various railways, and giving general specifications, hauling capacity, etc.

In our last issue L. S. Hough was spoken of as sales agent on the staff of Taylor & Arnold of Montreal, General Sales Agents for the Ontario Iron & Steel Co. and the Canadian Railway Equipment Co. The position referred to is held by L. S. Rough.

Wm. Abbott, Montreal, has been appointed agent for Canada and Newfoundland for the Stahlwerk Becker, A. G., Krefeld, Germany, manufacturers of high speed and high grade steel, tungsten and nickel alloys, which are made by the Girod electric process.

Taylor & Arnold, Montreal, have sold to the Silliker Car Co. and to the Preston Car & Coach Co., the heavy cast steel double body and truck bolsters for use under the seven sleeping, three colonist and three mail cars which the I.C.R. recently ordered from these companies. We are advised that these will be the first bolsters of this description made in Canada.

The Dominion Car & Foundry Co. has decided that in future their various works will be designated as follows:—The Dominion Car & Foundry Co.'s plant at Blue Bonnets, near Montreal, will be known as the Dominion Works, —. Ditchfield remaining as Superintendent. The Canada Car Co.'s plant at Turcot, near Montreal, will be known as the Turcot Work, S. King remaining as Superintendent. The Rhodes, Curry & Co.'s plant at Amherst, N.S., will be known as the Amherst Works. W. M. Robertson, heretofore of the Canada Car Co.'s staff, has been appointed Superintendent at Amherst.

The Canadian Crocker-Wheeler Co., Ltd., which is the Canadian end of the Crocker-Wheeler Co., of Ampere, N.J., which has been manufacturing electrical equipment for 22 years, is establishing a manufacturing plant at St. Catherines, Ont. It has secured eignt acres of land adjacent to the G.T.R. and the N. St. C. & T.R. on which are buildings with 30,000 ft. of floor space, which were built by the city for the J. M. Rose Co., manufacturers of traction engines. The Canadian Crocker-Wheeler Co. is remodelling these buildings and will erect additional ones within a short time, so as to be fully equipped for manufacturing a complete line of electric apparatus.

The Canada Bolt & Nut Co., Ltd., with a capital of $2,500,000 and head office at Toronto, has taken over the Toronto Bolt & Forging Co., with bolt mills at Swansea (Toronto) and Gananoque, and rolling mills at Sunnyside, Toronto, the Brantford Screw Co., Brantford, the Belleville Iron & Horseshoe Co., Belleville, and the Gananoque Bolt Co., Gananoque. Lloyd Harris, M.P., of the Brantford Screw Co., is President of the new company, and T. H. Watson, heretofore of the Toronto Bolt and Forging Co., Vice President and General Manager. G. Gillies, President of the Toronto Bolt & Forging Co., having disposed of his holdings, it is intended to concentrate the manufacture of certain lines of work in certain plants, so as to avoid duplication, and the Swansea works will probably be enlarged.

Temiskaming and Northern Ontario Ry.—Owing to the change by which the fiscal year for this railway will in future be closed Oct. 31, the figures here given for 1909 represent 10 months only, as compared with 12 months for the year 1908. Total passenger revenue, $483,-110.89; total freight revenue, $756,-141.66; other revenue from transportation, $121,972.33; total revenue, $1,361,-224.88; operating expenses, $794,796.88; net operating revenue, $566,428.00; received from ore royalties, $108,516.68; total income, $674,944.68; hire of equipment, $19,073.47; net result, for 10 months ended Oct. 31, 1909, $655,871.21, against $366,504.53 passenger revenue; $471,203.41 freight revenue; $135,357.67 other revenue from transportation; $973,065.61 total revenue; $688,397.43 operating expenses; $284,668.18 net operating revenue; $134,820.27 received from ore royalties; $419,488.45 net result, for 12 months ended Dec. 31, 1908.

Diamond Coal Co.—Application is being made to the Alberta Legislature to empower the company to acquire and operate the railway constructed from Kipp to Diamond City, by a company affiliated with it. The company finds from experience that it would be much better to have the railway with the mine and all its auxiliaries joined together in one company.

The Grand Trunk Pacific Ry. Co. has issued through Glyn, Mills, Currie & Co., London, Eng., £1,000,000 of 4% debenture stock, the proceeds of which will be applied to the purchase of additional rolling stock, to be delivered during the current year, for use on the prairie section and on the Lake Superior branch. The issue price is £92-10, and the stock will rank pari passu with £3,000,000 of such stock already issued, and is subject to redemption at £105 by the company any time after Mar. 1, 1936, on giving one year's notice. The issue forms part of an issue of $25,000,000 (£5,136,900) authorized by chap. 100 of the Dominion statutes of 1906, is secured by a lien on the company's property, and ranks next after the company's second mortgage bonds and Lake Superior Branch bonds. In addition the G.T.R. Co. under an agreement of Jan. 10, has guaranteed the payment of interest on the £2,136,980 of the stock yet unissued, out of the net earnings of the G.T.R. of each year, after making certain deductions. The subscription list closed Jan. 19.

Essex Terminal Ry.—Application is being made to the Dominion Parliament to extend the time for the completion and putting in operation of the authorized railway; to authorize the company to operate vessels; to enter into agreements with other similar companies; to increase the capital stock and bonding powers, and to change the date of the annual meeting. J. H. Coburn, Walkerville, Ont., is the solicitor.

Buctouche Ry. and Transportation Co.—Application is being made to the Dominion Parliament to incorporate a company with this title to construct a railway between Buctouche and Richibucto, N.B., and in connection therewith to operate vessels, and build wharves, docks, etc. Barnhill, Ewing and Sanford are solicitors for applicants.

At a meeting of the Engineers Club of Toronto, Jan. 6, W. Chipman, who had previously been elected President for the current year, declined the position, and C. M. Caniff was elected in his place.

The Governor General visited the C.P.R. Angus shops, Montreal, Jan. 7, where he presented certificates and diplomas to the employes who had passed St. John's Ambulance Association's examination during the past year.

The Canadian Society of Civil Engineers Toronto Branch held its annual meeting, Jan. 6. The officers for the current year are:—Chairman, A. W. Campbell; Secretary-Treasurer, P. Gillespie; Councillors, T. S. Scott, T. C. Irving, Jr., O. W. Smith, N. H. McLeod and A. W. Connor.

During Nov., 1909, 46 employes were killed in the course of their employment on Canadian railways. Twenty-nine deaths were due to derailments (22 being caused in one accident due to a washout in B.C.); seven to being run over; four to falls; two each to collisions and while coupling; and one each to an explosion of boiler and to falling material.

NOTICE is hereby given that the Grand Trunk Railway Company of Canada will apply to the Parliament of Canada, at its present session, for an Act authorizing that company to acquire by purchase or otherwise, and hold, hypothecate, sell, or otherwise dispose of bonds, debentures, or other securities, issued by the Ottawa Terminals Railway Company, by the Lachine, Jacques Cartier and Maisonneuve Railway Company, and by the Grand Trunk Pacific Terminal Elevator Company, Limited, respectively.

W. H. BIGGAR,
Solicitor for the applicants.

Dated at Montreal, this 4th day of January, A.D. 1910.

ASSISTANT SECRETARY, Aubrey Acton Burrows, Secretary and Business Manager, Railway and Marine World.

OFFICIAL ORGAN, THE RAILWAY AND MARINE WORLD.

Electric Railway Statistics for 1908-09.

The report of the Comptroller of Railway Statistics for the year ended June 30, 1909, states that during the year a complete re-organization of the basis of reporting by electric railways took place. The schedules which were sent out by the Department in 1901, when the collection of statistics was first commenced, was probably the best that could be devised; each railway company followed its own method of accounting, and as a result important and useful details were lacking. Mr. Payne adds "The time was opportune for the installation of a new and carefully considered system in relation to statistics. Classifications and schedules were printed and distributed; but this heavy task could not be carried out until nearly six months of the railway year had passed. It had been my privilege, however, to meet the members of the Canadian Street Railway Association on Nov. 11, 1908, and to explain to them the general features of the proposed changes. They heartily approved of the new plan, and expressed their willingness to co-operate. I desire in this way to gratefully recognize the response of electric railway corporations to the demands made upon them under circumstances which must have been exceedingly inconvenient to many of them."

The total mileage of electric lines in Canada is put at 988.97, a decrease of 3.06 miles, whereas there was actually an increase. There has heretofore been some confusion on the part of reporting lines as to the proper method of computing mileage. This difficulty has been removed and hereafter the facts in relation to mileage will be returned on a uniform basis. In addition to the 988.97 miles of main track, there were on June 30, 1909, 215.05 miles of second main track, 83.62 miles of sidings and turnouts, making altogether a total of 1,287.65 miles computed as single track. The paid-up capital aggregated $91,604,989, of which $51,946,433 is represented by stocks, and $39,658,556 by funded debt. The subsidies paid by governments and municipalities amount to $493,346. The gross earnings from operation were made up as follows:—Passenger, $14,080,755; freight, $386,092; mail and express, $110,452; other earnings, $34,185. Adding surplusses and other source of income the gross aggregate incomes of the companies amounted to $15,799,850.93. From this has to be deducted the following items:—Operating expenses (including $246,192.77 of net loss by certain lines), $8,885,235.70; taxes, $843,959.70; interest on funded debt, $1,213,142.24; interest on floating debt, $104,573.13; other deductions, $36,631.99; a total of $11,083,542.18; leaving a net income of $4,716,308.75. This net income is equal to a 5.13% on the capitalization. The operating expenses were equal to 59.93 of the gross earnings, against 62.08 in the previous year.

The various lines carried 314,026,671 fare passengers and 81,670,945 transfer passengers, making 395,697,616 in the aggregate. In previous years the fare passengers only were reported, the total for the year ended June 30, 1908, being 299,099,309. The total car mileage was 60,152,846 of which 737,720 was in connection with the carrying of freight mails and express. There were of all classes 3,544 cars in the service, of which 3,043 were passenger cars; 20 mail, express and baggage; seven combination passenger and freight; 85 work cars; 54 snow ploughs; 90 sweepers, and 93 miscellaneous. The number of employes was 10,557, to whom was paid $6,761,281.12, equal to 77.84% of the total operating expenses. Of the employes, 545 were employed in general administration; 3,620 in maintenance; and 6,392 in transportation.

During the year 68 persons were killed and 2,139 injured, against 67 killed and 1,937 injured in the preceding year.

Electric Railway Track Laid in 1909.

In our last issue we gave a summary of reports received from electric railway companies showing track laid during 1909 by 12 companies. Returns have since been received from the Niagara, St. Catharines & Toronto Ry., bringing the total mileage laid up to 57.50 miles, as follows:—

	Miles.	Miles.
BRITISH COLUMBIA ELECTRIC RY.		
Extensions in Vancouver, etc., est.	5.00

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for Nov. 1909, $244,520; operating expenses, $157,880; net operating earnings, $86,640; renewal funds, $16,394; net earnings, $70,246; approximate income from investments, $16,500; net income, $86,746, against $202,378 gross earnings; $124,621 operating expenses; $77,757 net operating earnings; $14,443 renewal funds; $63,314 net earnings; $13,550 approximate income from investments; $76,864 net income for Nov. 1908. Aggregate gross earnings for five months ended Nov. 30, 1909, $1,211,692; net earnings, $541,042, against $937,589 gross and $433,074 net for same period 1908.

Halifax Electric Tramway.—Traffic receipts for Dec. 1909, $16,107.26, and for two weeks ended Jan. 14, $6,991.77, against $15,312.78 and $6,416.72 for Dec. 1908, and two weeks ended Jan. 14, 1909.

London St. Ry.—Gross earnings for Dec. 1909, $21,674.21; expenses, $15,469.06; net earnings, $6,205.15; deductions, $2,441.75; net income, $3,763.40, against $20,558.16 gross earnings; $14,848.66 expenses; $5,709.50 net earnings; $2,544.56 deductions; $3,164.94 net income for Dec. 1908. Aggregate gross earnings for 12 months ended Dec. 31, 1909, $243,359.39; expenses, $169,830.44; net earnings, $73,528.95; deductions, $28,887.56; net income, $44,641.39, against $235,932,40 gross earnings; $167,566.72 expenses, $67,465.68 net earnings; $28,454.74 deductions; $39,010.94 net income for same period 1908.

Montreal St. Ry.—Passenger earnings for Dec. 1909, $333,135.21; miscellaneous earnings, $4,407.97; total earnings, $337,563.18; operating expenses, $212,006.44; net earnings, $125,556.74; city percentage on earnings, $15,599.94; interest on bonds and loans, $14,382.01; rent leased lines, $498.62; taxes, $4,000; total charges, $34,480.57; surplus, $91,076.17; expenses per cent. of earnings, 62.80, against $301,329.27 passenger earnings; $3,555.57 miscellaneous earnings; $304,884.84 total earnings; $203,118.97 operating expenses; $101,765.87 net earnings; $12,275.79 city percentage on earnings; $15,306.25 interest on bonds and loans; $444,46 rent leased lines; $2,700 taxes; $30,276.50 total charges; $71,039.37 surplus; 66.62 expenses per cent. of earnings for Dec. 1908. Aggregate total earnings for three months ended Dec. 31, 1909, $1,026,441.40; expenses, $586,878.97; net earnings, $439,562.43; total charges, $96,344.84; surplus, $343,217.39; expenses per cent. of earnings, 57.18, against $935,071.10 aggregate total earnings; $549,195.02 expenses; $385,876.08 net earnings; $90,568.93 total charges; $295,307.15 surplus; 58.73 expenses per cent. of earnings, for same period, 1908.

Niagara Gorge Rd.—The annual meetings of this company and the Lewiston and Youngstown Frontier Ry., were held Jan. 14, at Niagara Falls and Buffalo, N.Y., respectively. Following are the directors for the N.G. Rd. Co. for the current year:—J. T. Jones, H. P. Bissell, B. L. Jones, R. E. Powers, J. A. Jones, F. V. Greene, W. H. Hotchkiss, C. M. Bushnell, R. R. Hefford, W. G. Case, G. C. Rilxey. For the L. and Y.F.R. Co. the directors are the same, with the exception of the last two mentioned. The election of officers will take place at the meeting in Feb. We are advised that there will probably be no change.

Toronto Suburban Ry.—Application is being made to the Ontario Legislature for power to re-arrange and confirm the bond issue, and to grant an increase in the capital stock.

Winnipeg Electric Ry.—Gross earnings for Nov. 1909, $252,200; expenses, $125,700; net earnings, $126,500, against $229,100 gross earnings; $105,100 expenses; $124,000 net earnings for Nov. 1908. Aggregate gross earnings for 11 months ended Nov. 30, 1909, $2,340,100; net earnings, $1,171,400, against $1,964,600 gross earnings, and $993,900 net earnings for same period 1908.

Militia versus Street Cars.

In our July, 1909, issue, we gave particulars of an important issue which had arisen in Winnipeg as to whether the militia or electric railway cars had the right of way on the streets, the Police Magistrate having taken the ground that the militia had and having fined one of the Winnipeg Electric Ry. Co.'s motormen $5 for not stopping his car during a 90th Rifles parade.

The case was appealed and we are advised that the County Judge has not given any definite decision, but intimated that he would quash the conviction by the Police Magistrate. The solicitor for the 90th Rifles made an application for a stated case before the Court of Appeal, but the County Judge has not decided as to this.

WOVEN WIRE FENCING

ARE YOU INTERESTED IN THIS FEATURE OF RAILWAY WORK?

While we are not the only people who make a good wire fence, we are the only firm in Canada who make the best "wrapped stay" fence. Our "Safe Lock" is so constructed that we don't require to kink the strand wires to prevent stays slipping, therefore, the whole strength of the wire is preserved in the "Safe Lock" Fence.

Our "Monarch" is a "stiff-stay" fence similar to others of this style with the most of their objectionable features eliminated.

ELECTRIC RAILWAY STATISTICS FOR YEAR ENDED JUNE 30, 1909.

The following abbreviations are used in the names of railways—E., electric; E.R., electric railway; E.S.R., electric street railway; Ry., railway; S.R., street railway. The minus mark (—) in the column for net income or deficit, shows that there was a deficit in the operations of the line to the extent of the figures given. The numbers in brackets—thus (1)—after the name of a railway refer to notes below.

Name of Railway	Mileage	Gross Earnings	Operating Expenses	Taxes, Interest, etc.	Net Income or Deficit	Passenger Car Mileage	Freight Car Mileage	Fare Passengers Carried
Berlin & Waterloo S.R. (1)	3.12	$ 29,564	$ 22,797	$ 5,338	$ 1,428	89,987	.....	590,705

Notes to Electric Railway Statistics

The companies also carried 81,670,945 transfer passengers, making a total of 395,697,616 passengers carried. One-half of the companies reporting divide the number of passengers carried, into the two classes, the number of transfer passengers carried on the lines reporting being as follows:—Berlin and Waterloo, 21,876; Cape Breton Electric Co., 359,219; Grand Valley Ry., 60,564; Halifax Electric Tramway Co., 342,210; Hull Electric Co., 73,000; International Transit Co., 3,789; Kingston Portsmouth and Cataraqui, 145,872; Levis County Ry., 34,229; London St., 1,020,242; Montreal Park and Island Ry., 341,266; Montreal St., 31,577,363; Montreal Terminal Ry., 115,931; Niagara, St. Catharines and Toronto, 18,605; Quebec Ry., Light and Power Co., Citadel Division, 3,266,000; Sandwich, Windsor and Amherstburg Ry., 343,324; Sherbrooke St., 108,951; South-Western Traction Co., 22,259; St. John Ry., 1,318,894; St. Stephen S.R., 23,389; St. Thomas S.R., 151,820; Sydney and Glace Bay, 22,220; Toronto Ry., 34,951,318; Toronto Suburban Ry., 40,648; Winnipeg, 7,307,956.

(1) The Berlin and Waterloo St. Ry. is owned by the town of Berlin, Ont. It leases the Berlin and Bridgeport Ry. from a company.

(2) The Dominion Power and Transmission Co., owns or controls the Brantford and Hamilton Ry.; Hamilton and Dundas Ry.; Hamilton, Grimsby and Beamsville Electric Ry.; Hamilton Radical Ry., and Hamilton St. Ry.

(3) The British Columbia Electric Ry. operates local lines in Vancouver, New Westminster and Victoria, and interurban lines radiating from Vancouver. It has 13.44 miles of second track, and operates over 21 miles of leased lines.

(4) The Chatham, Wallaceburg and Lake Erie Ry. added $9,141.67 to reserves and special charges, and paid $14,040 in dividends out of net income.

(5) The Egerton Tramway Co. paid $5,000 in dividends out of net income.

(6) The Galt, Preston and Hespeler Ry. which also operates the Preston and Berlin Ry. under lease, has 1.36 miles of second track. It is operated in connection with the C.P.R. under a lease. The C.P.R. also owns the Hull Electric Co. This company has 11.51 miles of second

track and operates over 1.82 miles of leased track.

(7) The Grand Valley Ry. mileage includes the lines of the Brantford St. Ry., the G.V. Ry., and the Woodstock, Thames Valley and Ingersoll Ry., which were reported separately in previous years.

(8) The Guelph Radial Ry. is owned by the City of Guelph.

(9) The Halifax Electric Tramway Co. has 3.09 miles of second track.

(10) The International Transit Co.'s line, owned by the Lake Superior Corporation at Sault Ste. Marie, Ont., connects with the Trans St. Mary's Ry. at Sault Ste. Marie, Mich., owned by the same company.

(11) The London St. Ry. has 6.79 miles of second track. It paid $32,711.76 in dividends out of net income.

(12) The Montreal St. Ry. has 57.18 miles of second track, and operates over 8.58 miles of leased tracks. It reports a surplus of $1,577,947.17. It owns the Montreal Park and Island Ry., which has 14.61 miles of second track, and paid $32,711.76 dividend out of the latter's net income. It also owns the Montreal Terminal Ry., which has 4.66 miles of second track.

(13) The Niagara Falls Park and River Ry. has 9.31 miles of second track. It is owned by and operated in connection with the International Ry. of Buffalo, N.Y.

(14) The Niagara, St. Catharines and Toronto Ry. mileage includes the Niagara Falls, Wesley Park and Clifton Ry., and the Port Dalhousie, St. Catharines and Thorold Electric St. Ry., formerly reported separately.

(15) The Ottawa Electric Ry. has 20.64 miles of second track, and operates over 2.22 miles of leased track. It paid $149,697.34 in dividends out of net income.

(16) The Port Arthur St. Ry. has 6.45 miles of second track. It is operated by a commission appointed by the city councils of Port Arthur and Fort William, Ont.

(17) The Quebec Ry., Light and Power Co. has 6.30 miles of second track on its Montmorency Division. A steam freight service is operated over the Montmorency Division, the returns for which are given in the steam railway statistics.

(18) The St. John Ry. has 6.50 miles of second track. It paid $48,000 in dividends out of net income.

(19) The St. Stephen S.R. operates over 3.00 miles of leased tracks.

(20) The St. Thomas St. Ry. is owned by the city of St. Thomas, Ont.

(21) The Sandwich, Windsor and Amherstburg Ry. owns and operates the Windsor and Tecumseh Electric Ry. The S.W. and A. Ry. is in turn owned by the Detroit United Ry.

(22) The Sarnia St. Ry. paid $4,847.18 in dividends out of net income.

(23) The South Western Traction Co. has trackage rights over 2.28 miles of the St. Thomas St. Ry.

(24) The Sydney and Glace Bay Ry. added $5,299.97 to reserves and special charges, and paid $10,000 in dividends out of net income. It is owned jointly by the Cape Breton Electric Co. and the Dominion Coal Co.

(25) The Toronto Ry. reports 49.654 miles of "first main track" and 53.205 of "second main track." It added $150,000 to reserves and special charges account, and paid $499,805.65 in dividends out of net income. The T. Ry. owns the Toronto and York Radial Ry.

(26) The Winnipeg St. Ry. paid $614,496.10 in dividends out of net earnings.

F. G. Rumball, of London, Ont., who was interested in the inauguration of the Southwestern Traction Co., recently returned from Honduras, where he has been viewing the country with a view to the building of a railway there.

C.P.R. LANDS

The Canadian Pacific Railway Company have 9,000,000 acres of selected lands for sale in Manitoba, Saskatchewan and Alberta.

Maps, as enumerated below, showing these lands in detail, will be sent free on application.

Map No. 1—Winnipeg to Second Meridian	$ 8.00 to $15.00 per acre.
Map No. 2—South-Eastern Saskatchewan, 2nd to 3rd Meridians	10.00 to 25.00 per acre.
Map No. 3—Main Line, 3rd Meridian to Range 10, W. 4th Meridian (generally)	8.00 to per acre.
Map No. 5 South-Western Alberta	8.00 to 15.00 per acre.
Map No. 6—Part of Alberta, Edmonton, Battle and Saskatchewan Rivers Districts—4th Meridian to Range 7, West 5th Meridian	10.00 to 25.00 per acre.
Map No. 7 - Part of Western Saskatchewan, 3rd to 4th Meridians	10.00 to 25.00 per acre

All prices are subject to change without notice.

TERMS OF PAYMENT

An actual settler may purchase not more than 640 acres on the ten instalment plan by paying a cash instalment at time of purchase, interest at six per cent. on the unpaid purchase money at the end of the first year, and the balance of the principal, with interest, in nine equal instalments annually thereafter, as shown in the following table:

160	Acres at	$ 8.00	per acre,	cash payment	$191.70	first year's interest	$ 65.28	and nine instalments of	$160.00
"	"	9.00	"	"	213.70	"	"	"	73.46	"	"	180.00
"	"	10.00	"	"	239.70	"	"	"	81 62	"	"	200.00
"	"	11.00	"	"	263.60	"	"	"	89.78	"	"	220.00
"	"	12.00	"	"	287.60	"	"	"	97.96	"	"	240.00
"	"	13.00	"	"	311.55	"	"	"	106.10	"	"	260.00
"	"	14.00	"	"	335.60	"	"	"	114.32	"	"	280.00
"	"	15.00	"	"	359.50	"	"	"	122.44	"	"	300.00

Purchasers who do not undertake to go into residence on the land are required to pay one-sixth of the purchase money down, balance in five equal annual instalments with interest at the rate of six per cent. per annum. Interest at six per cent. will be charged on overdue instalments.

F. T. GRIFFIN, Land Commissioner, Winnipeg.

CANADA NORTH-WEST LAND CO.

This Company has 525,000 acres of selected lands in Manitoba and Saskatchewan which offer excellent opportunities to settlers and investors who desire to secure good lands in well-selected districts. These lands are on sale at the Company's Office at Winnipeg, and at the various land agencies of the Canadian Pacific Railway Company.

MONTREAL, QUE. **CHICAGO, ILL.**

Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—It is proposed to construct about two miles of extensions to the lines in Vancouver city during the year.

In connection with the line connecting Vancouver and New Westminster, D. J. McQuarrie, local manager, stated that there would be an expenditure of $315,000 upon betterments during the current year. A considerable proportion of this will be expended upon the construction of second track in New Westminster.

The Fraser Valley line, which has been completed to Cloverdale, was placed in operation early in Jan. Tracklaying has been completed to Abbotsford, and grading is being gone on with beyond that point. It is expected that the line will be completed by the fall to Chilliwack, where terminal yards will be laid out, and a power station erected.

The company has purchased property for a terminal site in Victoria, for the proposed extension of its lines to the Saanich district. (Jan., pg. 57.)

Berlin and Waterloo to Conestogo.—As a result of a meeting in Waterloo, Ont., Jan. 7, a committee was appointed to interview the President of the Preston and Berlin St. Ry., with a view of ascertaining the terms upon which the company would extend its line from Berlin to Conestogo.

Dunnville, Wellandport and Beamsville Electric Ry.—Application is being made to the Ontario Legislature to authorize the company to construct an extension of its authorized line of railway **from Jordan Harbor to St. Catharines,** Ont. J. R. Roaf, Toronto, is the solicitor. (Sept., 1909, pg. 683.)

Fort Erie Ferry Ry.—Application is being made to the Ontario Legislature to consolidate the various acts relating to the company, and to change its name to the Buffalo and Fort Erie Ry. The company also asks power to acquire lands for park or pleasure purposes. The Legislature is also being asked to validate a proposed mortgage to secure a proposed issue of bonds for $300,000; to extend the company's powers so as to enable it to acquire shares and guarantee the obligations of certain companies, or of any other company with similar objects whose business may be carried on in conjunction with that of the company.

Fort William, Ont.—The city council of Fort William is applying to the Ontario Legislature to authorize among other things, to raise $137,000 for the improvement of the street railway system within the city. The work proposed to be done with the money obtained will be the construction of a second track on certain streets and some short additional lines. (See Port Arthur and Fort William Electric Ry., Jan., pg. 59.)

Grand Valley Ry.—Southwestern Traction Co.—Negotiations for the purchase of the S.W.T. Co.'s line and franchises by the Grand Valley Ry. are reported to be in progress. The interests controlling the S.W.T. Co. are applying to the Dominion Government for a charter with the title of the London and Lake Erie Transportation Co., and it is stated that as soon as the act authorizing the incorporation of this company is passed, the arrangement will be completed for the merging of the two companies. The lines which the L. and L.E.T. Co. desires power to construct cover those constructed by the Grand Valley Ry. and its allied lines, the Brantford Ry. and the Woodstock Thames Valley and Ingersoll Ry., and the South Western Traction Co.

Hamilton, Waterloo and Guelph Ry.—The owners of property along the right of way of this projected railway have been given notice that possession will be required by April 1. It is reported that construction will be started early in the spring, and the line completed to Galt by the end of 1911. The company is making application to the Dominion Parliament for an act authorizing it to make a number of extensions of its lines, including one to Toronto. The Toronto city council has given instructions to its legal department to oppose this part of the bill. (Dec., 1909, pg. 929.)

Hurontario Ry.—Application is being made to the Ontario Legislature to incorporate a company with this title to construct a line from Collingwood, Ont., through Nottawasaga, Sunnidale, Flos and Vespra tps., to Barrie. W. T. Allan is solicitor for applicants.

London and Lake Erie Transportation Co.—The Dominion Parliament is being asked to incorporate a company with this title for the purpose of constructing and operating a railway from Aylmer, via St. Thomas to London, with a branch from St. Thomas to Port Stanley; through London westerly to Glencoe; from Delaware northwesterly to Strathroy; and from London easterly to Ingersoll, with branches from Ingersoll to Thamesford and to the southern boundary of West Zorra tp., and from London easterly to Brantford, Paris and Woodstock, Ont. These various lines, it is asked, shall be declared to be for the general advantage of Canada. Power is asked to acquire the South-Western Traction Co. lines, which extend from London to Port Stanley, via St. Thomas. The capital of the company is fixed at $2,000,000, and power is asked to issue bonds for $25,000 a mile. The lines proposed to be constructed or acquired cover those which have been constructed by the Grand Valley and its allied companies, and by the South Western Traction Co. (Jan., pg. 57.)

Montreal and Southern Counties Ry.—Arrangements have been made for the leasing by this company of the Central Vermont Ry.'s branch from St. Lambert to Waterloo, Que., 59 miles, which is to be electrified, so that both freight and passenger traffic will be operated by electricity.

Morrisburg and Ottawa Electric Ry.—See Morrisburg Electric Ry.

Morrisburg Electric Ry. Co.—Application is being made to the Ontario Legislature to authorize this company to change its name to the Morrisburg and Ottawa Electric Ry. Co. and to extend the time for the construction of the lines authorized. These consist of lines in the vicinity of Morrisburg authorized by chap. 130 of the statutes of 1908, and an extension to Ottawa, authorized by chap. 136 of the statutes of 1909. The company also asks that its capital stock may be reduced to $500,000 and that it may be authorized to issue bonds to the amount of $20,000 per mile constructed, and to arrange and contract with any existing railway company for trackage from near Ottawa into that city. I. Hilliard, Morrisburg, Ont., is the solicitor.

J. McFarland, a director, is quoted as saying that arrangements would be made with the New York Central & Hudson River Railroad for a direct connection with its system; that options had been secured on several falls on the Ottawa River west of the city, from which the necessary power would be developed for the operation of the company's lines; that the location surveys had been completed for 18 miles, and estimates were in preparation, so that the grading could be started at an early date, and that the preliminary surveys showed the line would be almost straight from Ottawa to Morrisburg.

The line of railway being promoted by this company is not connected in any way with the projected belt line railway from Ottawa, passing through Morrisburg, for which the Ottawa and St. Lawrence Electric Ry. has a charter. Some confusion has taken place in regard to these two companies in the past owing to the fact that the one company was generally referred to as the Ottawa and Morrisburg Electric Railway, and not the Morrisburg Electric Ry. With the change of name no further confusion is likely to occur. (Nov., 1909, pg. 849.)

Niagara, St. Catharines and Toronto Ry.—There are before the Board of Railway Commissioners seven applications by this company for locations in Port Colborne and the townships of Crowland and Humberstone, Ont. The applications were adjourned to enable the Board's Chief Engineer to make an examination and report. (Jan., pg. 59.)

North Midland Ry.—Application is being made to the Ontario Legislature for an extension of the time for the commencement and completion of the line authorized by 4 Edward VII., chap. 84, and for other purposes. T. H. Luscombe, London, Ont., is the solicitor.

People's Ry.—Application is being made to the Ontario Legislature to authorize the company to construct the following lines in addition to those already authorized:—From Stratford via Exeter to Grand Bend, with a branch to St. Marys; from near Stratford via Sebringville, Seaforth and Clinton to Goderich, with a branch from Clinton to Bayfield; from Mitchell to Listowel; from New Hamburg to Wellesley; from Baden to Wellesley; from Petersburg via New Dundee to Ayr and from Guelph via Hespeler to Puslinch Lake. (Jan., pg. 59.)

Regina, Sask.—A letter was read at the meeting of the city council, Jan. 3, from solicitors representing local parties who stated that they were prepared through the Western Trust Company of Winnipeg and in conjunction with J. D. McArthur to install a street railway. The council decided to advertise that the city is prepared to consider proposals relative to the granting of franchises for the operation of street railway and gas works, subject to the right of the city to take over the undertakings at the expiration of a definite term of years at a realization to be fixed by arbitration and subject to conditions with regard to charges to be made by the company's outstanding franchises. (See Regina Interurban Tramway Co., Feb., 1909, pg. 137.)

Simcoe Ry. and Power Co.—The Ontario Legislature is being asked to confirm a bylaw of the county of Simcoe and a bylaw of the township of Matchedash, allowing the company the use of certain roads and road allowances for the purposes of a pole line. The company also is asking the Legislature for an extension of time within which it may construct the railway authorized to be constructed by its act of incorporation. W. Finlayson, Midland, Ont., is the solicitor. The Simcoe county council and the Matchedash tp. council are parties to the application for the confirmation of the bylaws. (May, 1909, pg. 367.)

The Toronto city council is promoting a bill in the Ontario Legislature for a variety of purposes, in which it is also asking power to construct and operate surface railways on the streets in territory added to the city since Sept. 1, 1891; to construct a system of underground railways, and issue debentures therefor on obtaining the consent of a majority of qualified ratepayers; to construct and operate surface railways on streets upon which the Toronto Ry. Co. fails or refuses to construct its railway, or which the company may abandon under the agreement of Sept. 1, 1891; and to acquire (expropriating if necessary) the lands, buildings and appliances

necessary for the operation of the Toronto Ry. Co., including the right to operate a street railway system in Toronto until Aug. 31, 1921.

Toronto Suburban Ry.—The Ontario Legislature is being asked to authorize the company to construct an extension of its authorized line from Brampton to Guelph, and giving it permission to amalgamate or enter into running arrangements with other companies or railways. (May, 1907, pg. 369.)

Western Central Ry.—Application is being made to the Ontario Legislature to authorize the company to guarantee the securities of other companies, the issue of its bonds over acquired railways, constructed or unconstructed; the increase of its bonding powers for its double track, and for an extension of time within which it may construct its authorized lines. Mowat, Langton and MacLennan, Toronto, are the solicitors.

Winnipeg Electric Ry.—The Manitoba Legislature is being asked to pass an act ratifying an agreement entered into between the company and the municipality of Kildonan, on Oct. 25, 1904. (Jan., pg. 59.)

Electric Railway Notes.

The taxpayers of North Toronto on Jan. 1, voted in favor of Sunday cars by a majority of 146.

The Montreal and Southern Counties Ry. has received two interurban cars and one double broom sweeper from the Ottawa Car Co., Ottawa.

The Montreal St. Ry. dividend of 2½% for the quarter ended Dec. 31, 1909, making 10% for the year is payable to shareholders of record Jan. 13, on Feb. 1.

The Ottawa Electric Ry. gave 5,000 free car tickets for the use of school children, for whom the Mayor made arrangements for a visit to the recent fat stock show at Ottawa.

The Toronto Ry. is reported to have decided to put into service during Feb. a number of pay-as-you-enter cars. They will probably be given a trial on some of the busy routes.

A petition has been sent to the Montreal city council, asking it to compel the Montreal St. Ry. to stop its cars on the farther side of a crossing instead of the other, as at present.

The Hull Electric Co. has received one double broom sweeper from the Ottawa Car Co., Ottawa, and has ordered three 50 ft. double truck summer cars, for May delivery, from the Preston Car and Coach Co., Preston, Ont.

C. E. A. Carr has been appointed General Manager Quebec Ry., Light and Power Co., vice E. A. Evans, General Manager and Chief Engineer, who has resigned the former position, and will continue to act as Chief Engineer.

The Calgary St. Ry. has ordered three cars of the pay-as-you-enter type, 46 ft. 6 in. long over all, with 24 stationary seats, from the Ottawa Car Co., Ottawa, and also three similar cars from the Preston Car and Coach Co., Preston, Ont.

The London city council has granted the London St. Ry., the theatre and amusement privileges at Springbank Park for seven years, with the option of renewal for a further three years, in return for a 10c. fare with stopover privileges.

W. E. Middleton, K.C., has been engaged by the Toronto city council to represent the city under an English counsel in the Toronto Ry. appeal on the question of new lines in the city, before the Judicial Committee of the Privy Council in London, Eng., in Feb.

The disputes between Port Arthur and Fort William relative to the operation of the street railway, are again being discussed, and it has been decided that the whole matter shall again be laid before the Ontario Railway and Municipal Board.

A Vancouver, B.C., dispatch says that on account of complaints from lady passengers the B.C. Electric Ry. Co. has posted a notice that no smoking will be allowed in city cars. Smoking has heretofore been permitted on the rear platforms.

The St. Thomas city council is applying to the Ontario Legislature to repeal the act appointing its Board of Street Railway Commissioners, to abolish the Board, and to place the management and control of the street railway in the council's hands.

A conductor on a British Columbia Electric Ry. car at Vancouver, is said to have been held up, Jan. 5, by two masked and armed men, and robbed of $15 and his ticket box. It is stated that there was one passenger on the car at the time, and the motorman, neither of whom witnessed the occurrence, nor were disturbed.

J. T. Goldthorpe, one of those interested in the origin of what is now being constructed at the Ontario West Shore Ry., recently sued J. W. Moyes, the engineer responsible for the construction, for the non-fulfilment of a contract. On the case coming before the courts, Jan. 10, it was announced it had been settled out of court.

The Montreal & Southern Counties Ry. will be in the market shortly for eight cars, including motors and trailers, six motor freight cars and six motor flat cars for carrying building material. As soon as it electrifies the Central Vermont Ry.'s St. Lambert-Waterloo branch, which it is leasing, it will require more cars and some electric locomotives.

The Montreal Recorder recently dismissed the action of the city council against the Montreal St. Ry., for overcrowding its cars, and in doing so, stated that the company warned the city of the state of congestion three years ago, and the city has done nothing to alleviate it, and added that the city was suing the company for a state of things for which the city itself was responsible.

The Winnipeg city council has abolished the position of city inspector of street railway service on the ground that no results are following the regular inspection of equipment and service. It was stated that during the past year, the points made by the inspector had received little attention from the company, and it was considered that the service would be the same whether the inspector was on duty or not.

The Hamilton St. Ry. has ordered from the Ottawa Car Co. nine double truck cars, of which the following are the chief particulars:—

Length over end sills	30′ 0″
Length of rear vestibule	6′ 0″
Length of front vestibule	6′ 0″
Length over all	43′ 0″
Width over side sills	7′ 8″
Width at belt rail	8′ 2″
Seats	Longitudinal.
Upholstering	Rattan.
Inside finish	Cherry.
Seating capacity	40

The Winnipeg city council has sent an account to the Winnipeg Electric Ry., for $2,552.47, which includes a claim for taxes on some cars on which a tax has not yet been paid, and also amounts covering the cost of repairs to breaks to water mains alleged to have been caused by electrolysis, due to electricity escaping from the company's rails. The company repudiates the claim, stating that every reasonable precaution has been taken to guard against electrolysis, and that the city is charging for breaks in mains, whether that was the cause or not. The city solicitor has intimated that unless the company agrees not to take advantage of the statutory limitations, the city will at once sue for recovery of the amount.

The Toronto Board of Control, Jan. 11, discussed the question as to whether the Toronto and York Radial Ry. should be given permission to lay double tracks in the centre of the road on the Metropolitan division, instead of a single track on the west side as at present. Objection was taken to this, as it was considered that no such permission should be given until an arrangement had been made with the Toronto Ry. for a single fare from the city to Mount Pleasant, which is reached by the Metropolitan Ry., operated by the Toronto and York Radial Ry. Co. The matter was dropped on the city engineer intimating that there was some talk of the C.P.R. elevating its tracks in the north part of the city, and if this were done, the crossing of the C.P.R. on the level would be obviated.

The case of J. McR. Selkirk and W. Simpson against the Windsor, Essex and Lake Shore Rapid Ry., to which W. Newman and A. J. Nelles had been added by an order of the court, came up before Justice Riddell at Toronto, Jan. 9. The plaintiffs claimed $1,000 under an agreement, for which consideration they were to cease all operations in support of the Essex and Kent Radial Ry. Co., or any other electric railway company in opposition to the W.E. and L.S.R. Ry., and to assist in procuring franchises from Leamington and Mersea. The action as against the company was dismissed, and judgment entered for the plaintiffs against the other two defendants, for the amount claimed. W. Newman and A. J. Nelles signed the agreement as President and Secretary of the company, the liability thus becoming a personal one, it being held that they had misrepresented themselves, being only provisional directors, as the company had not then been organized.

The Canadian Street Railway Association's Executive Committee had a conference with the Board of Railway Commissioners' Chief Operating Officer, A. J. Nixon, at Ottawa, Jan. 11, in reference to the proposed action of the Board to require the equipment of all electric cars with air brakes. The subject was discussed at considerable length, D. McDonald, President; J. Anderson, Vice President, J. E. Hutcheson, Ottawa, and C. B. King, London, presenting the Association's views. E. P. Coleman, Manager Railways Dominion Power & Transmission Co., and E. F. Serxas, Niagara, St. Catharines & Toronto, also specially represented their respective companies. The various companies have no objection to the equipment of double truck cars with air brakes, in fact nearly all such cars are now so equipped, but they object to the use of air brakes on light single truck cars and advanced a number of powerful reasons against such a proposal. It was decided that a series of tests of air and hand brakes be made, and the further hearing of the matter, which was fixed by the Board for Feb. 1, has been postponed to May 3.

Grading Operations at Lorne Park, Ont.—Some grading work is being done on and near the Electrical Development Co.'s power line right of way. Contracts for teams and men to work ploughs and graders were let to farmers in the vicinity of Lorne Park, some 15 miles from Toronto, early in Jan., but how much work is to be done or what it is for no one seems to know. The power right of way is understood to form the right of way for the Canadian Northern Ry. line from Toronto to Buffalo, and the route of the Hamilton Radial Ry.'s projected line to Toronto, comes in contact with it near Lorne Park. Whatever it is for the work is not regarded as being in the nature of real construction.

Northern Navigation Co. of Ontario, Ltd.

Following is the report for the year ended Dec. 31, 1909, presented at the annual meeting in Toronto, Jan. 25:—

"Navigation opened on Lake Superior on April 27 and the Georgian Bay on May 1, for the Company's steamers, which were about the same dates as in 1908. Our statement shows an increase of about $114,000 in gross receipts and $41,455 in net receipts, as compared with the previous year. This was accasioned by the addition of the steamers Hamonic and Waubic to our fleet, which increased the volume of our passenger business very materially. Last year eight steamers appeared in the balance sheet valued at $887,955. This year it shows a fleet of 10 steamers valued at $1,485,394. This difference is accounted for by the addition of two new steamers, the Hamonic and Waubic, which when fully completed will be valued at $550,000 for the former, and $58,000 for the latter. The amount spent on them up to this date is on the Hamonic $542,040, and on the Waubic $55,398.

"The gross earnings of the Company were $649,297.21 and the expenditure $505,202.65, which with the balance at the credit of profit and loss account last year of $49,637.09, leaves a balance of $193,731.65, less appropriation for President and directors of $2,740. Out of this amount your directors have made the following appropriations:—

Claims for 1908 paid in 1909	$2,490.47
Interest on renewal and insurance funds	3,299.16
Renewal fund	24,000.00
Repair and maintenance fund	10,000.00
Written off special improvement account	2,100.00
Interest on advances	10,460.36

and dividend at the rate of 8% per annum, amounting to $80,000, leaving a balance to be carried forward at credit of profit and loss account of $58,641.66. The reserve funds now stand as follows:—

Renewal account	$94,440.78
Marine insurance fund	16,202.31
Profit and loss credit	58,641.66
Total	$169,284.75

The percentage of expenses of gross earnings (not including claims paid for previous years) are as follows:—1903, 94.16%; 1904, 89.71%; 1905, 80.73%; 1906, 77.73%; 1907, 77.63%; 1908, 80.73%; 1909, 77.80%.

The steamer Hamonic, which went into commission in June, 1909, between Sarnia, Port Arthur, Fort William and Duluth, has proven herself to be a very successful venture, and she is admitted to be by the general travelling public what was claimed for her in our last report. The steamer Waubic, which was constructed last year to operate on the Midland-Penetang-Parry Sound route is in the same class as the Hamonic for the traffic she was intended, and has fully come up to our expectations in speed and adaptability.

The company's steamers sailing from Sarnia to Lake Superior ports consume about 20,000 tons of coal each year, on which the cost of handling at their docks at Point Edward was 40c. per ton. Your directors, realizing the necessity for cheaper handling of fuel, have built at Point Edward (three miles from Sarnia) a fuelling plant which shows a saving of 25c. per ton in the cost of handling, in addition to saving about four hours' time each trip of each steamer in obtaining her coal.

Your directors being anxious for as many of the shareholders as possible to inspect the company's property propose to offer this year a reduction of 20% off the regular passage rates for any shareholder of record May 15 and any members of their family travelling with them, for one one-way or round trip passage

H. H. GILDERSLEEVE,
Manager Northern Navigation Co. of Ontario.

on any of the Company's steamers during June and July.

Balance carried forward		58,641.66
		$190,991.65

The President in moving the adoption of the report said the new stock when issued would be offered first to the shareholders. A bylaw was passed fixing the President's salary at $1,500, five members of the executive committee at $300 a year each, and a director's fee of $10 for each meeting attended, with travelling and hotel expenses. The directors were unanimously re-elected, the current year's board being constituted as follows:—President, W. J. Sheppard; Vice President, H. Y. Telfer; Secretary Treasurer, C. E. Stephens; other directors, W. E. Davis, Hon. J. S. Hendrie, F. A. Lett, W. D. Matthews, H. B. Smith.

At a special meeting held immediately afterwards a bylaw increasing the capital stock from $1,000,000 to $1,500,000 was confirmed, the President stating that the new stock when issued would be offered first to the shareholders. Another bylaw changing the name to Northern Navigation Co., Ltd., was also confirmed.

Dominion Marine Association.

The annual meeting was held in Ottawa Jan. 27 under the presidency of C. J. Smith, Richelieu & Ontario Navigation Co.

The Vice President, H. H. Gildersleeve, declined election to the presidency owing to lack of time to devote to the duties. F. Plummer, Canadian Lake Transportation Co., was elected President; J. Playfair, Midland Navigation Co., First Vice President; and D. Murphy, Ottawa Transportation Co., Second Vice President.

The Executive Committee is composed as follows: Elected in 1909 for three years, two years yet to serve:—A. B. Mackay, Inland Navigation Co.; S. C. Calvin, Calvin Co.; J. W. Norcross, Mutual Steamship Co. D. Murphy was elected for the remaining two years in place of R. W. Shepherd, who has resigned from the Ottawa River Navigation Co. Elected in 1909 for two years, one year yet to serve:—H. H. Gildersleeve, Northern Navigation Co.; L. Henderson, Montreal Transportation Co.; F. Plummer, Canadian Lake Transportation Co.; J. Playfair, Midland Navigation Co. The following were elected for three years at the recent meeting:—H. W. Richardson, H. W. Richardson & Sons; J. P. Cavanagh, Ogdensburg Transportation Co.; W. F. Wasley, Muskoka Lakes Transportation & Hotel Co.; G. B. Green, Upper Ottawa Improvement Co.

A bill providing for the placing of a load line on vessels trading in Canadian waters was given a first reading in the House of Commons, Nov. 18.

The Prince Rupert Sand and Gravel Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $50,000, to operate sanl and gravel quarries, and in connection therewith, to own and operate steam and other vessels, wharves, docks, &c., and to carry on the businesses of general trader, shipowner and carrier by land and water.

WELD
FRAMES
WITHOUT
DISMANTLING

Why go to the bother and expense of taking down a locomotive frame to weld it? Thermit enables you to weld it in place and return your engine to service with the least possible delay. Some shops are making a regular practice of doing the entire job in twelve hours or less. The process is equally advantageous for repairing driving wheel spokes, connecting rods, mud rings, crank shafts and for general repair work.

Write for pamphlet No. 25-N and for "Reactions," the Thermit Quarterly, which give full information.

432-6 Folsom Street, San Francisco

Niagara Navigation Co., Ltd.

Following is the report for the year ended Nov. 30, 1909, presented at the annual meeting in Toronto, Jan. 11:—

The purchase of the dock at Lewiston, referred to in the last annual report, has been completed, at a cost of $25,000, this sum being added to real estate and wharves account. The Company now owns a landing place at each of its Niagara River ports of call. The cost of restoring and improving the wharves damaged by the ice jam last spring has been charged against operating expenses for the year. This, with the inconvenience caused by obstruction to navigation early in the season, accounts for the reduction shown in net earnings. The steamers and all the Company's property have been fully maintained. An opportunity is now open to the Company to obtain the ownership of, or a controlling interest in, suitable dock property in Toronto, and your approval of the Board taking steps to secure this important advantage will be asked for. After providing for the dividend, interest on debentures, writing $25,000 off steamer values, and placing $5,000 to renewal and betterment fund, the balance to credit of profit and loss account stands at $133,714.02.

ASSETS.

Steamers	$859,725.33

		56,136.00
Balance carried forward		133.714.02
		$225,351.27

Note.—The net earnings in 1908 were $102,510.28, against $91,956.79 in 1909.

The shareholders authorized the directors to acquire the Yonge St. wharf, hitherto leased by the Richelieu and Ontario Navigation Co., and which had already been purchased from the Freeland Estate by the President, E. B. Osler. It was also intimated at the meeting that the company has acquired a dock at Youngstown, N.Y., opposite Niagara-on-the-Lake.

Following are the officers and directors for the current year:—President, E. B. Osler; Vice President, F. B. Cumberland; other directors, Hon. J. J. Foy, C. Cockshutt, J. B. Macdonald, W. D. Matthews, Hon. J. S. Hendrie.

G.T.P.R. S.S. Prince Rupert.

The s.s. Prince Rupert, which was launched at Wallsend-on-Tyne, Eng., Dec. 19, has been built specially to meet the requirements of the Pacific Coast service. When completed, she will present a smart appearance, with straight stem and cruiser stern. There will be two pole masts and three funnels, the centre one bearing the flag device of the company, a maple leaf in a circle traversed by a band bearing the initials G.T.P. The rounded cruiser stern has been adopted in order to obtain the best lines to give a high speed. In service she will run at 17 to 18 knots an hour, though she may be run at 19 knots an hour. The principal dimensions are: length over all, 320 ft.; breadth, 42 ft. 2 in.; depth, to main deck, 18 ft. She is being built to the highest class under the British Corporation Survey and will also comply with the Board of Trade regulations for passenger steamers. Her gross tonnage will be about 2,859 tons. The machinery will consist of two sets of triple expansion engines balanced on the latest improved systems, ensuring smooth and steady running and the reduction of vibration to a minimum. The accommodation will consist of staterooms, each of two berths, for 220 first class passengers, on the shelter and shade decks, with a few staterooms en suite placed amidships on the shelter deck. Second class passengers will be carried on the main deck forward, and when occasion arises, 1,500 excursionists can be taken aboard. The dining saloon on the main deck is placed at the extreme after end of the vessel, the rounded shape of the cruiser stern making an extremely handsome room, which will be furnished and panelled in oak, the tables being small and placed in bays. The smoking room, at the after end of the shade deck will be furnished and panelled in fumed oak. The music room will be decorated in white enamel and light colors. An observation room will be provided on the shade deck forward of the funnels. It wil be pannelled in maple and sycamore, and will be very lofty and well lighted by large square windows giving an uninterrupted view of the scenery en route. The vessel is being equipped with wireless telegraph installation, electric light, steam heating and complete refrigerating plant. The rudder is of the balanced type, wholly below the water line, and will be actuated by a telemotor steering gar.

Improvements at Port Colborne

The question of the cost of the improvements at Port Colborne, Ont., was raised in the House of Commons, Jan. 17. The Minister of Public Works stated that the works, so far as they affected his department were complete but, eventually, the superstructure of the inner portion of the western breakwater, which was built of wood, would require to be renewed in concrete at an estimated cost of $250,000. The Department of Railways and Canals has represented to his department the advisability of constructing a spur from the western breakwater to the extermity of the Welland Canal, which would cost about $350,000, and the matter was under discussion. The construction of breakwaters had cost $905,057.82. And the Minister of Railways and Canals stated that $1,709,946.73 had been spent by his department on the work at Port Colborne since 1901, and the amount necessary to complete the works contemplated, not including the elevator, was $104,000. The main improvements made are:—deepening of the harbor and canal entrance to 22 ft., cost $870,602; building docks and piers, $816,571; building elevator siding, $36,707. The cost of the elevator and equipment was $817,737.94; it had a capacity of 800,000 bush., but it had been constructed in such a way as to provide for an extension to a capacity of 2,000,000 when justified by sufficient business. The elevator was first used Oct. 6, 1908; in that season 365,033 bushels of grain were handled, and in 1909 there were handled 1,747,550 bush. The cost of operating the elevator in 1909 was $19,310.24, and the revenue was $9,477.

In connection with the Port Colborne improvements and the question of deepening the Welland Canal the Minister of Railways stated Jan. 17, in reply that $20,000 had been expended upon surveys to ascertain the most desirable route for a possible new canal or enlargement of the old canal. These surveys are not yet completed and it is estimated that $25,000 will be required to complete them.

The Montreal, Ottawa and Georgian Bay Canal Co. is applying to the Dominion Parliament for an Act repealing sections in its Acts of 1896 and 1898, and adding a new paragraph to sec. 8 of the Act of 1894, defining the route of the proposed canal as follows: From the River St. Lawrence near Montreal, by way of the Ottawa River, Mattawa River, Lake Talon, Turtle Lake, Trout Lake, Lake Nipissing and the French River, or any of the branches or tributaries of these rivers, with such deflections as may be necessary to overcome obstacles to navigation, to the navigable waters of Georgian Bay. Authority is asked to increase the number of directors from 15 to 25, the minimum number to be nine, instead of eight, as heretofore; and it also asks an extension of time within which it may construct the canal. The rights of the Government of Canada secured by sec. 5, Chap. 128, of the statutes of 1906, are not to be affected or impaired by anything in the new Act.

Maritime Provinces and Newfoundland.

The St. John's, Nfld., pilots have chartered Job Bros.' steam tug Tommy for their use until a steam pilot boat can be purchased.

The Newfoundland Government received tenders Jan. 15, for the mail service for the districts of Fogo and Fortune Bay. For the former service the steamer

desired is to be between 120 and 150 tons, and for the latter service, from 80 to 100 tons.

The annual meeting of the St. John, N.B., Pilot Commissioners was held, Jan. 7. During 1909, 336 British and 239 foreign vessels were liable to pilotage dues, from which there was collected $29,974.61 British and $8,262.86 foreign, total $38,237.41. There are 24 pilots on the active roll, two under superannuation, and 11 widows are being provided for out of the funds.

Bruce Stewart and Co. are applying to the P.E.I. Legislature for incorporation, to carry on the business of engineers, ship owners and contractors for the construction of boats, bridges, elevators, railways, wharves, etc., and in connection therewith to own and operate steam and other vessels. The applicants are, B. Stewart, A. McNair, C. L. McKay, F. R. Heartz, Charlottetown and J. McLean, Souris, P.E.I.

The question of the formation of a company to build a vessel for operation between Fredericton and Woodstock, N.B., is being considered. It is proposed to have a vessel about 80 ft. long, with 18 ft. beam, equipped with two gasolene engines of 50 h.p. each, and with an adjustable stern wheel, for about 21 ins. wraught, at an estimated cost of $7,000. W. E. Vaughan, Fredericton, N.B., is interested in the matter.

In our last issue it was stated that the Dominion Iron and Steel Co., was reported to have ordered two vessels for its ore carrying trade. We are advised that two vessels are being built in Great Britain, specially adapted for the ore carrying trade, for cargoes of not less than 10,500 tons each on a maximum draught of 25 ft. They will have an average speed of 10 knots an hour, and dimensions, length overall, 452 ft., breadth, 58 ft. They will be operated by the Dominion Iron and Steel Co., under charter for the ore carrying season only, say from May to Nov., inclusive.

Province of Quebec Marine.

The s.s. Turret Bell was libelled, Jan. 11, at the instance of a firm of Levis merchants, who are suing for the supply of necessaries. The Turret Bell was wrecked about three years ago at Prince Edward Island, and was raised last fall, and was berthed at Levis for the winter.

The annual meeting of the Fraserville Navigation Co. was held at Riviere du Loup, Dec. 31, 1909. Following are the officers and directors for the current year:—President, J. Hamel; Vice President, L. Fortin; other directors, Messrs. Lacombe, Charette and Aubin; Manager, G. St. Pierre. G. G. Grundy, General Manager Temiscouata Ry., who was Vice President of the company at its inauguration, resigned last summer, and has not since been connected with it.

The Quebec Harbor Commissioners are taking action against the estate of the late E. Dussault and the President of the Legislative Council of the Province for the recovery of certain beach lots near the mouth of the St. Charles River. The Commissioners claim to have a title to these lots under the Statutes passed before Confederation, and it is anticipated that an interesting controversy will arise between the Federal and Provincial Governments as to the disposition of beach lots in the Quebec harbor.

La Compagnie de Navigation des Pelerinages has been incorporated with a capital of $90,000 and office at Montreal, to carry on the business of general carriers of passengers and freight on the rivers and lakes of Canada, and in connection therewith to construct, acquire and operate steam and other vessels. The provisional directors are: J. C. Desautels, E. A. Marchildon, J. Beaulac, O. Brunet and J. A. Parent, Montreal. It is anticipated that the company will acquire or lease either one or more vessels for the operation of a service between Montreal, Cap Magdelen and Ste. Anne de Beaupre during the summer months in connection with pilgrimages from points in Quebec, Ontario and the U.S. to the shrine at Ste. Anne de Beaupre.

Ontario and the Great Lakes.

Capt. A. Muir, a well known lake mariner and shipbuilder of Port Dalhousie, died there Jan. 2, aged 91.

The St. Clair and Erie Ship Canal Co.'s bill was read a second time in the House of Commons, Jan. 18.

During 1909 2,939 vessels arrived at Toronto, having a total tonnage of 1,480,293, against 3,430 vessels, with a tonnage of 1,521,165 in 1908.

The Fort William City Council is asking the Ontario Legislature, among other things, for power to raise $525,000 for the construction of a subway and dock.

The Inland Revenue Department is receiving tenders to Feb. 7, for the privilege of ferrying across the Ottawa River from Pembroke, Ont., to Allumette Island, Que., for five years from May 1.

J. MacEdward, purser of the C.P.R. s.s. Assiniboia, was presented with a gold locket, a cane and an arm chair, at Owen Sound, recently, on his retiring on superannuation after 23 years' service.

The Northern Transport Co., Ltd., has been chartered under the Ontario Companies Act., with a capital of $40,000 and office at Toronto, to carry on the businesses of general carriers and forwarding agents.

The International Waterways Canal and Construction Co. is the title of a company for the incorporation of which the Dominion Parliament is being asked to pass an authorization act. G. A. Graham, Fort William, Ont., is one of the provisional directors.

Considerable progress has been made with the preparatory work of construction on the site of the dry dock at Port Arthur. A number of teams are at work, and the crib work and filling has been extended out about 500 ft. Work will be continued throughout the winter.

The Toronto Board of Control has under consideration an application from the Polson Iron Works, Ltd., Toronto, for the purchase of about 50 acres in Ashbridge's Bay for the construction of a dry dock and shipbuilding plant. It is stated that the company is willing to pay $1,000 an acre.

The Porcupine Transportation and Trading Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $40,000 and office at Cobalt, to acquire and operate steam and other vessels for the carrying of passengers and freight and to carry on a general transportation business.

The International Dredge and Dock Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $50,000 and office at Toronto, to carry on a general dredging, dock and contracting business, and to own and operate steam and other vessels. The provisional directors are: W. A. Lydon, W. Cahill and H. C. Wild, Chicago, Ill.

The Montreal and Lake Erie Steamship Co. has purchased the steamboat Japan in the U.S., which it proposes to transfer to the Canadian register under the name City of Hamilton. She will be operated in conjunction with the company's other vessels, the City of Montreal and the City of Ottawa, under the management of G. E. Jaques and Co., Montreal.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tidewater, for Dec., 1909, as follows:—Superior, 602.29; Michigan and Huron, 580.08; Erie, 571.41; Ontario, 245.21. Compared with the Dec. average for the previous 10 years, Superior was 0.40 ft. below; Michigan and Huron, 0.21 ft. below; Erie, 0.29 below; and Ontario, 0.07 below.

The International Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $20,000 and office at Toronto, to build, acquire and operate steam and other vessels, wharves, docks, etc., and to cooperate with other companies. The provisional directors are: H. Munderloh, C. Byrd, Montreal; D. A. Gordon, Wallaceburg, Ont.; C. Renfret and R. Bell, Montreal.

Local press reports state that V. P. Baumb is about to submit a proposal to the London city council for the dredging of the River Thames to Springbank, in return for the sand and gravel rights for five years. He intends to build a dredge at a cost of about $7,000, and is prepared to dredge the river to a reasonable depth, after which, it is stated, it is the intention to operate a passenger boat there.

The Fort William Ice and Fuel Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $40,000 and office at Fort William, to carry on a general land, building and ice business, and in connection therewith to build, purchase or otherwise acquire and operate steam and other vessels, wharves, docks, warehouses, etc. The provisional directors are: C. W. Jarvis, H. J. and J. E. Swinburne, Fort William.

The Colonial Transportation Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $100,000 and office at Toronto, to construct, own and navigate steam and other vessels, to carry on the business of common carrier of passengers and freight, and to enter into agreements with other similar companies. The provisional directors are: A. M. Boyd, M. P. Arnold, M. McPhee, R. B. Henderson and W. W. Sloan, Toronto.

Application is being made to the Dominion Parliament to incorporate the Morrisburg Ferry and Dock Co., with power to construct, acquire and operate a ferry service on the St. Lawrence River, for passengers, cars and freight, between Morrisburg and some point in New York State, and with power to build docks, wharves, slips, and a railway to connect with the G.T.R. or any other railway within the Morrisburg municipality. I. Hilliard, Morrisburg, is solicitor for applicants.

Capt. G. C. Coles on his return to Collingwood from Port Burwell, where he had been investigating the causes of the grounding of the car ferry Ashtabula, is reported to have stated that he will recommend the construction of a breakwater off the piers there, to make the port safe at all times. The cost of such work is estimated at $20,000, and its construction would render unnecessary the dredging which has to be done every summer to clear the sand from the mouth of the harbor.

The Hamilton Ferry Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $40,000 and office at Hamilton, to build, purchase or otherwise acquire and operate steam and other vessels, and carry on a general transportation and inland navigation business, etc., and to acquire the undertaking of the Hamilton Ferry Co., under agreement of Dec. 6, 1909. The provisional directors are: J. A. and H. W. Woodman, J. Freeborn, O. W. Gibb, J. Chisholm, Hamilton, Ont.

The Algoma Central Steamship Line has sold its steamboat King Edward to A. E. Thomson, Cleveland, O., who is stated to be interested in the steamboat service which press reports state the London and Erie Transportation Co. will operate in connection with the Southwestern Traction Co., recently acquired. The Algoma Central Steamship Line will not have any passenger boats in operation during the forthcoming season, and it is unlikely that it will undertake any passenger business in the future, although the freight service will be continued as heretofore.

The Detroit, Belle Isle and Windsor Ferry Co. has placed an order in Toledo, Ohio, for the construction of an excursion passenger steamer, for delivery in June. Following will be the dimensions:—length over all, 196 ft.; length between perpendiculars, 181 ft.; breadth of hull molded, 50 ft.; breadth on guards, 62 ft.; depth molded, 17 ft. 6 ins. She will be equipped with triple expansion engines, with cylinders 20½, 32 and 50 ins. diar., by 36 ins. stroke, supplied with steam by two cylindrical boilers, 13 ft. 2 ins. diar., by 12 ft. long, under 180 lbs. pressure, and fitted with forced draught. She will develop 1,800 h.p., and have a speed of 18 miles an hour when loaded. She will be licensed to carry 3,400 excursionists on the Detroit River.

Speaking at a political meeting in Ottawa recently Hon. C. Murphy, Secretary of State, said that a commission of five composed of a ship-owner, a banker, a business man or manufacturer, an engineer, and one other, to report on the commercial feasibility of the Georgian Bay Canal as a preliminary step to its construction by the Government. Sir Wilfrid Laurier also spoke in favor of the construction of the canal, intimating that he would like to have the name of his Government connected with the enterprise. He said that the deepening of the Welland Canal was also a necessary project that must be undertaken in the near future in order to provide an outlet for the rapidly-growing export traffic from the west, which in a few years must include at least six hundred million bushels of wheat for export, and which would be sufficient to tax every possible outlet.

The Richelieu and Ontario Navigation Co. has secured the incorporation of a subsidiary company to be known as the Richelieu and Ontario Navigation Co. of the United States, for the operation of its new vessel the City of Rochester. Next season, this vessel will make three trips a week between Youngstown and Ogdensburg, N.Y., calling at Charlotte, Clayton, Frontenac and Alexandria Bay, N.Y., and Prescott, Ont., connecting at the last named place with the rapids steamboat for Montreal. On the up trip, Prescott will not be called at, the stops between Ogdensburg and Youngstown being Alexandria Bay, Frontenac, Clayton and Charlotte. The press reports that the company would operate between United States ports under the title of the International Inland Navigation Co., to which we called attention in our last issue, are incorrect.

The Richelieu and Ontario Navigation Co., has leased the Geddes wharf, Toronto, which will probably be used also by the Hamilton Steamboat Co.

B.C. and Pacific Coast Marine.

Press reports from Victoria state that the survey ship Egeria will be sold out of the service in 1911.

The British Columbia sealskin catch for the past year was 3,552 skins taken by five vessels, the average per vessel being good, but the total catch, owing to the smallness of the fleet engaged, was the smallest on record.

The Empire Stevedoring Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $100,000, to carry on a general stevedoring business; to acquire any existing business having the same objects; to build, purchase or otherwise acquire, and operate steam and other vessels, and to carry on a general steamship business.

The Gulf of Georgia Towing Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $25,000, to acquire the tug, scow and business of A. R. Best, Vancouver, to own and operate steam and other vessels, to carry passengers and freight, and to carry on a general business as vessel owners, forwarders and warehousemen.

Agents wanted in unrepresented districts.

Railroad Employees and Collective Insurance a specialty.

The steamboat Strathcona, which was recently wrecked on the Fraser River, has been abandoned after having been raised, as she is not considered to be worth repairing. She was built in 1898 at Vancouver; her dimensions were: length, 142.4 ft.; breadth, 30.4 ft.; depth, 4 ft.; tonnage, 596 gross, 376 register. She was equipped with engine of 17 n.h.p. driving a paddle.

At the annual meeting of the New Westminster Pilot Board, Jan. 3, it was reported that 17 ocean going steamships and three sailing vessels came up the Fraser River during the 10 months ended Dec. 31, 1909. The pilotage fees received were $1,350, a considerable increase over the previous year. The proposal that the pilots of New Westminster, Vancouver, Nanaimo and Victoria, be placed under the control of a general board with headquarters at Williamshead, near Victoria, was discussed and rejected on the ground that a general pilot station at the point named, where pilots would take vessels in regular turn, would be impracticable, as pilots taking vessels to New Westminster require to have special knowledge of the Fraser River, and keep in touch with its constantly changing sandbars.

Atlantic and Pacific Ocean Marine.

The Canadian-Australian Steamship Co.'s s.s. Makura has been equipped with a wireless telegraph installation.

The Donaldson Line is reported to have purchased the s.s. Raglan Castle, and to have renamed her Pythia, to replace the wrecked s.s. Hestia.

Canadian Northern Steamships, Ltd., is reported to have made application to the Mersey Dock and Harbor Board, Liverpool, Eng., for berthing accommodation there.

European press reports state that the Italian Government will subsidize a new steamship line for the maintenance of a fortnightly service between Naples and Montreal.

The s.s. Germanicus chartered by the Dominion Iron and Steel Co., sailed from Sydney, N.S., early in Jan., with a further consignment of rails for the G.T.P.R., for Prince Rupert, B.C., by way of Cape Horn.

The C.P.R. s.s. Empress of Ireland is scheduled to sail from Liverpool, Eng., Feb. 11 for St. John, N.B., on her first trip after being overhauled in consequence of the accident she had near Matane last fall.

The Donaldson Line s.s. Saturnia was launched recently at Glasgow, Scotland, and is scheduled to sail on her maiden trip, from Glasgow, June 11, and will be due at Montreal, June 20. She has been constructed more especially for the third class passenger trade, with accommodation for 1,000.

The contract entered into for the transportation of goods from Canadian Pacific ports to Canadian Atlantic ports, via the Tehuantepec route, to which Elder-Dempster Co. forms a party, prohibits that company under penalty of cancellation and forfeiture of bonds from carrying cargo between Mexican Gulf ports and Europe by way of Canada.

Press reports of Jan. 1, emanating from the U.S., stated that the Dominion Government had purchased the British cruiser Rainbow, as the first vessel for the proposed navy. On a subsequent date, the Premier stated that no vessels had been purchased, but negotiations, with that end in view, were proceeding with the British Government.

D. Campbell. local manager Elder-Dempster Co., Montreal, on his return from Ottawa, Jan. 7, stated that the Australia and New Zealand Governments had promised subsidies for the service proposed to be operated by his company between the St. Lawrence and the Antipodes, by way of South Africa, and the Canadian Government had promised that the matter would have its early attention.

With reference to the remarks made at the recent launching of the s.s. Prince Rupert for the G.T.P.R., in England, as to that company's intention in connection with its proposed Atlantic steamship service, we are officially advised that there is no change in the present position of the company in regard thereto, and although it is possible that such a service will eventually be established, no immediate change is contemplated.

Judgment was recently pronounced in Glasgow, Scotland, against the Allan Line for £184 19s 5d, being the amount of loss in respect of damage to a cargo of flour between New York and Glasgow, on the s.s. Corinthian, and £17 6s 11d for short weight. It was held that the ocean bill of lading, to which the through export bill of lading is subject, charged the defenders with the receipt of the flour in apparent good order and condition, except in so far as they notified the inland carriers that 110 bags was the contrary. On the arrival of the cargo at Glasgow, the consignees were advised that 4,123 bags were caked, and the defenders had failed to prove that the caking of the 4,022 bags did not arise on board the Corinthian, or in their custody.

The Vice President of the International Mercantile Marine Co. has confirmed the statement that a portion of the Canadian service will be discontinued for the forthcoming season, unless arrangements can be made for a Government subsidy. It is stated that the St. Lawrence service is unprofitable, and that the deficit on the year's operations of $1,729,983 is in part due to that fact. Negotiations are in progress regarding a subsidy, and should these not be successful, it is probable that the Laurentic and Megantic, the two vessels constructed last year for the Canadian trade in the summer and the New York trade in the winter, and operated under the White Star-Dominion Line, will not again be placed on the St. Lawrence route.

Dry Docks Harbors, Etc.

The total expenditure incurred by the Department of Public Works during the financial year ended March 31 was $14,784,739.39, divided as follows: Capital, $1,867,346.01; income, $12,292,359.15; revenue, $625,034.23. Of this expenditure works on harbors and rivers absorbed $3,305,920.32; dredging, $4,547,773.43; slides and booms, $137,086.57. The revenue included $76,455.41 from slides and booms, and $60,505.16 from graving docks. The sources of revenue from graving docks were: Esquimalt, $20,583.36; Kingston, $10,693.84; Levis, $29,227.96.

The increase in the Canadian lake marine during the past few years has rendered absolutely necessary the construction of more and larger docks. With a view to encouraging private enterprise in this direction, an act was passed in 1903 whereby an annual subsidy of 3% for 20 years on the cost, not to exceed $1,000,000, might be paid to any company constructing a dry dock in accordance with plans submitted to and approved by the Department. In the session of 1908-09 an amending act was passed making such subsidy payable on a sum not exceeding $1,500,000. The first company to take advantage of the provisions of this act was the Vancouver Dry Dock and Shipbuilding Co., with which the department entered into an agreement May 31 last for the construction of a floating dock in Vancouver harbor, to be 486 by 66 ft., with a tonnage of 11,000. The dock will be constructed in England, and shipped in knockdown condition to Vancouver. Two other applications for subsidies are under consideration, one from the Sault Ste. Marie Dry Dock and Shipbuilding Co., and the other from the Thunder Bay Dry Dock and Shipbuilding Co., for the erection of a floating dock at Port Arthur. For some time the shipping interests have felt the need for a dock with thoroughly equipped repair plant on the lower lakes. The Kingston graving dock was constructed at a time when chartered companies would not build a dock. It has served its purpose up to the present, but of late years there has arisen a pressing demand for improved facilities. The United States docks and shipyards have absorbed a good part of the business which would naturally go to Kingston if a satisfactory repair plant were installed. It is felt that the time has come when a private company, if in control of this dock, by establishing a modern repair and shipbuilding plant, would satisfy the demands of the shipping trade on the lakes and canals. A proposition to lease the dock has accordingly been receiving most careful consideration with the result that it has been decided to call for tenders for a 21 years' lease, subject to the requirements of the Dry Dock Act and conditional on the establishment by the lessee of a suitable repair plant capable of taking care of the largest vessels which could be accommodated by the dock.

The expenditures on harbors and rivers during the year was $7,853,693.75, including dredging. Works of improvement, exclusive of dredging, have been carried on at 759 points, comprising the construction of wharfs, piers, breakwaters, dams, bridges, etc., and their repair and re-construction. At Fort William and Port Arthur, during the season of 1908, a total of 2,883,607 cubic yards of material were removed. A further contract was entered into last spring with the Great Lakes Dredging Co. for the excavation of a basin at the mouth of the Mission River, which will form the G.T. Pacific Ry. lake terminus. Around this basin a quay wall will be constructed, with the necessary slips for the accommodation of vessels receiving and discharging cargoes. Early this season, on representations from the Winnipeg Board of Trade, local boards of trade and business and railway interests, the question of the further deepening of the channel in the Kaministikwia and Mission rivers to 25 ft. was carefully studied, with the result that the work of increasing the depth and width of the channels and basins, beyond what was originally determined upon, has been undertaken, 22 ft. of water not being sufficient to afford the larger vessels now frequenting the ports adequate steerage way. At Victoria Harbor, three dredges have been at work, with an average daily output of 5,000 yards. A slip of 600 ft. wide, 25 ft. deep and practically 5,000 ft. long should be completed, according to the original plan, early next season. At Tiffin, a slip has been dredged sufficient to permit the largest lake vessel in the grain-carrying trade to discharge her cargo at the G.T.R. elevator. Both of these harbors are being developed in accordance with a comprehensive plan and to a corresponding depth, viz., 25 ft., to those at the head of navigation on Lake Superior. Reference was also made to the works being carried on at Montreal, Quebec and St. John. The expenditure of the department under the head of dredging, including new plant, repair and maintenance of existing plant, amounted to $4,547,773.43, a sum of $1,203,466.87 in excess of the outlay of the preceding year.

OUR RAILROAD FENCES

We can furnish Light or Heavy Fencing, Hinge or Straight Stay, to meet all conditions.

We are adding to and improving our plant each year, and our customers can depend on securing something better than we had previously furnished.

We are prepared to furnish all material and labor, and turn out to the Railroad a complete job, as we have a number of experienced fence builders always in our service.

Send us your Specifications and we shall be pleased to furnish prices either by mail or otherwise.

Steel and Wood Frame Gates for Railroads at special prices.

New Brunswick Wire Fence Company, Limited

Moncton, New Brunswick

LOCOMOTIVE

SMOKE STACK WEBS

Greening's Smoke Stack Webs are woven from "double-Crimped" Wire. This fact means absolutely square and uniform openings and no danger of the wire becoming displaced.

They give the most reliable and longest service.

Made in all weights and meshes, from the best grade of steel wire, drawn and woven in our own mills.

Write us for quotations and Catalogue 2.

St. Lawrence & Chicago Steam Navigation Co., Ltd.

Following are extracts from the report presented at the annual meeting, Jan. 5: "The season of 1909 was on the whole a fairly satisfactory one, although not as good as expected at the close, owing to excessive competition among Canadian vessels. Two of the company's steamers were injured by grounding in harbors where there was supposed to be 4 ft. more water than steamers were drawing, caused by careles dredging. The directors have decided to lengthen the steamer G. R. Crowe, with a view to increasing her earning power, and contract for same has been given, the steamer to be ready on the opening of navigation, 1910. The directors from the earnings of the season have paid a dividend of 8%, and have carried forward $30,623.73 to the credit of profit and loss, leaving a balance at the credit of that account of $133,007.28."

ASSETS.

Five steamers, Algonquin, Iroquois, W. D. Matthews, G. R. Crowe, E. B. Osler	$950,000 00

Dividend 8%, payable Jan. 3, 1910		68,800 00
Balance carried forward		133,007 28
		$215,314 35

The President, W. D. Matthews, stated at the meeting that J. H. G. Hagarty wished to be relieved of the duties of Managing Director, which position he filled as well as that of Secretary Treasurer. The Board had elected the Superintendent, A. A. Wright, as a director in place of the late G. Hagarty and proposed to appoint him Managing Director, J. H. G. Hagarty to continue as Secretary Treasurer. He also stated that the steamship G. R. Crowe would be lengthened 72 ft., increasing her capacity from 3,500 to 5,000 tons, at a cost of about $50,000.

The following are the directors for the current year:—President, W. D. Matthews; Vice President and Sec. Treas., J. H. G. Hagarty; Managing Director, A. A. Wright; other directors, Jas. Carruthers, S. Crangle, G. R. Crowe, C. S. Gzowski, E. B. Osler.

Welland and Georgian Bay Canals.

The question of the deepening of the Welland Canal and the construction of the Georgian Bay Canal were referred to by Sir Wilfrid Laurier in a speech at Toronto Jan. 5. He said:—"The deepening of the Welland Canal is of paramount necessity. We must have continuous lake transportation from Port Arthur, Fort William, and Duluth to Montreal. At present vessls of 10,000 tons and over unload their grain at the mouth of the Welland Canal. When the canal is deepened they will carry their grain to Prescott to tranship it for Montreal. This is one problem, and then there is the other, the Georgian Bay Canal. It also is a matter of necessity. You will find vessels leaving Fort William for Montreal and going almost in a straight line, whereas if they were going by the St. Lawrence route they must sail about a right angle. It is a saving of one-third of the distance; it is the route which was followed in the old days of the Hudson Bay trade. You will ask me which of those two routes I favor? I favor both. When are the works to be undertaken? The Government has not said, but if I have a voice in the Government they will be undertaken just as soon as this country is able to undertake them. The Transcontinental is a heavy burden to be discharged, and we must husband our resources. We must be prudent and bold, economical and generous. Just as soon as the Minister of Finance gives me assurance that the work can be done the work will go on. I shall not live to see the completion of this work, but so long as I am able I shall do my work. Should I leave this work undone it remains in the hands of those who will prosecute it to the extent of their last resources. But in the order of things it cannot be very long before we take up these duties, and the sooner they are taken up the better pleased I will be and you will be."

Vessels Removed from the Register.

The following vessels were removed from the register in Dec., 1909, for the reasons assigned:—Steam: Adele, Sydney, N.S., 23 tons, sold to foreigners; Admiral, Port Stanley, Ont., 8 tons, out of existence; Augusta, St. Catharines, Ont., 31 tons, burned; Bertha L. Cockell, Port Stanley, Ont., 16 tons, broken up; Burt, Vancouver, B.C., 34 tons, broken up; Caledonia, Vancouver, B.C., 359 tons, wrecked; Canada, Toronto, 209 tons, dismantled; Eleanor, Toronto, 57 tons, lost; Frank N. McCrea, Kingston, Ont., 10 tons, sold to U.S.; Gilphie, Ottawa, 18 tons, burned; Lady Eileen, Gaspe, Que., 526 tons, stranded; Margherita, Toronto, 15 tons, wrecked; May Bird, Toronto, 32 tons, broken up; Ottawa, Ottawa, 1,344 tons, foundered; Shamrock, Toronto, 101 tons, out of existence; Snow Storm, Port Stanley, Ont., 10 tons, broken up; Star, Port Burwell, Ont., 9 tons, sold to U.S.; Stranger, Port Hope, Ont., 17 tons, burned; Tender, Toronto, 21 tons, burned; Union, Ottawa, 66 tons, dismantled; Welshman, Ottawa, 99 tons, burned; Mantinea, St. John, N.B., 1,737 tons, sold to foreigners; Rome, Port Arthur, Ont., 1,164 tons, burned; Sailing: Alexandra, Weymouth, N.S., 178 tons, stranded; Belle of the Bay, Sydney, N.S., 11 tons, broken up; Belmont, Lunenburg, N.S., 98 tons, stranded; Ben Bolt, Yarmouth, N.S., 91 tons, transferred to West Indies; Bob o'Link, Toronto, 15 tons, out of existence; British Eagle, Yarmouth, N.S., 64 tons, lost; Canadienne, Halifax, N.S., 53 tons, wrecked; Dart Halifax, N.S., 10 tons, broken up; Echo, Toronto, 50 tons, out of existence; Ella Claripa Eddy, Ottawa, 141 tons, broken up; Emma Burke, Sydney, N.S., 12 tons, transferred to Newfoundland; Hillside, Yarmouth, N.S., 439 tons, sold to foreigners; Jessie L. Smith, Lunenburg, N.S., 100 tons, abandoned at sea; Lena A., Port Medway, N.S., 11 tons, broken up; Lulu, New Westminster, B.C., 16 tons, burned; Marion F., Chatham, N.B., 24 tons, broken up; May, Ottawa, 165 tons, broken up; Mizpah, Lunenburg, N.S., 100

tons, stranded; Myrtle V. Hopkins, Liverpool, N.S., 158 tons, lost; Nellie Morrow, Gaspe, Que., 88 tons, stranded; Nita, Port Hawkesbury, N.S., 22 tons, transferred to Newfoundland; Rover, Toronto, 20 tons, out of existence; Twilight, St. John, N.B., 30 tons, broken up; Valetta, St. John, N.B., 99 tons, wrecked; Wilfrid M., Lunenburg, N.S., 199 tons, transferred to Barbadoes; Wanderer, Toronto, 110 tons, out of existence; Willetta, Halifax, N.S., 12 tons, broken up; Wm. McGillivrey, Ottawa, 157 tons, broken up; J. Levesque, Quebec, Que., 62 tons, wrecked; Sirocco, St. John, N.B., 298 tons, broken up.

Passenger—"What makes this boat pitch so?" Sailor—"That's a nautical secret, ma'am, that we don't like to give away, but seein' it's you, I don't mind tellin' you that it's the waves."

Canadian Coasting Privileges

The following order in council has been passed amending the order in council of Dec. 17, 1908, published in our Jan., 1909, issue:—"Whereas applications have been made to allow the ships and vessels of certain foreign countries to participate in the ocean trade between Atlantic and Pacific ports of Canada to a limited extent for a temporary period—it is hereby ordered that notwithstanding anything in the order in council of Dec. 17, 1908, respecting vessels participating in the coasting trade of Canada, steamships of the following countries, namely, Italy, Germany, The Netherlands, Sweden, Norway, Austria-Hungary, Denmark, Belgium, the Argentine Republic and Japan shall be admitted to the coasting trade of Canada, in the carrying of goods and passengers between any port in the Atlantic provinces of Canada and any port on the Pacific coast of Canada (via South America), and vice versa, on the same terms and conditions as are applicable to Canadian vessels, until Dec. 31, 1911."

During Nov., 1909, 13 employes were killed in the course of their employment in Canadian navigation. Of this number, eight deaths were due to drowning, four to falls, and one to falling material.

Application is being made to the Dominion Parliament to incorporate the Canadian Shipping and Drydock Co., with power to construct, acquire and navigate steam and other vessels, and to construct and acquire wharves, docks, elevators, warehouses, etc., in connection therewith. J. A. Ritchie, Ottawa, is solicitor for applicants.

Largest Dealers Rebuilt Equipment in United States

TWO SEPARATE PLANTS

EAST PLANT
Capacity, 25 New Freight Cars per day
10 New Coaches per month

WEST PLANT
Capacity, 10 Heavy Repairs Locomotives per month
Besides Coach and Freight Car Repairs

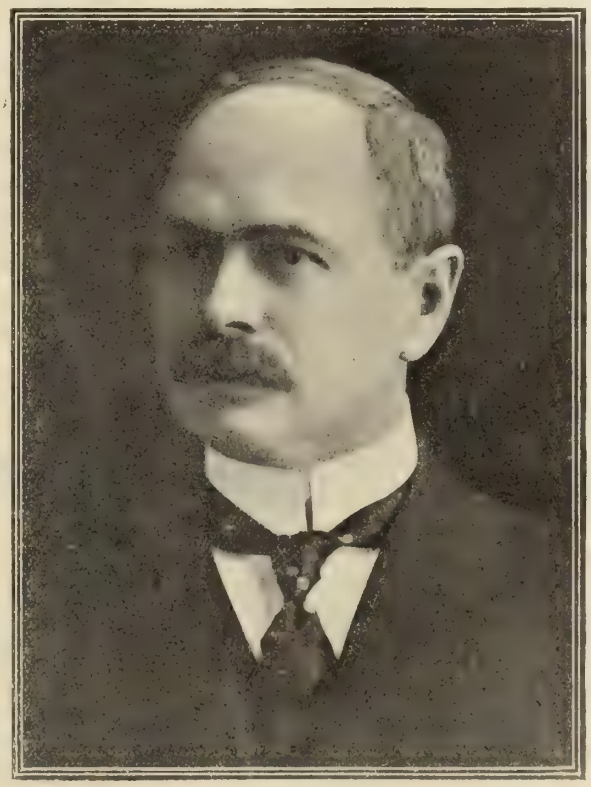
C. P. R. Consolidation Locomotive with Superheater

In the system of standardization of locomotive equipment adopted by the Canadian Pacific Ry., the class M4 has been the standard consolidation locomotive, and with a single exception, the most powerful class of locomotive on the road, being what is termed a 180% engine, the basis (100%) being 20,000 lbs. tractive effort at 80% of the boiler pressure. The locomotives of that class are 21 x 28 in. simple engines having 57 in. drivers and weighing 186,200 lbs., of which 163,700 lbs., or 87½%, is on drivers. The boiler is of the extended wagon top type, 69 in. in diameter at the front end and carries a steam pressure of 200 lbs. All of these locomotives have superheaters, and in some of the later ones the steam pressure is reduced to 180 lbs. and the cylinders enlarged to 22½ x 28 in.

The traffic now demands a more powerful type of locomotive and an entirely new design of consolidation engine, which is known as class N3, has been developed. While, of course, a large number of the former standard parts are used in this design it is, in the main, an entirely new arrangement. It is a 210% engine and has a tractive effort of 42,500 lbs. The total weight is 220,000 lbs. and 195,000 lbs., or 88.6% is on drivers. The cylinders are very large, 24 x 32 in., and a boiler pressure of 180 lbs. with a Vaughan-Horsey superheater, having 450 sq. ft. of heating surface, is employed. The drivers have been enlarged to 63 in. and the boiler has an evaporative heating surface of 2,811 sq. ft. as compared with 2,381 in the class M4. An examination of the ratios shows that while the evaporative heating surface has kept pace with the increase in the weight of the locomotive, as compared with the class M4, the increase in size of the drivers has affected the B D factor very materially, giving a figure of 1,003, as compared with 880. When the B D factor is determined by the use of an equivalent heating surface, the derivation of which will be explained later, it is found that it has a value of 815 as compared with 714 for the class M4. In general, the locomotive will be seen to be a normally conservative design, arranged in many particulars to suit the special conditions under which it is to be operated. An electric headlight on a heavy freight locomotive is somewhat unusual, as is also the location of the air reservoir. The different parts of the locomotive will be considered separately, beginning with the boiler.

BOILER.—A radial stay, extended wagon top type of boiler having a firebox of large volume, with an inclined grate of 49 sq. ft. area, has been applied. Its largest diameter is 79 in. and the smallest 72 in. The throat is but 19¼ in. in depth and the level of the back mudring is slightly above the bottom of the barrel of the boiler, the grate inclining 20 in. in a length of 9 ft. 2¾ in. One of the most noticeable features is found in the use of curves of very large radii at the corners of the mudring, which are gradually decreased toward the top portion of the firebox. The side sheets are both slightly inclined inward from the mudring, which is 4½ in. wide on the side; the distance between the side sheets is increased by 1 in. at the turn of the crown. Both the side and crown sheets and the roof are in one piece.



A. W. CAMPBELL, C.E.,
Deputy Minister of Railways and Canals, and Chairman Government Railways Managing Board.

The location of the tubes, which includes 24 5-in. and 272 2-in., the former being arranged in three rows of eight each for the superheater elements, is shown in one of the accompanying illustrations. The heating surface of the fire tubes is 2,631 sq. ft., which, in connection with 180 sq. ft. in the firebox, gives 2,811 sq. ft. of evaporative heating surface. It has been found, however, that, in comparing a superheater engine with one using saturated steam, to get an equivalent heating surface in the latter it is necessary to multiply the superheating surface by 1.5, which should be added to the total heating surface of the engine as obtained in the ordinary manner. In this case this would show that a boiler of the same capacity as the one applied, if it was not fitted with a superheater, would require 3,486 sq. ft. of heating surface, or a ratio of one square foot to 55.9 lbs. on drivers, which is certainly a guarantee of ample steam capacity.

FRONT END ARRANGEMENT.—A section through the front end and superheater is given in one of the illustrations. This type of superheater has proven to be most satisfactory in every way, after a number of years of trial. It is now the standard type on the C.P.R., where a larger number of superheaters are in operation than on any other railway on this continent. The introduction of the superheater requires the front tube sheet to be set back 2 ft. 9 in. from the centre line of the stack and also the introduction of a special arrangement of diaphragm plates and a damper for cutting off the circulation to the large fire tubes when the engine is not using steam. The arrangement includes a comparatively low exhaust nozzle and long petticoat pipe in two sections. The stack has no internal extension. The presence of two adjustable deflectors admits of an accurate equalization of the draft. The petticoat pipe is arranged to be easily removed to permit access to the superheater elements behind it.

THE CHECK VALVE is located on the top centre line of the boiler, underneath the base of the bell stand. It consists of a double check arrangement, there being one check valve for either feed pipe, the passages from which are combined and enter the boiler through one opening. Each check valve passage is provided with a stop valve, which can be closed to permit the check to be reground when the boiler is under steam. A valve in the centre of the casting closes the passage to a chamber in which there is a connection for a pipe or hose for either blowing down or filling up the boiler. All of these valves are provided with renewable seats. This arrangement of checks on top of the boiler gives a non-freezing discharge pipe from the injector to the checks, and any leakage at the checks will drain back to the injector.

ASH PANS.—An exceptionally novel and interesting design of ash pan is used. It is of the self-clearing type, having two hoppers, and really consists of two separate parts, the hoppers and their operating mechanism being secured to the locomotive frames, and deflector plates, forming the upper part of the pan, being secured to the mudring and extending down inside of the hopper sec-

Galena-Signal Oil Company

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY

Galena Railway Safety Oil

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT

tion. There is an air inlet space 7 in. wide, in a horizontal direction, between the two sections. The arrangement and shape of this air space is well shown in the cross section of the pan. While the weight of the two parts is principally held by the frames and boiler respectively they are secured together and stiffened by the plates forming the end of the pan and by two intermediate ¼-in. stiffening plates secured to each through the medium of angles.

The doors closing the hopper openings are of swinging link type, being arranged to fit over and seat upon an extension of the hopper frame. The swinging link is so designed that the first movement of the doors is directly outward to clear this flange and then swing upward, as is shown by the dotted lines in the illustration. The operating mechanism is arranged so that the doors may be securely locked or held open at any desired point. This design of pan gives unusually large openings for air, which is well diffused before reaching the grates, and at the same time it acts as a perfect protection against fire being blown out of the pan or otherwise escaping.

CYLINDERS.—In the design of the cylinders every opportunity has been taken for the reduction of weight where it could be done without sacrificing strength or steam economy. The 12 in. valve chambers have been set inside of the cylinders almost directly over the frames

and in the line of the steam passage to the cylinders. This location of the valve has made necessary an alteration of the design of Walschaert valve gear previously standard on this road, which will be mentioned later. The cylinders have a ¾ in. bushing, and ports for the application of a by-pass valve arrangement, somewhat similar to the Sheedy type which has been in use on this road for some years, are provided. An excellent arrangement is noticed in connection with the fastening of the cylinders to the frames, consisting of two steel castings secured underneath the cylinder proper and inside of the frames, forming between them the bearing for the fulcrum pin of the front truck equalizer. This makes a solid mass across from frame to frame beneath the cylinders and puts no strain on the bolts fastening the cylinder flanges together at the centre. It also gives a fulcrum pin bearing of great strength, which is entirely independent of the cylinder casting. The design of these cross-ties is shown in one of the illustrations.

A by-pass valve arrangement, as shown in the illustration, is fitted to the cylinders and covered by the cylinder jacket. The two openings in the cylinder casting are the terminations of passages from the steam ports and connect to the by-pass valve casting with ground joints. In the centre of this casting is a valve with a renewable seat, which is held open by a coiled spring. The valve is closed by the pressure of steam in the chamber behind it, in which it has a steam tight fit. This chamber is connected by a small pipe to the centre steam passage in the valve chamber, so that when the throttle is open the by-pass valve is closed and communication between the two ends of the cylinder is prevented. When steam is shut off, however, the valve is held open by the spring and air is permitted to freely circulate from one end of the cylinder to the other.

VALVE GEAR.—Because of the difference in the location of the valve chamber in this design the valve gear differs somewhat from the one heretofore in use by the C.P.R., although it is designed on the same general principles. In the former type the valve was located directly over the cylinder, the whole weight of the forward part of the gear being supported by a bracket, forming part of the back steam chest cover, carrying a rocker to which is secured the combination lever and a block working vertically in a crosshead fastened to the valve stem, which sets in guides, also forming part of the steam chest head.

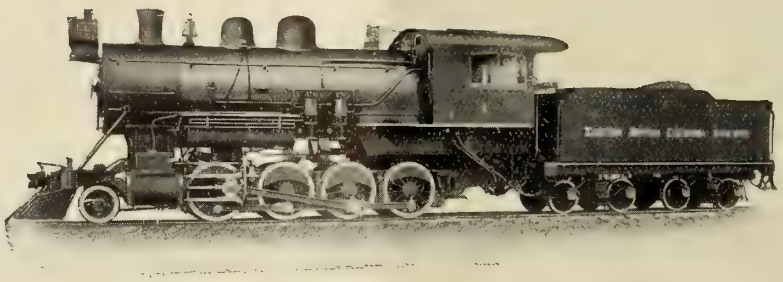
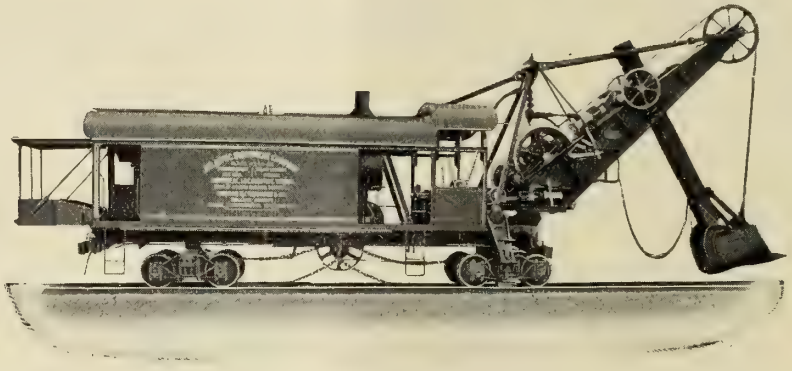
LOCOMOTIVES FOR ALL CLASSES OF SERVICE



Consolidation Type Freight Locomotive, Built for Eastern British Columbia Railway.

Total weight of engine in working order, 186,310 pounds. Weight on driving wheels, 166,100 pounds. Diameter of driving wheels, 51 inches. Boiler pressure, 210 pounds. Cylinders, 20 x 28 inches. Maximum tractive power, 39,200 pounds.

ATLANTIC STEAM SHOVEL



Direct wire rope hoist with but one sheave, instead of chain hoist with from five to seven sheaves, reduces delays and loss of time due to breakdowns, increases the efficiency of the engines, and reduces repair bills as well as fuel consumption.

Finished, interchangeable spare parts always on hand at works.

MONTREAL LOCOMOTIVE WORKS, LIMITED

BANK OF OTTAWA BUILDING, MONTREAL, CANADA

The idea of this arrangement is to relieve the valve stem of all stresses from the weight of the other parts of the valve gear.

In the present design the same idea has been followed by connecting the combination lever to the outer arm of a rock shaft, the inner arm of which carries a small crosshead working in guides, forming part of the valve stem. The valve stem itself is extended backward and carried in a guide secured on top of the frames. The rock shaft is supported by most substantial bearings; the outer one, of very rigid design, is secured to the cylinder casting directly above the cylinder and the inner one is part of the valve chamber head. The bearings are both inside the arms of the rocker. In this manner the valve stem is relieved of the duty of carrying the weight of any part of the gear and is held in perfect alignment. The other features of the valve gear are practically the same as was shown in the article above mentioned. The design and method of supporting the link is of particular interest.

THE GUIDE YOKE is of the built-up type comprising a 1¾ x 12 in. wrought iron plate, supported across the frames by very substantial cast steel knees located in the rear of the yoke and including in the same casting the inner bearing for the link shaft. These knees are most securely bolted to the plate, having a lip over the top and a very liberal bearing and secure fastening to the top of the frames. At the outer end of the cross plate are secured large cast steel carriers for the guides, the details of which are shown in one of the drawings. These are of I-beam section

throughout and include brackets for carrying the guides, the upper one being nearly 2 ft. in length and carrying the guide by three 1¼ in. bolts. These yokes were most carefully designed to obtain the required strength and rigidity with a minimum weight and are cut out for clearance of the radius bar. The plate is set in a recess in these castings and secured to each by six 1⅛ in. bolts.

From the guide yoke are also carried the outer bearing of the link shaft and the bearings for the lift shaft, these being separate castings of steel, which were specially designed to combine the maximum rigidity with minimum weight. They are carried on the back of the cross plate by four 1⅛ in. bolts. Each has a lip over the top of the plate and a bearing for the full depth of 12 in.

FRAMES.—One casting, 35 ft. 8⅛ in. long, forms each of the frames. The main section is 5 in. thick and has a depth of 6½ in. at the pedestal. The forward section passing below the cylinders, however, is but 3½ in. wide, the inside edge being in alignment with the main frame. The section below the cylinders is 12 in. in depth at the narrowest point. The pedestal binders are of the clip type, being held by two 1¼ in. bolts at either end. The design throughout is simple and straightforward, requiring comparatively few departures from straight line work on the slotter.

BUMPER BEAM.—Three steel castings with a 15 in. channel form the bumper beam and centre pin bearing. The casting between the frames, which forms the guide for the truck pin, is similar to that which was commonly used when cast iron was the only material available. It is deeply ribbed and securely fastened between the frames, but has no connection to the cylinder casting. In addition to this there are two castings on the outside of the frames, of deeply ribbed section, forming the wings of the bumper beam. These three castings are secured together by a 15 in., 40 lb., channel, which forms a tension member in case of any cornering strains on the end of the bumper beam. This makes a very strong arrangement, but also one which, in case of accident, permits part of the beam to be replaced without disturbing the remainder. The frames are terminated 10¾ in. from the face of the beam, the castings being lipped over the ends of the frames. The whole beam is covered with a ¼ in. plate, which is cut away where necessary and has a hinged section on each side to permit the removal of the pistons.

THE DRIVING BOXES have brasses 14 in. long, the axles being 9½ in. in diameter except the main, which is 10 in. The boxes are set 1 in. out of line with the

centre of the frames, towards the inside, the spring rigging being arranged to be central over the box. This gives a longer bearing area than would otherwise be possible and introduces no particular complications.

The spring rigging is of the customary type, having the front pair of wheels equalized with the front truck and the remaining three on either side being equalized together.

AIR PUMP BRACKET.—A new design of air pump bracket is found on this locomotive, which is considerably lighter and fully equal in strength to the designs commonly in use. It consists of two 1 x 3 in. wrought iron straps, each secured by three 1 in. studs to the boiler shell at the top, and held in position at the bottom by a cast iron bracket extending out from the boiler and secured to each of the straps by two ⅝ in. bolts. The air pump is bolted directly to the vertical hangers, which are lipped over on the bottom. The illustration clearly shows the details of this bracket.

The general dimensions, weights and ratios of this locomotive, which was designed in the Mechanical Engineer's office under the supervision of H. H. Vaughan, Assitant to the Vice President, are as follows:—

GENERAL DATA.

Gauge	4 ft. 8½ in.
Service	Freight and Passenger
Fuel	Bituminous Coal
Tractive effort	44,750 lbs.
Weight in working order	220,000 lbs.
Weight on drivers	195,000 lbs.
Weight on leading truck	25,000 lbs.
Weight of engine and tender in working order	354,000 lbs.
Wheel base, driving	16 ft. 6 in.
Wheel base, total	25 ft. 5 in.
Wheel base, engine and tender	55 ft. 7⅞ in.

RATIOS.

STEAM RAILWAY STATISTICS FOR YEAR ENDED JUNE 30, 1909.

The table given in our last issue showed the financial results of the operations of steam railways for the year ended June 30, 1909. The following table gives the percentages and the principal statistical information compiled by the companies. The table published last issue and the one given below contain all the information given in our compilation of these statistics published, but the columns have been rearranged so as to combine in the first table the financial and in the second the statistical information.

Name of Railway.	Proportion of total passenger service train revenue of total earnings.	Proportion of freight revenue plus switching revenue &c. to total earnings. A Railway to Hudson Bay.

In the House of Commons recently, the Minister of Railways said he wished to make it clear that the Government has been committed to the work of the construction of a Hudson Bay railway, and intended to proceed with it with all possible speed. After full study of the situation, so far as it was possible at present, the Government had decided that it was advisable to make the Hudson Bay route another great outlet for the rapidly increasing products of the western part of Canada. The Government intended to proceed as rapidly as possible with the construction of this railway. Chief Engineer Armstrong, in his report, expressed the opinion that Nelson possessed a superior harbor to Churchill, while the route was 67 miles shorter than to Churchill. However, before either place was selected as a terminal it would be wise to make sure of the fact, and the Minister of Marine would ask the House for a vote for the purpose of sending a ship up through the channels which would go into both these harbors from the outside, make an examination of the channels and of the passage through the straits. This expedition would make a thorough investigation of the outer harbors of both places, and when that was done the Government would be in a position to take up in a more practical way that part of the project at the harbor end. But that need not mean any delay in the beginning of the construction of the railway, as for about 260 miles the route would be the same, whichever harbor was selected as a terminal. This mileage would carry the line from Pas Mission to Split Lake; the total distance from Pas Mission to Nelson being 410 miles, and to Churchill 477 miles. The estimates given in the Departmental report were based on the preliminary surveys. A survey party was then engaged in making the location from Pas Mission to Split Lake. There might be an increase in the estimate as a result. The surveys provided for the construction of a line having a gradient of 0.4% going to the Bay; the engineer thinking it impracticable to make that gradient both ways. There might be some difference of opinion as to the necessity of constructing a roadbed necessitating the use of 80 lb. steel rails. There also might be differences of opinion as to the construction of the line as a government work. He was not prepared to say how it would be done, but no matter how it was done, that did not of necessity mean that construction could not be begun at once, because if an arrangement was made with a company that was satisfactory, any work the government had done could be handed over to it on reasonable terms in a contract.

$180,000 was voted by the House of Commons, Feb. 4, for the survey and location of the line. The Minister of Railways explained that this was for the completion of location from Pas Mission to Split Lake. He expected to bring down an item for construction in the supplemented estimates when he hoped to be able to state whether the line would be constructed by the Department, or let by contract. A bridge had to be constructed across the Saskatchewan River at the commencement of the line.

Replying to questions the Minister said there was no agreement with any person as to the construction; how it would be constructed, or who would construct it is an open question. D. D. Mann, had been, within the previous few days, in Ottawa, consulting the Department upon other matters, but nothing was said about the construction of the railway to Hudson Bay. (Feb., pg. 97).

Farm Crossings Regulations

The Board of Railway Commissioners passed the following order 9325, Jan. 17, as standard regulations regarding farm crossings:—

1. Farm crossing gates shall be of such a width as to give a clear space between the post of not less than 16 ft. in Manitoba, Saskatchewan, Alberta and British Columbia, 15 ft. in Ontario, 14 ft in Quebec and the Maritime Provinces.

2. The planking or other approved filling between the steel rails, and for a width of at least 8 ins. on the outer sides thereof, and the roadways between the gates and the track or tracks, shall each furnish a road surface of not less than 14 ft. wide in Manitoba, Saskatchewan, Alberta and British Columbia, and 12 ft. wide in the other Provinces.

3. For any cut or fill up to 5 ft. the grade shall not be steeper than 10%, and for each foot, or fraction exceeding one-half foot, of cut or fill in excess of 5 ft. the percentage of grade shall (except where, and to the extent that, the slope of the ground makes it impossible) be decreased by ½ of 1% until a depth or height of 11 ft. is reached.

4. When a cut or fill at any farm crossing exceeds 11 ft. the matter shall be referred to the Board to decide as to the advisability of requiring the railway company to construct a bridge or undercrossing, unless the company, in consultation with the owner of the farm affected, voluntarily constructs a suitable bridge or undercrossing. The width of bridges and undercrossings to be the same as the width of the gates in the different Provinces, and the height of undercrossings to be determined by the requirements in each case.

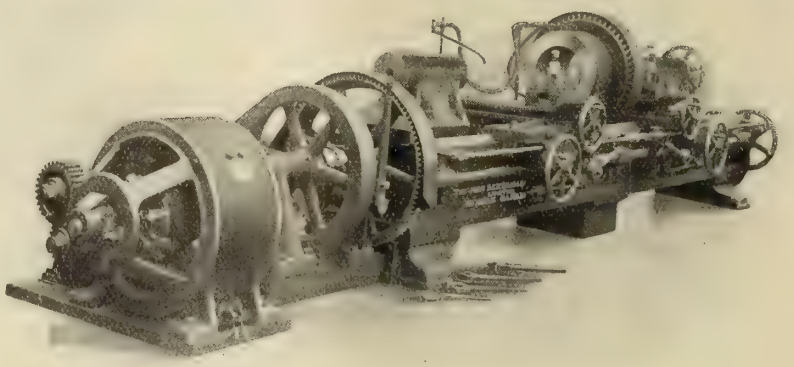
5. In special cases, it may, upon application, be ordered that any existing farm crossing be reconstructed to conform to the foregoing standards.

The Canadian Ticket Agents' Association's Executive Committee met in Toronto recently and decided to hold the annual meeting in Quebec on Oct. 5, 6 and 7. The headquarters will be at the Chateau Frontenac. The Manager in Chief of the C.P.R. hotel system, Hayter Reed, has quoted very liberal terms for the members' accommodation. W. E. Rispin, G.T.R. ticket agent, Chatham, Ont., will represent the Association at the American Association of General Passenger and Ticket Agents' meeting at Havana, Cuba, Mar. 28. The following agents have joined the Association recently:—A. Bawden, C.P.R., Ridgetown, Ont.; W. J. Anderson, C.P.R., Beeton, Ont.; E. A. Hay, C.P.R., Durham, Ont.

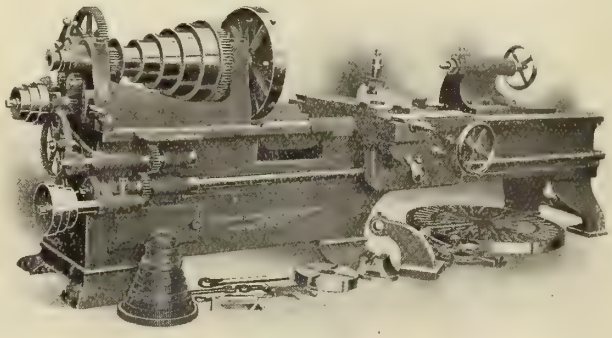
I.C.R. Sleeping Cars.—F. P. Brady, General Superintendent, has issued the following circular to passenger conductors:—"I have to call your attention to rule 133 in the book of instructions issued by the Passenger Department, which reads as follows:—'Train conductors should visit the sleeping cars on their trains at frequent intervals during the night to see that the sleeping car conductor is on the alert and that the temperature of the car is right, viz: 60 or 65 degrees.' I am informed that this rule is usually disregarded. In future it must be obeyed."

The name of the Grand Trunk Pacific Town and Development Co. has been changed to the Grand Trunk Pacific Development Co.

BERTRAM MACHINE TOOLS



BERTRAM NO. 3 DOUBLE CAR AXLE LATHE - Motor Driven



BERTRAM 40-24 INCH STANDARD GAP LATHE

Engine and Gap Lathes, Hammers, Planers and Vertical Drilling Machines of various sizes for prompt delivery.

Particulars sent on request.

National Transcontinental Railway.

Speaking in the House of Commons, recently, the Minister of Railways reported on the progress of construction on the N.T.R., Eastern Division. On Nov 30, 1909, there had been graded on the six districts between Moncton, N.B., and Winnipeg, Man., 1045.1 miles, of which 319.60 miles had been graded since Mar. 31. The mileage graded in the several districts at Nov. 30, was: District A., 241 miles; district B., 349.6; district C., 8.0; district D., 106.0; district E., 33.0; and district F., 307.5. On Mar. 31 there had been laid 275.49 miles of main track, and 59.88 miles of sidings. On Nov. 30, the mileage of track laid was: District A., 124.98 miles of main track, and 20.84 miles of siding; district B., 169.33 main track, 13.94 sidings; district D., 47.44 main track, 10.96 sidings; district F., 255.87 main track, 56.81 sidings. The number of miles of track fully ballasted on Nov. 30, was 425, of which 101.5 was in district A., 74.8 in district B., and 212.4 in district F. There had been steel bridges completed in three of the districts, A., B. and F., representing 23,600,223 lbs. of steel, and 1,732,304 ft. 6 in. of timber, and costing $1,122,449.05. There were steel bridges under construction in four districts, A., B., D. and F., requiring in their construction an estimated weight of steel of 44,459,617 lbs.; and 2,649,979 ft. 6 in. of timber; the estimated cost of these bridges was $2,145,065.66, and there had been paid on account of construction to Dec. 31, 1909, $949,561. There were other bridges required in all districts for which contracts had not been let; for these the estimated quantities of steel required was 37,810,686 lbs; of timber 3,220,241 ft. 6 in.; and the estimated cost $1,949,-987.66. The total estimated cost of the bridges on the Eastern Division was therefore $5,217,502.37.

Replying to questions in the House of Commons recently, the Minister of Railways stated that surveys extending from Winnipeg for about 700 miles easterly were taken over by the Commission from the G.T. Pacific Ry. Co. and paid for by the Government. This mileage was all re-surveyed and re-located by the Commission's engineers. Parts of the re-located line on the McArthur contract were changed after the contract was let, particularly in two places, the line being improved thereby. On mileage 49 to 93 the cost of the change over the original estimate was $127,377, while the capitalized value of the improvement was $49,692 on a saving of 4969.2 ft. in length, and $59,854.40 on a saving of 748 degrees 18 ft. in curvature; on mileage 103-122 the cost over the original estimate was $565,465, while the net saving in capitalized cost was $1,760. The long tunnel east of the Winnipeg River is 613 ft. long. Reports dated Dec. 31, 1909, showed that the line between Winnipeg and Lake Superior Jct., was 94.66% completed, and of the ballasting 59% completed. The estimated quantities, actual excavations and cost were:—

	Estimate.	Actual.	Cost.
Solid rock	3,696,336	6.415,869	$10,906,977.30
Loose rock	733,454	2,056,297	1,233,778.20
Com. exc.	11,233,247	2,215,876	664,762.80
	15,663,037	10,688,042	$12,805,518.30

This amount had been paid less 10% hold-back. All the excavations, except the actual entrance into Winnipeg had been completed. The original estimated cost of excavation was $13,010,398.92, and the revised estimates, including rails, ties, steel bridges, etc., was $17,534,000.

The Minister of Railways replying to questions in the House of Commons recently, as to the sections in Districts E. and F. let to O'Brien, Fowler and McDougall, said as to the section in District F., mileage 1,534.04 to 1,538.17 from Moncton, the estimated quantities, actual excavation to Nov. 30, 1909, and the cost were:—

	Estimate.	Actual.	Cost.
Solid rock, c.y.	493,400	344,334	$499,283.86
Loose rock, c.y.	71,900	330,805	181,942.75
Com. exc., c.y..	374,000	128,611	32,152.75

The cost of the excavation at the contract prices on the estimated quantities was $848,475. The estimated quantities were approximate. In a number of muskegs, where no soundings had been taken it was found as the work progressed, that the bottom of many of these was of such a nature as to require much larger quantities of filling than was estimated in order to get a solid bottom. These fills had to be made of material nearest to the work, which was almost entirely loose and solid rock. This accounts to a great extent for the large returns of loose rock. The total estimated expenditure on the section was $1,158,-258.25. The second contract let to the firm covered mileage 1,407.65 to 1,534.04 from Moncton. The estimated quantities, actual excavation to Dec. 31, 1909, and the cost were:—

	Estimate.	Actual.	Cost.
Solid rock, c.y.	2,602,000	658,182	$974,109.35
Loose rock, c.y.	89,000	242,178	205,851.30
Com. exc., c.y..	1,489,000	228,703	66,323.87

The reference to muskeg filling made in the first instance applies to this contract also. The cost of the section on the basis of the estimated quantities at the contract prices is $5,967,208.75.

The question of the entrance of the line from the east into Winnipeg came up for discussion with the Minister of Railways, Feb. 3. The original plan approved by H. D. Lumsden, ex-Chief Engineer, provided for an entrance by a certain route, and the line had been constructed in consequence to a junction with the Canadian Northern Ry. Dundee branch. The C.P.R. objected to the route on account of the crossing of its line involved, and another route, called the northern route, was surveyed and approved by G. Grant, the Commissioners' new Chief Engineer. This route was objected to by the C.P.R. as well as by the Canadian Northern Ry. on the grounds that its use would cut up their yards. An alternative plan was suggested by which the C.N.R. right of way would be used from the junction with the Dundee branch, the right of way being sufficient to permit of both lines being carried along it. After a lengthened discussion between the Minister, the Commissioners and the Chief Commissioner of the Board of Railway Commissioners, the matter was adjourned to permit consideration being given to the suggestion.

GRAND TRUNK PACIFIC RAILWAY

The report of C. Schreiber, General Consulting Engineer to the Government, and Chief Engineer of the Western Division, N.T.R., upon the conditions of the construction being done by the G.T.P.R., to Dec. 31, 1909, as presented to the House of Commons, Feb. 1, by the Minister of Railways, was as follows:—

The Prairie Section extends from Winnipeg to Wolf Creek, 915 miles. The grading and bridging are completed throughout the whole distance, and 1,431 miles of single fencing have been built. The track is laid from Winnipeg to about 24 miles west of Entwhistle, a distance of 885 miles, and a telegraph line has also been built. There is a lift of ballast on the line from Winnipeg to Entwhistle, 861 miles. The road is in operation from Winnipeg to Edmonton, 795 miles, and the traffic for the past 12 months has been as follows:—

74,715 passengers; 5,880,069 bush. grain; 117,810 tons general freight. The accommodation provided for public traffic service on this section is as follows:—6 engine houses, 3 machine shops, 6 divisional station houses, 33 way station houses, 56 section houses, 67 bunk houses, 55 tool houses, 35 water stations, 6 coaling stations, 77 loading platforms, 113 grain elevators, 13 stock yards. For the safety of the travelling public all crossings by this road of other railways have been guarded by interlocking plant. The following is the public traffic rolling stock:—92 locomotives, 6 sleeping cars, 3 parlor cars, 4 first-class cars, 9 second-class cars, 4 mail and express cars, 9 baggage cars, 11 colonist cars, 83 conductors vans, 33 refrigerator cars, 2 official cars, 3,213 box freight cars, 895 platform cars, 31 stock cars, 3 snow ploughs. Work on the "prairie section" is practically closed down for the winter season; the only work going on, being the laying of the track and the finishing of some of the buildings.

The Mountain Section is about 837 miles long. The following works are under contract, viz.:—From Wolf Creek to 179 miles west thereof. Foley, Welch and Stewart are the contractors for the

A Railway Expert's View.

The Ottawa Electric Railway, from its inception, has been one of the most perfect electric lines on this continent. It was a pioneer in up-to-date equipment and has lived up to the standard then set. Its cars are thoroughly up-to-date in construction and equipment and are well maintained in every respect. Its track is good and its various lines are well operated and give thorough satisfaction to the capital's citizens and to the thousands of people who visit Ottawa on business or pleasure during the year. The credit for this very satisfactory state of affairs is undoubtedly largely due to the Superintendent and Purchasing Agent, J. E. Hutcheson, who entered the company's services in 1891, after 17 years of steam railway work. Mr. Hutcheson is recognized as one of the very best electric railway operating men in Canada. He has taken an active part in the Canadian Street Railway Association's proceedings since its organization, has been a member of its executive committee continuously and was Vice President in 1907-8 and President in 1908-9. His opinion on all matters relating to construction, operating and maintenance is continually sought and always valued. He has been a reader of the Railway and Marine World for many years and recently wrote to our Managing Director as follows:

"I wish to say that I have found The Railway and Marine World the most useful periodical published in the interests of the railway business. The reading matter is live and very interesting and is so arranged as to make the paper a very valuable advertising medium. Railway officials who cannot find time to read your monthly are missing something. I wish you continued success."

Mr. Hutcheson's letter points out clearly that our reading matter is what railway men want, that even the most busy ones read it thoroughly and that its value to advertisers is undoubted. Our paper is edited with great care and thoroughness, but all the hard work and expense involved is well repaid by the knowledge that we enjoy the confidence of our subscribers in every Province of the Dominion and in Newfoundland and that the paper is recognized as the authority on transportation matters by people engaged in all branches of that service.

Vancouver, Mercantile Bldg.

grading and wooden bridges. They have done considerable clearing of right of way and about 200,000 cu. yds. of excavation. They have a great number of teams on the tote road hauling in plant, tools and supplies, so as to be in readiness for a vigorous prosecution of the works upon the opening of spring. Only a small force is at work in the cuttings. C. May is the contractor for the substructures of the Wolf Creek and McLeod river bridges. There is a large quantity of sand and gravel delivered at both points, and a large force is engaged excavating the foundations for the piers, pedestals and abutments; as soon as the track reaches Wolf Creek, say in three weeks, cement will be carried up to that point by train. It is of urgent importance that the work on these two structures be rushed to completion with the greatest possible speed, in order that track-laying may be advanced, thus facilitating the transportation of plant, tools and supplies to the unlet portions of the mountain section, enabling intending contractors to bid very much lower for the work than they otherwise could. From 179 miles west of Wolf creek to 597 miles west thereof, the work has not been placed under contract. From 597 miles west of the Wolf Creek to Prince Rupert, 240 miles, the work of grading and the construction of wooden bridges is under contract with Foley, Welch and Stewart. No work has been executed on the first 40 miles, and merely a good start has been made on the next 100 miles; the reasons being, that navigation closed on the Skeena River about a month earlier than usual, thus putting a stop to running in supplies, tools, plant, etc. However, the contractors are exerting their efforts to push a tote road through so as to enable them to haul in supplies, etc., by team and keep the work moving throughout the winter. They are now at work on one of the tunnels and some rock cutting. The work of grading and the construction of wooden bridges on the last 100 miles, to Prince Rupert, was practically completed when a very heavy storm with a high tide caused damage, washing away some of the rock embankments where exposed to the sweep of the open ocean, and bringing down considerable slides from the mountain sides, filling up some cuttings and blocking up waterways. The damage, however, was not very extensive. Mr. Ferguson, the contractor for the substructure of the several steel bridges, having failed in carrying out his contract, the G.T.P.R. has relieved him of the work, and are carrying it on itself by day labor. This work is progressing very slowly, but better conditions are promised for the future. If these promises are not realized, track-laying in the spring will be delayed. Steel rails for this 100 miles; 1 locomotive; 1 conductor's van and 24 cars, for the work of track-laying and ballasting, have been delivered at Prince Rupert, and a large quantity of ties has been delievered along the line. About one mile of track has been laid, but nothing further will be done in that direction until next spring." (Feb., pg. 137).

GRAND TRUNK PACIFIC BRANCH LINES CO.—The House of Commons has passed an act amending chap. 86, of the statutes of 1909, by adding to sec. 1, five paragraphs, authorizing the construction of additional lines, as specified in the notice of application quoted on pg. 31 of our Jan. issue, and granting an extension of time for the construction of the branch lines previously authorized. The act also authorizes the company to issue bonds or other securities to the extent of $30,000 a mile in respect of the new branches to be constructed under this act, with the exception of the branch from between Moose Lake and Tete Jaune Cache, to Vancouver, in respect of which $50,000 a mile may be issued.

Canadian Northern Ry. Construction, Etc.

Canadian Northern Quebec Ry.—The seven miles of line described as the Montmorency branch, for the operation of which the Board of Railway Commissioners recently passed an order, is practically an industrial spur, connecting the Quebec and Lake St. John Ry. with the Montmorency Pulp Co.'s mills near the Montmorency Falls. Heretofore the company's logs were sent over the falls and floated out, and the spur was hurriedly constructed in the fall of 1909 in order to handle the traffic.

The work on the branch line to Rawdon, Que., has been closed down. Grading is practically completed, and some track has been laid. On the resumption of work a bridge will be constructed across the Quareau River and the branch completely.

W. D. Barclay, General Manager, is quoted as having stated in Montreal, Feb. 6, that plans had been prepared for the company's Montreal terminals, and that they are being considered by the executive at Toronto. According to what Mr. Barclay is reported to have said, the site will be a central one; the cost will be about $5,000,000, and the work will be completed within two years.

Canadian Northern Ontario Ry.—A bill has been passed by the House of Commons authorizing the company to enter into agreements as specified by sec. 361 of the Railway Act with the following companies:—Central Ontario Ry., Ontario and Ottawa Ry., Irondale, Bancroft and Ottawa Ry., Marmora Ry. and Mining Co., Bay of Quinte Ry., Brockville, Westport and North Western Ry., Toronto, Niagara and Western Ry. and Bessemer and Barry's Bay Ry.

Work on the Hawkesbury-Ottawa line has been completed, and trains are being operated over it. There are questions connected with the entrance of the line into Ottawa from Toronto yet to be settled, but for the present construction in Ottawa is completed.

The construction of the first 100 miles of the Toronto-Ottawa line, from the Don valley to Trenton, is being pushed forward. The work is being carried out by the general contractor—Angus Sinclair Co.—in four sections, on all of which sub-contracts have been let, and gangs of men are at work, 700 men being at present engaged. There is a considerable amount of heavy clay work in the Don valley, and there is also some heavy work to be done in the vicinity of Scarboro Jct., where the line is to be carried under the G.T.R. tracks. The only points at which construction is not actively in progress are Cobourg and Port Hope, where some matters of route are in course of settlement with the local authorities.

The company has completed and opened for traffic the extension of its line from Sellwood Jct. to Gow Ganda Jct., Ont., 30.7 miles. The construction was carried out by Angus Sinclair Co.

Ontario and Ottawa Ry.—A bill has been passed by the House of Commons and is now before the Senate incorporating a company with this title to construct a railway from the Canadian Northern Ry. near Lake Couchiching, easterly to Snowdon tp., Haliburton county, Ont.; and from Herschell tp., Hastings county, easterly to Renfrew, thence crossing the Ottawa River and continuing in a generally south-easterly direction to Hull, Que., or recrossing the Ottawa River to Ottawa. The company is authorized to enter into agreements with the various Mackenzie, Mann & Co. lines, and also with the Central Ontario Ry., the Marmora Ry. and Mining Co., the Thousand Islands Ry., the Bay of Quinte Ry., the Brockville, Westport and North Western Ry., and the Bessemer and Barrys Bay Ry. The provisional directors are: G. G. Ruel, G. F. Macdonnell, R. H. M. Temple, A. J. Reid, R. P. Ormsby.

James Bay and Eastern Ry.—A bill has been passed by the House of Commons and is now before the Senate incorporating a company with this title to construct a railway from the Canadian Northern Ry. near Lake Abitibi, generally easterly and southeasterly, passing south of Lake St. John to the mouth of the Saguenay River, with a branch to Ha Ha Bay on the Saguenay River. The provisional directors are:—G. G. Ruel, G. F. Macdonnell, R. H. M. Temple, A. J. Reid, R. P. Ormsby.

Wahnapitae Ry.—The Ontario Legislature is being asked to incorporate a company with this title to construct a railway to be operated by steam or electricity from some point on the Canadian Northern Ontario Ry. in the township of Hutton or Creelman northerly, passing Burwash and Welcome Lakes, to the Wanapitei River, above the outlet from Welcome Lake. The provisional directors are:—D. D. Mann, D. B. Hanna, F. H. Phippen, G. Ruel, G. F. Macdonnell, Toronto.

Canadian Northern Ry.—A bill has been passed by the House of Commons, authorizing the company to construct the railways mentioned on page 43 of our Jan. issue, and extending the time within which certain of the lines authorized by sec. 2, chap. 92, of the Statutes of 1908, may be built.

A train service was started over the Maryfield branch line, Feb. 7. Track has been laid for 80 miles, and grading has been completed for a further 80 miles.

The bill for the ratification of the agreement between the company and the B.C. Government for the construction of a line from the Alberta—B.C. boundary to Vancouver, is under discussion by the B.C. Legislature. It is said that R. G. Tatlow, who has resigned the office of Provisional Treasurer, will be appointed a Commissioner to take charge of the funds realized by the sale of the securities and pay them out to the C.N.R. for the construction of this line, and to the Kettle River Valley Ry., in respect of the construction of the line from Grand Forks to Vancouver. (Feb., pg. 169.)

W. Mackenzie, President, is credited with stating in Montreal recently that the company will build 500 or 600 miles of line west of Port Arthur this year, and will make a good start on the B.C. section.

Wellington Colleries Ry., Etc.—Press reports state that the Wellington Colleries, the railway, steam and other vessels, and the other Dunsmuir properties on Vancouver Island, have been sold, one report stating that the C.P.R. is the purchaser, and another the Canadian Northern Ry. A Victoria, B.C., telegram of Feb. 11, says that Mackenzie & Mann are the real owners of the great coal mines and coal bed areas on the Dunsmuir interests on Vancouver Island. The price paid is said to have been $11,000,000, and the firm is reported to have been backed in the deal by J. P. Morgan, of New York, and his associates. A part of the project is to erect immense steel and iron works on the Island, and one of the provisions laid down is that $5,500,000 is to be spent at once on developing mines and the associated enterprises. The price, $11,000,000, must be paid in cash by May 1.

The Interstate Commerce Commission in the case of T. M. Partridge Lumber Co. vs. Great Northern Ry Co. et al, including the Canadian Northern Ry. Co., has declared that the rates on fence posts and poles from Beaudette and Warroad, Minn., are unreasonable and has prescribed new rates. Through routes have been established from Beaudette to such destination points.

Geared Lever Jack No. 183

Joyce Crydland Track Jacks

GEARED LEVER TRACK JACK No. 183, with automatic lowering device; has four times the lifting capacity of the Plain Lever Jack. Specially adapted for wrecking work.

TOGGLE TRIP TRACK JACKS, Nos. 38 and 39, for line work and yard duty. The superior construction of these Jacks increases the grip and friction 40 per cent. or more above others of similar type.

FULL AUTOMATIC JACK, strong and reliable, combines highest efficiency with simplicity of mechanism.

Write for Bulletins giving full description of working parts of Joyce Crydland Jacks.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta Ry. and Irrigation Co.—In the notes on the table of steam railway statistics on page 105 of our Feb. issue, it was stated, on the authority of the statistics issued by the Department of Railways, that this company had a third rail on 20 miles of its railway, making a 3 ft. gauge in addition to a standard gauge for that distance. We are advised by the company that it has no third rail on any part of its system.

The company's lines were originally constructed on a 3 ft. gauge both in Canada and the U.S. When the U.S. section of the line was sold to the Great Northern Ry. in 1902 the company converted the Alberta Ry. and Coal Co.'s line to standard gauge and by laying a third rail on the St. Marys River Valley Ry., which was then a separate company under the same ownership, made it a standard as well as a narrow gauge railway. This was done, as we were informed at the time, for the purpose of utilizing the old rolling stock. When this rolling stock became worn out or was sold the necessity for retaining the narrow gauge ceased, and the third rail appears to have been taken up. The Alberta Ry. and Coal Co. and the St. Marys River Valley Ry. with the land companies controlled by the same interests were subsequently amalgamated as the A. Ry. and Irrigation Co.

The Algoma Central and Hudson Bay Ry. Co. is applying to the Dominion Parliament for an extension of time within which it may construct the lines authorized by chap. 50 of the statutes of 1899, as amended by chap. 49 of the statutes of 1900. The new time limit for construction is five years from the passing of the act. The portion of the line yet to be constructed is the extension from the present end of track to the junction with the Michipicoten branch, thence to a junction with the C.P.R. In a recent interview at Montreal, General Manager Franz, of the Lake Superior Corporation, owning the charter, said that tenders would be called for by the end of Feb.

In the bill now under consideration by the Dominion Parliament provision is made for the issue of securities to the amount of $40,000 a mile of line constructed or to be constructed. This amount is to include the amount of securities heretofore authorized; and the securities are to be issued only in proportion to the length of railway constructed or under contract to be constructed. (Feb., pg. 109).

Anglo-Newfoundland Development Co.—We are advised that the lines operated by this company in Newfoundland are:—A railway from Millertown Jct., on the Reid Newfoundland Ry., to Millertown, 20 miles. This line was taken over by this company when it acquired the timber limits belonging to the Newfoundland Timber Estates Co. A railway from the mills at Grand Falls to tide water at Botwood, 22 miles; this railway has been constructed during the past year and is now in operation. At a mid-way point between the pulp and paper mills and Botwood is the pulp mill now being constructed by the company. The gauge of both these railways is 3½ ft.; the track is laid with 50 lb. rails; the maximum gradient on the Millertown line is 1.05%, and the maximum curvature 10 degrees, while the maximum gradient on the line to Botwood going to the coast is 0.9% compensated for curvature, and the maximum gradient coming inland is 1.25%, with a maximum curvature of 10 degrees; there is however only one curve of this degree. We are advised that it is not the intention of the company to construct any further mileage during the current year. (Feb., pg. 109.)

Bay of Quinte Ry.—The Dominion Parliament is being asked to extend the time for the construction of lines authorized to be constructed by the company's act of 1896, as amended by the statutes of 1902 and 1905. An extension of time is also being asked to construct the proposed branch line from Bridgewater for about 15 miles, to Actinolite, Ont. (Jan., pg. 19).

British Columbia and Alaska Ry.—Application is being made to the B.C. Legislature to incorporate a company with this title to construct a line to the International boundary between British Columbia and Alaska. J. Wolkenstein is one of the provisional directors. (See Salmon River, B.C., Jan., pg. 23.)

British Columbia Central Ry.—The B.C. Legislature is being asked to incorporate a company with this title. J. C. Keith is one of the provisional directors.

B.C. Mainland and Coast Industrial Co.—A bill is before the B.C. Legislature to authorize the company to construct railways and tramways for the purposes of its undertaking. The route of the proposed lines is from Prince Rupert, Port Simpson and Port Essington or either of them, wherever the company's works may be located, to the seacoast, where wharves and piers may be constructed; and such railways or tramways as may be necessary, from the company's works to sites for warehousing and shipping its products, such sites to be selected within a radius of 75 miles of the works. The railways or tramways may be laid across or along highways, streets or bridges; and electricity may be used as a motive power. Mason and Mann, Victoria, B.C., are the solicitors.

Bruce Mines Ry.—The Ontario Legislature is being asked to extend the time within which the company may construct the lines and branches authorized, and to declare that notwithstanding default in certain directions the company's act is still in force. The company constructed a line from Bruce Mines on the C.P.R. Algoma branch northerly to its copper mines, and southerly to the lake front. The northerly line has not been operated for several years. (Feb., pg. 109.)

Burrard Inlet Tunnel and Bridge Co.—The Dominion Parliament is being asked to incorporate a company with this title to construct a tunnel under the first narrows of Burrard Inlet and a bridge over the second narrows, with the necessary approaches, from the south shore at Vancouver to the opposite shore to connect with present and future line of street railways and railways, and to construct one or more lines of railway not exceeding 10 miles long. The bridge and tunnel to be constructed to provide steam and street railway tracks as well as for all kinds of ordinary traffic. Power is also asked to construct a railway from the northern ends of the bridge and tunnel easterly along the shore line of the municipality of North Vancouver to Deep Cove, on the north arm of Burrard Inlet, and westerly along the shore line of the city of North Vancouver to Horse Shoe Bay on Howe Sound. The undertaking of the company to be one for the general advantage of Canada. The provisional directors are:—E. Mahon, E. W. MacLean, J. P. Fell, L. Bond, Vancouver and J. Y. McNaught, North Vancouver. (Feb., pg. 109).

Cariboo, Barkerville and Willow River Ry.—The British Columbia Legislature is being asked to incorporate a company with this title to construct a railway from near Eagle Lake to Barkerville and along the valley of the Willow River to a junction with the Grand Trunk Pacific Ry. W. F. Dunphy is one of the provisional directors. (See Eagle Lake to Barkerville, B.C., Feb., pg. 109.)

Columbia and Alaska Ry.—The British Columbia Legislature is being asked to incorporate a company with this title to construct a railway to the International boundary between British Columbia and Alaska. E. P. Davis is one of the provisional directors.

Comox Logging and Ry. Co.—Application is being made to the British Columbia Legislature to authorize the construction of a railway, to be used for logging purposes, in the Comox district of Vancouver Island. A. D. and R. J. McRae are the principal of the provisional directors. (See Comox Harbor to Campbell Lake, B.C., Feb., pg. 109.)

Dominion Atlantic Ry.—Application is being made to the Dominion Parliament to extend the time within which the company may commence and complete the construction of the North Mountain Division, the construction of which was authorized by chap. 101 of the statutes of 1908. The line in question is projected to start from the old Cornwallis Valley Ry. between Kentville and Canning westerly to the company's railway between Berwick and Middleton, or some point between the main line and North Mountain. (Jan., pg. 19).

Edmonton, Dunvegan and British Columbia Ry.—The Dominion Parliament is being asked to grant an extension of time for the construction of the line which this company was authorized to construct by chap. 85 of the statutes of 1907. The bill has been passed by the House of Commons and is now before the Senate. (Nov., 1909, pg. 829).

Erie, London and Tillsonburg Ry.—The Senate has passed a bill granting an extension of time within which the company may construct the line which it is authorized to do by chap. 90 of the statutes of 1906, as amended by chap. 106 of the statutes of 1908. (Feb., pg. 109.)

Graham Island Ry.—The British Columbia Legislature is being asked to extend the time within which the company may construct its previously authorized line of railway on Graham Island, one of the Queen Charlotte group.

Application was recently made to the British Columbia Legislature to incorporate the Graham Island Ry. Co. to construct a railway on Graham Island, H. R. Bellamy being one of the provisional directors. When the bill came before the Private Bills Committee attention was called to the fact that there was already in existence a company with the same title, and it was recommended that one of the two should change its name. (Jan., pg. 19.)

Intercolonial Ry.—The Dominion Parliament has granted appropriations on capital account for the following works:

Locomotive car shops at Moncton, with equipment and freight yard	$343,825
To strengthen bridges	61,000
General protection of highways	10,000
Original construction	800
Towards double-tracking part of line	10,000
Increasing facilities and accommodation	38,700
Increasing water supply	45,100
Halifax, increased accommodation	52,650
Sydney Mines, diversion	100,000
Truro, increased accommodation	42,000
St. John, increased accommodation	46,150
Moncton cut-off	100,000
Loggieville, improvements	12,000
Indiantown and Blackville, to put line in a condition for operation	2,000
Chatham, diversion of line and branch to wharf	150,000
Levis, improvements	3,500
Lac au Saumon, overhead crossing	1,400
Riviere du Loup, engine house	63,720
Robinson's Crossing, subway	6,000
St. Rosalie, improvements	8,500
Chaudiere Jct., engine house	6,000
Beresford, subway	6,000

Island Valley Ry.—The British Columbia Legislature is being asked to incorporate a company with this title to construct a railway. S. J. Castleman is one of the provisional directors.

Kettle Valley Lines.—The Dominion Parliament is being asked to authorize

THE ELECTRIC HEADLIGHT

The following letter was received under date of May 8, 1908, from Mr. J. W. Cleary, Travelling Engineer Pyle-National Electric Headlight Co.:

"I learn from_____the Master Mechanic here, that an engineer running between_____ and_____discovered a broken rail with the Pyle-National Electric Headlight and made the stop without ditching his train. One or two pairs of wheels got off, but that was a small affair to what it would have been where a foot of the rail was broken off. Also an engineer running east of here found some cars shoved out on the main line. He saw them with the 'Electric' and made the stop without hitting them."

PYLE-NATIONAL ELECTRIC HEADLIGHT CO.

MONADNOCK, CHICAGO

the construction of a line from the present authorized line near Coldwater River to the navigable waters of the Fraser River near Ruby Creek, B.C.; to grant an extension of time for the construction of previously authorized lines, and to limit the amount of bonds to be issued in respect of the new line to $40,000 a mile. The proposed new piece of line is the one for which a bonus agreement has been made with the British Columbia Government. At opening of the B.C. Legislature, Jan. 20, the Lieutenant-Governor in his speech said that a bill would be submitted to ratify the agreement. (Jan., pg. 19.)

Manitoulin and North Shore Ry.—The Dominion Parliament is being asked to grant an extension of time within which the company may construct the lines authorized. When the bill came before the Railway Committee of the House of Commons, Feb. 7, the company's representative stated that the line from Sudbury to Little Current, Manitoulin Island, Ont., would be completed within two years, instead of three, as at first contemplated. (Feb., pg. 111.)

Menzies Bay Ry.—Application is being made to the British Columbia Legislature to incorporate a company with this title to construct a railway in the Menzies Bay district. J. H. McDonald is one of the provisional directors. (See Menzies Bay to Quinsan River, Jan., pg. 21.)

Michigan Central Rd.—Press reports from Windsor, Ont., Feb. 4, stated that announcement had been made that the company was about to construct an additional track from there to Buffalo, N.Y., paralleling the present double track line, and that construction would be started in June. General Superintendent Brown on the following day stated that the report was absolutely without foundation. The company proposed building a roundhouse at St. Thomas, Ont., to accommodate 30 or 40 locomotives, the existing roundhouse not being adequate for present requirements. (Feb., pg. 111.)

Montreal, Kapitachuan and Rupert's Bay Ry.—The Dominion Parliament is being asked to incorporate a company with this title to construct a line of railway from the St. Lawrence River in Hochelaga County, northerly to L'Orignal Rapids, thence to Kapitachuan Lake to cross and connect with the National Transcontinental Ry., and thence to Ruperts Bay. The provisional directors are:—H. A. Fortier, Hull, Que.; J. A. Grenier, Mon-Laurier, Que.; J. T. Marchant, C. Robilliard, L. J. Tarte, A. Berthiaume, L. Payette, L. A. Lapointe, G. Langlois, Montreal. (Jan., pg. 21.)

Nickel Range Ry.—Application is being made to the Ontario Legislature to incorporate a company with this title for the purpose of constructing this projected railway. The provisional directors are:—J. R. Booth, J. F. Booth, Ottawa; M. J. O'Brien, Montreal; J. N. Glidden, Sudbury; F. B. Chapin, J. J. McFadden, Toronto; W. Anderson, Ottawa; and C. A. Masten, Toronto. In addition to these persons, The Dominion Nickel Copper Co. is named as one of the petitioners for the act. (Dec., 1909, pg. 883.)

Northern Vancouver Island Ry.—Application is being made to the British Columbia Legislature to incorporate a company with this title to construct a railway in the northern part of Vancouver Island. W. B. Garrard is one of the provisional directors.

Ottawa, Montreal and Eastern Ry.—The House of Commons has passed an act incorporating a company with this title to construct a railway from the shores of Lake Megantic, Compton Co., Que., to Montreal, crossing the St. Lawrence River at Longueuil, with power to construct a bridge over, or a subway under, the river; and to continue the line westerly from Montreal to Ottawa through Prescott, Russell and Carleton counties in Ontario; with power to construct branch lines to Arthabaska, Victoriaville, and Yamaska, Que. The act provides that the bridge or tunnel at the St. Lawrence River shall be calculated to accommodate general traffic and electric cars as well as steam railway traffic. The provisional directors are: W. I. Bishop, A. Jarvis, C. E. Cutler, V. Cusson, M. Tetreau, Montreal. (Jan., pg. 21.)

Port Moody, Indian River and Northern Ry.—The British Columbia Legislature is being asked to incorporate a company with this title to construct a railway from Port Moody to the Indian River and thence northerly. C. T. Dunbar is one of the provisional directors. (See Port Moody to Indian River, Jan., pg. 23.)

Prince Albert and Hudson Bay Ry.—The application for a change of route and an extension of time for construction was considered by the Railway Committee of the House of Commons Feb. 8. The company asked for power to develop water powers along the route. This led to a lengthened discussion, the bill as a result being "talked out." (Jan., pg. 23.)

Reid-Newfoundland Ry.—It is reported that the agreement which has been made between the R.N. Co. and the Newfoundland Government, for which legislative confirmation is being asked, provides for the construction of the following branch lines:—From Shoal Harbor to Bonavista Bay, 75 miles; Broad Cove to Heart's Content and Grete's Cove, 62 miles; Ransford Bridge to Trepassy, 70 miles; Country Channel to Fortune Bay, 48 miles; Bay of Islands to Bonne Bay, 42 miles. (Feb., pg. 111.)

Saskatchewan Central Ry.—An act has been passed by the House of Commons, and is now before the Senate, incorporating a company with this title for the purpose of constructing a line of railway as outlined in the application given in our January issue. The provisional directors are: F. S. Cahill, Saskatoon, Sask.; D. McAnulty, J. B. Prendergast, J. J. Leddy, W. Johnston, Ottawa. (Jan., pg. 23).

St. Maurice Valley Ry.—The House of Commons has passed a bill extending the time within which the company may complete the construction of its authorized railway. (Oct., 1909, pg. 745.)

Toronto Eastern Ry.—A bill has been passed by the House of Commons, and is now before the Seante, incorporating a company with this title to construct a line from Toronto, easterly through Whitby, Oshawa and Bowmanville to Cobourg, Ont., with branches from Cobourg to Peterboro, Scarboro tp. to Markham, Stouffville or Uxbridge; from Oshawa northerly, via the eastern side of Lake Scugog, to Lindsay; from Oshawa southerly to Lake Ontario. The company desires that the lines be declared to be for the general advantage of Canada, and that it be authorized to amalgamate or enter into agreements with the C.P.R., the G.T.R. or the Canadian Northern Ontario Ry. The provisional directors are: W. F. Cowan, R. McLaughlin, T. E. Kaiser, F. W. Robson, Oshawa; J. H. Downey, Whitby; R. R. Mowbray, Kinsale, Ont. (Nov., 1909, pg. 831).

Trans-Canada Ry.—We are advised, with reference to a press report that 60 miles of this line is under construction westerly from Roberval, Que., that there is no construction work going on near Roberval at present. (July, 1909, pg. 481.)

Vancouver and Coast Kootenay Ry.—A bill has been passed by the Dominion Parliament granting the company an extension of time within which it may commence the construction of its projected railway. (Dec., 1909, pg. 885.)

Vancouver and Nicola Valley Ry.—Application is being made to the British Columbia Legislature to revive and confirm the act under which this company was incorporated in 1908. W. H. Armstrong is one of the provisional directors. (Dec., 1909, pg. 885.)

Vancouver Island and Eastern Ry.—A bill has been passed by the Dominion Parliament granting the company an extension of time within which it may construct its previously authorized railway, and authorizing it to construct a branch from near Seymour Narrows on Vancouver Island, northerly to Quatsino Sound. (Dec., 1909, pg. 885.)

Vancouver-Westminster Terminal Ry. and Dock Co.—The British Columbia Legislature is being asked to incorporate a company with this title to construct a terminal railway system in Vancouver and New Westminster, together with docks, wharves, etc. A. von Alvensleben is one of the provisional directors. (See Vancouver to New Westminster, Jan., pg. 23.)

The Western Canada Power Co. is incorporated under the Dominion Companies Act, for the purpose of generating and distributing electrical and other power. A bill has been passed by the House of Commons authorizing it to construct "for reward if necessary" such lines of iron or steel railways or tramways, and telegraph and telephone lines in connection therewith, as may be from time to time authorized by competent authority. The sphere of the company's operations is in British Columbia.

Great Northern Ry. Lines in Canada.

Vancouver, Victoria and Eastern Ry.—In connection with the company's application to the Dominion Parliament for an extension of time for the construction of its line, the Associated Boards of Trade of Eastern British Columbia have passed a resolution requesting Parliament to grant no concessions until the company has complied with its charter terms, which require it to construct its line from Grand Forks to Midway via Greenwood and Denoro.

It is reported that contracts have been let to P. Welch, of Spokane, Wash., for the two sections of the line between Princeton and Hope, B.C., for which tenders were recently asked. The first section extends from Princeton to Tulameen, and the second from Abbotsford to Hope, the two having a total mileage of 78 miles. The section between Tulameen and Hope covers the distance through the Hope Mountains for which the route is as yet undecided. Two surveys have been made, one for a tunnel of about eight miles and the other involving about 28 miles of open work. The contractor's outfit has reached Princeton, and an early start is anticipated. (Feb., pg. 107.)

A firm in Ridgetown, Ont., shipped a carload of beans from that station to Montreal some time ago, and the car was 30 days on its way. The shippers sought to recover $313.13 for the loss, on account of the consignee having refused to receive the beans. Owing to the shippers not having given notice to the G.T.R. of the delay within 36 hours of the consignment reaching Montreal, the action was dismissed.

Judgment was delivered in the Exchequer Court recently in the case of E. A. Wallberg against the Government on a claim of $105,940 for extras in connection with the contract for the construction of the I.C.R. Moncton shops, etc. The case had previously been before the Registrar, who allowed approximately $53,000, from which an appeal was made and the judgment just delivered, allows about $90,000, with costs of the appeal.

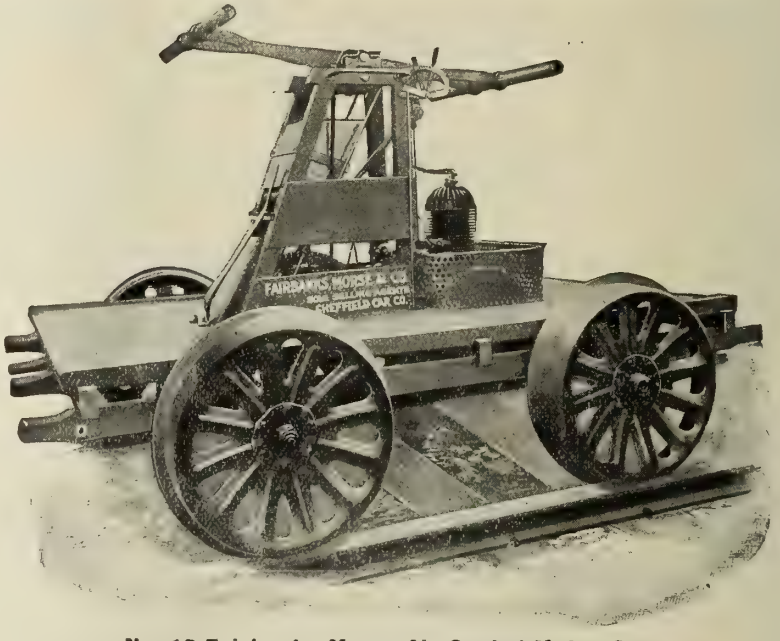
Your men will do more work

—BECAUSE—

They start to work Fresh and Strong. They work harder and longer for They can Ride Home Quickly. Sections can be lengthened and forces cut down with increased efficiency.



No. 13 Fairbanks-Morse Air Cooled Motor Car

The car rides easily with scarcely any side motion. The parts are all protected, and rain or moisture will not affect the running. Ten minutes daily will keep it in first-class running order. Speed 18 miles per hour.

The Canadian Fairbanks Co. Limited

MONTREAL ST. JOHN, N.B. TORONTO WINNIPEG CALGARY VANCOUVER

The Quebec Bridge.

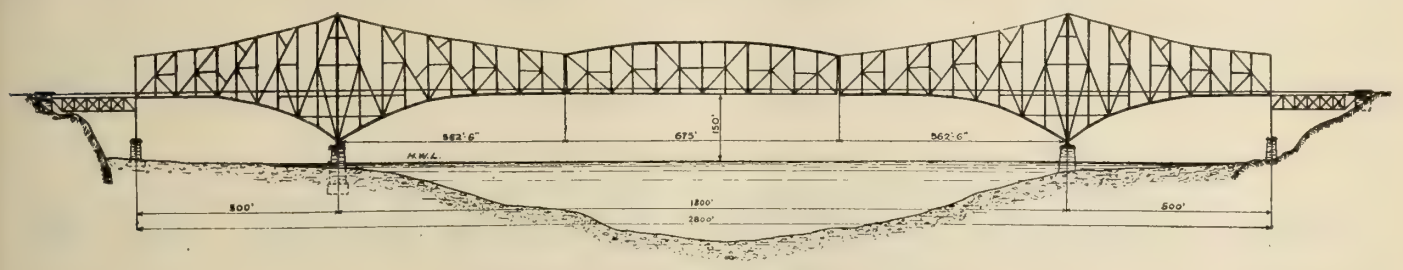
In the House of Commons recently in referring to the reconstruction of the Quebec Bridge, the Minister of Railways and Canals, read a memorandum as to the appointment of the Board of Engineers, H. Vautelet, R. Modjeski and M. Fitzmaurice—and their work. Following are extracts: "The task entrusted to them is a great one, and, as was anticipated at the time of their appointment, material differences of opinion have arisen between them. Under the provisions of the order in council creating the board, in the event of differences arising, consulting engineers were to be called in to assist. Accordingly, on the question of foundations and substructures, A. Noble, M. Am. Soc. C.E., chief engineer of the Pennsylvania Ry. tunnel, New York (one of the most experienced men in America in foundation work), and H. Holgate, M. Can. Soc. C.E., Montreal, were selected, and the matters in dispute were accordingly settled. The south pier is to be enlarged to an area of 180 ft. by 80 ft. at the base. A new caisson is to be sunk for the north pier and is to be carried to the rock, reducing the span from 1,800 to 1,758 ft. Specifications covering every phase of the substructure work have been completed. General plans for guidance of the contractors have been prepared. The work of the substructure was advertised widely and the work was allotted to M. P. & J. T. Davis, they being the lowest tenderers. The other tenderers were Larkin & Sangster and M. Connolly.

"A great deal of valuable work has been done in connection with the superstructure. The span, centre to centre of main piers, has been fixed at 1,758 ft.; the width, centre to centre of trusses, at 88 ft.; with a maximum depth of truss of 290 ft. A clear head room of 150 ft. above the highest water has been provided for a width of 600 ft. under the centre of the bridge. A general specification has been prepared, fixing the loading so that it will be ample for all possible contingencies of the future. The unit stresses allowed have been settled, for carbon steel and nickel steel, and are conservative. The form of the main compression members has been determined. A series of tests of model columns has been started and a similar series of tests of chord bars will be carried to completion. The dead load has been thoroughly computed and the relative concentrations determined, thus eliminating all possibility of error in calculations for the new structure. Material differences of opinion relating to the superstructure have arisen from time to time between members of the board, and acting under the provision of the order in council, P. Wolfel, M. Am. Soc. C.E., consulting engineer, Philadelphia, and P. Johnson, chief engineer and manager Dominion Bridge Co. of Montreal, were called in as consulting engineers, and the difficulties were overcome."

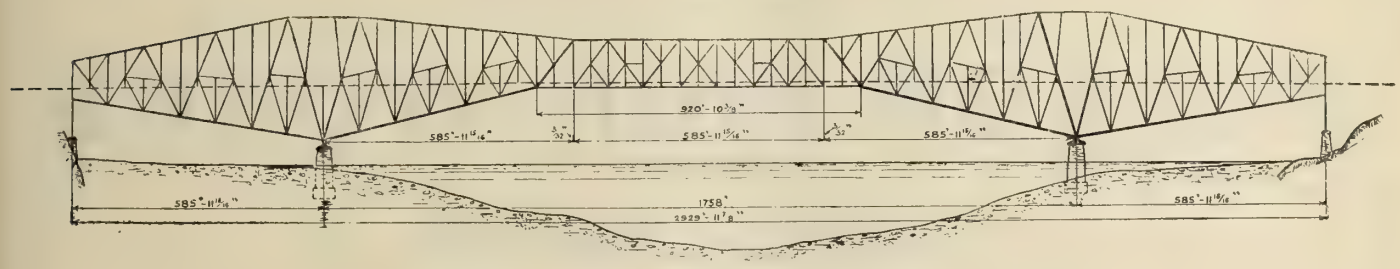
The work has advanced to such a stage that the bridge builders of the world have been invited to Montreal to study the plans and general specifications, these being open for inspection until May. Three or four months will then be allowed for the preparation of tenders. "All tenderers must bid on the plans prepared by the board, but may submit alternative designs—in this way the form of the trusses, about which there is a reasonable difference of opinion, will be tested; the question of a suspension or cantilever bridge will be settled. The Board has completed studies for a suspension bridge and also for a single intersection cantilever. The ultimate decision will be made when all the designs are before the board, having regard to: first, safety; second, speed of erection and completion; third, cost. As the responsibility for the proper carrying on of the work is placed upon the builder, and the fact that the best designs the board are able to prepare is in competition with the best efforts of the best bridge builders in the world, we hope to secure the best bridge that the present state of engineering skill can produce."

The magnitude of the work, added the Minister, is so great that men with the ability and reputation of the members of the Board, will only move carefully and cautiously. As he pointed out to them when discussing the question with them, the great point to be considered was stability, there must be no chance, so far as engineering skill could provide against it, of any failure of the bridge. That being their instructions, they studied every step with the greatest care, tests and studies being made both in Canada and in the United States and in more than one country in the old world, so that step by step they might be sure of what they were doing. He added that it was proposed that in the contract, so that there could be no question, the builder shall be required to accept the contract on the plans and specifications, and should be held responsible as a builder for the construction of the bridge on the plans and specifications which he accepted, and a guarantee would have to be given. It would not be fair to mention the estimated cost of the bridge while tenders were being invited. He had not asked for an opinion from the engineers as to how soon the bridge could be erected, but he was of opinion that it would take four years from next fall.

Replying to questions in the House of Commons, as to the appropriation of $1,000,000 for construction of the bridge, the Minister said the contract called for the completion of one pier next fall and the other the year following. There were two piers which would be required whether it was a cantilever or suspension bridge; a third would be required if it was a cantilever. This was included in the Davis contract, but the contract was so drawn that it could be struck out if not required. The north pier was to be removed in its entirety. The foundation of the south pier was to be used, but it would be enlarged. The old pier was 150 by 50 ft. and the new one was to be 180 by 80 ft. This pier had been taken down to low water mark and the foundations were being used and enlarged. The two anchor piers on the land had to be taken down, because they would not fit the new bridge, and new ones built. The steel work of the collapsed bridge, which did not fall would be taken down and might be utilized for another purpose. A contract had been let to C. Koenig for the removal of the scrap of the fallen section of the bridge,



THE QUEBEC BRIDGE WHICH COLLAPSED, AUG. 29, 1907.



DESIGN FOR THE NEW QUEBEC BRIDGE BY THE BOARD OF ENGINEERS.

the contractor to receive $45,000 and the salved scrap. The company having the contract for the construction of the collapsed bridge had a capital of $50,000, and he had no great hopes that any large amount of damages could be secured even if there was a case. The matter was, however, under the consideration of the law officers. He roughly estimated the length of time it would take to complete the bridge at four years from next fall, and its cost at about $11,000,000.

The specifications for the work to be done under the contract let to M. P. and J. T. Davis, provide for the taking down of the existing masonry of the two main piers and two existing anchor piers; the making and building of two main piers, two anchor piers and abutments, and the enlarging of the two existing abutments. The masonry of the two existing anchor piers is to be taken down to at least 2 ft. below the level of the ground, and low enough to remove the existing anchor metal; and the masonry of the existing north main pier is to be taken down to at least 2 ft. below extreme low water level. The stone taken from the old piers may be used either for the facing, the backing or the concrete of the new works, and any balance of the stone, as well as the old concrete, shall be deposited as protection work or

rip-rap for main piers or otherwise, as shall be instructed by the Chief Engineer. The new anchor piers are to be carried down to solid rock foundation, and are to be built of granite faced masonry with concrete backing, with three top courses of dressed stone coping same as the main piers. The steel work for the anchorage shall be built in and the walls constructed in accordance with plans to be furnished later on. The north main pier is to be built 5 ft. south of the existing caisson. It is to be built by the pneumatic process with caisson and cofferdam filled with concrete to elevation + 70.00, the upper part above elevation to be built of masonry with granite facing and filled with concrete, except for a height about 12 ft. below the coping courses, which shall have granite backing; the upper three courses are to be of dressed granite. The caisson of this pier is to be sunk down to solid rock, and no work is to be started on the site of the new pier until the masonry of the old north main pier shall have been taken down. The south main pier is to be taken down and the two lower pneumatic caissons sunk in exact position to such a depth as will allow the upper pneumatic caisson to be floated in position. The upper pneumatic caisson shall then be sunk on top and strongly attached to the lower caisson and the whole shall be sunk 2 ft. below the depth of the old caisson. The 5 ft. spaces between the three lower caissons shall then be excavated and filled in with granite concrete. The abutments are to be built of granite masonry and are to be of the same type and construction as the present abutments; plans are to be furnished later. If decided on a small pier is to be constructed of granite masonry.

G.T.R. Betterments, Construction, Etc.

Southern New England Rd.—Application is being made to the Rhode Island Legislature for the incorporation of a company with this title to construct a line from Palmer, Mass., through which town the Central Vermont Ry., a company controlled by the G.T.R., runs, to Providence, R.I., passing through Webster, Mass.; Woonsocket, Valley Falls, Saylesville, and Pawtucket, R.I. The petition for the incorporation of the company is signed by C. M. Hays, President, G.T.R., and E. H. Fitzhugh, First Vice President, G.T.R. The construction of this line will give the Central Vermont Ry. a second outlet to the sea, viz: New London, Conn., and Providence, R.I., which the G.T.R. as owning the C.V.R., can use in addition to its own terminals at Portland, Me.

Kingston, Smith's Falls and Ottawa Ry.—A bill has been passed by the Senate and is now before the House of Commons granting an extension of time for the construction of this projected railway.

Toronto Grade Crossing Elimination.—The plans for the elimination of the grade crossings on the G.T.R. from Bathurst St., Toronto, to the Humber River, are being prepared in the Chief Engineer's office at Montreal. The first portion of the work to be undertaken will be the section from Bathurst St. to Sunnyside, upon which the tracks are to be depressed, and the streets carried over the tracks by bridges. On the other section, from Sunnyside to the Humber River, there will be an embankment, raising the tracks, the roads being carried underneath. This will provide a practically level track from the Humber into the city. The Board of Railway Commissioners' order provided for the construction of a two-track line, and proportioned the cost of the bridges and other work between the company and the municipalities on that basis, but the G.T.R. has decided to construct the works so as to provide for the laying of four tracks, meeting the extra cost itself. It is said that the work, which will be carried out by the G.T.R. Construction Department, will be started about May 1, and will be completed within two years.

Tay Township Assessment.—The Ontario Legislature is being asked to confirm a by-law of Tay township council granting the company a fixed assessment of $1,700 a year upon the company's property in the township for 20 years for general taxes, and a gross value of $300,000 a year for school taxes. The company agrees to keep in operation during the period its grain elevators situated in the township.

Guelph Station.—A conference was held with the city authorities of Guelph, Ont., Feb. 3, with reference to the carrying out of the Board of Railway Commissioners' order for the erection of a new station and some subways there. The point of difference between the parties is the price to be paid by the company for Jubilee Park, and the giving up of a piece of land near the C.P.R. right of way which is required for station purposes by that company. E. H. Fitzhugh, First Vice President, stated that if the city placed no obstacle in the path the company would have the new station erected this summer, and the subways well under way. The plans are being prepared in the Resident Engineer's office, Toronto. The Board's order requires the work to be done by July, 1911.

Stratford Station—E. H. Fitzhugh, First Vice President, in an interview at Stratford, Ont., Feb. 3, stated that he expected a new station of the most modern design would be erected there this year. The erection of the new station involves the rearrangement of the freight yards, and plans for this work are now being prepared in the Resident Engineer's office, Toronto.

Stratford Shops.—The Ontario Legislature is being asked to confirm a by-law passed by the City Council of Stratford, Ont., in 1904, granting the company a fixed assessment in consideration of its shops there. This agreement provides that the assessment of $8,000 a year agreed to for 10 years from 1900 shall be extended from its expiry for a further 10 years.

In an interview at Stratford, Feb. 3, First Vice President Fitzhugh stated that plans were under consideration for a further enlargement of the shops, and that he hoped to be able to make an announcement with regard to them at an early date. We are advised that the question of the erection of a new foundry and frog shop is under contemplation at Stratford, but the matter has not been finally settled.

Port Huron Shops.—First Vice President Fitzhugh had an interview with the Mayor, Feb. 4, with respect to the proposed enlargement of the shops. Subsequently the Mayor said Mr. Fitzhugh had told him that a big addition was to be built and that a much larger force of men would be employed. (Feb., pg. 137.)

The International Railway Fuel Association will hold its second annual meeting at Chicago, Ill., May 23 to 26.

E. de la Hooke, Secretary-Treasurer Canadian Ticket Agents Association, has issued a characteristic circular to members reminding them that their subscriptions for 1910 are due, and also one to ticket agents who are not members, inviting them to join. Both circulars are enlivened by flashes of humor with which Mr. de la Hooke always adorns his communications.

March Birthdays.

Many happy returns of the day to:—

W. G. Annable, General Passenger Agent C.P.R. Atlantic Steamship Lines, Montreal, born at Ottawa. Mar. 3, 1875.

Quebec and Lake St. John Ry. Report.

The annual report has been issued over the signature of D. B. Hanna, President, as follows:—

The result of the operations for the year ended Dec. 31, 1908, are:—

Gross earnings—		
Passenger traffic		$221,472 34
Freight traffic		348,871 51
Express, mail and miscellaneous		35,908 62
		$606,252 47
Working expenses (including taxes, etc.		$527,380 40
Net earnings		$78,872 07
To Main line and equipment	$13,624,612.27	
Less Dominion Govt. bonus.	$1,002,999.50	
" Provincial Govt. bonus.	2,368,816.88	
" Town of Chicoutimi bonus	12,000.00	3,383,816.38
		$10,240,795.89
Betterments, terminals and new equipment	1,732,172.77	
La Tuque branch construction	1,421,261.52	
Less Dominion Govt. subsidy	$150,528.00	
Proceeds of sale of La Tuque land grant	470,686.26	621,214.26
		800,047.26
Gosford branch construction		44,772.26
Lake St. Jospeh Hotel stock and bonus		8,000.00
Chambord water works		1,125.22
Quebec Transport Co. stock		3,622.55
Roberval branch wharf		12,17.08
Lands at La Tuque		13,608.78
Str. Pikouagami		7,161.68
		$12,863,323.49
Branch lines (Gosford and Roberval bonds)		127,800.00
Bills receivable		328,100.00
Coal on hand	83,818.72	
Mechanical and other stores	22,135.99	
		105,954.71
Fire insurance unearned premiums		2,594.15
Great Northern debenture stock		1,050.00
Lower Laurentian Railway		9,253.38
Lake St. Joseph Hotel Co.		19,121.68
Outstanding accounts due company		36,013.18
Profit and loss		148,653.80
		$13,641,864.39
By capital stock	$4,303,500.00	
City of Quebec stock	220,500.00

		40,176.78
Outstanding accounts due by company		180,567.23
Profit and loss account prior to reorganization (expended in betterments)		91,159.
		$13,641,864.39

Your directors much regret that both gross and net earnings for the year show decreases, the gross earnings being $56,870.57, or 8.58%, and the net earnings $84,454.92, or 51.78% less compared with the previous year's figures. The falling off is due to the trade depression everywhere, and specially to the decline in shipments connected with the manufacture of paper, pulp and lumber, the fluctuations in which are beyond the control of any transportation company, and which have been smaller in North Eastern Quebec than in any other pulp and lumber district. The situation was further aggravated during the early months of the year by the prevalence of unusually severe snowstorms, which increased operating expenses very largely in the effort to keep the line open for traffic, the operating expenses being 86.99% of the gross earnings, compared with 75.37% for the previous year. The increase in passenger receipts is $20,183.00, or 8.91%. This is in face of a decline of 8,681 in the number of passengers carried, and is due to a readjustment of fares, which counterbalanced the disadvantage of a falling off, caused by diminished lumbering operations, in the number of passengers carried, and increased the earnings per passenger train mile by 9c. The freight business declined, both in tons carried and the earnings per traffic train mile; the tonnage to the extent of 46,088 tons, and the earnings per traffic mile from $1.93 to $1.57. But this showing, unsatisfactory as it is, would have been much worse if your directors had further postponed the readjustment of rates, which was found to be absolutely necessary if the methods of the railway were to be brought into good commercial order. The importance of this readjustment is shown by the fact that the earnings per ton mile increased from 1.22 to 1.57c., or 28.69%. If instead of this increase in the earnings per ton per mile the earnings had been on the former basis, the freight earnings would have been only $269,654.56, or $79,216.95 less than they actually were.

A considerable portion of the loss on working expenses was incurred in connection with the La Tuque branch, which was undertaken on the assumption that its cost would be somewhat more than half of what proved to be the case, and in the expectation that the near approach of the completion of the Quebec bridge would soon secure to the company a large freight business from the paper and pulp mills that were to be constructed at La Tuque. But the damages to the bridge, which postponed for several years the advantageous rates, in expectation of which the construction of the branch was undertaken; together with the depression in pulp and lumber industries inevitably retarded the development of this property; and there is no immediate prospect of extensive works at the La Tuque Falls being undertaken. Meanwhile the outlay on maintenance and unremunerative service must be continued.

During the year the wages of trainmen were further increased by the arbitration board appointed under act of Parliament; and further considerable expenditures have been incurred in bringing the equipment nearer to present-day requirements.

The shareholders will observe a change in the form in which the accounts are presented. The only reason for the change was that the newer form is that which is prescribed by the Minister of Railways for Canada.

There was recently offered for subscription $2,350,000 Canadian Car & Foundry Co., Ltd., 6% first mortgage 30 year sinking fund bonds. The Royal and Dominion Securities Corporations, which made the issue, announced that it was three times oversubscribed, although the books were only open for half an hour. The bonds were issued to provide for the purchase price of the Dominion Car & Foundry Co. and the Canada Car Co.

Government Railways Results,

Dealing with the Government railways in the course of his speech in the House of Commons recently, on the work of the Department of Railways and Canals for 1909, the Minister referred at length to the question of what should and what should not be charged to capital account. The Government desired to treat these railways in as approximately a fair way as it did the lines owned by companies. About 75% of the company lines on the continent have gone into liquidation, and the original capital and original stockholders have, for all purposes of profit, been wiped out. Every dollar invested on capital account on the Intercolonial Ry. stands there to-day against it, whereas in many of the company lines one-half of the original capital has been practically wiped out by liquidation. It was sometimes said that the Intercolonial charged small things to capital which should come out of revenue. He submitted that the Intercolonial stood on all fours with company lines, and would compare with them in that same respect as regards age. If the capital account of a railway must cease after a number of years, a number of company lines ought to have come to an end of their capital expenditure years ago. The Intercolonial is doing exactly what these companies are doing as regards expenditures on capital account. The general rule was that anything which will add to the value of the property, any betterment that will add to the power of earning, should go into capital account. There were exceptions as in the case of building new stations, the cost of most of these was charged to capital account. The following figures showed increases on the I.C.R. during the last 13 years:—

	1896.	1909.	Increase %
Length of line	1186.5	1479.13	25
Capital invested	$55,277,034.63	$90,994,664.06	65
No. of locomotives	204	414	100
Tractive power of locomotives, lbs.	2,686,725	10,318,716	284
Passenger car service, number	276	450	60
Freight car service, number	6,667	12,692	90
Ploughs, flangers, etc., number	77	103	30
Engine mileage	4,714,661	9,208,327	95
Car mileage	43,005,684	93,374,119	117
Train mileage	3,842,502	6,865,204	79
No. of passengers	1,471,866	2,933,754	100
Tons of freight	1,379,618	3,552,739	160
Sidings	157.25	365.74	132

In 1909, after a pretty thorough discussion, a Managing Board was appointed for the Government railways. This Board had managed the I.C.R. during the past nine months without any interference from the Department, except in so far as he had suggested that in filling vacancies on the staff, the men who had been discharged on account of the Board's action in reducing staffs, should have the preference. The Board's work really began in July last. It started in to bring about results on the railway, and the members had worked with that idea in the interests of the railway, treating it as a transportation project belonging to all the people of Canada. As is well-known our traffic on all railways had dwindled away very materially, and the receipts on all railways, including the I.C.R., were materially less than they were in the preceding year. There was a deficit of about $800,000 for the year ended Mar. 31, 1909. The Board undertook the work, and wishing to bring about an equilibrium, and put the railway in proper shape, reduced the staff, 503 employes being dropped. In addition to reorganizing the shops, on the transfer to the new quarters, the Board had been enabled to expend $131,507.07 on repairs and renewals, and $100,000 on rail renewals out of revenue. There had also been ballasted 55.5 miles of track; 574,237 new ties had been laid, 11.5 miles were relaid with new 80 lb. steel rails, and 5.33 miles of track were relaid with 67 lb. steel rails, and the maintenance of the track has been generally kept up. On Mar. 31, 1909, there was a credit of $207,262.20 in the fund for renewals of rolling stock. In accordance with the custom established in 1907-08 $25,000 a month was added to this out of revenue, so that at Dec. 31, 1909, the fund amounted to $439,000. Contracts for rolling stock to be delivered by April 1, of the current year, to the value of $445,924 had been made. At the end of the financial year this rolling stock would have been paid for leaving $60,000 at the credit of the fund for further purchases. The thirty 50-ton coal cars, forming part of this rolling stock, have a total carrying capacity of 1,500 tons, against the 1,498 tons of the 153 wooden cars, and 29 20-ton coal cars which they replace. This would mean so much less dead weight to move. Nine of the 11 locomotives purchased, replace old locomotives, the new ones having a tractive power of 338,697 lbs. against 304,681 lbs. of the old. In addition there had been expended out of revenue $553,560 for locomotive repairs, $194,800 for repairs to passenger cars and $440,900 for repairs to freight cars.

As to traffic he claimed that Ontario as well as other provinces get some benefit from the I.C.R. as a Government line, and from the rates which it has always charged. Up to Jan. 4, of this year, the railway had transported 329,699 bush. of grain to Halifax, against 81,904 bush. in the previous year, and 1,165,967 bush. to St. John against 525,753. This grain was handed over by the G.T.R. The average number of employes on the line during the nine months ended Dec. 31, 1909, was 8,833 and the amount of wages paid per month was $427,470.86. Briefly the result of the operations of the line for the nine months ended Dec. 31, 1909, showed as follows: The expenditure on capital account for the year would be approximately $1,280,000 against $3,867,232.60 last year. The gross receipts for the nine months ended Dec. 31, 1909, were $7,073,300.97, an increase of $442,154.87 over last year; the gross working expenses were $6,310,912.36, a reduction of $757,087.98; charged to revenue for rail renewals, $100,000.00, $6,410,912.36; leaving a net revenue on Dec. 31, 1909, of $662,388.61. What the net results of the year's operation would be could only be estimated, but he thought it would be found to be a surplus of about $662,000.

In regard to the Prince Edward Island Ry., he wished to say that he did not expect, and it was not fair to expect that it would keep even. The traffic was not there to keep it even, and the country must be prepared to run the line fairly for the accommodation of the people, and to meet any deficiency out of the consolidated revenues. It was a matter for serious consideration if the passenger service should not be improved, providing for the additional service out of the consolidated revenue. The amount expended on capital account on the P.E.I.R. during the present year would be approximately $170,000. Up to Nov. 30, 1909, the deficit on the line was $44,554.45, and he expected that by the end of the financial year it would be about $70,000, against $89,010.78 for 1908-09.

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

The Board's Secretary has issued the following circular:—

"Differences of opinion appear to have arisen between some of the railway companies and the public as to the scope of order 4988, July 8, 1908, known as the General Interswitching Order, and judging from their interswitching tariffs, these differences do not seem to be non-existent as between the companies themselves. While of the opinion that the language of the order is clear beyond misinterpretation, the Board declares that, for the purposes of the order:

"(a) The maximum interswitching distance is unqualified, and means, as stated, 'any distance not exceeding four miles.....from the nearest point of interchange,' regardless of the location of the point of interchange, or of station yard limits, or any other limits or boundaries.

"(b) Clause 10 of the order refers, as stated to 'ordinary freight service from station to station'; that is, traffic originating at the common point, as distinguished from interswitched joint traffic."

WOOD PULP RATES FROM THOROLD.

9246. Jan. 12.—The order 9031, Dec. 2, 1909, directing the Niagara, St. Catharines & Toronto Ry. to restore the joint rate of 2c. per 100 lbs. on wood pulp, in carloads, from Thorold, Ont., to Suspension Bridge, N.Y., by Jan. 15, 1910. Leave having been granted the company to appeal to the Supreme Court of Canada from the said order, upon a question of the jurisdiction of the Board to make the order requiring the restoration of the rate to Suspension Bridge, N.Y. Order 9031, is amended by extending the time within which the N.S.C. & T.R. shall be required to restore the said joint rate, until March 15, 1910.

COAL RATES, NIAGARA FRONTIER TO SUDBURY.

9271. Jan. 12.—The complaint of Board of Trade of Sudbury, Ont., complaining that the joint rate charged by the C.P.R. on coal from the Niagara frontier to Sudbury is unreasonable and discriminative as compared with the rate charged by the G.T.R. from the Niagara frontier to North Bay, Ont. It is ordered that the Michigan Central, the C.P., and the Toronto, Hamilton & Buffalo Ry. companies publish and file, not later than Mar. 1, 1910, a joint rate not exceeding $2.60 per ton, in carloads of the customary minimum weights, from Black Rock and Suspension Bridge, N.Y., to Sudbury, Ont. And it is further ordered that the special mileage rates on coal and coke, in carloads, published in the C.P.R. Special Tariff, C.R.C. no. E. 660, to be applied "between stations on the Ontario, Lake Superior (east of North Bay), Eastern and Atlantic Divisions, where specific rates are not published, or when lower than shown in (specific) tariff," be extended so as to include the Lake Superior Divisions, Sudbury and East, and so to conform, territorially, to the company's approved Standard Mileage Freight Tariff, C.R.C. no. E. 1244; the same to become effective not later than Feb. 7, 1910. And it is further ordered that all other of the company's special mileage freight tariffs (if there be any) in which the point of separation between the rates of the Lake Superior Division and the lower eastern scale may be east of Sudbury, be amended so as to include the Lake Superior Division, Sudbury and east, in the said lower eastern scale, and so to conform, territorially, to the company's approved Standard Mileage Freight Tariff C.R.C. no. E. 1244; the same to become effective not later than Mar. 1, 1910.

RATES FOR ASBESTOS GOODS.

9362. Jan. 24.—Re application of Canadian Asbestos Co., of Montreal, for a carload rating of 5th class on asbestos goods with or without cotton waste and oakum, in mixed carloads, more particularly with reference to shipments to Canadian points west of the lakes, or for a commodity tariff to western points on the same 5th class basis:

It is order that in the Canadian Classification the ratings of asbestos goods, excepting moulded pipe covering, packing, and rope, be reduced, where now higher, to 5th class in carloads, and 3rd class in less than carloads; also that the asbestos items be added to the hardware list, the said changes to be included in the forthcoming amendment to the Canadian Classification when the Board has ruled thereon.

2. That asbestos boiler and pipe covering be added to pg. 38 of Westbound Transcontinental Tariff C.R.C. 242, in the item which now covers asbestos, n.o.s., asbestos roofing slate, and asbestos building paper and felting, at the same minimum carload weight.

3. That the asbestos ratings shown at pg. 38 of the Westbound Transcontinental Tariff C.R.C. 242 be not advanced by reason of the carload commodity rate of $1.20 per 100 lbs. on certain articles of asbestos, cotton waste and oakum, to B.C. Pacific Coast terminals, shown at pg. 27 of Supplement 4 to said tariff, published and filed since the hearing, and that the subsequent application for reduction of said commodity rate of $1.20 per 100 lbs. be refused.

4. That the companies having since the hearing published and filed a commodity rate of 5th class on mixed carloads of asbestos goods, and cotton waste and oakum, to Nelson, B.C., Rossland, B.C., and Nelson and Rossland common points, the subsequent application with respect to the Kootenay rates be refused.

C.N.R. Hotel at Port Arthur.

The Prince Arthur hotel, which is being built by the Canadian Northern Ry. at Port Arthur, is to be a six story and basement structure, 51 by 213 ft. and 75 ft. high. The base is to be of granite, the first two stories of Bedford limestone, treated with pilasters, the caps and cornice forming the finish between the stone and the brick work above. This brick work extends to the level of the sixth story window sills, and will be red face brick with Bedford limestone sills. The band course at the level of the sixth story window sills and the cornice and balustrade above these windows are to be of Bedford limestone. The frieze in which these sixth story windows are set is to be of red brick, laid up in panels. At each entrance will be an ornamental wrought iron and glass marquise, the two entrances being marked by a more elaborate treatment of the stone work projecting out from face of main building wall.

The basement will contain cold storage, boiler room (with space for future extension), elevator machinery, baggage room, servants' dining room, storage rooms for the hotel and for the stores of the first floor, a laundry large enough to do all the hotel work, porters' room and servants' lavatories and locker rooms. The greater portion of the first floor will be devoted to the hotel lobby, writing rooms, ladies' parlor and entrance, cafe grill and pantry, barber shop and toilet rooms. The remainder of the first floor will be taken up by six stores, each running entirely through the building. In general this floor will be wainscotted, with marble base and terrazzo flooring, except in the pantry and space occupied by offices and news stands, where the flooring will be of cork. The walls throughout the first floor will be panelled and the ceilings beamed. Ceilings and plaster cornices will be tinted. On the south-east corner of the second floor will be the dining room, overlooking Thunder Bay. On the north-east corner will be the kitchen, pantry and store rooms. The remainder of this floor will be devoted to 10 bedrooms, the rooms at the western end of the building being arranged en suite, the remaining bedrooms each having a private bath. The natural grade of Cumberland St. has made it possible to place the dining room and kitchen floor lower than the general level of the second floor, leaving the first floor under these rooms at the sidewalk level. The stairway to the dining room from the first floor will have a short run, and the extra ceiling height necessary to rooms of this size will be gained without adding to the total height of the two stories. The problem of service has been most carefully worked out. The dining room will be directly back of the kitchen and over the cafe grill and bar, which in turn will be directly over the servants' dining room and wine room in the basement, thus making it possible to use the dumbwaiters to the greatest advantage. The kitchen and service rooms are to be fitted with every modern appliance for the facilitation of service and will be ample in equipment to allow for any future addition to the hotel. The third, fourth and fifth floors will each have 23 large rooms, averaging in size 17½ by 20 ft.. The rooms at the ends of the building on the south side will be arranged en suite; all other rooms on these floors will have private baths. The sixth floor will contain 24 guests' rooms, each provided with stationary basins and closets. As there will be no private baths on this floor, general bath rooms and lavatories will be provided. At the eastern end of this floor, isolated from the part of the floor devoted to the guests' use will be the servants' quarters, lavatories and housekeeper's apartment.

The stairs throughout the guests' portion of the hotel will be of cast iron with marble treads and wrought iron railings. The service stairs will be of similar construction, but of somewhat less expensive design. The bedrooms and corridors throughout will be trimmed in oak with plaster walls, ceilings and cornices. Bath rooms throughout will have tile floor with sanitary base and wainscotting. The bedroom floors will be so arranged that each room will be perfectly lighted and ventilated, and the use of inside bath rooms with mechanical ventilation will make all the space available. The elevators will be centrally located, and will be of the electric type, the cars being of ornamental iron and glass. There will be 103 rentable rooms in the hotel. The building has been so designed that extensions may be added in the form of wings at each end of the building. The completed structure will then present the form of three sides of a hollow square, with a court facing Thunder Bay. Warren & Wetmore, New York, are the architects and the Imperial Construction Co., Toronto, the contractors.

Canadian Northern Ry. Earnings, Etc.

Gross earnings, working expenses, net profits, increases or decreases from 1908-09, from July 1, 1909:

	Earnings.	Expenses.	Net Earnings.	Net Increase or Decrease.
July	$ 843,500	$613,900	$229,600	$26,700+

Inc.	$9,213,853.71	$3,185,155.06	$6,028,698.65	.....

Approximate earnings for Jan., $6,007,000, and for two weeks ended Feb. 14, $2,888,000, against $4,711,000 and $2,292,000 for same periods 1909.

DULUTH, SOUTH SHORE AND ATLANTIC RY.—Operating revenue for Dec., 1909, $236,364.95; expenses, $164,201.12; net revenue, $72,163.83, against $213,228.55 operating revenue; $163,336.86 expenses; $49,891.69 net revenue for Dec., 1908. Operating revenue for six months ended Dec. 31, 1909, $1,719,742.71; expenses, $1,149,182.67; net revenue, $570,660.04, against $1,383,858.12 operating revenue; $987,261.74 expenses; $396,596.38 net revenue, for same period 1908. Approximate earnings for Jan., $219,885, and for two weeks ended Feb. 14, $101,464, against $196,058 and $96,842 for same periods 1909.

MINERAL RANGE RD.—Operating revenue for Dec., 1909, $69,790.85; expenses, $58,463.88; net revenue, $11,326.97, against $65,343.79 operating revenue; $54,928.14 expenses; $10,415.65 net revenue for Dec., 1908. Operating revenue for six months ended Dec. 31, 1909, $439,286.02; expenses, $366,652.25; net revenue, $72,633.77, against $427,846.63 operating revenue; $339,906.91 expenses; $87,939.72 net revenue for same period 1908. Approximate earnings for Jan., $65,600, and for two weeks ended Feb. 14, $30,258, against $61,660 and $31,162 for same periods 1909.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RY.—Operating revenue for Nov., 1909, $1,613,666.45; expenses and taxes, $790,740.86; operating income, $822,925.59, against $1,180,183.63 operating revenue; $674,511.85 expenses and taxes; $505,671.78 operating income, for Nov., 1908. Operating revenue for five months ended Nov. 30, 1909, $7,547,707.71; expenses and taxes, $3,889,505.62; operating income, $3,658,202.09, against $6,108,328.06 operating revenue; $3,505,733.96 expenses and taxes; $2,602,594.10 operating income, for same period 1908. Approximate earnings for Dec., 1909, $1,586,725; for Jan., $1,568,719, and for two weeks ended Feb. 14, $748,521, against $1,481,910, $1,330,378 and $630,628 for same periods 1908-09.

Grand Trunk Ry. Earnings, Expenses, Etc.

Subject to audit, the accounts for the half-year ended Dec. 31, 1909, show the following results:

Gross receipts		£3,632,900
Working expenses (including £255,000 in reduction of engine and car renewal suspense account		2,753,100
Net receipts		£ 879,800
Income from rentals, outside operations and car mileage balance		39,900
Total net revenue		£ 919,700
Net revenue charges, less credits		503,900
Balance		£ 415,800
Deduct, Canada Atlantic deficiency	£17,400	
Less, D., G. H. & M. surplus.	12,100	5,300
Surplus		£ 410,500

This surplus added to the balance of £9,900 from June, 1909, makes a total of £420,400 available for dividend, which will admit of payment of the dividend for the half-year on the 4% guaranteed and first preference stocks, and the full dividend of 5% for the year on the second preference stock, leaving a balance of about £11,800 to be carried forward. The accounts of the G. T. Western Ry. for the half year show a surplus of £25,800, which amount is carried forward to the current half year.

TRAFFIC RECEIPTS FOR THE SYSTEM.

Aggregate from Jan. 1 to Jan. 31:—

	1909	1908	Inc.
Grand Trunk ...	£490.217	£408.948	£81,269
Canada Atlantic.	29.373	23.220	6.153

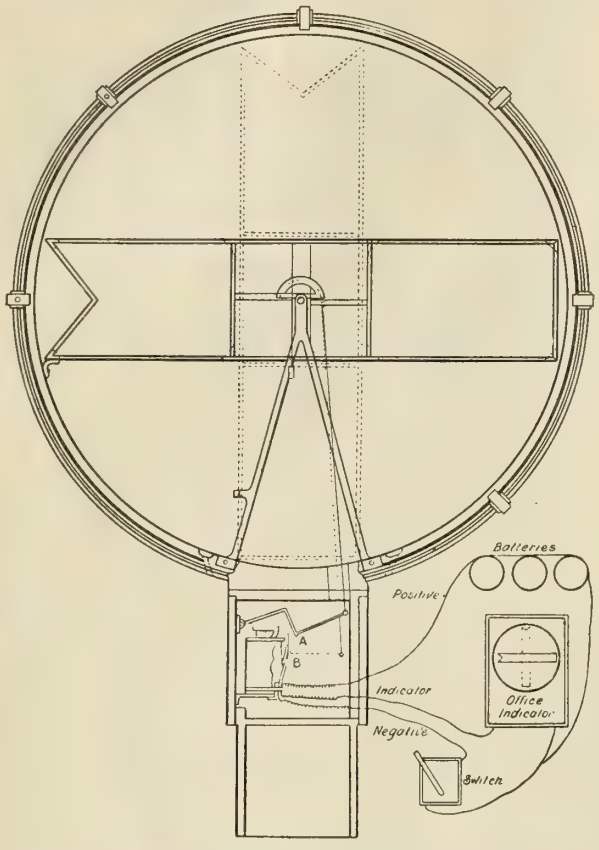
D.G.H. & M....	32.621	24.827	7.794
Totals	£647,875	£542.551	£105.324

The G.T.R. Freight Traffic Department, Montreal, held its third annual dinner at the Montreal Club, Feb. 4.



Position of Semaphore Banner is always absolutely indicated to operator.

THE McAVITY ELECTRIC RAILWAY SIGNAL

SIMPLE RELIABLE ECONOMICAL

The McAvity Electric Signal can be used either in a Block System, as a Semaphore for Station, Yard, Junction and Drawbridge Protection, or as a Train Order Signal.

The banner in a horizontal position signifies "STOP." When current is applied the banner comes to position of "CLEAR," or perpendicular, as shown by dotted lines; this brings lever A down, making contact with point B, which contact must be made before Office Indicator will operate, and as the Semaphore only works to "CLEAR" electrically, therefore, in case there should be any derangement of the wires, **the banner instantly assumes the position of "STOP" by gravity**, where it will remain until the cause of the disturbance is discovered and removed.

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them.

9261. Jan. 13.—Approving proposed road diversion and highway crossing of G.T.P.R. in s.e. sec. 31, tp. 39, r. 21, w. 3 meridan, West Saskatoon district, Sask.

9262. Jan. 13.—Approving Montreal and Southern Counties Ry. proposed revised location near Riverside St., Montreal.

9263. Jan. 13.—Approving C.N.O.R. revised location near Osaca, Hope tp.

9264. Jan. 13.—Authorizing Montreal and Southern Counties Ry. to cross G.T.R. near Victoria Jubilee Bridge, near Windmill Point, and on Common St., Montreal.

9265. Jan. 12.—Authorizing C.P.R. to construct spur for A. & F. Fraser, Pembroke tp., Ont.

9266. Jan. 13.—Approving G.T.P.R. location, Prince Rupert easterly, mileage 299.15 to 359.00, r. 5, Fort Fraser district, B.C.

9267. Jan. 4.—Dismissing city of Montreal's application for order directing C.P.R. to pay cost of construction of sidewalks and pavement of subway at Iberville St.

9268. Jan. 10.—Ordering C.N.R. to erect fences on each side of its right of way through lots 124 to 127, Portage la Prairie parish, Man.

9269. Jan. 14.—Approving pipe line of Smith, Kerry & Chace over C.P.R., for construction purposes in connection with concrete dam on Illecillewaet River, near Revelstoke, B.C.

9270. Jan. 14.—Authorizing G.T.R. to construct several branch lines in con. 1, Tay tp., near Midland, Ont.

9271. Jan. 12.—Ordering M.C.R., C.P.R. and T.H. & B.R. to file, not later than Mar. 1, a joint rate not exceeding $2.60 a ton on coal in carloads of customary minimum weights, from Black Rock and Suspension Bridge, N.Y., to Sudbury, Ont.

9272. Jan. 14.—Extending until Mar. 1 time within which additional protection may be provided at G.T.R. and Galt, Preston & Hespeler Ry. crossing, Hespeler, Ont.

9273. Jan. 14.—Authorizing city of Winnipeg to construct bridge over C.P.R. connecting Brown St. on the north and Brant St. on the south of the railway yards.

9274. Jan. 13.—Authorizing Nipissing Power Co. to place wires across Bell Telephone Co.'s wires near Callandar, Ont.

9275. Jan. 14.—Authorizing Gillies Hill Telephone Association to place wires across G.T.R. at m.p. 140, con. 7, Elderslie tp., Ont.

9276. Jan. 14.—Authorizing Pipestone municipality, Man., to place wires across C.N.R. near Belleview Siding.

9277. Jan. 14.—Authorizing Shawinigan Cotton Co. to lay water pipe under C.N.Q.R. at Shawinigan Falls, Que.

9278. Jan. 14.—Approving location of C.P.R. Kipp to Aldersyde branch, mileage 50 to 84.45, Alta.

9279. Jan. 15.—Authorizing G.T.R. to construct five bridges on its 20th district.

9280. Jan. 14.—Authorizing G.T.R. to construct spur on Walnut St., Collingwood, Ont.

9281. Jan. 15.—Authorizing C.P.R. to reconstruct bridge 52.7 on its Cranbrook section, B.C.

9282. Jan. 17.—Approving proposed transfer tracks layout between C.N.O.R. and C.P.R. near Cypress St., Toronto.

9283. Jan. 15.—Authorizing Manitoba Government Telephones to place wires across C.N.R. near Clanwilliam station.

9284. Jan. 15.—Authorizing C.P.R. to place wires across its Woodstock section, mileage 105.4, Atlantic Division.

9285. Jan. 6.—Authorizing C.N.Q.R. to build across Charlesbourg Rd., St. Roch parish, Que.

9286. Jan. 4.—Authorizing C.N.O.R. to build across G.T.R. near Powassan.

9287. Jan. 4.—Ordering that the rate of speed at which G.T.R., Kingston and Pembroke Ry. and Bay of Quinte Ry. may operate trains over the crossing in Kingston, Ont., be six miles an hour.

9288. Jan. 17.—Approving proposed location of C.P.R. Sedgewick to Ellerslie branch, mileage 93.85 to 3.65.

9289. Jan. 17.—Approving G.T.R. bridges across River St. Lawrence and Soulanges canal, Que.

9290. Jan. 15.—Authorizing C.P.R. to construct spur to Peterboro Hardware Co.'s premises, Peterboro, Ont.

9291. Jan. 17.—Authorizing C.P.R. to make changes in interlocking plant at crossing with G.T.R. at Komoka, Ont.

9292. Jan. 17.—Approving C.N.R. plan and profile of proposed layout for passenger station and local freight yards at Fort Garry, Winnipeg.

9293. Jan. 17.—Ordering C.N.R. to improve condition of ditches along its right of way opposite sec. 23, tp. 2, r. 8 e., and sec. 23, tp. 2, r. 7 w., Man.

9294 to 9296. Jan. 17.—Authorizing C.N.O.R. to build across public roads in Pickering tp.

9297. Jan. 18.—Authorizing Saraguay Electric and Water Co. to place cable under Montreal Terminal Ry. at St. Pierre St., Pointe aux Trembles parish, Que.

9298. Jan. 18.—Authorizing Dominion Light, Heat & Power Co. to place wires across Montreal Terminal Ry. at Air Ave., Maisonneuve, Que.

9299. Jan. 18.—Authorizing C.N.O.R. to cross public road between lots 8 and 9, con. 4, Darlington tp., at station 1492-00.

9300. Jan. 18.—Amending order 8900, Dec. 13, 1909, approving plan of proposed C.P.R. subway at Albert St., Regina, Sask.

9301. Jan. 18.—Authorizing C.N.O.R. to build across public road between lots 15 and 16, and lot 17, con. 4, station 2612-73, Pickering tp.

9302. Jan. 17.—Authorizing C.P.R. to construct siding to Standard Sanitary Manufacturing Co.'s premises across Royce St., Toronto.

9303 to 9305. Jan. 17.—Authorizing Seymour Power & Electric Co. to place wires across G.T.R. at three points in Hastings co., Ont.

9306. Jan. 18.—Extending until May 1, time within which Brandon, Saskatchewan & Hudson Bay Ry. may construct branch in Brandon, Man.

9307 to 9310. Jan. 19.—Authorizing Berlin, Ont., Light Commissioners to place wires over, and gas mains under G.T.R. at four points.

9311 to 9320. Jan. 19.—Authorizing Manitoba Government Telephones to place wires across C.P.R. at 10 points.

9321. Jan. 19.—Authorizing C.N.O.R. to build across public road between lots 22 and 23, con. 1, Scarboro tp.

9322. Jan. 19.—Authorizing C.P.R. to use bridge 41.6 on its Montreal-Ottawa section.

9323. Jan. 19.—Authorizing C.P.R. to cross Water St., St. Andrews, N.B.

9324. Jan. 19.—Authorizing city of Toronto to lay water pipe under C.P.R. on Christie St.

9325.—Standard regulations regarding farm crossings. This order is given fully on another page.

9326. Jan. 18.—Authorizing Ontario & Minnesota Power Co. to divert, for use in U.S., 6,000 electrical horse power developed on the Canadian side of Rainy River near Fort Frances, Ont.

9327. Jan. 20.—Authorizing G.T.R. and C.P.R. to operate trains over crossing east of Weston Rd., West Toronto, Ont.

9328. Jan. 20.—Authorizing C.N.O.R. to build across and divert public road between lots 33 and 34, con. 1, Hamilton tp.

9329. Jan. 20.—Authorizing C.N.O.R. to build bridge over creek at station 1778-30, lot 29, con. 4, Darlington tp.

9330. Jan. 20.—Authorizing C.N.O.R. to build across public road between lots 9 and 10, con. A, Hamilton tp.

9331. Jan. 20.—Authorizing C.N.Q.R. to build across Route Royale,, lot 192 Pointe aux Trembles, mileage 25.13 west from Quebec bridge.

9332, 9333. Jan. 20.—Authorizing C.N.Q.R. to divert highway and build across road in Dombourg village.

9334 to 9337. Jan. 20.—Authorizing C.N.Q.R. to build across public roads in Point aux Trembles, Cap Sante, at mileage 24.75 west from Quebec bridge, and at Dombourg.

9338. Jan. 20.—Authorizing C.N.O.R. to construct bridge over creek at station 1911, lot 4, con. 3, Whitby tp.

9339. Jan. 18.—Ordering G.N.R. to construct spur at Tamarack station, B.C., for Clarkson Bros.

9340. Jan. 18.—Dismissing application of Col. Hughes, M.P., for order directing alteration in C.P.R. and G.T.R. time tables so as to allow persons reaching Peterboro on G.T.R. morning train from Port Hope to catch C.P.R. morning train for Montreal and Ottawa.

9341. Jan. 20.—Authorizing Winnipeg Electric Ry. to operate cars over crossing on Logan Ave.

9342. Jan. 18.—Ordering G.N.R. to establish on its V.V. & E. and N.W. & S. Rys. re-arrangement of train service between Point Guichon and Vancouver; Huntingdon and Cloverdale Jct., Cloverdale Jct. and Vancouver; and tri-weekly service between Hazelmere and Cloverdale Jct., B.C.

9343. Jan. 22.—Authorizing C.P.R. and Canada Atlantic Ry. to operate trains over crossing at St. Polycarpe Jct., Que., without being brought to a stop.

9344. Jan. 21.—Authorizing G.T.R. to construct spur on Anglesea St., Goderich, Ont.

9345. Jan. 18.—Ordering G.N.R. to construct spur at Port Rico station, B.C.

9346. Jan. 21.—Authorizing town of Macleod, Alta., to place electric light wires across C.P.R. at Third Ave.

9347. Jan. 21.—Authorizing Mornington and Wellesley Telephone Association to place wires across C.P.R. at Tralee, Ont.

9348. Jan. 22.—Authorizing the Chinguacousy Municipal Telephone System to place wires across G.T.R. near Cheltenham, Ont.

VANADIUM

Contrary to the custom of things, Vanadium won immediate success in the highest branches of Metallurgy—in the manufacture of armor plate, marine forgings, locomotive and automobile parts.

Tests tell; and the tests which instantly admitted Vanadium Steels to these important fields are revolutionizing results all over the metal world.

This space is too short for the story. It is a story that vitally affects the success of every man, every machine, and every mill that uses iron, steel, brass, bronze or aluminum.

Vanadium, the "Master Alloy," is now in use all over the world. Get the complete story from our books.

American Vanadium Company

324 Frick Building,
Pittsburgh, Pa.

This order is given fully on another page.

9363. Jan. 24.—Authorizing G.T.R. to extend its public team track on Esplanade St. between Sherbourne and Princess Sts., Toronto.

9364. Jan. 24.—Ordering C.N.R. to erect fences on each side of its right of way in Oliver tp., Ont.

9455. Feb. 1.—Approving rules of Boston & Maine and Maine Central Rds. for operation of trains in Canada.

9456. Feb. 1.—Ordering C.P.R. to repair embankment known as Dewdney Dyke, B.C., and limiting speed of trains crossing dyke to 20 miles an hour.

9457. Jan. 26.—Authorizing G.T.R. to acquire necessary land for approaches to Mrs. Merrin's and J. Elliott's properties, and to carry out improvements.

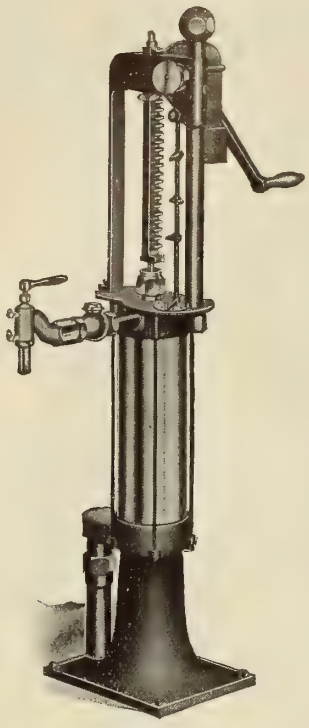
9458. Feb. 3.—Approving G.T.P. Branch Lines highway crossing and road diversion in the n.e. quar. sec. 34, tp. 45, r. 21, w. 4 m., North Alberta.

9459. Feb. 2.—Approving C.P.R. plan showing standard 10 in. stand-pipe.

9460. Jan. 29.—Authorizing Ontario Hydro-Electric Power Commission to erect transmission wires across Hamilton and Dundas Electric Ry. in Ancaster tp.

9461. Feb. 3.—Authorizing Bell Telephone Co. to place wires across C.N.R. telegraph wires near Cyrville station, Ont.

9462. Feb. 1.—Authorizing Ontario Hydro-Electric Power Commission to



BOWSER

SYSTEMS FOR RAILWAY OIL STORAGE

are backed up by twenty-five years of experience in the manufacture of Self-measuring Pumps and Tanks.

The Tanks are made of any capacity, either cylindrical or rectangular, may be buried underground and connected with the pumps which are placed any distance away, wherever most convenient. No danger from FIRE.

The Pumps measure accurately, and by means of a Gallon Meter, keep an accurate record of all oil drawn. OVER FIFTY RAILROADS ARE USING BOWSER EQUIPMENT. Drop a card for BULLETIN 18.

S. F. BOWSER & COMPANY, LTD.

TORONTO, ONT.

ADDITIONAL SAFETY AND ECONOMY IN

TRACK MAINTENANCE

has been proved by the use of Continuous, Weber and Wolhaupter base-supported rail joints—after fourteen (14) years' service, having a record of over **50,000 miles in use**—the extent of which is evidence of their excellence.

9479. Feb. 8.—Authorizing C.P.R. to construct its Lacombe branch across highways from mileage 50 to 85, Alta.

9480. Feb. 8.—Authorizing C.N.O.R. to place telegraph wires across Bell Telephone Co.'s wires at Russell Road, near Ottawa.

9481. Feb. 8.—Authorizing C.N.O.R. to build under Bell Telephone Co.'s wires at station 2.31, Parry Sound.

9482. Feb. 8.—Authorizing town of St. Louis, Que., to place light and power wires under Montreal and Southern Counties Ry. at Front St.

9483, 9484. Feb. 8.—Authorizing Hamilton Cataract Power, Light and Traction Co. to place transmission wires across G.T.R. in Saltfleet tp., Ont.

9485 to 9488. Feb. 8.—Authorizing Bell Telephone Co. to place wires across C.N.O.R., C.P.R. and G.T.R. at four points in Ontario.

9489 to 9493. Feb. 8.—Authorizing Seymour Power and Electric Co. to place wires across North American Telegraph Co.'s wires at six points in Ontario.

9494. Feb. 4.—Dismissing application of Canadian Freight Association for variation in Canadian Classification rating of automobiles "set up," L.C.L., and directing that Canadian Classification rating of automobiles taken apart (wheels detached), in box cars, L.C.L., actual weight, be double first class. This change to be incorporated in forthcoming amendments to Canadian Classification.

9495. Feb. 5.—Authorizing C.P.R. to construct spur to D. Rabbitt's premises, Bawlf, Alta.

9496. Feb. 8.—Authorizing city of Toronto to lay sewer under C.P.R., Albany Ave.

9497. Feb. 8.—Authorizing C.P.R. to construct spur between Mary and Christina Sts., Westfort, Ont.

9498. Feb. 5.—Authorizing C.P.R. to construct spur for Carter-Halls-Aldinger Co., Winnipeg.

9499. Feb. 5.—Authorizing C.P.R. to extend existing spur from its Pheasant Hills branch, s.e. quar. sec. 27, tp. 29, r. 22, w. 2 m., Sask.

9500. Feb. 10.—Authorizing Saskatchewan Public Works Department to construct crossing over G.T.P.R., n.e. ¼ sec. 10, tp. 20, r. 33, w. p.m.

9501. Feb. 10.—Authorizing Bell Telephone Co. to place wires across C.N.O.R. telegraph wires and tracks at McGill St., Hawkesbury.

9502 to 9508. Feb. 10.—Authorizing Manitoba Government Telephones to place wires across C.P.R. at seven points.

9509. Feb. 10.—Approving rules and regulations of Rutland Rd. for operation of trains in Canada.

9510 to 9517. Feb. 10.—Authorizing the C.N.O.R. Ry. to build across public roads at eight points in East Whitby tp.

9518. Feb. 10.—Authorizing C.N.O.R. to construct bridge over Orono Creek, Clarke tp.

9519. Feb. 7.—Authorizing G.T.R. for delivering freight to C.N.O.R. and its contractors to connect temporary switch at point referred to in order 9243 re Scarboro tp.

9520. Feb. 3.—Authorizing C.N.O.R. to build across public road between lots 22 and 23, con. 4, Whitby tp.

9521. Feb. 11.—Authorizing C.N.O.R. to build across and to divert road on lot 9, con. B, Murray tp.

9522. Feb. 12.—Authorizing G.T.P.R. to divert road in n.e. quar. sec. 12, tp. 44, r. 6, w. 4 m., North Alberta.

9523. Feb. 12.—Approving Chatham, Wallaceburg and Lake Erie Ry. bylaw authorizing J. E. Richards, G.F.A., to prepare and issue tariffs of tolls.

9524. Feb. 12.—Authorizing Ontario Hydro-Electric Power Commission to place wires across T.H. and B.R. at lot 55, con. 1, Ancaster tp.

9525. Feb. 15.—Authorizing Ontario Hydro-Electric Power Commission to place wires across Hamilton and Dundas Electric Ry. in Ancaster tp.

9526 to 9528. Feb. 12.—Authorizing C.N.O.R. to build across public roads at three points in Whitby tp.

9529. Feb. 14.—Approving C.N.O.R. location between lots 24 and 25, mileage 173.9, to line between Durham and Northumberland counties, mileage 177.

9530 to 9537. Feb. 14.—Authorizing C.N.O.R. to build across public roads at eight points in Darlington, Whitby, Scarboro, Pickering and Hope tps.

9538. Feb. 14.—Authorizing C.N.O.R. to use bridge over Seguin River on its Parry Sound spur.

9539. Feb. 14.—Approving plan, etc., of proposed drainage works in Tilbury East tp., Ont., across Canada Southern Ry. property.

9540 to 9544. Feb. 12.—Authorizing C.P.R. to use two bridges on Drummondville section; six on Sherbrooke section; one on its St. Guillaume branch, two on Newport section, and three on Farnham section, Que.

9545. Feb. 12.—Approving G.T.P. Branch Lines highway crossing and road diversion in sec. 22, 23 and 14, tp. 50, r. 19, w. 4 m., Alta.

9546. Feb. 14.—Amending order 9331, Jan. 20, re application of Pointe Aux Trembles municipality, Que., by changing reference to plan on file and approving another plan.

9547. Feb. 15.—Authorizing C.P.R. to use Higgins Avenue subway, Winnipeg.

9548. Feb. 15.—Authorizing C.P.R. to use bridge over Old Man River and the Lethbridge viaduct.

9549. Feb. 15.—Authorizing C.P.R. to use bridge 14.6 on its Columbia and Kootenay section, B.C.

9550. Feb., 14.—Authorizing Kent municipality, B.C., to construct highway crossing over C.P.R. at Harrison River.

9551. Feb. 10.—Amending order 6682, July 14, 1908, directing the Peterboro Radial Ry. to install derails and semaphores on Charlotte St., Peterboro, Ont., and changing system of blocking said derails and semaphores.

9552. Feb. 3.—Approving Niagara, St. Catharines and Toronto Ry. revised and new locations from mileage 13 to 18.55, Humberstone tp., Ont., and authorizing it to construct transfer track from Elm St., Port Colborne, to Dominion Government elevator siding; to build across Killally and Clarence Sts., Port Colborne; concession road between 4 and 5; Neff and Thompson Sts., Humberstone; concession road between cons. 2 and 3; and Main St. West, Humberstone, Ont.; and to cross at grade the G.T.R. air line and G.T.R. Buffalo-Goderich Division.

9553. Feb. 15.—Authorizing G.T.R. to construct branch line to National Manufacturing Co.'s premises, Ottawa.

9554. Feb. 12.—Authorizing St. Jean de Dieu Hospital, Longue Pointe, Que., to place light and telephone wires under Montreal Terminal Ry. and C.N.Q.R.

9555. Feb. 17.—Authorizing Hamiota municipality, Man., to place wires across G.T.P.R. near Oakner siding.

9556 to 9563. Feb. 16.—Authorizing C.N.O.R. to build across eight highways in Clarke tp.

9564. Feb. 16.—Authorizing Atlantic, Quebec and Western Ry. to construct branch line to proposed Government wharf at Adam's Bluff, Gaspe, Que.

9565. Feb. 15.—Authorizing G.T.R. to construct spur to E. Long Manufacturing Co.'s premises, Orillia, Ont.

9566. Feb. 3.—Approving Niagara, St. Catharines and Toronto Ry. revised location through lot 27, con. 6, and lots 26 and 27, con. 7, Crowland tp., mileage 11.53 to 13; authorizing it to cross highways north and south of canal feeder, at stations 307.83 and 314.22, public road at mileage 11.97, and town line between lot 27, Humberstone tp., and lot 27, Crowland tp., and to cross Canada Southern Ry. and T.H. & B. Ry.

9567. Feb. 11.—Authorizing Canada Atlantic Ry. to construct bridge over St. Lawrence River at Coteau, Que.

9568. Feb. 14.—Authorizing C.N.O.R. to divert and cross the Montreal and Ottawa road.

9569. Feb. 15.—Authorizing C.N.O.R. to build across road between lots 16 and 17, con. 3, Clark tp.

9570. Feb. 12.—Authorizing C.P.R. to use two bridges on its Drummondville branch, Que.

9571. Feb. 14.—Authorizing C.P.R. and C.N.O.R. to use for traffic the branch line in Parry Sound, Ont.

9572. Feb. 14.—Authorizing C.P.R. to construct spur line to E. F. Kendall's sawmill, Norman, Ont.

9573, 9574. Feb. 15.—Authorizing C.P.R. to construct spur to J. I. Case Threshing Machine Co.'s premises, Regina, Sask., and Sidney Brick and Tile Co.'s premises, Sidney, Man.

9575. Feb. 16.—Authorizing C.N.O.R. to place telegraph wires across C.P.R., Ottawa and Prescott branch, mileage 56.6, west from Hawkesbury.

9576 to 9579. Feb. 16.—Authorizing C.N.O.R. to carry its joint tracks with C.P.R. under Bell Telephone Co.'s wire from points near Parry Sound.

9580, 9581. Feb. 16.—Authorizing Chinguacousy Municipal Telephone System to place wires across C.P.R. at two points on its Orangeville branch, Ont.

At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Fayette Brown, President of the Brown Hoisting Machinery Co., Cleveland, Ohio, died recently, aged 87.

The Wire & Cable Co., Montreal, has appointed The Northern Electric & Manufacturing Co., 918 Pender St., Vancouver, its sales agent for British Columbia.

Burton W. Mudge & Co., railroad supplies, Chicago, Ill., announce the appointment of Otto P. Hening, as Sales Manager, with charge of sales, advertising and purchasing.

The General Railway Signal Co., Rochester, N.Y., and Eastern Townships Bank Bldg., Montreal, has issued in pamphlet form a paper on the use of alternating currents in railway signaling by its chief engineer, W. K. Howe.

The Silliker Car Co., Ltd., Halifax, N.S., recently offered $125,000 seven per cent. cumulative preference stock at par. The prospectus states that the company's authorized capital is $750,000, of which $244,000 is paid up.

The Railway Committee of the House of Commons threw out the bill introduced for the purpose of amending the Railway Act so as to compel railway companies to pay their workmen every two weeks instead of every month.

The House of Commons has passed the act authorizing the Government to acquire by lease lines of railway connecting with the Intercolonial Ry. The lines may be leased in whole or in part, but only if such lines are reported by the Chief Engineer of the Department of Railways to be in good and safe condition for operation. The terms of the lease have to be approved by the Government Railways Managing Board and by Parliament before any line is taken over for operation.

Railway Finance, Meetings, Etc.

Alberta Ry. and Irrigation Co.—Approximate net profits, from all sources, exclusive of land sales for Dec., 1909, $43,820, against $40,340 for Dec., 1908. Cumulative net profits for six months ended Dec. 31, 1909, $257,309. Traffic receipts for Jan., $21,442, against $16,333 for Jan., 1909. Aggregate traffic receipts for seven months ended Jan. 31, $225,428.

Canadian Northern Ontario Ry.—A bill has been passed by the House of Commons authorizing the company to acquire the shares, bonds or other securities issued by a number of other companies; to consolidate the securities heretofore made by itself, or by any other railway company whose stock or property it has acquired, and in lieu thereof to issue consolidated mortgage or other stock.

The Canadian Northern Ry. reported to the Minnesota State Auditor, Feb. 5, that the earnings of its line in that state for the year 1909 were $461,598. The amount of taxes paid on this was $18,563.

Dominion Atlantic Ry.—Gross earnings for Dec., 1909, $97,300, against $91,050 for Dec., 1908. Aggregate gross earnings for seven months ended Dec. 31, 1909, $817,300, against $792,285 for same period 1908.

Guelph Jct. Ry.—The annual meeting was held Feb. 1, when C. Kloepfer, R. L. Torrance and J. Crowe were re-elected directors. The other directors are the Mayor and appointed representatives of the Guelph city council. The shareholders after discussion decided to make the city an offer of the ten $100 shares held by them, so as to enable the city to retain the control of the company, if the bondholders are paid off, as it is understood that the C.P.R., which operates the line under lease, proposes to do. The actual amount of capital stock of the company is $30,000, of which the city holds $20,000, the remaining shares being held by the 10 shareholders who have paid up $100 each on their shares, the city having guaranteed the liability on the balance. The city in addition to taking the company's bonds to the amount of $155,000, advanced $18,000 in 1900.

Quebec Central Ry.—Gross earnings for Dec., $82,409.52; expenses, $62,316.49; net earnings, $20,093.03, against $72,833.00 gross earnings; $56,795.52 expenses; $16,037.48 net earnings for Dec., 1908. Aggregate gross earnings for six months ended Dec. 31, $580,770.09; expenses, $386,439.48; net earnings, $194,330.61; against $552,691.24 aggregate gross earnings; $377,579.80 expenses; $175,111.44 net earnings for same period 1908.

Quebec and Lake St. John Ry.—Total earnings for Jan., $37,654.84, against $46,249.05 for Jan., 1909.

White Pass and Yukon Ry.—Gross earnings for six months ended Dec. 31, 1909, $842,186.

Railway Lands Patented.—Letters patent were issued during Nov., covering railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Canadian Northern Ry.	20.50
Canadian Pacific Ry.	1.54
Grand Trunk Pacific Ry.	10.98
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	2,239.00
Total	2,272.02

The Canadian Transfer Co.'s officers and directors for the current year, are as follows:—President, C. Cassils; directors, H. Paton, G. H. Starke, Sir H. Montagu Allan, H. M. Molson; Manager and Secretary, F. M. McRobie, all of Montreal.

Paper Rates from Grand Mere.

Following is the judgment of the Interstate Commerce Commission in the case of H. R. Williar vs. Canadian Northern Quebec Ry. et al, decided recently:—

"On various dates in July, Aug., and Sept., 1907, complainant caused to be delivered to the C.N.Q.R. Co., at Grand Mere, Que., some 18 carloads of newspaper for transportation to San Francisco, Cal. With one exception the shipments were routed by the shipper via C.P.R., Wabash Rd., Chicago, Burlington & Quincy Rd. and lines beyond; the remaining carload was routed via C.P.R., Wabash Rd., Chicago and North Western Ry. and lines beyond. At the time of movement there was in effect a rate of 75c. per 100 lbs. on newspaper, in carloads, from Grand Mere to San Francisco, but this rate was effective only through Chicago. The Wabash Rd. carried these shipments from Detroit via its East Hanibal gateway, and, with the exception of a single carload, delivered same to the C., B. & Q.R. at Kansas City; the remaining carload was delivered to the Missouri Pacific Ry. at Kansas City. Thence shipments were carried to destination via the lines of the several other defendants. The rate lawfully applicable by the route of movement was 90c. per 100 lbs., and charges were collected in accordance therewith. This rate is alleged by the complainant to be unjust and unreasonable, to the extent that it exceeds the rate of 75c. per 100 lbs. applying through the Chicago gateway. Reparation is sought in the amount of $1,891.93. Effective Jan. 28, 1908, the 75c. rate was made specifically applicable via all routes. The through rate appears to have been canceled on Jan. 1, 1909, but was re-established on June 5, 1909. Certain of the defendant carriers disclaim liability for the collection of the alleged excessive charges upon the plea that it was the duty of the initial carrier, or of the Wabash Rd. to which the shipments were intrusted at Detroit, to forward the same via the Chicago gateway, and that the connecting lines should bear no part of the responsibility for the shipments having been sent by the more expensive route. We may observe that carriers charged with exacting an unreasonable rate cannot escape liability solely upon the ground that the shipments could have been transported via a route carrying a lower rate. If the rate assessed was, in fact, unreasonable, defendants should be required to make reparation irrespective of the fact that the shipper would have enjoyed a lower rate if his shipments had moved through a different gateway. We find that the rate assessed and collected on the shipments giving rise to this complaint was unjust and unreasonable to the extent that it exceeded the rate of 75c. per 100 lbs. which was applicable via the Chicago gateway and has since been made effective via the route of movement. We find further that a reasonable rate to be observed for the future should not exceed 75c. per 100 lbs. Reparation will be awarded in the amount of $1,891.93 as claimed, with interest from the date of payment of freight charges. An order will issue in conformity with these findings.

Toronto Viaduct Question.—The Supreme Court gave judgment at Ottawa, Feb. 15, on the appeal of the G.T.R. and the C.P.R. against the Board of Railway Commissioners' order requiring the companies to construct a viaduct along the Esplanade at Toronto. The Court, with two judges dissenting, dismissed the appeal. It has not been announced whether the companies will make application for leave to appeal against this decision to the Imperial Privy Council.

Construction Freight Tariffs.

In the complaint of Baker, Reynolds & Co., of Moose Jaw, Sask., against C.P.R. construction rates the Board of Railway Commissioners' Chief Traffic Officer, J. Hardwell, made the following report Nov. 27:—"I have been in communication with E. W. Beatty, Assistant Solicitor C.P.R. Under the circumstances detailed in complainants' letter, Sept. 17, 1909, complaint is made to the Board against the rates charged by the C.P.R. on some 28 carloads of lumber and shingles shipped from Vancouver, New Westminster and Barnet, B.C., to Brownlee, Tugaski and Outlook, Sask., stations on what is now operated as the C.P.R. Tuxford Branch, which connects with the main line at Moose Jaw. The published rates to Moose Jaw were 49c. on cedar lumber and shingles, and 40c. on fir and spruce lumber. The first "Company" tariff was published to Tuxford, April 11, 1908, at the same rates as to Moose Jaw; to Brownlee and Tugaski, Sept. 30, 1908, and to Outlook, Dec. 2, 1908, the rates to these last three stations being the same on fir and spruce as to Moose Jaw and Tuxford, namely 40c. and 1c. over Tuxford and Moose Jaw, or 50c. on cedar lumber and shingles. All the lumber in question appears to have been way-billed to Tuxford, as the end of the operated line, with the addition of 2c. to Brownlee and 3c. to Tugaski and Outlook. It is the excess over the through rates afterward published and filed as for operation that is complained of. The additional rates appear to have been issued in the form of construction tariffs, but they were not published and filed with the Board. On interrogating Mr. Beatty as to this omission, he writes me that as the operation of the branch lines had not been authorized by the Board at the time the construction tariffs were issued, it would have been useless to file them, as the Board would have no authority to approve them. His traffic officials 'think though they are not positive, that the matter was discussed with me unofficially at the time, and that my opinion was that the company could publish construction tariffs without filing them with the commission.' I cannot recall any such discussion; indeed, the reports I had made to the Board, and the action taken by the Board previously, would not warrant any such conjecture. The construction tariffs are still unfiled.

The Canadian Pacific Co. were authorized to carry freight traffic over the different sections of the new branch line, as construction proceeded, by orders 5364, Sept. 18, 1908; 5919, Dec. 10, 1908; 6083, Jany. 20, 1909, and 6586, Feb. 18, 1909.

In connection with the Grand Trunk Pacific Construction Dept.'s special freight tariffs, the late Chief Commissioner ruled, Oct. 25, 1907, that 'in approving the railway company's Standard tariff unconditionally, the Board did not intend to decide upon the propriety of the company's proposed limitation of the traffic to construction trains; but that the Board is of opinion that such a limitation is not proper in dealing with tariffs; that the Board is of opinion that the nature of the facilities to be furnished for the carriage of traffic depends upon circumstances; and that the same facilities are not to be expected upon a road just opened for traffic, and upon which numerous construction trains are run, as upon a completed railway.'

"Again, with regard to the printing of the words 'On construction trains only' on the G.T.P. tariffs, it was decided that the Board has nothing to do with the question as to whether the traffic is carried on construction trains or otherwise. The Board recognizes that under the circumstances the Company cannot give full freight service; but that the question whether the goods shall be carried on freight trains, or otherwise, is not a question to be considered in deciding on the standard tariff. The Board leaves it to the company to provide such service as the circumstances would reasonably require.

"Order 5153, Aug. 11, 1908, on the application of the G.T.P.R. for leave to carry settlers, etc., on construction trains over the line between Winnipeg and Battle River, provides 'that, in exercising the powers conferred by this order, the applicant company be not thereby subjected to a penalty for contravening any of the provisions of The Railway Act in that behalf.'

"The Great Northern Ry. (U.S.) for its Midland and B.S. & H.B. lines to Portage la Prairie and Brandon, respectively, filed certain commodity tariffs to apply on tariff carried on construction trains. No standard tariff had been filed, and the authority of the Board for the carriage of any traffic whatever had not been obtained. The late Chief Commissioner ruled as follows:—'By sec. 207 (Act of 1903), no railway or any portion thereof, shall be opened for the carriage of traffic, other than for the purposes of the construction of the railway by the company, until leave therefor has been obtained from the Board, as hereinafter provided. The carriage of traffic by the company or its contractors, before leave has been given under this provision, is wholly unauthorized, whether a standard tariff has or has not been approved, and such a practice should not be recognized or sanctioned by the Board. As, however, the public are frequently accommodated in this way, there does not appear to be any reason for the Board to take action unless complaint is formally made to it.'

"In the present case, the C.P.R. appears to have carried traffic on construction trains, under construction tariffs which were not filed with the Board, before the different sections had been inspected by the Board's Engineer, and before the orders cited had been issued. The company has not even supplemented its Standard Tariff C.R.C. no. W. 3, so as to make it cover this new Tuxford branch.

"In Oct., 1907, the Canadian Northern Ry. filed its construction department's special tariff on grain from stations on its new line between Brandon and Regina, which had not been opened for traffic, to Port Arthur. The late Chief Commissioner ruled as follows:—'The Board cannot approve any tariff for a line as to which a standard tariff has not been approved, and the Board cannot approve the carriage of traffic upon a railway until the leave of the Board has been given under either sub-sec. 1, or sub-sec. 7 of sec. 261.'

"The C.P.R. seems to have been in default in three ways; it carried traffic before it had been authorized to do so under sec. 261, it has filed no standard freight tariff, and it filed no special tariffs for traffic carried on construction trains pending formal opening for general traffic.

"The Tuxford branch seems to have been built by the Company's own construction department; but even if it were built by a private contractor, should he not be considered the agent of the company so that any traffic he might carry on his own trains before handing the line over to the Company might, for the purposes of The Railway Act, be considered as traffic carried by the Company itself?"

On considering the Chief Traffic officer's report the Chief Commissioner gave the following decision, Dec. 17:—

"Sec. 26, provides that no railway, or portion thereof, shall be opened for the carriage of traffic, other than for the purposes of the construction of the railway by the company until leave therefor has been obtained from the Board. This makes it clear that a railway company cannot use the road in course of construction for other purposes than carrying construction material. Subsec. 7 of sec. 261 provides that the Board, upon being satisfied that public convenience will be served thereby, may, after obtaining a report of an inspecting engineer, allow the company to carry freight traffic over any portion of the railway not opened for the carriage of traffic generally. This might apply where the company was anxious to convenience settlers before the road was ready for opening generally. Sec. 327 provides for filing standard freight tariffs, and sub-section 4 prohibits the company from charging any toll until the provisions of the section have been complied with. Sub-sec. 5 of sec. 314 prohibits a company charging, levying, or collecting any money for any service as a common carrier, except under the provisions of the Railway Act.

"In the face of all this, it is said a company may carry traffic during construction without the road having been inspected and without tariffs being filed. This contention is entirely untenable. The tolls charged in the case in question were all illegally collected and in violation of the express provisions of the Statute. It is said that the company do not desire to be hampered and delayed by carrying any sort of traffic during construction, and that it is done only to convenience settlers in those new districts. With this position, of course, one is in entire sympathy; but there is no law that I know of that permits it, except upon compliance with the terms of the Act. Tariffs are made out entitled "Canadian Pacific Ry. Construction Department," "Canadian Northern Ry. Construction Department in connection with the Canadian Northern Ry." These are supposed to apply to lines during construction and are not filed with the Board. I know of no authority in the Act for this practice, and none has been pointed out to us. It is all illegal; moneys paid to the Companies for service under these alleged tariffs have been illegally levied. The persons responsible for the issue and use of these tariffs have subjected themselves to the penalties provided for by the Act. Where is there any authority to issue tariffs in the name of a construction department? Is this a department of the railway company or is it a firm of contractors? And, if the latter, where is there authority to operate a railway, issue tariffs, and collect tolls? If it exists, it must be somewhere else than in the Railway Act.

"I have before me a tariff issued by what is called the construction department of the C.P.R. Co.. It has printed upon it the following,—'During construction of Sheho extension—pending the completion and taking over by this company of the extension east of Lanigan (now under construction), for the convenience of settlers, etc., etc.' I have another Canadian Northern tariff attempted to be made applicable to its Maryfield extension during construction, with the words, 'pending the completion and taking over by this company, etc., etc.,' printed upon it. This tariff has also printed upon it at the foot 'Mackenzie, Mann & Co., Ltd., Contractors,' along with the names of the traffic officers of the Canadian Northern Ry. Co. I do not know why this practice has been adopted, or why it is continued in the face of the Act. Let copies of Mr. Hardwell's report and of this memo., as well as Mr. McLean's, be sent to the complainants and the C.P., C.N., and G.T.P. Ry. Companies."

Commissioner McLean gave the following decision:—"Mr. Hardwell's re-

A. B. Jardine & Co. - - Hespeler, Ont.

port raises the question of the alleged right of railway companies to carry freight on construction traiffs, on sections of railway not yet inspected, without such tariffs having been filed with the Board. Mr. Beatty, for the C.P.R., takes the position that where 'the operation of branch lines has not been authorized by the Board at the time the construction tariffs were issued, it would be useless to file them, as the Board would have no authority to approve them.' And he is of the opinion that such tariffs do not need to be filed with the Board. The provisions of sec. 261 of the Railway Act and the policy of the Board as indicated in the citations contained in Mr. Hardwell's report show clearly that Mr. Beatty's position is untenable. The opinion of the late Chief Commissioner as expressed in re Brandon, Saskatchewan and H. B. Railway Company Standard Tariffs, is especially pertinent. It appears to me that the construction tariffs in the case before us have no legal status, and consequently the charges made thereunder have no legal status as well."

C. N. R. Winnipeg Terminal Bonds.

The Canadian Northern Ry. Co. has issued $3,000,000 thirty year mortgage 4% guaranteed gold bonds on its Winnipeg terminal property. Following are extracts from a letter from W. Mackenzie, President, to the purchasers of the bonds:—W. A. Read & Co., of New York.

"The proceeds of the bond are to be used entirely for expenditures for the construction of the new station and for improvements on and extension of the Winnipeg terminals. The value of the mortgaged properties will be practically twice the amount of the bonds outstanding. The bonds are a direct obligation of the C.N.R. Co., guaranteed principal and interest by the Province of Manitoba and specially secured by a mortgage on approximately 169 acres of the C.N.R. freight and passenger terminals at Winnipeg. The passenger and local freight terminals are situated in the heart of Winnipeg's business district, and comprises approximately 69.93 acres. It is estimated that the improvements now being made on this property, including passenger station, offices, tracks, freight sheds, etc., will, when completed, amount to over $2,000,000. The mortgage also secures the bonds upon approximately 99.13 acres of freight terminals also within the city limits. The freight terminals comprise extensive shops, yards, freight tracks and other terminal facilities representing an improvement expenditure of over $1,000,000. The terminal bonds are also secured by a charge on all the right, title and interest of the C.N.R. under the agreement for their joint use by the G.T. Pacific Ry. and the National Transcontinental Ry., the rentals for which payable to the C.N.R. Co. amount to, approximately, $97,500, besides any other rental payments which may accrue to the C.N.R. for the use of the terminals by any other railway. The payment of principal and interest of the bonds is unconditionally guaranteed by the Province of Manitoba. The value of the lands comprising the passenger terminals, apart from improvements, based on a valuation which was made on behalf of the G.T. Pacific Ry., the National Transcontinental Ry., and the C.N.R., made for the purpose of determining the rental value of the property together with the cost of two subsequently acquired properties is over $2,500,000. The G.T. Pacific and the National Transcontinental Rys. (which, when completed are, under their agreements, to be operated as one), have agreed to use the city terminals for their passenger and local freight business, paying therefor as rental an amount equivalent to interest at 4% on one-half of $2,625,000 and a further amount equal to one-half of the interest at 4½% on the expenditures for improvements. This agreement, confirmed by act of Parliament, covers 999 years from Jan. 1, 1907. The terminal rental payable by the National Transcontinental Ry. and the G.T. Pacific Ry. amounts to, approximately, $97,500 from these tenant railways as against the total interest of $120,000 accruing on the $3,000,000 terminal bonds now authorized. Should it be arranged to allow additional railways to use the terminals, the amount of rentals would be increased. The passenger terminals are most advantageously located in Winnipeg on the main street and at the door of the business district. Subject to the terms of the terminal agreement with the Government and the G.T. Pacific Ry. Co., about 45 acres of the passenger terminals are owned by the C.N.R. Co. in fee simple, and the remainder, about 24 acres, is held under a 999 years lease from the Northern Pacific Ry. Co. The freight terminals, approximately, 99.13 acres, are equipped with modern facilities for the handling of an extensive freight business. They are in part subject to a mortgage for $300,000 given by the Winnipeg Land Co., which formerly owned part of the lands, as a security for certain first mortgage bonds issued by that company. These bonds were acquired by the C.N.R. Co., and are now being held by the trustees of the mortgage securing the company's 4% consolidated debenture stock."

Too Late for Classification.

Brandon, Saskatchewan and Hudson's Bay Ry.—Application is being made to the Dominion Parliament for the passing of an act extending the time within which the company may complete the construction of its authorized lines of railway.

Grand Trunk Pacific Ry. Branch Lines.—Referring to information published on another page, the contract for the construction of a further 50 miles of the line from Melville to Regina, Sask., has been let to the J. D. McArthur Co., Winnipeg. The line has already been completed from Melville to Balcarres. The same company has also received the contract for the construction of the balance of the line from Tofield to Calgary, Alta. The first 50 miles of this line were placed under contract in 1909, and track was laid to Camrose, 26 miles.

Canadian Northern Ry.—A contract is reported to have been let to T. Kelly & Sons, Winnipeg, for the construction of the piers for a bridge across the Assiniboine River, east of the Main St. bridge, to carry the C.N.R. and G.T. Pacific Ry. tracks. The bridge will be 454 ft. long, and will be of the deck plate girder type. There will be one section of 44 ft. at the north end which will be a through span, then two of the deck plate sections, each 80 ft. in length. The central span will be 90 ft. long, of the trunnion lift pattern, instead of a swing span as in other river bridges across the Red and Assiniboine. At the south end there will be two more deck plate spans of 80 ft. each. The cost of the concrete piers is estimated at $50,000.

Intercolonial Ry.—Tenders will be received to Mar. 15 for the construction of a railway between Nelson and Chipman, N.B., 8.28 miles, and for a line between George's River and Sydney Mines, N.S., 9.09 miles.

Little Nation Ry.—Application is being made to the Quebec Legislature to change the location of the northern end of the main line and grant an extension of time for the construction of the line. (Sept., 1908, pg. 617.)

Northern Quebec Colonization Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to construct a railway from Tadousac, at the mouth of the Saguenay River, Que., westerly along the north shore of the river to Lake St. John, thence north-westerly to between Lake Chibougamau and Lake Mistassini, thence north-westerly to Hannah Bay, Ont., at the southern end of James Bay. The provisional directors are:—N. Drouin, J. Picard, W. Ray, Quebec; P. Tourigny, Victoriaville, Que.; Jas. B. Phillips, Haileybury, Ont. (Jan., pg. 21.)

The Ottawa Valley Ry. Co.'s application for an act reviving its powers and granting an extension of time for construction was withdrawn from consideration by the Dominion Parliament. (Jan., pg. 21.)

Prince Edward Island Ry.—Tenders have been asked for the construction of a 3-stall engine house at Georgetown, and for the following buildings on the Elmira branch:—a station, freight shed, two way stations, two shelters, two tool houses, a 2-stall engine house and a coal shed.

St. John Valley Ry.—A representative of the company was in Ottawa, Feb. 12, for the purpose of ascertaining the requirements of the Dominion Government as to construction. Application is being made to the New Brunswick Government to recommend the Legislature to guarantee the company's bonds to the amount of $25,000 a mile. The Dominion Government was asked to operate the line, taking 60% of the gross receipts, and it is said that this will be done, provided the line is constructed to the same standard as the National Transcontinental Ry., with which it will connect at Grand Falls, N.B. The company, it is stated, was organized "for the public welfare," and it is desired to secure the operation of the railway by one of the lines giving through connections. The company does not want to construct the line itself, unless arrangements cannot be made otherwise. (Dec., 1909, pg. 885.)

Temiskaming & Northern Ontario Ry.—A deputation from North Bay, Parry Sound and the surrounding districts waited on the Ontario Government, Feb. 10, to urge the extension of the T. and N.O.R. from the present southerly terminus at North Bay to Parry Sound, about 75 miles. Consideration of the suggestion was promised.

Toronto Terminal Ry.—When the application of the company for incorporation came before the Railway Committee of the House of Commons it was almost unanimously decided to reject it. (Dec., 1909, pg. 915.)

Toronto, Haliburton and Pembroke Ry.—The Ontario Legislature is being asked to incorporate a company with this title to construct a railway from Barry Bay southerly to Haliburton, or as an alternative from the crossing of the boundary between Lyell and Jones townships by the Canada Atlantic Ry. southerly to Haliburton. Thomson, Tilly and Johnston, Toronto, are solicitors for applicants. The provisional directors are:—W. B. Russell, W. Bilbrough, S. Johnston, R. H. Parmenter, Toronto; E. A. Dunlop, J. G. Fergie, J. F. Munro, Pembroke, Ont. (Feb., pg. 111.)

The Buffalo and Lake Huron Ry. Co.'s report for the half year ended Dec. 31 shows that after providing for interest on the first and second mortgage bonds the available balance, including the amount brought forward from the previous half year, is £14,787 2s. 5d., from which has been declared a dividend of 5s. 3d. a share, leaving a balance of £1,002 9s. 2d. to be carried forward, against £973 0s. 9d. carried forward from the previous half year. This railway is operated under lease by the G.T.R.

Railway Rolling Stock Notes.

The Canadian Northern Ry., between Jan. 15 and Feb. 15, received two cafe-parlor cars from the Crossen Car Mfg. Co., Cobourg, Ont.

The G.T.P.R. has ordered two superintendent's private cars, nos. 4,102 and 4,103, from the Canadian Car and Foundry Co., Montreal.

The C.P.R., between Jan. 15 and Feb. 13, received the following additions to rolling stock, from its Angus shops, Montreal:—three Pacific type locomotives, one consolidation locomotive, 24 flat cars, seven vans and one sleeper.

The Canadian Locomotive Co., Kingston, Ont., between Dec. 14, and Feb. 14, delivered four mogul locomotives to the Grand Trunk Ry., and four consolidation locomotives to the Canadian Northern Ry.

The Dominion Parliament has voted the following amounts on account of rolling stock for the Intercolonial Ry.:—$10,000 for air brakes, and $10,000 to exchange drawbars on freight cars; $1,000 for side ladders for box cars, and $66,000 for Pintsch gas apparatus.

The Montreal Locomotive Works, between Jan. 15 and Feb. 15, delivered 15 ten wheel locomotives to the G.T.R.; one locomotive to the Toronto, Hamilton and Buffalo Ry; and one steam shovel to the Canadian Copper Co. It is also building one steam shovel, class 45, for the Canadian Western Improvement Co., and two for stock.

The G.T.P.R., between Jan. 15 and Feb. 15, received the following additions to rolling stock:—200 stock cars, nos. 350,100 to 350,299; 315 box cars, nos. 310,300 to 310,614; five first class cars, nos. 2,026 to 2,030; from the Canadian Car and Foundry Co., Montreal, and 227 box cars, nos. 310,825 to 311,051, from Rhodes, Curry Co., Amherst, N.S.

The Mount McKay and Kakabeka Ry. (electric), has ordered four Otis all steel cars from the Hart Otis Car Co., Montreal. Following are the chief dimensions:—

Length over end sills	21′ 1½″
Length inside	19′ 1″
Width inside	9′ 6″
Height inside	4′ 6″
Height top of rail to top of side	8′ 10 13-16″
Height from rail to floor	4′ 4½″

The C.P.R., between Jan. 15 and Feb. 13, ordered the following rolling stock at its Angus shops, Montreal:—35 vans, 65 box cars, 25 flat cars, six stock cars, one refrigerator car, one steel coal car, 14 first class cars, one second class car, 17 baggage cars, 29 Hart steel ballast cars, seven suburban cars, six combination first and smoking cars, and two G2 locomotives.

Replying to a question in the House of Commons, Jan. 24, the Minister of Railways stated that the special car used by E. Tiffin, a member of the Government Railways Managing Board and General Traffic Manager, had been undergoing repairs at the Silliker Car Works, Halifax, N.S. The I.C.R. shops had been overwhelmed with ordinary repairs, largely due to the fact of the accumulation of work during the transfer from the old to the new shops. This work had since been overtaken, and as the organization improved, new work would be started.

The Hart Otis Car Co., Montreal, has recently received orders for its 1910 design Hart convertible cars, as follows:—20 from O'Brien, Fowler and McDougall, National Transcontinental Ry. contractors; 15 from E. F. and G. E. Fauquier, National Transcontinental Ry. contractors; 35 from the Quebec Central Ry., and 250 from the Canadian Northern Ry. Following are the chief dimensions:—

Length over end sills	35′ 8″
Length inside as gondola	34′ 8″
Length inside as hopper	20′ 10″
Width inside	8′ 8″
Height inside	3′ 9¼″
Height from top of rail	8′ 1⅞″
Height from rail to floor	4′ 4⅛″

The G.T.R. has ordered 20 ten wheel locomotives from the Montreal Locomotive Works. Following are the chief particulars:—

Weight in working order	167,300 lbs.
Weight on drivers	126,420 lbs.
Weight on engine truck	40,880 lbs.
Wheel base, driving	14′ 0″
Wheel base, engine	24′ 4″
Wheel base, engine and tender	54′ 9″
Cylinders	19″ by 26″
Driving wheels diar.	63″
Boiler type	Extended wagon top
Boiler, diar. at first ring	60¼″
Boiler pressure	200 lbs.
Tubes, no. and diar.	263—2″
Tubes, length	13′ 6″
Brakes	Westinghouse American
Capacity, water	7,000 gals.
Capacity, coal	10 tons

The Montreal Locomotive Works has received orders for two mogul locomotives from each of the following National Transcontinental Ry. contractors: Cavicchi and Pegano, M. P. and J. T. Davis, O'Brien, Fowler and McDougall, and the Willard Kitchen Co. Following are the chief particulars:—

Weight in working order	131,000 lbs.
Weight on drivers	113,500 lbs.
Weight on engine truck	17,500 lbs.
Wheel base, driving	12′ 6″
Wheel base, engine	20′ 6½″
Wheel base, engine and tender	50′ 0″
Cylinders	19″ by 26″
Driving wheels, diar.	50″
Boiler, type	Extended wagon top
Boiler, diar. at first ring	62″
Boiler pressure	180 lbs.
Tubes, no. and diar.	240—2″
Tubes, length	10′ 5¼″
Brakes	Westinghouse American
Capacity, water	5,000 gals.
Capacity, coal	9 tons

Following are the chief particulars of the 100 logging cars which the Canadian Northern Ry. has ordered from the Russel Wheel and Foundry Co., Detroit, Mich., as mentioned in our last issue:—

Capacity	60,000 lbs.
Sills	8″ by 10″ by 24 ft.
Bunks	12″ by 12″ by 10 ft.
Sway bar between bunks	Solid, 8″ by 8″
Bunk centres	10 ft.
Material	White oak
Air brakes	Westinghouse
Bolsters and brake beams	Simplex
Couplers	Simplex
Side bearings	Susemihl
Channel spring planks	12″
Journal boxes	McCord M.I.
Wheels	M.C.B., 600 lbs., 33″ diar.
Axles	Hammered steel
Journals	4¼″ by 8″

The Temiskaming and Northern Ontario Ry. has ordered three parlor-cafe cars from the Canadian Car and Foundry Co., Montreal, of which the following are the chief particulars:—

Length over vestibule buffer plates	80′ 3¾″
Length over side sill angles	70′ 3½″
Width over side sill angles	9′ 8½″
Width over wood side sills	9′ 10⅝″
Width over all at eaves	10′ 3¼″
Width at deck opening between deck sills	5′ 6″
Height from rail to under side of side sill angle	3′ 7½″
Height from rail to top of roof boards	14′ 1½″
Height from rail to centre of coupler	2′ 11″
Distance centre to centre of trucks	51′ 10″
Truck wheel base	11′ 0″
Underframes	Steel
Trucks	All steel, 6-wheel
Steel platforms	Standard
Curtains	Pantasote
Heating system	Gold combination
Lighting	Pintsch system
Air brakes	Westinghouse L.N. 1612
Wheels	Solid steel, 36″
Journal bearings	anadian Bronze Co.
Brake shoes	Steel back

The Grand Trunk Pacific Ry. has ordered 10 ten-wheel locomotives from the Canadian Locomotive Co., Kingston, Ont., of which the following are the chief particulars:—

Weight in working order	126,420 lbs.
Weight total	167,300 lbs.
Wheel base of engine, rigid	14′ 0″
Wheel base of engine, total	24′ 4″
Wheel base engine and tender	54′ 9″
Length overall	64′ 6″
Width overall	9′ 11″
Height overall	14′ 8″
Heating surface, firebox	160 sq. ft.
Heating surface, tubes	1,917 sq. ft.
Heating surface, total	2,077 sq. ft.
Driving wheels	63″
Driving whel centres	Cast steel and cast iron
Journals	9″ by 10″
Cylinders	19″ by 26″
Boiler, type	Radial stay
Boiler, pressure	200 lbs.
No. and diar. of tubes	266—2″
Tubes, length	13′ 6″
Brakes	Westinghouse ET
Weight of tender loaded	143,300 lbs.
Capacity, water	7,000 U.S. gals.
Capacity, coal	10 tons
Truck	Four wheel arch bar frame
Truck wheels	34″
Wheels	Cast iron centres, steel tired
Journals	5½″ by 10″
Brake beams	G.T.R. standard

Following are the chief particulars of the 300 box cars, three first class cars, five second class cars and four combination passenger and baggage cars which the Canadian Northern Ry. recently ordered from the Silliker Car Co., Halifax, N.S., as mentioned in our last issue:—

BOX CARS.

Length over end sills	36′ 9¾″
Width over side sills	9′ 0¾″
Height from sill to plate	7′ 10¾″
Door opening	6′ 0″
Bolsters and brake beams	Simplex
Brake shoes	Steel back
Couplers	Janney
Springs	Montreal Steel Works
Journal bearings	Canadian Bronze Co.
Wheels, diar.	33″
Air brakes	Westinghouse
Axles	Nova Scotia Steel & Coal Co.

FIRST CLASS CARS.

Length over end sills	72′ 6″
Width over side sills	9′ 10½″
Platforms	Standard Coupler Co.
Heating	Gold
Lighting	Commercial Acetylene Co.
Air brakes	Westinghouse
Bolsters	Double wrought iron
Brake beams	Simplex
Springs	Montreal Steel Works
Oil boxes	McCord & Co.
Journal bearings	Canadian Bronze Co.
Wheels	36″, steel tired

COMBINATION CARS.

Length over end sills	70′ 0″
Width over side sills	9′ 10½″
Platforms	Standard Coupler Co.

Brake beams	Simplex
Springs	Montreal Steel Works
Oil boxes	McCord & Co.
Journal bearings	Canadian Bronze Co.
Wheels	36″, steel tired

Q. and L. St. J. Railway Receivership.

In our last issue we gave particulars of the offer made on behalf of Mackenzie, Mann & Co. to the Quebec & Lake St. John Ry. bondholders and of the rejection of the same by the bondholders. As a result of the Q. & L. St. J. Co. failing to pay the coupons for interest on the first mortgage bonds, which fell due on Jan. 1, the Railway Share Trust & Agency Co., of London, Eng., trustees for the bondholders, has appointed as Receiver and Manager A. J. Gorrie, Managing Director of the Geo. Hall Coal Co. of Canada, Montreal, and formerly General Superintendent of the Great Northern Railway of Canada, which is now part of the Canadian Northern Quebec Ry. system.

The Alberta Attorney General is reported to have announced that a test case will shortly be made on the question of prairie fires, with a view to compelling railway companies to recompense settlers who suffered from such fires last year.

ATTENTION, MASTER CAR BUILDERS!

The M. C. B. rules of interchange provide for the use of THE STEEL BACK BRAKE SHOE on your freight equipment.

The use of OUR STEEL BACK SHOE will mean a saving in brake shoe maintenance, brake heads and brake beams.

THE STEEL BACK BRAKE SHOE is an economy on all railway equipment.

LET US PROVE IT TO YOU

GENERAL SALES AGENTS

C.P.R. Betterments, Construction, Etc.

Tobique and Campbellton Ry.—We are advised that parties connected with this company have been negotiating with the C.P.R. to take up the construction of this line, but that nothing definite has been decided. The C.P.R. Tobique Valley branch terminates at Plaster Rock, and the proposed line would be an extension further into the interior, the ultimate idea being to extend it to Campbellton.

Improvements in Toronto.—Very extensive purchases of land have been made in Toronto, along King St., and down to the railway tracks, in the interests of the railways, and particularly of the C.P.R. The latest property acquired is stated to be the Lieutenant-Governor's residence on the corner of Simcoe and King Streets. The object of all these purchases is said to be to enable the company to transfer its freight sheds and yards from south of the tracks to the north, in view of the construction of the viaduct along the water front. It is stated that the company has secured nearly all the property extending from King St. to Front Street, and between Simcoe St. and Spadina Ave. (or Brock St.). To secure some of the lands not at present acquired expropriation proceedings will be necessary.

Western Lines Construction.—W. Whyte, Second Vice President, spent the early portion of Feb. in Montreal, during which time he was in conference with the President, and as a result it was decided to build about 500 miles of additional railway lines in the Prairie Provinces and British Columbia, in addition to second track work, which will be referred to separately below. Following are the lines decided on:—

The line from Lauder, Man., which is built to Tillston, on the Manitoba-Saskatchewan boundary, will be extended 24 miles into Saskatchewan.

Regina southerly to Griffin, Sask., a station midway between Stoughton and Weyburn, about 79 miles.

Regina to Bulyea, Sask., a station on the Pheasant Hills branch, about 50 miles. This line is already built for about 10, so the new construction will be about 38 miles. This line will afford a short cut off from the district north, east and west of the Qu'Appelle valley to Regina, and will be a most important line to that city.

Regina to Colonsay, Sask., a station between Lanigan and Saskatoon, about 110 miles.

From Weyburn, Sask., a line has been built about 26 miles to Forward. This will be extended for about 25 miles, to a point about 51 miles westerly from Weyburn.

From Outlook, Sask., on the branch from Moose Jaw, an extension of 93 miles will be built in the direction of Caster, the present terminus of the Calgary and Edmonton Ry. Lacombe branch. It is not intended to build east from Caster.

An extension westerly from the 93 miles from Outlook to Macklin, a station on the Saskatoon-Wetaskiwin line, 54 miles.

An extension of 20 miles from Irricana, on the Red Deer branch, easterly into the irrigation lands of the branch under construction from Langdon, Alta., to Red Deer. The Langdon-Red Deer line is already built for about 25 miles.

An extension of 30 miles from Carmangay of the present line of 28 miles from Kipp northerly to Carmangay.

From or near Elko, on the Crow's Nest Pass line, to Fort Steele, about 25 miles. This will be the first section of the Kootenay Central Ry.

Tenders for these various lines will be invited in the near future.

West of Brandon a large number of long sidings will be put in at various points to provide additional passing tracks and avoid delays in traffic.

Winnipeg to Brandon.—It has been decided to build a double track from Winnipeg to Portage la Prairie, 55.6 miles, this year, and contracts will be awarded at an early date. It is the present intention to extend the second track next year from Portage la Prairie to Brandon, 131.1 miles.

Branch Lines Authorized.—The House of Commons has passed a bill authorizing the company to construct a line from tp. 22, range 2, northerly or northwesterly to tp. 34, ranges 5, 6 or 7, west of 1st meridian; and from near Asquith to tp. 38 or 39, ranges 10, 11 or 12; and granting an extension of time for the construction of a number of previously authorized branch lines.

Manitoba and North-Western Ry.—A bill has been passed by the Senate and is now before the House of Commons granting the company an extension of time for the construction of the branch line authorized to be constructed by sec. 1, chap. 126 of the statutes of 1908, and authorizing the construction of a branch from Birtle to Hamiota, Man., and another from near Russell to Lake Winnipegosis, at the mouth of Shoal River.

Souris, Man., Shops.—We are advised that the press report as to the purchase of 400 acres of land at Souris, Man., for shops and sidings is without foundation. The company's traffic at Souris is growing and will doubtless require additional facilities before long.

Station at Regina, Sask.—Plans are reported to have been filed for the construction of a union station at Regina, Sask., the estimated cost of which is about $600,000. The new building will it is said, be 480 ft. long, and a portion of it will be four stories high, affording accommodation for offices of the C.P.R., the Canadian Northern Ry. and the G.T. Pacific Ry. The general waiting room will be 100 ft. square, and on the main floor of the building there will also be provided accommodation for ticket offices, waiting rooms, baggage rooms, express rooms, etc. We are advised that nothing has yet been settled as to the erection of a union station.

Calgary and Edmonton Ry.—The House of Commons has before it a bill passed by the Senate granting an extension of time for the construction of the branch line authorized by sec. 6, chap. 89 of the statutes of 1903, and authorizing the construction of an extension of the Lacombe branch from its present terminus at Stetler to Outlook, Alta., where a junction will be effected with the branch from Moose Jaw.

Steel Viaduct at Outlook.—The company has under consideration tenders for the construction of a steel viaduct over the South Saskatchewan River, at Outlook, Alta., which will form the connection between the Moose Jaw-Outlook branch of the C.P.R., and the extension of the Lacombe branch of the Calgary and Edmonton Ry., for the construction of which the Dominion Parliament has just given the necessary authority. The viaduct will be 3,000 ft. 6 in. long from face to face of ballast wall, and will be entirely of steel, resting on concrete and piers and pedestals. There will be 18 sets of four piers each to support the towers, with 20 sets of two pedestals each to carry the intervening uprights. These are to be of concrete, and are to be carried down to solid ground, piles to be used if necessary. The bridge will have a gradient of 0.4% from each end to the centre, the rail level at this point being 123.3 in. above high water mark. Provision is made for the use of the bridge for general traffic by the including of a floor for a highway having a clear width of 20 ft. This highway will start from pier three, and will run off at pier 45. The J. D. McArthur Co., Winnipeg, has the contract for the piers and abutments. The superstructure contract has not been let. It is expected the erection of the bridge will take about a year.

CANADIAN PACIFIC RAILWAY BRIDGE OVER THE OLD MAN RIVER, ALBERTA.

Old Man River Bridge.—The bridge on the Lethbridge-Macleod cut-off, across the Old Man River, an illustration of which is given on this page, although not so long nor so high as that over the Belly River, is one of considerable magnitude. It is 1904 ft. long, and at its highest point is 146 ft. above high water level. The structure is entirely of steel.

Columbia and Western Ry.—A bill has been passed by the Senate and is now before the House of Commons granting an extension of time for the completion of this railway in British Columbia.

Lytton to Hope, B.C., Realignment.—We are advised that the question of the improvement of the alignment and the

reduction of the gradient on the main line, between Lytton and Hope, B.C., is under the consideration of the company's engineers, but that all the data necessary for a decision have not yet been worked out.

Vancouver Hotel.—An additional wing is to be built to the company's hotel at Vancouver, B.C., which will provide 70 more rooms. The cost of the addition is estimated at $150,000.

Esquimalt and Nanaimo Ry.—A bill has been passed by the Senate and is now before the House of Commons granting an extension of time for the construction of the extension of the main line to Comox and branches, and providing that the company shall not construct any portion of the branch lines to settlements on the east coast of Vancouver Island unless first authorized to do so by the Governor in council.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—The question of the further extension of the company's line from Thief River Falls to Duluth, Minn., is under discussion. The construction of this extension would enable the operation of C.P.R. trains between Montreal and Winnipeg, via Duluth. (Feb.,

A press report states that the company is preparing to let contracts for the construction of the following lines:—Cut-off from New Richmond, Wis., to Withrow, Minn., 17 miles, the maximum gradient to be 0.5% with light curvature; cut-off from Spencer, Wis., westerly to Owen, 19 miles, the maximum gradient to be 0.3%, with light curvature.

Atlantic, Quebec & Western Railway.

This company issued from its London, Eng., office recently a prospectus of 1750 five per cent, 1st mortgage debenture bonds of £100 each at £98 a bond, being balance of an issue restricted to £525,700. The bonds are repayable after July 1, 1935, but can be redeemed by the company at six months' notice on Jan. 1, 1915, or on any subsequent July 1 or Jan. 1 at £110.

Under agreements with the Dominion Government, the company is entitled to the following subsidies in respect of its Gaspe or coast section (102 miles), which is expected to be opened for traffic in 1910, viz.:—

$6,400 per mile on 102 miles	$652,800
For bridges	250,000
Total subsidies	$902,800
Deduct amount already received	156,672
Balance	$746,128

The bondholders have in the first place a first charge on the net receipts; in addition, the balance above mentioned, as received from the Government, will be paid over to the trustees for the bondholders, and be applicable towards payment of interest on the bonds to Dec. 31, 1915.

Under the company's act of 1903 the company was authorized to construct two railways, viz., a line through the interior from Gaspe to Edmunston, and the Gaspe section shortly approaching completion, and the act empowered the issue of first mortgage debenture bonds to be secured by mortgage of these railways to an aggregate amount of £1,866,000. Accordingly these railways with their appurtenances have been mortgaged by trust deeds to secure an aggregate issue of such bonds to the authorized amount, and under the same deeds all rolling stock and plant purchased in respect of these railways is to be included in the security. But first mortgage debenture bonds to the amount of £350,700 only have been issued, and the company has recently precluded itself from issuing more than the £175,000 now offered by entering into an agreement with the contractors for the railways to restrict the total issue of first mortgage debenture bonds to £525,000, and to provide for future payments in excess of that amount under the contract by an issue of consolidated bonds instead of by the remaining authorized issue of first mortgage debenture bonds. The consolidated bonds are postponed to the first mortgage debenture bonds, and when issued instead of first mortgage debenture bonds they reduce the number of first mortgage debenture bonds which can be issued. By agreements with the Quebec Government the company is entitled to a subsidy of 400,000 acres of land in respect of its Gaspe or coast section, of which the company is entitled to an immediate grant of 80,000 acres. The right to all land subsidies to which the company is so entitled has been conveyed to the trustees for the bondholders. The proceeds of the sale of the bonds offered will be paid out from time to time on certificates of the company's Engineers-in-Chief, Sir Douglas Fox & Partners, for work to be done towards the completion of the Gaspe section. Every effort is being made to complete this section as rapidly as possible. When finished it will provide the long-desired railway communication between Gaspe and the rest of Canada, serve the considerable population already settled along the route followed by the line, and open up Gaspe Harbor.

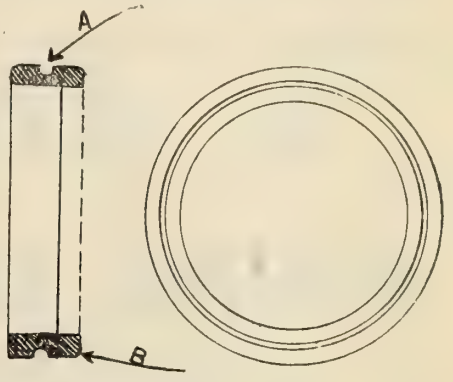
The Engineers in Chief, Sir Douglas Fox & Partners, report as follows:—"The length of the Gaspe or coast section is 102½ miles, and is divided into 10 sub-sections, commencing near New Carlisle; the first nine are each 10 miles long, and the last 12½ miles. The number of stations at present proposed is 16. The whole of the land has been acquired and cleared, and a large proportion of the fencing has been erected. Sub-sections 1 and 2 (ending at Port Daniel) are complete and open for public traffic. Sub-sections 3 and 4 (mileage 20 to 40) are sufficiently complete to carry construction traffic and should be open for public traffic in Dec., 1909. Work is rapidly proceeding on sub-sections 5 to 10 and excellent progress has been made in all departments. The rock excavations and about 75% of the earthworks have been executed. The sub-structures of the bridges are being built, and the steel work for superstructures is in course of manufacture. The permanent way has been laid over 75% of sub-section 10. The permanent works on the railway are of a substantial character and will compare favorably with similar works on the best Canadian railways. Special attention has been given to the designs of the steel superstructures of the bridges, and they may be regarded as a combination of the best English and American practice. All bridge designs are approved by the Railway Commissioners. The railway and bridges are designed to carry loads equal to the loads provided for on many main lines in this country, and may be relied upon to carry with safety fast passenger and heavy goods trains without incurring more than the usual expenses of maintenance. Under normally favorable working conditions, the whole of the coast section of the railway should be finished by next autumn."

During Dec., 14 employes were killed and 29 injured in the course of their work on Canadian railways. Of the fatalities, eight were due to being run over, three to being caught between cars, and one each to machinery, to a fall and to falling material, while of the other accidents, 11 were due to falls, six to being caught between cars, three to being run over, two each to tools and to being struck by a locomotive, and one each to a collision, to falling material, to machinery, to flying material and to being struck by an object in passing.

Hints on Piston Valves

By H. J. Varlow, General Shop Foreman C.P.R., Fort William.

It is practically understood that friction is the resistance which two contracting surfaces have when one is moving over the other. There is an enormous strain on the valve motion or gear and one which causes it to wear rapidly. The piston valve has many good qualities. It permits much greater port area, and takes less space than the slide valve. It is supposed to be a perfect balance valve. I am not sure that this is correct. Its perfection depends to a great extent upon the width of the rings. As long as the steam exerts a pressure under the rings, holding them to the walls, they create an unbalanced friction equal to their area. It would be impossible to fit the rings steam tight in the grooves, without sticking, but the better they are fitted the less friction there will be. The more the sides of the rings are worn the greater will be the pressure under the ring to force against the walls. I do not think the principle of reducing clearance is so great as claimed, although the valve ports are near the ends of the cylinder, which is less than with the slide valve. It must not be lost sight of that



the clearance space that extends clear round the valve must be filled with steam, which reduces the expansive force and increases the exhaust. I have noticed piston valve rings, when removed for examination, to have sharp cutting edges through wear. These rings have a tendency to cut the walls of the valve bush and keep the wall from the necessary lubrication. I am satisfied a good lubrication is of the uttermost importance, especially with superheated steam. When the valve becomes dry the friction is greatly increased and requires more power to move. The acompanying sketch shows a style of valve ring which will give good results and reduce friction to some extent, and is much more durable than the flat, square edge ring. The centre of this ring will be noticed to have an oil groove ⅛ in. deep, as marked at A. The edges of the ring have a radius of ⅛ in., as marked at B. By this style of ring the oil groove in the centre provides for lubrication; the width of bearing surface on walls is reduced, which reduces friction; the outer edges having a radius prevents the valve from cutting the bushes; the wear on the valve motion is greatly reduced, and the engineer is able to reverse the engine much more easily.

A club, on very similar lines to the Engineers' Club of Montreal, is being promoted in Toronto. Nearly 350 members have been secured at an entrance fee of $25 and an annual subscription of $25. At a preliminary meeting Feb. 11, presided over by A. W. Campbell, Deputy Minister of Railway and Canals, a committee was appointed to prepare a constitution and by-laws and to secure a charter and quarters.

SCULLY STEEL & IRON CO. DEPT. 22 CHICAGO, ILL.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Anglo-Newfoundland Development Co.—The railway lines of this company in Newfoundland are under the charge of the following officers:—General Superintendent, W. Scott; Mechanical Superintendent, P. D. Park; Roadmaster, D. Steel.

Canadian Northern Quebec Ry., Quebec and Lake St. John Ry., Halifax and South Western Ry.—M. M. Beekman has been appointed South Eastern Passenger Agent. Office, 1416 New York Ave., Washington, D.C.

H. R. Stevens has been appointed Travelling Passenger Agent. Office, 1,416 New York Ave., Washington, D.C.

Canadian Northern Ry.—J. E. Nelson, heretofore Trainmaster at North Battleford, Sask., has been appointed Trainmaster at Rainy River, Ont., vice B. T. Chappell, transferred.

S. J. Hungerford, heretofore Superintendent Winnipeg shops, C.P.R., has been appointed Superintendent of Rolling Stock, C.N.R. Office, Winnipeg.

M. Helston has been appointed Chief Dispatcher at Port Arthur, Ont., vice W. I. Munroe, whose appointment as Chief Dispatcher at Dauphin, Man., was announced in our Feb. issue.

E. H. Williams, heretofore Locomotive Foreman at Kipling, Sask., has been appointed general foreman at Brandon, Man.

B. T. Chappell, heretofore Trainmaster at Rainy River, Ont., has been appointed Trainmaster District 4, North Battleford, Sask., vice J. E. Nelson, transferred.

Canadian Pacific Ry.—We are advised, unofficially, but on excellent authority, that J. W. Leonard, General Manager Eastern Lines, has resigned on account of ill health, and that he and Mrs. Leonard, who is also not in good health, will go away for a change in the near future. The daily press has printed a lot of rumors lately, one being to the effect that in future there would be three general managers, instead of two, for Eastern and Western Lines, as at present. We do not think there is any foundation for this report. The great growth of the territory embraced in the Western Lines will, however, probably necessitate an increase of staff there, and it would not surprise us to see the present three grand divisions, Central, Western and Pacific, increased to four, which would necessitate the appointment of another general superintendent.

F. B. Haney, who has been connected with the Legal Department, is reported to have been appointed Assistant Tax and Insurance Commissioner and Claims Adjuster, Eastern Lines, at Montreal.

C. E. Benjamin, heretofore General Agent Passenger Department Atlantic Steamship Service, Chicago, Ill., has been appointed General Tourist Agent. Office, Montreal.

W. Webber, heretofore purser on the s.s. Empress of Britain, has been appointed General Agent Passenger Department Atlantic Steamship Service, Montreal, vice I. E. Suckling, transferred to Toronto.

F. L. Hay, hertofore Superintendent Sleeping, Dining and Parlor Cars and News Service, Vancouver, B.C., has been appointed Assistant General Superintendent same service, Eastern Lines. Office, Montreal.

W. H. Pearson, hertofore general car foreman, Farnham shops, has been appointed General Car Inspector Eastern Lines, Montreal.

R. A. McAdam, heretofore Air Brake Instructor, has been appointed Air Brake Inspector, vice C. W. Carey, deceased. Office, Montreal.

G. A. G. Bartlett, heretofore Assistant Air Brake Instructor, has been appointed Air Brake Instructor, vice R. A. McAdam, promoted. Headquarters, Montreal.

H. C. Harragin has been appointed Assistant Air Brake Instructor, vice G. A. G. Bartlett, promoted. Headquarters, Montreal.

R. H. Marengo, heretofore foreman painter, Farnham shops, Que., has been transferred to Angus shops, Montreal, as assistant foreman painter.

I. E. Suckling, heretofore General Agent Passenger Department Atlantic Steamship Service, Montreal, has been appointed General Agent Passenger Department Atlantic Steamship Service, Toronto, vice S. J. Sharp, transferred to Winnipeg.

C. Mead, heretofore Inspector Sleeping, Dining and Parlor Cars and News Service, has been appointed Sleeping and Dining Car Agent at Fort William, Ont., vice J. S. Youngson, who has been appointed a dining car conductor.

S. J. Sharp, heretofore General Agent Passenger Department Atlantic Steamship Lines, Toronto, has been appointed General Agent Passenger Department Atlantic Steamship Lines, Winnipeg, vice H. M. MacCallum, transferred to Chicago, Ill.

H. M. MacCallum, heretofore General Agent Passenger Department Atlantic Steamship Lines, Wininpeg, has been appointed General Agent Passenger Department Atlantic Steamship Lines, Chicago, Ill., vice C. E. Benjamin, transferred to Montreal.

G. Moth, heretofore Road Foreman of Locomotives, District 4, Pacific Division, Cranbrook, B.C., has been appointed Trainmaster, District 1, Western Division, Moose Jaw, Sask., vice W. H. McConnell, transferred.

L. E. W. Bailey, heretofore District Master Mechanic at Moose Jaw, Sask., has been appointed Road Foreman of Locomotives, District 4, Western Division, Cranbrook, B.C., vice G. Moth, transferred.

A. C. Harshaw, heretofore Trainmaster District 4, Western Division, Macleod, Alta., has been appointed acting Superintendent, District 4, at Cranbrook, B.C., during the absence of J. Brownlee on leave.

A. N. McIntyre, heretofore Yardmaster at Revelstoke, B.C., has been appointed acting Trainmaster at Field, B.C., vice L. A. Warner, assigned to other duties.

W. M. Ansley, heretofore Trainmaster, has been appointed acting Superintendent District 1, Pacific Division, Revelstoke, B.C., vice T. Kilpatrick, appointed acting General Superintendent at Vancouver, B.C.

C. A. Cotterell, heretofore Chief Train Dispatcher, has been appointed acting Trainmaster, District 1, Pacific Division, Revelstoke, B.C., vice W.M. Ansley, appointed acting Superintendent there.

J. H. Armstrong, heretofore Train Dispatcher, has been appointed acting Chief Train Dispatcher, District 1, Pacific Division, Revelstoke, B.C., vice C. A. Cotterell, appointed acting Trainmaster.

J. Beck, heretofore conductor, has been appointed acting yardmaster at Revelstoke, B.C., vice A. N. McIntyre, promoted.

T. Kilpatrick, Superintendent District 1, Pacific Division, Revelstoke, B.C., has been appointed acting General Superintendent Pacific Division, Vancouver, B.C., during the absence of F. F. Busteed on leave.

E. W. Bateman has been appointed Local Right of Way and Lease Agent, Pacific Division, Vancouver, B.C., vice W. F. Brougham, resigned.

A. W. Porter has been appointed Superintendent Sleeping, Dining and Parlor Cars and News Service, District 5, Vancouver, B.C., vice F. L. Hay, promoted to Montreal.

Government Railways Managing Board.—D. Pottinger, a member of the Board, has been appointed Deputy Chairman, by order in council.

Grand Trunk Pacific Ry.—P. H. McFadden, heretofore General Roadmaster, has been appointed Superintendent Prairie Division, vice W. C. C. Mehan, promoted. Office, Melville, Sask. The position of General Roadmaster has been abolished.

W. C. C. Mehan, heretofore Superintendent Prairie Division, has been appointed General Superintendent Mountain Division. Office, Prince Rupert, B.C.

Grand Trunk Ry.—J. D. Scott, heretofore Locomotive Foreman at Brockville, Ont., has been appointed Locomotive Foreman at Turcot, Que., vice R. Ivers, resigned.

G. Woodsum has been appointed acting Locomotive Foreman at Island Pond, Vt., vice M. B. Dube resigned.

F. W. Warren has been appointed Locomotive Foreman at Brockville, Ont., vice J. D. Scott transferred.

W. Hamilton, heretofore Locomotive Foreman at Stratford, Ont., has been appointed Master Mechanic (Road) Western Division, vice E. D. Jameson, assigned to other duties. Office, Battle Creek, Mich.

A. J. Roberts, heretofore chargeman T. & N.O.R. shops, North Bay, Ont., has been appointed Locomotive Foreman at Stratford, Ont., vice W. Hamilton, promoted.

Intercolonial Ry.—John Campbell having retired from the service, the office of Car Accountant has been abolished, and reports heretofore sent to the Car Accountant will in future be addressed to the Superintendent of Car Service.

Rutland Rd.—R. A. White has been appointed General Auditor. Office, New York.

Rutland Transit Co.—R. A. White has been appointed General Auditor. Office, New York.

New York Central and Hudson River Rd.—The organization of the Accounting Department has been changed, as follows:—General Auditor, R. A. White; Auditor, C. H. Chambers; Assistant Auditor and Auditor of Subsidiary Lines, A. L. Linn, Jr.; Auditor of Disbursements, J. H. Foulds, Jr.; Assistant Auditor of Disbursements, M. R. Connell; Freight Claim Agent, R. L. Calkins; Assistant Freight Claim Agent, J. K. Lovell; Auditor of Revenue, W. T. McCulloch; Auditor of Freight Accounts, F. E. Briggs; Auditor of Passenger Accounts, J. L. Snow; Auditor of Miscellaneous Accounts, J. F. Fairlamb; Assistant Auditor of Miscellaneous Accounts, W. A. Cormier; Chief Travelling Auditor, C. L. Cormier.

E. F. Haubold has been appointed Assistant Auditor of Freight Accounts, New York.

W. J. Fripp has been appointed General Superintendent Eastern District, with which has been incorporated the Mohawk division, transferred from the Western District, vice C. F. Smith. Office, Albany, N.Y.

New York Central & Hudson River Rd. and Boston & Albany Rd.—C. F. Smith, heretofore General Superintendent Eastern Division, Albany, N.Y., has been appointed General Superintendent of Passenger Transportation, in charge of all matters pertaining to passenger traffic, reporting to the Assistant General Managers of Transportation. Office, New York.

New York Central and Hudson River Rd., West Shore Rd., and Boston and Albany Rd.—Gerrit Fort, heretofore Assistant to the Vice President in charge of traffic, N.Y.C. & H.R.R., B. & A. Rd., and West Shore Rd., has been appointed

MAINLY ABOUT PEOPLE.

Mrs. Shanly, wife of the late Frank Shanly, C.E., died in Toronto, Feb. 20, aged 76.

The late Archer Baker's estate is reported to have been valued for probate, at £12,352.

C. Cockshutt, director Niagara Navigation Co., died at Toronto, Jan. 9, aged 55, of pernicious anæmia.

D'Arcy Tate, G.T.P.R. Solicitor, Winnipeg, has been appointed a Commissioner for the taking of affidavits in Manitoba.

Sir Thos. G. Shaughnessy, President C.P.R., returned to Montreal, Feb. 2, from Europe, where he spent a short holiday.

D. B. Hanna, Third Vice President Canadian Northern Ry., is expected to return to Toronto from England towards the end of March.

F. C. Salter, European Traffic Manager G.T.R., has returned to England after having gone over the G.T.R. and G.T.P.R. systems.

Miss M. E. Brent, third daughter of J. Brent, G.T.R. agent, Malton, Ont., was married at Weston, Ont., Feb. 2, to H. A. C. Carr of Malton.

A. W. Campbell, Deputy Minister of Railways and Canals, addressed the University of Toronto Engineering Alumni Association, Feb. 10.

A. W. Smithers, Chairman of the Board, G.T.R., was the chief speaker at the Canada Club dinner in London, Eng., in the early part of Feb.

J. W. N. Johnstone, General Passenger Agent Reid Newfoundland Co., St. John's, Nfld., was married there recently to Miss Beatrice Gordon.

The engagement is announced of Miss Aileen Sinclair, daughter of Angus Sinclair, railway contractor, Toronto, to Kenneth MacKenzie, barrister, Toronto.

D. McDonald, Manager Montreal St. Ry., is one of the promoters of a company which has been organized to operate taxi-cabs in Montreal.

H. G. Reid, Vice President Reid Newfoundland Co., returned to Canada from Great Britain, Feb. 3, and left for Newfoundland, Feb. 5.

G. Fauquier, one of the National Transcontinental Ry. contractors, and Mrs. Fauquier are spending the winter at Fauquier, north of Lake Nipigon, Ont.

The C.P.R. directors at their meeting, Feb. 14, passed a resolution expressing their regret at the death of Sir Geo. A. Drummond and sympathy with the members of the family.

F. F. Busteed, General Superintendent C.P.R. Pacific Division, Vancouver, B.C., was recently granted leave of absence for six weeks, on account of Mrs. Busteed's ill health.

Miss M. C. Bassett, daughter of Captain W. J. Bassett, of the Western Steamship Co., Collingwood, Ont., was married there recently to M. Lemon, of Owen Sound.

F. W. Morse, formerly Vice President and General Manager G.T.P.R., is being mentioned in the press as likely to be appointed President of the Buffalo and Susquehanna Rd.

Mrs. J. P. Mabee, wife of the Chief Railway Commissioner, died at their home in Toronto, Feb. 25, aged 50, after a long illness. She was buried at Port Rowan, Ont.

D. B. Hanna, Third Vice President Canadian Northern Ry., sailed from New York on the s.s. Mauretania, Feb. 9 for England, on C.N.R. business. He will probably return to Toronto in March.

Thos. Reynolds, the C.P.R. conductor, who displayed great bravery in connection with the accident at Spanish River, Ont., Jan. 21, has been awarded the Albert medal of the first class by the King.

Lord Strathcona has subscribed $5,000 to the Mansion House Fund, being raised by the Lord Mayor of London, Eng., for the benefit of the sufferers by the recent floods in Paris, France.

E. D. Jameson, Road Master Mechanic G.T.R., Battle Creek, Mich., has been granted leave of absence on account of ill health. What position he will occupy on his return, has not been decided on.

The estate of the late Jno. Proctor, of Hamilton, Ont., who was at one time in the G.T.R. service, has paid $4,868 as succession duties to the Ontario Government. The estate is valued at $168,000.

W. A. Dube, District Superintendent Intercolonial Ry., Levis, Que., has been named as a likely appointment as a member of the Government Railways Managing Board, should it be decided to increase the number.

J. C. Schreiber, of the Egyptian State Railways, who died at Cairo, Egypt, Feb. 7, was a brother of O. P. Schreiber, of the National Transcontinental Ry. engineering staff, and a cousin of Collingwood Schreiber, C.M.G.

Arthur Hawkes, Superintendent of Publicity, Canadian Northern Ry., lectured at Chicago University, Feb. 8, on the gain in international goodwill from the multiplying of communications between Canada and the United States.

D. J. Rochon, C.P.R. City Ticket Agent, Winnipeg, who was appointed to that position in Dec., on the resignation of A. C. Smith to enter private business, died there Feb. 19, of pneumonia, after a very short illness.

A. W. Campbell, whose portrait appears on the first page of this issue, was recently appointed Deputy Minister of Railways and Canals. Biographical information respecting him was published in our Feb. number.

Hugh A. Allan, who is at present in England in connection with the reorganization of the Allan Line, purposes remaining there some time, probably until all arrangements have been completed for the transfer of the head office to Montreal.

C. M. Hays, President G.T.R. and G.T.P.R., left Montreal, Feb. 25, for England, with his wife and daughters. Miss Louise Hays will christen the s.s. Prince George, the second vessel for the G.T.P.R. service, which will be launched at Wallsend-on-Tyne about the middle of March.

J. Markey, Master Mechanic G.T.R., Toronto, was fined $20 and costs, with the option of 30 days imprisonment, at Toronto, Feb. 4, for permitting dense smoke to be emitted from the G.T.R. roundhouse chimney, in excess of the time allowed by the law.

Winnipeg press reports state that M. H. McLeod, General Manager Canadian Northern Ry., Winnipeg, will shortly be transferred to British Columbia to take charge of the railway construction in that province. Nothing is known at the head office of the company regarding this.

E. B. Osler, M.P., director C.P.R., who has contributed $25,000 to the Toronto Playgrounds Association, has been elected Honorary President, and has, also, with W. Mackenzie, President Canadian Northern Ry.; Hon. G. A. Cox, director G.T.P.R., and M. J. Haney, become a life member.

The Misses Mackenzie, daughters of Wm. Mackenzie, President Canadian Northern Ry. and Mrs. Hugh Sutherland, wife of the Executive Agent C.N.R., sailed from New York, Feb. 3, on the s.s. Celtic for the Mediterranean. Mr. Sutherland will probably go to Europe in March, returning to Winnipeg with Mrs. Sutherland in the spring.

Sir Geo. A. Drummond, director C.P.R., and President Bank of Montreal, died at Montreal, Feb. 2, aged 81. Among other offices he held at various times, were those of First Vice President, and from 1886 to 1888, President Montreal Board of Trade, during which latter period he did good work in the interests of the harbor and the St. Lawrence River navigation generally.

With reference to the recent report that F. P. Brady, member of the Government Railways Managing Board and General Superintendent Government Railways, was about to enter the Dominion Iron and Steel Co.'s service, J. H. Plummer, President, has stated that there is nothing whatever in it, nor could he understand how such a report could have started.

M. Helston, who has been appointed Chief Dispatcher Canadian Northern Ry., at Port Arthur, Ont., was, from 1890 to 1898, train dispatcher M.C. Rd., at Michigan, Ind.; 1898 to 1909, Night Chief and Chief Dispatcher Northern Pacific Ry., at Staples, Minn.; and from May to Oct., 1909, train dispatcher, Minneapolis, St. Paul and Sault Ste. Marie Ry., at Minneapolis and Enderlin, since when he has been train dispatcher on the Canadian Northern Ry.

Among the Express Companies.

J. E. Maley pleaded guilty at Strassburg, Sask., recently, to the theft of a money package from the Dominion Ex. Co.'s office there. He had been engaged as a telegraph operator at Strassburg, and was arrested at Tuffner Lake, N.Y.

W. Dobson, an employe of the Canadian Ex. Co., and P. Whistler, were recently sentenced to four and three years, respectively, in the peitentiary, for conspiracy and stealing $14,169 from the Canadian Ex. Co., at Niagara Falls, Ont., by means of a bogus hold-up on Nov. 4, 1909.

The Canadian Northern Ex. Co. has opened offices at Howell, Sask., and Kittscoy, Alta.

F. G. McKay, agent Dominion Ex. Co., at London, Ont., died there Jan. 29, aged 47. He had been in London for about 15 years, having previously been route agent between Toronto and Detroit.

At the recent half-yearly meeting of the Dominion Ex. Co., held at Montreal, the report showed that the company had enjoyed a fairly prosperous year. The usual dividend of 8% for the year was declared. With regard to the proposed new building in Montreal, on the site of the St. Lawrence Hall, it was stated that the present building would be pulled down, and a 10-story structure erected in the spring, but as the plans were still in the hands of the architects it could not yet be said whether an hotel would be included in the building or not.

Temiskaming and Northern Ontario Ry.—Traffic earnings for Nov., $157,-227.78; operating expenses, $114,660.22; net earnings, $42,567.56; ore royalties, $4,784.48; total income, $47,352.04; less hire of equipment, $6,804.51; net result, $40,547.53; percentage of expenses to earnings, 72.08. Traffic earnings for Dec., $168,303.28; operating expenses, $120,012.52; net earnings, $48,290.76; less hire of equipment, $5,258.28; net result, $43,032.48.

Telegraph and Cable Matters.

The C.P.R. telegraph system consists of 11,500 miles of poles and cables and 65,000 miles of wire.

The M.C.R. telegraph operators on the Canadian division, have been granted an increase in wages, to date from Dec. 1, 1909.

The Dominion Government telegraph system comprises 973.75 miles of land lines, 259 miles of cable and 401 offices.

The C.P.R. telegraph department has completed its through wire between Winnipeg and Edmonton, through Saskatoon and Wetaskiwin.

H. McDougall, who died recently at Toronto, aged 63, was formerly local manager G.N.W. Telegraph Co. at Winnipeg.

The Dominion Public Works Department received tenders Feb. 15, for the freighting of supplies for the Yukon telegraph line for 1910, 1911 and 1912.

F. H. Knight has been appointed agent Canadian Northern Telegraphs at Fort William, Ont., vice H. E. Fraser, who has been transferred to Saskatoon, Sask.

The telegraph line along the National Trancontinental Ry., between St. Boniface and Superior Jct., 249½ miles, has been completed and put into operation.

H. E. Fraser, heretofore agent Canadian Northern Telegraphs, Fort William, has been appointed agent at Saskatoon, Sask., vice E. S. VanAlstyne, who has left the service.

The Premier stated, in the House of Commons, Feb. 7, that the Government proposes to protect all trade routes by the erection of wireless telegraph stations at suitable points.

H. A. Shambrock, heretofore chief delivery clerk C.P.R. Telegraphs, Toronto, has been appointed Local Manager at Toronto, vice D. G. Sturrock, who has resigned on account of ill health.

The bill for the compulsory equipment of all vessels on the Canadian register of 1,200 tons and over, with a wireless telegraph system, which was introduced in the House of Commons, has been reported against in committee.

F. C. Robertson, heretofore Chief Operator C.P.R. Telegraphs, Toronto, has been appointed Inspector of the Ontario Division, with office at Toronto, and is succeeded by H. J. Lillie, hertofore wire chief.

An Ottawa press dispatch states that the Marconi Wireless Telegraph Co. is planning to erect a number of wireless telegraph stations at various points throughout Canada, and that such a system will be in operation in the spring.

The dispute between the Grain Exchange at Winnipeg and the telegraph companies operating on the floor, has terminated by the companies refusing to pay rent for the space occupied and removing their instruments from the building.

The Marconi Wireless Telegraph Co., of Canada, has a scheme on hand for the widening of its scope in Canada, and, it is stated that J. N. Greenshields, K.C., is visiting England for the purpose of discussing the matter with the directors of the English company.

The Great North Western Telegraph Co. operates over 13,410 miles of poles, 49,686 miles of wire, and 406 miles of cable. It has 1,360 offices, 1,183 of which are in Canada, and of the total number, 894 are engaged exclusively in the company's business.

The Governor of Newfoundland, in his speech at the opening of the Legislative Assembly, intimated that the wireless telegraph system on the Labrador and northeast coasts would be extended during the year, and also the telegraph system in the St. Barbe district.

W. C. Furness, local manager G.N.W. Telegraph Co., London, Ont., died there Feb. 13, aged 70. He was manager of the London office for 40 years under the Montreal Telegraph Co., and the G.N.W. Telegraph Co., and prior to going to London was stationed at Hamilton, Ont.

The Anglo-American Telegraph Co., since 1904 has received a subsidy of $5,000 a year from the Dominion Government, and $1,800 a year from the P.E.I. Government and exclusive rights for a telegraph service in Prince Edward Island. The agreement, which was for five years, expired at the end of 1909.

It is reported that a contract has been placed for the erection of 1,000 miles of telegraph line by the Northern Commercial Telegraph Co., Ltd., a company which was incorporated about six years ago, with a capital of £750,000, to construct telegraph and telephone lines throughout Canada. Similar reports have been current frequently, but little or nothing has been done.

W. Marconi has arrived in Nova Scotia to superintend the installation of the apparatus at the new Glace Bay station of the Marconi Wireless Telegraph Co., in place of the one destroyed by fire a few months ago. The station at Clifden, Ireland, has been re-equipped, and it is anticipated that communication will be again established across the Atlantic in March.

Press reports state that at a recent conference on the subject of establishing a wireless telegraph system on the Pacific, it was recommended that high power stations be erected at Sydney, Australia; Doubtless Bay, New Zealand; Suva, Fiji Island and Ocean Island, and medium power stations in the New Hebrides and Solomon Islands. All the stations to be controlled by the British Government.

The Montreal Telegraph Co.'s balance sheet for 1909, shows assets of $2,292,-851.97, of which $1,625,890 represents telegraph lines in Canada and the U.S., and $33,487.39 telegraph cables. The usual dividend of 8% for the past year has been paid quarterly as was customary. The officers and directors were re-elected for the current year, as follows: President, H. A. Allan; Vice President, W. McMaster; other directors, W. R. Miller and W. Wainwright.

A bill has been introduced into the House of Commons by the Postmaster General, to control the rates and facilities of ocean cable companies, and to amend the Railway Act with respect to telegraphs and telephones and the jurisdiction of the Board of Railway Commissioners. The bill provides for placing under the jurisdiction of the Board all matters pertaining to cable traffic with Canada, which shall include messages transmitted from Canada to any other country, or to Canada from any other country, or through, or into, or from any part of Canada, acting in conjunction with land lines, or by land lines acting in conjunction with cables, by means of a through route or otherwise.

The Board of Railway Commissioners has passed the following order:—9164. Dec. 22.—The complaint of the Canadian Manufacturers' Association Transportation Department against the G.N.W., C.P.R., and Western Union Telegraph Companies in connection with the transmission of code messages between points in Canada. It is ordered that the amendments to rule 4, in so far as they apply to code messages between points in Canada, and when embodied in proper tariffs filed by the telegraph companies with the Board, be approved, the amended rule to be put in force not earlier than July 1. The amendments mentioned in the order provide for charging code words on the basis of five letters constituting one word.

Grain Elevator Notes.

Forwarders, Ltd., Kingston, Ont., will, it is stated, build an elevator at Fort William, in the spring.

Alberta is credited with having 245 elevators at the end of 1909, with a total capacity of 8,050,400 bush.

The International Elevator Co.'s elevator at Clearwater, Man., was destroyed by fire, Feb. 6, with about 700 bush. of grain.

An elevator at Inglewood, Ont., together with 3,000 bush. of grain, was destroyed by fire recently. The loss is stated as $5,500, partly covered by insurance.

Goderich, Ont., ratepayers, defeated a by-law, Jan. 1, providing for an exemption of taxation for 10 years of a proposed extension of the Goderich Elevator and Transit Co.'s elevator there.

The Ellison Milling and Elevator Co., Ltd., with a capital of $150,000 and head office at Lethbridge, Alta., has been licensed to carry on business in British Columbia, with S, Herchmer, Fernie, as its attorney.

The Lieutenant-Governor's speech at the opening of the Manitoba Legislature, Feb. 10, mentioned the inclusion of a scheme for the Government ownership of elevators in the legislative programme for the current session.

The Western Farmers' Elevator and Milling Co., Ltd., has been incorporated under the North West Territories Companies Ordinance, with office at Lethbridge, Alta. Press reports state that the company intends to build several elevators, each of 30,000 bush. capacity, between Taber and Medicine Hat, Alta., and Lethbridge, Alta., and Weyburn, Sask.

E. H. Heaps, who is interested in the recently incorporated A.B.C. Elevator and Wharf Co., is reported to have said, recently, that the company had received a promise of assistance from Alberta Government, in aid of its project to erect elevators in Vancouver, Prince Rupert and New Westminster. A meeting of the company would shortly be held, when it would be decided as to when construction would commence.

Goderich, Ont., ratepayers, defeated a by-law, Jan. 1, providing for an exemption of taxation for 10 years of a proposed extension of the Goderich Elevator and Transit Co.'s elevator there, and on Feb. 14, passed by-laws granting fixed assessments to the Goderich Elevator and Transit Co., and the Western Canada Flour Mills Co., in connection with the addition to the capacity of 500,000 bush., in the former case, and the erection of a 500,000 bush. elevator in the latter case.

The Mechanics' Handbook, issued by the International Correspondence Schools, Scranton, Pa., is a convenient reference book for the pocket for all interested in engineering, both civil and mechanical. The volume extends to 330 pages, and contains rules, formulas, tables, etc., in most common use, together with explanations concerning them and practical examples illustrating their use. The daily wants of engineers are anticipated, and the information sought is given in the manner best suited to the needs of the user. Being of pocket size, the volume can always be carried about, and is therefore readily accessible when most wanted. The present is the seventh edition, and brings the total number issued to 317,000.

NINTH EDITION REWRITTEN.

Total Issue Twelve Thousand.

JOHNSON—BRYAN—TURNEAURE—**The Theory and Practice of Modern Framed Structures.** Designed for the use of Schools and for Engineers in Professional Practice. By the late J. B. Johnson, C.E., C. W. Bryan, C.E., Manager of the American Bridge Company, and F. E. Turneaure, C.E., Dean of the College of Mechanics and Engineering, University of Wisconsin. In three parts. Part I.—Stresses in Simple Structure. 8vo, xii+326 pages, illustrated with cuts throughout the text. Cloth, $3 net.

CONTENTS.

Chapter I.—Definitions and Historical Development. Section I.—Forces and Stresses. Section II.—The Truss and its Elements. Section III.—Historical Development.

Chapter II.—Elements of the Analysis of Framed Structures. Section I.—Definitions. Section II.—Resultant and Equilibrium of Concurrent Forces. Section III.—Resultant and Equilibrium of Non-concurrent Forces. Section IV.—Centre of Gravity, Moments and Moments of Inertia. Section V.—Application of the Laws of Equilibrium.

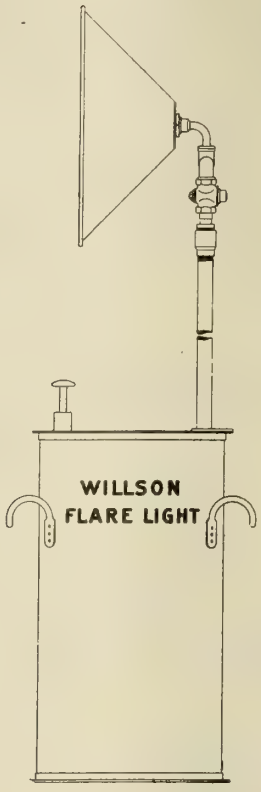
Chapter III.—Analysis of Roof Trusses.—Section I.—Forms of Trusses. Section II.—Loads and Reactions. Section III.—Analysis of Trusses.

Chapter IV.—Analysis of Bridge Trusses for Uniform Loads.—Section I.—Types of Trusses, Loads and Reactions. Section II.—Analysis of Simple Beams. Section III.—Trusses with Horizontal Chords and Single Web Systems. Section IV.—Trusses with Inclined Chords and Single Web Systems. Section V.—Trusses with Multiple Web Systems. Section VI.—Trusses with Subdivided Panels. Section VII.—Skew-Bridges.

Chapter V.—Analysis of Bridge Trusses for Concentrated Loads.—Section I.—Influence Lines. Section II.—Beams Loaded Continuously. Section III.—Trusses with Horizontal Chords and Single Web Systems. Section IV.—Methods of Calculation. Section V.—Trusses with Inclined Chords and Single Web Systems. Section VI.—Trusses with Subdivided Panels—Trusses with Multiple Web Systems. Section VII.—Skew-Bridges. Section VIII.—Conventional Load Systems.

Chapter VI.—Lateral Trusses, Trestles and Towers.

Chapter VII.—Deflections of Structures and Stresses in Redundant Members. Section I.—Deflection of Structures. Section II.—Stresses in Redundant Members.



THE WILLSON PORTABLE FLARE LIGHT

Brilliant Powerful Economica

Specially adapted for use in all kinds of construction work.

Its candle power varies from 1,000—8,000 according to the size of apparatus. The cost of 8,000 candle power is less than 6c. per hour.

O'Brien & Fowler, Contractors to the G.T.P., say:—

"During the past two or three years we have used various kinds of lights, but none of them have proved the equal of yours, either in the matter of economy or usefulness. The effectiveness of your light is beyond dispute."

PEERLESS
The Fence that saves Expense

It is the best fence you can buy because it is the cheapest, when measured by the years of good service it will give. PEERLESS FENCING is made of all No. 9 hard, springy wire, which is not easily affected by weather, wear or unruly stock. Just the fence suited to railroads. Neat in appearance—conforms to topography of ground and at the same time upright wires are perpendicular. It will pay you to get the free book we are sending to all who write us. A postal will do.

PRESIDENT, D. McDonald, Manager, Montreal St. Ry.; VICE-PRESIDENT, J. Anderson, Manager, Sandwich, Windsor and Amherstburg Ry.; SECRETARY-TREASURER, Acton Burrows, Managing Director, Railway and Marine World.

ASSOCIATION'S OFFICE, 157 Bay St., Toronto.

EXECUTIVE COMMITTEE:—P. Dubee, Secretary, Montreal St. Ry.; E. A. Evans, General Manager, Quebec Ry. Light and Power Co.; R. J. Fleming, General Manager, Toronto Ry.; H. M. Hopper, Secretary-Treasurer, St. John Ry.; J. E. Hutcheson, Superintendent and Purchasing Agent, Ottawa Electric Ry.; C. B. King, Manager, London St. Ry.

ASSISTANT SECRETARY, Aubrey Acton Burrows, Secretary and Business Manager, Railway and Marine World.

OFFICIAL ORGAN, THE RAILWAY AND MARINE WORLD.

British Columbia Electric Ry., Co.

Following are extracts from the reports of the year ended June 30, 1909:—

The gross receipts show an increase of $339,699, or 17%, and the net earnings, including income from investments in subsidiaries, and after charging renewals, an increase of $48,792, or 5.6% over the preceding year. From the close of the financial year up to October 31 there has been a still further increase in gross earnings of $231,961, or 32%, and in net earnings of $98,086, or 28%. From January 1, 1909, in pursuance of its long-established policy of allowing the public to share in its prosperity by treating them in the most liberal manner possible, spontaneously reduced its charges for electric light by about 17%. The rates now charged compare favorably with those of the largest cities of Canada. Various reductions in railway fares and charges have also been made during the year. It was anticipated when these reductions were put into force that they would involve considerable diminution of profits, but the increase in the volume of business has more than compensated for the reduced charges, and the above-mentioned satisfactory results are shown for the whole year. The following charges have been made against the revenue account of the year:—

Provision for renewals maintenance (from which £16,674 11s. 10d. has been deducted for adjustments and expenditures on renewals during the year)	£36,447	14	5
Bonus to employes	9,683	14	5
Amount added to capital amortization fund	2,018	1	10
The net profit for the year, after making the above deductions, amounts to	163,306	6	9
Add balance brought forward from last year	4,973	18	11
	£168,280	5	8
Deduct—			
Interest on debentures and debenture stock to June 30, 1909. £39,889	7	4	
Dividends already paid—			
On 5% cumulative perpetual preference stock for year ended June 30, 1909 20,000	0	0	
On preferred ordinary stock for year ended June 30, 1909 24,000	0	0	
ary stock for 6 months to Dec. 31, 1908 20,000	0	0	
	103,889	7	4
Leaving available for further distribution and reserves	£64,390	18	4
From this the Directors have decided—			
To recommend the payment of a dividend on the deferred ordinary stock at the rate of 8% per cent. per annum for the six months to June 30, 1909, making 8% for the year. £20,000	0	0	
To transfer to reserve fund 37,329	15	5	
	57,329	15	5
To carry forward to next account.	£7,061	2	11

The number of passengers carried during the year was 25,183,739, an increase for the year of 3,855,559. Although your directors have every confidence that the business will continue to increase steadily in the future, they point out that the extraordinary increase in earnings of the last few months is attributable [illegible]ly to exceptional causes. The exhibition at Seattle has attracted thousands of tourists, who have visited Vancouver and Victoria, besides which the great salmon run (which occurs every fourth year) has this year largely increased the earnings of the Lulu Island branch.

The great influx of settlers into British Columbia is indicated by the fact that the permanent population of Vancouver City alone is now reliably estimated at over 100,000. As a natural and necessary result of this growth, which your directors, after most careful examination of conditions, are satisfied will continue, the company is extending its railway system and general undertaking as the interests of the country and the requirements of the public demand. The new railway lines may not prove immediately remunerative, and must be expected to increase the ratio of expenses during the next two or three years, but they will undoubtedly in time develop a very valuable business. During the year £286,181 11s. 9d. has been spent in extensions and improvements. Very satisfactory progress has been made with the construction of the Fraser Valley branch to Chilliwack (65 miles), and it is estimated that the first section, 21 miles, to Cloverdale will be open for traffic towards the end of Nov., 1909, and a further section, 22 miles, to Abbotsford will be in operation towards the end of January, 1910, the whole line being completed and in operation some time during the spring of 1910. The opening of this line is eagerly looked for by the settlers in the districts through which it runs, and the prospects of traffic are good. Various extensions of the company's system in the districts adjacent to Vancouver and New Westminster have been undertaken, aggregating altogether about 31 miles of railway. The company has also built a short new branch line from Victoria City. When these extensions are completed, the company will be operating 164 miles of line.

In view of the demand for electrical energy, an increased supply of water power in the future has had to be considered. The directors have authorized the construction of a new dam of greater height at Lake Coquitlam, and also the enlargement of the tunnel between Lake Coquitlam and Lake Buntzen. It is estimated that this will enable the plant at Lake Buntzen to be gradually increased to about 62,000 h.p., which should satisfy the requirements of Vancouver and the neighborhood for years to come. At present the plant at Lake Burtzen is capable of generating 22,500 h.p., and an additional unit of 10,500 h.p. which is in course of erection will be available within a few weeks. It has also become necessary to increase the supply of power for the City of Victoria, but before undertaking the large capital expenditure for this purpose the directors entered into negotiations with the city, which have resulted in a satisfactory agreement, protecting the company from municipal competition. The development of a large water power on Jordan River is now in progress, and your directors are advised that it will when completed adequately meet the requirements of the city for many years to come, while it will also enable the company largely to extend its business.

The construction of the new freight sheds, referred to in the last report, has been completed. Plans are also being considered for new terminal buildings which will be in every way worthy of the City of Vancouver and of the company. They will, moreover, enable considerable economies to be effected in the general administration of the company's business. It has also become necessary to largely increase the company's equipment for the construction of rolling stock. The output from the company's existing workshops is satisfactory, both as to quality and cost, but with the present accommodation it is quite impossible to produce the new rolling stock required, or to deal efficiently with the requisite overhauling and repairs. The directors are therefore considering the advisability of moving the car shops to a more convenient and commodious site and of erecting workshops of large capacity, built and equipped in the most modern manner.

The following capital expenditures were made during the year:—

Rolling Stock	$235,308	57	
Track work	221,615	96	
Double tracking	153,866	97	
Lighting extensions	136,917	47	
Power extensions	37,326	47	
Railway feeders	9,259	48	
Land and buildings	205,800	70	
Extending the railway, light and power system under municipal charters—			
Light and power extensions. $13,412	13		
Light and power extensions $13,412	13

" Burnaby	11,327	74	
Transmission lines in Vancouver city	12,503	98	
	$1,387,980	71	

Toronto Ry Co's Report.

Following are extracts from the report for 1909, presented at the annual meeting, Feb. 2:—

The passenger earnings continue to show gratifying increases, amounting to $3,878,145.82, as compared with $3,566,493.72 for 1908. While the passenger earnings show an increase in gross of 8.73% over 1908, the net revenue from operation shows an increase of 12.19%, the percentage of operating and maintenance charges to passenger earnings for the year being 51.4%.

A summary of the report and statements dealing with the year show the following:—Gross earnings, $3,926,828.43; operating and maintenance charges, $1,995,914.64; net earnings, $1,930,913.79. From the net earnings there was paid to the city of Toronto: percentage of earnings, $507,827.49; pavement charges, $82,127.62; general taxes, $50,326.34; total, $640,281.45. The corresponding payments during 1908 were $578,994.56, thus showing that the payment to the city during the year increased $61,286.89. The total payments to the city since the commencement of the franchise, Sept. 1, 1891, amount to $5,250,066.50. The other deductions are:—Four quarterly dividends of 1¾%, $560,000.00; bond interest, etc., $198,250.23. There has been transferred this year to the contingent account provision for renewals, $150,000. There has been transferred from profits to the credit of this account $900,000, and there has been expended to date $597,620.58, leaving a balance of $302,379.42 for the purpose of future renewals. The principal charges to this account were in connection with the renewal of track and overhead work.

The capital expenditure during the year was only $138,081.49, compared

The Best Training School for Steam, Electrical, and Marine Engineers

The International Correspondence Schools, of Scranton, Pa., are the best training schools in the world for YOU because: (1) The I. C. S. Courses in Engineering are first prepared by practical men—men that have met and solved the problems common to every-day work—and then rewritten by I. C. S. experts to suit the practical needs of the man having to get his technical training in odds and ends of time. (2) Each I. C. S. Course is prepared to qualify students for a particular branch of work; students study only what is necessary to equip them for the work they want to follow. (3) The Courses are so frequently revised as to be always up to the minute; the cost of revision exceeds $250,000 a year. (4) I. C. S. Courses are easy to learn, easy to remember, and easy to apply.

The I. C. S. can better **your** position, increase **your** pay, brighten **your** future. Let us tell you how. Mark and mail the coupon **NOW.**

Montreal, Canada

with $431,870.94 during 1908. It is to be regretted that owing to the position taken by the city council in refusing to allow the company to construct new lines which it considered necessary to meet the public requirements, the company was compelled to discontinue the construction of new cars, which it has been constructing continuously for the past 16 years. The same might be said of track and overhead work, as the only new track built during the year was on Roncesvalles Ave. from Queen St. to Dundas St., 979 ft. Having in view that authority will ultimately be granted for the construction of additional tracks, which will necessitate the adding to our rolling stock a number of new cars, a contract has been entered into for the construction of a large up-to-date car house on Lansdowne Ave. Not only will this car house take care of a number of the new cars when constructed, but it will provide for a more even distribution of houses throughout the city for car storing and repairing purposes.

The business of the Toronto and York Radial Ry. system continues to show gratifying increases in all of its branches. After meeting all maintenance and operating charges, bond interest, etc., there was carried to the credit of profit and loss, $42,133.30. An interesting feature of the company's business is the steady growth of express traffic, etc., on the Metropolitan division. The company has co-operated with several York county municipalities in building up and establishing weekly markets, all of which are in a flourishing condition and with every prospect of creating increased business.

Tabulated statements show the Toronto Ry. Co.'s gross income, $3,926,828.43; operating and maintenance expenses, $1,995,914.64; net earnings, $1,930,913.79; passengers carried, 98,117,991; transfers, 38,137,688; percentage of operating expenses to passenger earnings, 51.4 for 1909, against $3,610,272.98 gross income; $1,889,046.62 operating and maintenance expenses; $1,721,226.36 net earnings; 89,139,571 passengers carried; 32,700,576 transfers; 52.9 percentage of operating expenses to passenger earnings, for 1908.

The officers and directors were re-elected for the current year as follows:— President, W. Mackenzie; Vice President, F. Nichols; other directors, Hon. G. A. Cox, Sir Henry M. Pellatt, W. D. Matthews, R. Forget, M.P., J. Gunn.

Ottawa Electric Ry. Co.'s Report.

Following are extracts from the report for the year 1909, presented at the annual meeting, Feb. 7:—

The gross earnings were $677,357.11, compared with $616,229.37 in 1908; 14,983,799 passengers were carried, compared with 13,711,382 in 1908. Dividends amounting to 12% were paid. The net profit of $247,285.25 was disposed of as follows:—Interest paid on bonds and loans, $30,081.26; four quarterly dividends of 2½% and bonus of 2%, $149,724.00; mileage payments, $12,467.25; taxes, $6,881.81; placed to credit of contingent account to be applied to reduction of track renewal, car equipment and other accounts, $36,119.81; transferred to credit of profit and loss account, $12,011.12. The balance at credit of profit and loss account is now $47,000, and of rest account $200,000.

Each month throughout the year showed a gratifying increase in earnings over the previous year, the largest increases being in the last three months. The Dominion Government has let contracts for damming Lakes Temiscaming and Kippewa, and it is the intention to give out other contracts for additional dams in the near future, which will form part of the series of storage dams proposed to be constructed to conserve the waters of the Upper Ottawa. Our business is increasing at such a rate that it will be necessary to add to the rolling stock without delay. During the past season 80 lb. rails were laid on the Rockliffe line from the car sheds to the old terminus; on Somerset St. from Bronson Ave. to Preston St., and from Bayswater Ave. to Irving Ave. on Somerset and Wellington Sts. The balance of Wellington St. to Holland Ave. will be renewed next summer. It is proposed to lay new 100 lb. rails on Sparks St. next spring. The rails and other material for this work are on hand. It is expected at the same time that the Ottawa corporation will improve the pavement on this street, which is now in a dilapidated condition. With the increase of traffic more power is required, and the question of duplicating our present water-power power house is being considered.

Gross receipts, $677,357.11; expenses, $479,502.18; net income, $197,854.93; passengers carried, 14,983,799; percentage of operating expenses to receipts, 63.5, for 1909, against gross receipts, $616,229.37; expenses, $455,827.80; net income, $160,401.57; passengers carried, 13,711,382; percentage of operating expenses to receipts, for 1908, 66.4.

The officers and directors were re-elected for the current year as follows:— President, T. Ahearn; Vice President, P. Whelen; other directors, W. Y. Soper, G. P. Brophy, Hon. G. A. Cox, T. Workman.

London Street Railway Co.'s Report.

Following are extracts from the report for the year 1909:—

EARNINGS.

	1908.	1909.
Passengers	$230,866.09	$238,267.23
Miscellaneous	4,166.31	5,092.16
Gross earnings	$235,032.40	$243,359.39

EXPENSES.

MAINTENANCE:		
Way and structures	$13,573.55	$21,735.66
Equipment	28,128.03	24,743.43
TRANSPORTATION:		
Power plant	30,125.32	27,796.46
Car service	68,845.27	67,866.35
GENERAL	26,894.55	27,688.54
Total operating expense	$167,566.72	$169,830.44
NET EARNINGS	$67,465.68	$73,528.95

DEDUCTIONS.

Interest on bonds	$25,005.82	$28,345.86
Interest on overdraft	3,448.92	541.70
Total deductions	$28,454.74	$28,887.56
NET INCOME	$39,010.94	$44,641.39

The following changes have effected your property during the year:—Increases—track and roadway, Ottaway Ave. derail, $292.93; miscellaneous bond issue, $25.00. Paving—Adelaide St., Dundas to Dufferin, $1,695.17; Dundas St., opposite fair grounds, $885.25; Rectory St., Dundas to G.T.R., $2,459.41; Ridout St., Dundas to King St., $742.53; total, $6,100.29. Decreases—Sale of lots, corner Horton and Ridout Sts., $2,000.00; Artesian well rights, back of power plant, $100.00; interest and discount, $62.50; total, $2,162.50; net increase, $3,937.79.

The expenditure for track purposes and general maintenance of the entire system was noticeably increased, and considerable reconstruction was accomplished at a minimum cost, owing to favorable conditions effecting both material and labor. The general adoption of the pay-enter system throughout the country has caused us to make some changes along the lines, but owing to local conditions, a pay-leave system was considered more desirable; consequently a number of cars were adapted to this plan and are being tried at present. As considerable dissension arose relative to the proposed locations of the north end extension, the city council dropped negotiations. We have been solicited by the city to negotiate for Niagara power,

NORTH AMERICAN LIFE

SPLENDID RECORD FOR 1909

The Twenty-ninth Annual Meeting of the North American Life Assurance Company was held at its Home Office in Toronto on Thursday, Jan. 27, 1910, when the Report of the business for the year ended Dec. 31, 1909, was presented.

INCREASE IN CASH INCOME

The cash income for the year from premiums, interest, etc., was $2,028,595.40, showing the satisfactory increase of $133,117.95.

ECONOMICAL MANAGEMENT

The business continues to be conducted on an economical basis; the ratio of expenses to premium income remains practically the same, notwithstanding the large increase in new assurances.

LARGE PAYMENTS TO POLICY-HOLDERS

The amount paid on policyholders' account was $789,520.41. Of this sum $138,320.47 was for surplus or dividends, while $327,111.96 represents payments for Matured Endowment and Investment Policies.

ADDIT ON TO ASSETS

The assets increased in 1909 by $899,826.81, and now amount to $10,490,464.90. As heretofore, they continue to be invested in the best class of securities available, the addition to mortgage loans being $710,285.39.

INCREASE IN NET SURPLUS

After making ample provision for all liabilities and distributing during the year the relatively large amount for dividends mentioned, the net surplus on policyholders' account was increased to $1,018,121.25.

INSURANCE INCREASED

The policies issued during the year, together with those revived, amounted to the sum of $5,091,029, being an increase over the previous year of $625,805; the total business in force amounted to $41,964,641.

CAREFUL AND SYSTEMATIC AUDIT

A monthly examination of the books of the Company was made by the Auditors, and at the close of the year they made a thorough scrutiny of all the securities.

A Committee of the Board, consisting of two Directors, made an independent audit of the securities each quarter.

J. L. BLAIKIE, President. L. GOLDMAN, Managing Director.

New Ways To The Woods

The six railways of the Canadian Northern Railway system offer the widest choice of new territories for the fisherman, canoeist, camper and hunter.

IN NOVA SCOTIA the Halifax and Southwestern Railway, from Halifax to Yarmouth, serves seven hundred miles of ocean shore; two score generous trout streams and the famous Rossignol lake system.

IN CAPE BRETON, sixty miles of the Gulf of St. Lawrence shore is skirted by the Inverness Railway, which gives easy access to the Margaree valley—far-famed for its salmon fishing.

IN QUEBEC, the Canadian Northern, Quebec and Quebec, and Lake St. John Railways give easy access to the Saguenay, Upper St. Maurice, the Batiscan, the La Tuque game and fish preserve, and the valleys of the St. Lawrence and Ottawa. All good fishing waters, abounding with ouananiche, trout and bass.

IN ONTARIO, the entire range of the Muskokas, the Georgian Bay hinterland, the French, Pickerel, Still and Maganetawan rivers—well stocked with bass, mascalonge, and pickerel, are best reached by the Canadian Northern Ontario Railway.

IN WESTERN ONTARIO and the prairie provinces, the Canadian Northern Railway serves over three thousand miles of splendid territory. The Rainy River section follows the old Dawson fur trail, which is the finest canoe trip on the continent. There is an amplitude of sporting opportunities for the camera hunter, the fisherman and canoeist.

For literature and general or special information inquire of the information Bureau, Canadian Northern Railway System, Toronto.

and as it will be necessary to increase our plant shortly, several other plans are also under consideration. As a result of the favorable vote, the question of Sunday cars was referred to the Legislature, which passed an Act requiring a population of 50,000, but as the committee could not give a satisfactory return, the matter was laid over until this year. The new stock authorized at the last meeting is entirely subscribed and 50 shares have been paid in full, although no calls have yet been made. Your directors have disposed of $25,000 of of bonds at a fraction over par, the proceeds being used to pay overdraft and to provide for other requirements, so that our present condition is excellent. It is with pleasure that we draw your attention to the increases in the gross earnings and surplus, which under existing conditions were very good, and we confidently expect the coming year will also prove satisfactory. Our relation with the public is good, and it is the constant aim of the management to improve the service so as to obtain the best results. No suits of consequence are pending against the company. There were 64 shareholders of record at Dec. 31.

Following are the officers and directors for the current year:—President, H. A. Everett, Cleveland, O.; Vice President, T. H. Smallman, London, Ont.; other directors, P. W. D. Broderick, W. M. Spencer, London, Ont.; H. S. Holt, Montreal; E. W. Moore and C. W. Wason, Cleveland, O.

Halifax Electric Tramway Co.

Following are extracts from the report for the year 1909:—

The gross and net earnings are viewed with much satisfaction, and we are assured will be appreciated by the shareholders. The proportion of operating expenses to income of 53.54% is a gratifying feature of the year's operations, and is largely due to the efficient condition of our railway and lighting services. The company is now carrying a "use and occupancy" insurance policy in addition to the regular fire and boiler explosion risks, and is arranging for the installation of an up-to-date sprinkler system, whereby the premium on fire policies will be greatly reduced. During the past year four "pay-as-you-enter" cars have been placed in operation, two having been built by the Silliker Car Co., and all of which appear to be giving general satisfaction.

ASSETS.

The officers and directors for the current year are:—President, Hon. D. MacKeen; Vice Presidents, J. Y. Payzant and W. B. Ross; other directors, A. Kingman, J. Hutchison, J. C. Mackintosh, C. C. Blackadar, F. B. McCurdy and M. C. Grant.

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for Dec., 1909, $269,179; working expenses, $151,522; net operating earnings, $117,657; renewal funds, $17,833; net earnings, $99,824; approximate income from investments, $16,500; net income, $116,324; against $206,050 gross earnings; $105,991 working expenses; $100,059 net operating earnings; $11,544 renewal funds; $88,515 net earnings; $13,550 approximate income from investments; $102,065 net income, for Dec., 1908. Aggregate gross earnings for six months ended Dec. 31, 1909, $1,480,871; net earnings, $657,366, against $1,143,639 gross earnings, and $535,139 net earnings for same period 1908.

British Columbia Electric Ry.—The new lease of the Vancouver and Lulu Island Ry. to the B.C. E. Ry. Co., which has just been signed, is an extension of the old lease for 21 years from July 1, 1909, with an option of renewal for a like period, up its expiry. The original agreement provided for the electrification and operation by the B.C.E. Ry. of the Eburne-New Westminster extension, which has just been completed.

Calgary St. Ry.—The municipally owned street railway started operation on July 5, 1909, and up to Jan. 31 the total receipts were $54,000. After meeting operating expenses and paying interest on the cost, $10,000 has been paid into the city treasury as profit. It is expected that the cost of operation will be reduced considerably as soon as the city's hydro-electric plant is placed in operation. The cost of the street railway to Jan. 31 was $476,000.

Detroit United Ry.—At the annual meeting, Feb. 1, it was decided to continue the practice of not paying dividends until the betterment of the tracks and rolling stock had been completed. The net earnings from operation aggregated $3,004,000, and there is on hand a surplus of $2,744,529, after paying off $500,000 of betterment notes Feb. 15. The company owns the Sandwich, Windsor and Amherstburg Ry. in Canada.

Halifax Electric Tramway.—The annual meeting was held Feb. 14. The report for the year 1909 shows passenger receipts, $197,330.15; earnings from light and power, $191,322.89; gas, $57,797.44; sundry, $1,129.36; total, $447,578.84; operating expenses, $239,606.05; coupons, $30,000, leaving $177,973.79 as net earnings. Dividends paid were $85,129.94, and $92,843.85 was taken to surplus account, which stands at $437,802.35. The percentage of operating expenses to income for the year was 53.54.

Approximate earnings for Jan., $15,510.09, and for two weeks ended Feb. 14, $6,913.26, against $13,785.59 and $6,198.52 for same periods 1909.

London St. Ry.—Gross earnings for Jan., $18,363.71; expenses, $13,578.22; net earnings, $4,785.40; deductions, $2,441.75; net income, $2,343.74, against $17,737.83 gross earnings; $12,985.11 expenses; $4,752.72 net earnings for Jan., 1909.

Montreal St. Ry.—Passenger earnings for Jan., $323,045.07; miscellaneous earnings, $2,575.89; total earnings, $325,620.96; operating expenses, $205,059.74; net earnings, $120,561.22; city percentage on earnings, $16,883.87; interest on bonds and loans, $14,273.67; rent leased lines, $552.90; taxes, $4,000; total charges, $35,690.44; surplus, $84,870.78; expenses per cent. of earnings, 62.98; against $291,698.83 passenger earnings; $3,754.54 miscellaneous earnings; $295,453.37 total earnings; $199,644.45 operating expenses; $95,808.92 net earnings; $15,230.09 city percentage on earnings; $15,107.19 interest on bonds and loans; $498.67 rent leased lines; $2,700 taxes; $33,533.95 total charges; $62,272.97 surplus; 67.57 percentage of expenses to earnings for Jan., 1909. Passenger earnings for four months ended Jan. 31, $1,316,411.91; miscellaneous earnings, $35,650.45; total earnings, $1,352,062.36; operating expenses, $791,938.71; net earnings, $560,123.65; total charges, $132,035.28; surplus, $428,088.37; percentage of expenses to earnings, 58.57; against $1,198,309.67 passenger earnings; $32,214.80 miscellaneous earnings; $1,230,524.47 total earnings; $748,839.47 operating expenses; $481,685.00 net earnings; $124,104.88 total charges; $357,580.12 surplus; 60.86 percentage of expenses to earnings, for same period 1908-09.

St. Thomas St. Ry.—The St. Thomas city council is applying to the Ontario Legislature for the passing of an act repealing sections 2, 3 and 4, chap. 3, of the statutes of 1904, by which the management of the municipal street railway was placed in the hands of a commission to be appointed by the council, and providing that hereafter the street railway shall be under the sole and direct authority of the city council. Authority is given to the council to place in the annual estimates of the current expenditure of the corporation such sum as may be necessary to provide for the maintenance and operation of the railway, and to raise the same annually by a general rate at the same time and in the same manner as other municipal rates are levied and collected.

Toronto Ry.—Earnings for Jan., $326,307.62, against $287,981.16 for Jan., 1909.

Winnipeg Electric Ry.—Gross earnings for Dec., 1909, $283,500; expenses, $151,900; net earnings, $131,600, against $241,400 gross earnings; $118,200 expenses; $123,200 net earnings for Dec., 1908. Aggregate gross earnings for 12 months ended Dec. 31, 1909, $2,623,700; net earnings, $1,303,000, against $2,206,000 gross and $1,117,200 net for same period 1908.

Winnipeg Electric Ry.—Application is being made to the Manitoba Legislature for the passing of an act ratifying the agreement for amalgamation between the company and the Western Power Co., Manitoba Gas and Electric Light Co., Northwest Electric Light Co., and some other companies.

The report that the G.T. Pacific Ry. proposed erecting a 15-story hotel at Quebec at the foot of Mountain Hill was denied by officers of the company at Montreal, Feb. 4.

The Commission operating the Port Arthur and Fort William St. Ry. has refused the demands of the operating employes for increases in wages, and there has been some talk of a strike, but it is not thought that such a step will be taken.

In connection with the contract which has been let for the removal of the fallen portion of the Quebec bridge which now lies in a tangled mass upon the south shore of the river, press reports state that the steel is to be severed for removal by means of a mechanical cutter. Not much credence should be placed in the statement, for the reason that the obviously ideal method would be to use the oxy-hydrogen or oxy-acetylene flame, whose apparatus is so portable as to render it ideal for setting up in the many difficult positions which would be necessary.

Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—Some delay has been experienced with the project for the erection of the new terminal station in New Westminster, owing to certain portions of the site not having been vacated. The work will not be started before April 1. These terminals will accommodate both passenger and freight traffic, not only for the interurban line to Vancouver, but also for the Vancouver and Lulu Island Ry. via Eburne to Vancouver, and for the Chilliwack line now under construction. Except for the completion of the ballasting, the first 12 miles of this line is in operation, and tracklaying was expected to be completed to Abbotsford by Mar. 1. Surveys have been completed for a line from Vancouver through Burnaby and along Burnaby Lake, which would also reach New Westminster from the east. An extension is also planned from the east end of the city to the Fraser River Mills. Both these lines will probably be built next summer. Work is in progress for a cut-off of the present line between New Westminster and Vancouver whereby the line will be shortened and the hill on 12th street, a 10% grade, will be eliminated. The line will also be double tracked. Plans are being prepared for the construction of a line down Lulu Island from New Westminster.

By an agreement with the Vancouver and Lulu Island Ry. the company has undertaken to construct 10 miles of extensions within five years from Oct. 26, 1910, in district lot 526, on routes to be arranged with the C.P.R.

The company has acquired a block of land on the east side of Douglas St., Victoria, for terminal purposes. (Feb., pg. 147.)

Calgary, Alta.—A press report states that it expected to construct some 12 miles of extensions to the municipally owned street railway during the current year. (Jan., pg. 57.)

Coteau Power Co.—A resolution has been passed by the town council of Vernon, B.C., endorsing the proposal made by E. G. Warren, representing the company, for the construction of an electric railway, and a plant for the supply of power and light. The company's proposal is to develop power at Shuswap Falls, and deliver it to Vernon and other points in the Okanagan Valley, and to construct an electric railway from Shuswap Falls to Vernon. A. E. Ashton is Chief Engineer in charge of the surveys at Vernon. According to press reports, it was stated that the company had decided to construct its line on the mono rail principle, and to use the gyroscope car, invented by L. Brennan, but we are informed that there is no truth in the report. (Nov., 1909, pg. 848.)

The Dominion Ry. and Plaster Co. has applied to the Sydney, N.S., City Council for right of way over certain streets for its projected electric railway from Sydney to the gypsum deposits at East Bay. The company expresses its willingness to accept conditions similar to those in the city's contract with the Cape Breton Electric Co., which, it is said, has a right to construct a line on King's Road, but has declined to construct it although the city has asked it to do so. The new company is willing to arrange to enter the city over that line, but would construct its own line if given the franchise. The matter was referred to the Board of Works. (See Sydney and East Bay Ry., Nov., 1909, pg. 849.)

Dunnville, Wellandport and Beamsville Electric Ry.—The Ontario Legislature is being asked to authorize the company to construct an extension of the present authorized line from Jordan Harbour to St. Catharines, Ont., and giving power to issue bonds in respect of a certain portion of this line to the amount of $30,000 a mile. (Feb., pg. 147.)

Fredericton Street Ry.—Application is being made to the New Brunswick Legislature to incorporate a company with this title to construct an electric railway in the city. R. B. Hanson, solicitor for applicants, in the course of an interview said the promoters' plans hinged on the obtaining of cheap power. Some arrangement would have to be arrived at for cars crossing the river, and several propositions were under consideration. The idea is to have the lines run to St. Marys, Gibson and Marysville, and possibly Nashwaaksis, and also to Springhill and Victoria Mills. A company was granted a charter for the construction of electric lines over a considerable part of this territory some years ago, but did nothing and the charter lapsed.

Grand Valley Ry.—A good deal of work is in progress on the G.V.R. lines in Brantford, Ont., and it is said work will be continued during the year. The company is preparing to let contracts for the erection of a new power house at Brantford, to be equipped with three 500 k.w. motor generator sets. W. P. Kellett is chief engineer. (Feb., pg. 147.)

The Hamilton, Waterloo and Guelph Ry. Co.'s application to the Dominion Parliament for an amendment to its act of incorporation has been given consideration by the Railway Committee of the House of Commons. It was opposed by the Toronto City Council, and as a result several alterations were made, some of which, however, are still debatable. The bill as amended in committee provides for the increasing of the capital stock from $2,000,000 to $6,000,000; authorizes the construction of a line from Hamilton to Toronto, which may be constructed south of High Park, north of the G.T.R., and at the same elevation, or such other route as may be agreed upon between the company and the Toronto City Council; the company, unless with the consent of the Toronto City Council, shall not have any rights east of Roncesvalles Ave. It is authorized to enter into an agreement with the Hamilton Radial Electric Ry. for a lease or for running rights over that company's line from Burlington to Toronto, provided always that there shall only be one right of way through High Park, to be decided according to section two; such right of way to be used in common on terms to be approved by the Board of Railway Commissioners. The bill as amended was put down for the committee stage in the House of Commons, Feb. 24. (Feb., pg. 147.)

International Ry.—We are advised that there is nothing in the press reports that the electric line now terminating at Queenston is to be extended to Niagara-on-the-Lake, and that the International Ry. representatives recently had a conference with the municipal authorities in reference to it. The electric railway now terminating at Queenston is operated by the International Ry., but its charter title is the Niagara Falls Park and River Ry. A dispatch from Niagara Falls, Ont., Feb. 18, stated that as the International Ry. would not build the desired extension a local company was being formed to undertake the work.

Lethbridge, Alta.—At a meeting of the City Council, Feb. 10, a committee was appointed to collect information from other cities with respect to the cost of the construction and operation of electric street railways. The committee consists of Aldermen King, Hatch and Frayne. (Jan., pg. 57.)

London and Lake Erie Ry. and Transportation Co.—The bill for the incorporation of a company with this title has been given a considerable amount of attention by the Railway Committee of the House of Commons. The purpose of the company is to take over the South Western Traction Co.'s lines, recently purchased at a sale by order of the courts, and extend them so as to furnish a complete system of radial lines in that section of Ontario and to connect them with other lines. The committee put in amendments protecting the rights of municipalities under existing agreements, but declined to put in a section prohibiting the operation of cars on Sundays, which was asked for by the Lord's Day Alliance. The opposition which had developed in London was settled after a conference between the provisional directors and the city council, Jan. 31. (Feb., pg. 147.)

Monarch Radial Ry.—The application to the Ontario Legislature for incorporation is being opposed by Toronto City Council. The promoters propose to construct an electric railway from a terminus at Dupont and Bathurst Streets, Toronto, to Orillia. The route proposed would parallel the Toronto and York Radial Ry's Metropolitan Division as far as Aurora, whence it would diverge so as to serve Holland Landing, Bradford, Deerhurst, Churchill, Stroud, Allandale and Barrie, with branches to Lake Simcoe and Markham. The provisional directors are:—W. H. Price, C. M. Garbey, J. F. Caughlin, N. R. Lindsay, S. F. Adalia; the engineers are Wragge and Fox, Toronto.

Moncton Electric St. Ry., Heat and Power Co.—Application is being made to the New Brunswick Legislature to change the name of the company to the Moncton Tramways, Electricity and Gas Co.; to increase the capital stock to $1,500,000; authorizing the issue of bonds up to $500,000, and particularly authorizing the company to exercise all the rights, franchises, etc., conferred upon or granted to the company by the Legislature and various municipalities. W. F. Wheeler is Secretary. (May, 1909, pg. 367.)

Montreal St. Ry.—Application is being made by the company to the Montreal city council for its sanction to a number of new routes in various parts of the city. (Jan., pg. 57.)

Mount McKay and Kakabeka Falls Electric Ry.—Application was made, Feb. 3, to the Port Arthur city council, by A. E. Babcock, Slate River, Ont., with regard to the running rights of the M. McK. and K. F. E. Ry. through the rural municipalities and into Port Arthur. No action was taken. (Nov., 1909, pg. 849.)

Nelson St. Ry.—The city of Nelson, B.C., has granted a franchise for 20 years for the operation of a street railway in the city. Some additional plant has been installed in the substation at a cost of $6,055, and a new transmission line has been erected from the substation to Bonnington Falls, at a cost of $9,508. A contract has been let for the supply of poles, ties, etc., to be delivered by Mar. 15, and for the supply of 123 tons of 56 lb. relaying rails, turnouts, spikes, etc. (Feb., pg. 57.)

Niagara, St. Catharines and Toronto Ry.—The Bridgeburg, Ont., town council passed a resolution, Feb. 13, granting permission to the company to use the right of way from Fort Erie into Bridgeburg, where it will be enabled to connect with the G.T.R., Wabash Rd., and Michigan Central Rd. The company is now operating cars into Welland, and has completed the grading for an extension from Welland to Port Colborne, on which track will be laid in the spring. The route has been surveyed for a further extension from Port Colborne to Fort Erie, and it is in connection with this extension that the negotiations with Bridgeburg have been carried on.

Press reports recently stated that the long-talked-of project for the erection of a high-level bridge over the old Wel-

C.P.R. LANDS

The Canadian Pacific Railway Company have 9,000,000 acres of selected lands for sale in Manitoba, Saskatchewan and Alberta.

Maps, as enumerated below, showing these lands in detail, will be sent free on application.

Map No. 1—Winnipeg to Second Meridian	$ 8.00 to $15.00 per acre.
Map No. 2 - South-Eastern Saskatchewan, 2nd to 3rd Meridians	10.00 to 25.00 per acre.
Map No. 3—Main Line, 3rd Meridian to Range 10, W. 4th Meridian (generally)	8.00 to per acre.
Map No. 5 South-Western Alberta	8.00 to 15.00 per acre.
Map No. 6—Part of Alberta, Edmonton, Battle and Saskatchewan Rivers Districts—4th Meridian to Range 7, West 5th Meridian	10.00 to 25.00 per acre.
Map No. 7—Part of Western Saskatchewan, 3rd to 4th Meridians	10.00 to 25.00 per acre

All prices are subject to change without notice.

TERMS OF PAYMENT

An actual settler may purchase not more than 640 acres on the ten instalment plan by paying a cash instalment at time of purchase, interest at six per cent. on the unpaid purchase money at the end of the first year, and the balance of the principal, with interest, in nine equal instalments annually thereafter, as shown in the following table:

160	Acres at	$ 8.00	per acre,	cash payment	$191.70	first year's interest	$ 65.28	and nine instalments of	$160.00
"	"	9.00	"	"	213.70	"	"	"	73.46	"	"	180.00

NOTICE is hereby given that the Annual Meeting of the Shareholders of the Victoria Rolling Stock and Realty Company of Ontario, Limited, will be held at the offices of Messrs. Osler & Hammond, 21 Jordan Street, Toronto, on Wednesday, March 2, 1910, at twelve o'clock noon, for the reception of the Annual Report and election of Directors for the ensuing year.

By order,
G. T. CHISHOLM,
Secretary.

Toronto, February 12, 1910.

land Canal at St. Catharines would be started at an early date, and that the project was in connection with the N. St. C. and T. Ry. Later advices state that the bridge had nothing to do with the railway, its promoters including W. D. Woodruff, W. H. Merrit and R. H. Leonard, C.E. We have been officially advised that nothing definite has been decided as to the construction of the bridge, but that the idea is, if such a bridge is constructed, to make it of sufficient strength to permit the running of electric cars over it. (Feb., pg. 147.)

North Midland Ry.—The Ontario Legislature has under consideration a bill granting an extension of time for the construction of the lines authorized to be constructed by chap. 84 of the statutes of 1904. (Feb., pg. 147.)

Ottawa Electric Ry.—Application is being made to the company to extend its lines to and through Ottawa South, the recently annexed part of the city. The proposal has been referred to the city council's railway extension committee.

People's Ry.—At a meeting in Guelph, Ont., Feb. 4, a resolution was passed favoring the aiding of this line by the city, and the city council is preparing a bylaw for submission to the ratepayers.

A bill has been given a first reading in the Ontario Legislature authorizing the company to construct a number of additional lines, particulars of which were given on pg. 931 of our Dec., 1909, issue. (Feb., pg. 147.)

Port Arthur, Ont.—Application is being made to the Ontario Legislature by the city council of Port Arthur to abolish the Electric Railway and Light Commission and to provide for the government of the city and all its public utilities by a board of paid commissioners. It is also sought to have legislative approval to a number of bylaws, among which are the following:—Authorizing the city to pay the costs of the street railway litigation; to provide for the additional expense of double tracking the electric railway from Current River to the southerly boundary of the city; to enlarge the storage battery; to authorize the purchase of machinery and fittings for the new car barn and for the storage battery already installed; to authorize the purchase of a motor generator; and to authorize the Council to enter into an agreement with J. J. Carrick to provide for the extension of the electric railway to certain points. (See Port Arthur and Fort William Electric Ry., Jan., pg. 59.)

Queen Victoria Niagara Falls Park.—A bill is under consideration by the Ontario Legislature with reference to the property vested in the Park Commissioners and the powers which they have in reference thereto. The park is provincial property and is administered by a commission appointed by the Ontario Government. The act provides among other things that all the rights of the old St. Catharines, Thorold and Niagara Falls Road Co. are vested in the Commissioners, and that the Commissioners have power to construct and operate a street railway over the road and may construct the same to any point on lands vested in the Commissioners and may charge tolls on the same. The Commissioners may empower the Clifton Suspension Bridge Co. to operate its cars by any power except steam to and from its bridge across the Chain Reservation, subject to any order of the Board of Railway Commissioners, and subject to any rights of the Niagara Falls Park and River Ry., and to the terms of any agreement made with that company.

Queenston to Niagara Falls.—See International Ry.

Rainy River Radial Ry.—Application was made to the Dominion Parliament to incorporate a company with this title to construct the following lines of railway:—from the northern boundary of Minnesota near Fort Frances to the Lake of the Woods near the mouth of Big Grassy River; from an intermediate point on the line to the mouth of Little Grassy River; from the last mentioned line to the northern boundary of Minnesota near the Long Saulte rapids on the Rainy River and to the town of Rainy River. The provisional directors named were:—P. A. Smith, Fort Frances, Ont.; J. J. Warren, J. H. Spence, Toronto; W. A. Dowler, F. G. Depew, Fort William, Ont. Objection was made to the passing of the act on the ground that the lines proposed to be constructed were wholly within the province of Ontario, and that they were purely local in their character, although it was desired to secure connection with the Canadian Northern Ry. The bill was "talked out" by the committee. (Sept., 1909, pg. 685.)

Sherbrooke Street Ry.—At a meeting of the Sherbrooke, Que., city council, Feb. 3, the new agreement with the company came up for signature. There are a few minor matters to be adjusted before the agreement takes effect.

The company is making application to the Quebec Legislature to amend its charter in regard to its name, the location of its head office and its powers respecting the following matters:—The territory within which such powers may be exercised; borrowing; the extent of lands which may be acquired by the company; the privilege of the company in the use of its tracks; the approval of shareholders required in certain cases. C. B. Hibbard, formerly of the Quebec, Montreal and Southern Ry., is acting for the promoters of the new company. (Jan., pg. 59.)

Toronto Ry.—The Toronto city council is applying to the Ontario Legislature for an act authorizing it among other things to compel the Toronto Ry. to extend its service to districts recently annexed to the city, but so that such legislation shall not in any way extend the period of the present franchise. (Nov., 1909, pg. 849.)

Western Central Ry.—The Ontario Legislature has under consideration a bill to grant an extension of time within which the company may construct the lines authorized by its act of incorporation. The company also asks for authority to guarantee the bonds of other companies engaged in any business incidental to the working of a railway.

Winnipeg Electric Ry.—The residents of St. Francois Xavier have laid the following proposition before the company in reference to an extension of the line from Headingly west to that point:—"That the municipality will raise $500 a mile, and that each person will grade the road across his place, and will facilitate any reasonable arrangement for the construction and operation of an extension to St. Francois Xavier, and would ask the company to give this matter early consideration, with a view to having such extension in operation on or before Oct. 1, 1910." The proposal is under the consideration of the Suburban Rapid Transit Co., under which title the W.E. Ry. operates the Headingly line. (Feb., pg. 149.)

Victoria Rolling Stock Co.—Supplementary letters patent have been granted to this company under the Ontario Companies' Act, changing its name to the Ontario Rolling Stock and Realty Co. of Ontario, and authorizing it to deal in all kinds of real estate and to undertake the business provided for in chaps. 203, 204 and 205 of the Revised Statutes of Ontario, 1897.

C. H. Mackay, President Commercial Cable Co., gave a dinner to the New York officers and staff recently in celebration of the 25th anniversary of the inauguration of the company.

Electric Railway Notes.

The Hull Electric Ry., has received one wing plow from the Ottawa Car Co.

The British Columbia Electric Ry. is reported to have ordered 100 freight cars to be built at its New Westminster shops.

The Mount McKay and Kakabeka Ry., has ordered four Otis all steel cars from the Hart Otis Car Co., Montreal.

The Ottawa Electric Ry., has ordered eight pay-as-you-enter cars, with double trucks, 35 ft. long, from the Ottawa Car Co.

The Nelson St. Ry., has ordered two semi-convertible double truck cars, 43 ft. overall, from the Ottawa Car Co., Ottawa.

The Quebec Ry. Light and Power Co., has ordered 16 pay-as-you-enter single truck cars, with 18 ft. bodies, from the Ottawa Car Co.

N. P. Baker, heretofore Assistant to General Manager International Ry., Buffalo, N.Y., has been appointed Treasurer of the Company.

Application has been made for a Quebec provincial charter for the Montreal Elevated & Underground Ry. Co., with a capital of $20,000,000.

The Port Arthur and Fort William Electric Ry. has ordered four pay-as-you-enter cars, similar to those already in operation, from the Preston Car and Coach Co., Preston, Ont.

The St. Thomas, Ont., Street Ry. Commissioners are making arrangements for the overhauling of two cars, so as to make them into convertible cars for summer or winter use, at the Michigan Central Rd. shops at St. Thomas.

The Toronto City Engineer's Department is preparing a plan which would give a single fare service to Mount Pleasant Cemetery, by running the Toronto Ry. cars there, a new rail with two grooves to be laid on the Toronto and York Radial Ry.'s Metropolitan Division on account of the difference in gauge.

The Nipissing Central Ry. has received two cars, fully equipped, 43' 6" long over all, 32' 6" over bodies, with 4' 6" wheel base, G.E. 80 motors, quadruple equipment, Westinghouse AMM air brakes, and snowplows and pilots at each end, from the Preston Car and Coach Co., Preston, Ont. A further two cars similarly equipped are being delivered.

J. S. Clarke, formerly President of the Grand Valley Ry., laid an information which came before the Police Magistrate at Brantford, Feb. 15, against A. J. Pattison, A. Easson, J. H. Couch and J. Costin, alleging conspiracy against the company. The magistrate refused to grant a warrant for the arrest of Couch, who did not appear, and Clarke refused to go on in his absence.

The Quebec Ry., Light and Power Co. is seeking an injunction from the Quebec courts to restrain the Quebec and Lake St. John Ry. and the Canadian Northern Ry. from using a bridge over the St. Charles River, and claiming $10,000 damages. The bridge is owned jointly by the plaintiff company and by the Q. and L. St. J. Ry., and the question at issue appears to be the amount to be charged for the use of the bridge.

In a case against the Toronto Ry., Feb. 7, the widow of a passenger, who died from injuries received through falling from a car while intoxicated, sued for damages, on the ground that the conductor had neglected his duty in not attending to the passenger. Chief Justice Falconbridge in non-suiting the plaintiff, stated that the conductor fulfielled his duty, and from questions submitted to the jury it was held that the company is not responsible for the safety of intoxicated persons travelling on its cars.

GRAND MASTER, Capt. J. H. McMaugh, Toronto, Ont.; GRAND SECRETARY-TREASURER, Capt. H. O. Jackson, 376 Huron St., Toronto.

Shipping Federation of Canada.

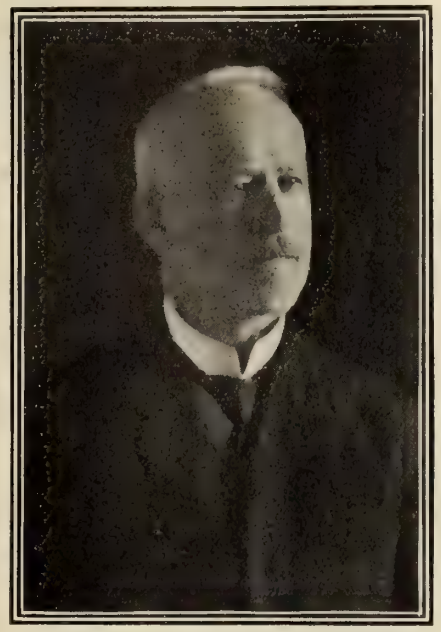
At the annual meeting in Montreal recently the report of the executive committee was presented by J. Thom, chairman. Following are extracts:—Navigation opened on May 1 with the arrival of the s.s. Corinthian, and closed with the sailing of the s.s. Montcalm, on Nov. 26. The number of seagoing vessels that arrived during the season was 659, with a tonnage of 1,893,595 tons, a decrease of 74 vessels and 83,854 tons as compared with previous season, this decrease in vessels and tonnage being the result of the trouble in the coal trade in Cape Breton. The passenger business showed a marked increase over that of 1908, and was most decided in the west-bound traffic, a fact showing the returning and increasing prosperity of the Dominion since the slump in the latter part of 1907. The shipments of apples increased by 219,030 barrels, cheese increased by 82,648 boxes, lard decreased by 10,346 packages, eggs by 10,282 cases, butter by 53,612 packages, box meats by 57,658 packages, flour and meal increased by 339,208 barrels, cattle decreased by 5,056 head, and sheep by 8,494 head, lumber increased by 7,851,842 ft. b. m., pulp and paper decreased by 9,582 tons, hay increased by 17,265 tons, and grain and seeds show a decrease of 3,871,117 bushels. This decrease in exports following on the bad year of 1908 with increased maintenance and working charges, shows what a small margin of profit accrues to the shipowner. As a matter of fact the greater number of vessels have been unremunerative for some time. Whether the slight improvement that is showing in other shipping trades will extend to the Canadian trade remains to be seen, meanwhile we can only hope that the worst is now past.

No trouble of any kind occurred on the wharves during the season, and sufficient men were available at all times to carry on the work. Employment was slightly less than in 1908, the daily average number of men employed being 659, compared with 669 in 1908.

The Signal Service stations were in full use during the season, and proved of great benefit. They have been supplemented by the erection of a Marconi wireless station on Tarte pier, thereby enabling steamers to communicate with the shore between Montreal and Quebec in thick weather.

Continuous work with dredges proceeded in the different sections of the ship channel, and the deepening at Beaujeu bank is now practically completed. The Government is obtaining a rock breaker for use at Cap a la Roche, with the aid of which it is expected that the deepening there will be finished in much less time than by the system at present in use. The buoys and lights gave every satisfaction during the season, and any defects reported to the department were at once attended to. The number of defects reported by masters and pilots was 53.

The structure and fittings of the last of the 14 new steel sheds in Montreal harbor was completed during the season, and the installation of the extension of the grain conveyors to nos. 11, 12, 13 and 14 was nearly completed at the close of navigation. This finishes the first part of the scheme of harbor extension. The wharves and roadways are in a very much superior condition now to what they were six or seven years ago, at the same time shipowners feel that they are not receiving value for the rents paid by them for shed accommodation, nor will they until some system for the cheap and expeditious handling of cargo to and from the upper storeys is in operation. The Harbor Commissioners at the beginning of the year proposed an increase in wharfage dues on certain classes of goods, and the importers took up the matter and petitioned the Premier strongly against the increase with the result that the proposal was held over. The floating crane built for the Commissioners arrived and was put into commission during the season, and should prove a valuable addition to the harbor facilities.



C. A. JAQUES,
General Manager, Merchants Mutual Steamship Line, Montreal and Lake Erie Steamship Co., and Montreal and Great Lakes Steamship Co.

In conjunction with the Quebec Harbor Board, a deputation from the Federation waited upon the Government to urge the construction of a dry dock of sufficient capacity, to take the large ships now engaged in the St. Lawrence trade. As an alternative scheme we put forward the construction of a floating dock, but so far nothing has come out of the representation. Every season it becomes more imperative that this want should be remedied. To urge the importance of at once formulating a scheme for a dry dock, we further petitioned the Government in May last.

The following resolution was carried unanimously. Resolved that the members of the Shipping Federation of Canada, record a cordial vote of thanks to Hugh A. Allan, who has been President since the inauguration in 1903, and who, owing to his absence from Canada, is now retiring, for his valuable services during the period in which he has held office. The interest manifested by Mr. Allan in all its affairs, together with his business experience and tact, have placed the members of the Federation under great obligation to him, and they regret that the increased demands of his business elsewhere deprives them of a continuation of those valued services.

The following officers were elected for the current year: President, A. A. Allan; Executive Council, J. Thom, Chairman; D. W. Campbell, R. W. Reford, W. R. Eakin, F. A. Wanklyn (or) A. Mackenzie; Treasurer, J. R. Binning.

The total tonnage entered with the Federation was 498,874 in 1908 and 512,198 in 1909.

Lake George Steamboat Co.

This company is building another steamboat for service between Lake George and Baldwin, N.Y. She will be 230½ ft. long over all, 59 ft. breadth outside; the engine will have a 52-in. diameter cylinder, 10 ft. stroke; there will be patent feathering wheels, and her speed will be 20 miles an hour. The hull will be steel. The boat, which will be ready for service next year, will be named the Horicon. A great variety of names was suggested, all of which had more or less to recommend them, and in selecting this one the management is carrying out a precedent already established, as is evidenced in the cases of the Vermont, the Ticonderoga, and the Mohican. The name Horicon signifies silvery waters, and has its origin from a tribe of Indians once inhabiting the shores of the lake; it is suggested by J. Fenimore Cooper's Last of the Mohicans The present steamboat, Horicon, has been in service on Lake George since 1877 and has carried thousands of people through the Lake each season without interruption or accident; she has been a very popular steamer, and no serious accident or loss of life has occurred in her long career. The advent of the new steamboat will mean the discontinuance of the old one, and trips operated by the new boat will be from Lake George to Baldwin and return, and will be the service which has been performed by the Sagamore since 1902. The Sagamore will perform the service from Baldwin to Lake George and return, which is now operated by the Horicon, and will also take care of the large number of excursionists who go to Lake George over the Delaware & Hudson Rd. for a day's outing.

R. & O. N. Co.'s Steamboat Rochester.

The Richelieu & Ontario Navigation Co., as stated in our last issue, has secured incorporation in Michigan under a similar title, the immediate object being to operate the s.s. Rochester between Youngstown and Ogdensburg, N.Y., on the schedule given in our last issue. The Rochester, which was launched at Wyandotte, near Detroit, Mich., last year, is expected to be completed in time to go into service on June 18, and will be thoroughly up to date.

The entrance hall, reached from the passenger gangway, will be finished in polished mahogany, with rubber tiled floor. Back of the entrance hall will be the dining room, capable of seating 150. This room will be panelled in oak, with rubber tiled floor and will have observation windows. In the entrance hall will be purser's office and parcel check room. The fore part of the main deck will be utilized for express matter, automobiles, etc. Ascending by the main staircase the main saloon is reached, both sides of which will be filled up with staterooms, many fitted with brass beds with bath and toilet rooms. At the bow and stern will be large open decks. The

The ladies' room will be decorated in cream and pink, in art nouveau style. The smoking room will be panelled in oak. Both rooms will have large windows affording an unobstructed view.

The Canadian Canals.

In his annual review of the work of the Department of Railways and Canals, the Minister speaking in the House of Commons recently in regard to the national waterways said Canada had shown more courage in making her canals free than had foreign countries. The port of Manchester, though 60 miles from the sea by canal and river, was an open port. He desired to draw attention to the fact that Montreal was now an open port, though many miles further from the ocean than Manchester. Canada had spent many millions in making Montreal an ocean port. Taking the expenditures on railways, canals and waterways generally, it was not at all out of the way to say that Canada had shown greater courage than any other country in the world in the amount of money expended per head of the population for carrying out these great works. The opinion of the Government with regard to the Georgian Bay Canal and the Welland Canal was well known. He had been for some time impressed with the necessity, owing to the great increase in canal traffic, of constructing another lock at Sault Ste. Marie. He would hazard a guess that such a lock would cost from $8,000,000 to $10,000,000. That lock, if constructed, ought to provide for a depth of 25 to 27 ft. of water, because it would be folly to half do the work, when in a few years the lock would have to be deepened or reconstructed.

During the season of navigation of 1909, the canals of Canada carried perhaps the largest volume of traffic in their history. The freight which passed through was 33,720,748 tons, compared with 17,502,820 in 1908. This was an increase of 93% in one year. To give an idea of the measure of increase in the freight traffic through the canals, he stated that three years ago the total traffic was only 10,523,185 tons, and 10 years ago it was only 5,013,693 tons; so that last year it was nearly seven times as much as it was 10 years ago. Of the traffic of 1909, 27,976,399 tons was eastbound and 5,744,349 westbound. He had not the figures at hand, but he could state generally that while the Canadian canals carried a large volume of U.S. traffic, the proportion of increase of Canadian traffic was perhaps a little more than that of U.S. traffic.

Referring to the Port Colborne harbor and elevator, the Minister pointed out that a large amount had been spent by his department and by the Department of Public Works in order to protect the entrance to the harbor, to make it deep enough to accommodate the vessels using it after the construction of the elevator. More work, however, would have to be done in the way of building breakwaters in order that the harbor might be fully protected, and that vessels might be perfectly safe there in taking on or discharging their cargoes, no matter what storms might be raging outside. The elevator had a capacity of 850,000 bush., and there were foundations and other provisions for increasing that to 2,000,000 bush. In 1909, there was put through the elevator about 1,500,000 bush., a very small quantity, but he was not at all sanguine that this elevator, if carried on by the Government, would handle any great quantity of grain. He was told by a very large shipper that the fact that there was such an elevator at Port Colborne, ready to tranship grain from the larger vessels into smaller ones, had a very modifying effect on the freight rates by other routes. It had been said it resulted in the saving of a cent a bushel, but even if it was only a half or a quarter of a cent a bushel it would mean a great deal to the people shipping their grain from the west. He had not made up his mind on the question of leasing the elevator to some one of the lines of transportation, but if that were done, unless some restrictions were imposed, it might deprive the Government of the benefit the elevator now conferred of keeping down the freight rates on other routes.

He did not think there was any chance of an amount being provided this year for the commencement of the Georgian Bay canal. He had not been discussing the subject. However, it was a great work which was before the people, and would be constructed in due time by the Government, which had always undertaken the great projects that the country required.

The act granting an extension of time to the Montreal, Ottawa and Georgian Bay Canal Co., within which to construct its deep-waterway from Montreal by the Ottawa and French Rivers to the Georgian Bay, was passed by the House of Commons, Jan. 21. Replying to a question the Minister of Railways and Canals said sec. 5, which allowed the Government on behalf of the country to take over the work at any time upon payment of the money which had been expended by the company, amply protected it, and when exercised would transfer to the Government whatever powers the company had.

An Ontario Steamship Merger.

Jas. Playfair, of Midland, Ont., President of the Midland Navigation Co., Ltd., and of the Empress Transportation Co., Ltd., has, with associates whose names have not been made public, bought a large block of stock in the Inland Navigation Co., Ltd., which has its headquarters at Hamilton, Ont. The purchase includes R. O. and A. B. Mackay's holding in the Inland Company, 2,700 shares; also G. Lynch Staunton's holding, some 300 to 400 shares. R. O. Mackay withdrew from active steamship work when the Inland Company was formed, and now A. B. Mackay retires, and it is said he has undertaken not to engage in the business again for at least five years. It is said that the price paid for the stock is 133, which would yield R. O. and A. B. Mackay $360,000 and make the total purchase by the Playfair interests from $390,000 to $400,000.

The Inland Navigation Co., Ltd., which was incorporated in 1908, took over the following companies and properties:—Hamilton and Fort William Navigation Co., New Ontario S. S. Co., Union S. S. Co., Dundee S. S. Co., Dunelm Ltd., Rosedale Ltd., Hamilton and Montreal Navigation Co., Winona S. S. Co., New Ontario Dock and Coal Co.'s wharf and coal business at Sault Ste. Marie, Ont., R. O. and A. B. Mackay's wharf, cartage and coal business at Hamilton and their wharf, shed and wharf privileges at Montreal. The Inland Co. has a capitalization of $2,000,000.

Following are the vessels in the three companies' fleets:—

Inland Navigation Co.—Neepawah, Wahcondah, Rosedale, Glenellah, Dundee, Dunelm, Winona, Strathcona, Donnacona, Dundurn, Stadacona.

Midland Navigation Co.—Midland Prince, Midland King, Midland Queen.

Empress Transportation Co.—Empress of Midland, Mount Stephen.

We are advised that the Inland Navigation Co., the Midland Navigation Co. and the Empress Transportation Co. will be merged, but at the time of our information it had not been decided what the name of the new company will be, though it is likely that the word Inland will be retained in some way. A number of the directors of the Inland Co. have retained their shares and will be interested in the new company.

Richelieu & Ontario Navigation Company.

Following are extracts from the report for the year 1909:—Gross earnings were $1,238,044.31, and net profit, after providing for fixed charges, interest, etc., $257,562.29. Operating expenses show a saving of 1% against the previous year. Four dividends, at the rate of 1¼% quarterly, were paid during the year.

The steamer Rapids Queen, mentioned in the last annual report, was placed in service July 1. In order to provide for the natural expansion of the company's business and to protect its interests, it was recommended at the last annual meeting that a modern twin-screw steamer be constructed for the Lake Ontario-Thousand Islands trade, and the steamer Rochester has been built and will go into commission in June. An additional Rapids and excursion steamer has also been ordered for the 1910 season. Having regard to future necessities and the benefits to be obtained, the company has purchased a general office building on Victoria Square, Montreal. The Insurance Fund has been credited with $36,000 out of the year's earnings, and $157,046.23 now stands to the credit of this account, of which $156,918.93 has been invested in bonds. This is in addition to insurance placed with insurance companies on shore properties, steamers, etc. During the year there were issued £50,000 of debentures, due 1937, to repay the company 75% of the expenditure made since the last issue for new steamers and property. There were also redeemed and cancelled, in accordance with the deed of trust, £3,400 of outstanding debentures.

Dividends for the half-year ended 31st December, 1909, have been declared as follows:—

On the Preference Stock, two per cent.

On the Common Stock, three per cent.

A further sum equal to one-half of one per cent. on the Common Stock will be paid thereon at the same time out of interest on the proceeds of land sales.

Warrants for the Common Stock Dividend will be mailed on 31st March next to Shareholders of record at the closing of the books in Montreal, New York and London respectively.

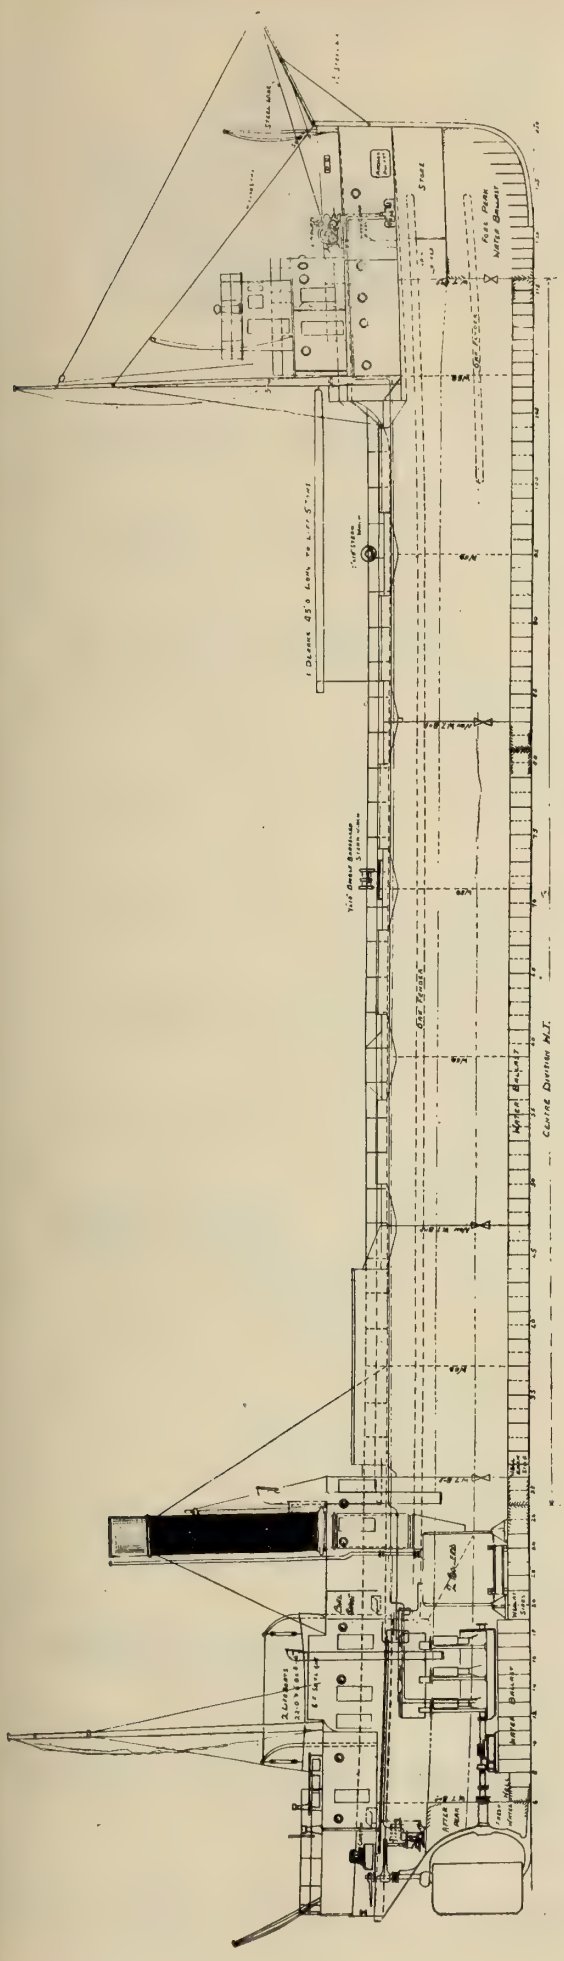
The Preference Stock Dividend will be paid on Friday, April 1 next, to Shareholders of record at the closing of the books at the Company's London Office, No. 62, Charing Cross, London, S.W.

The Common Stock Transfer Books will close in Montreal, New York and London at 3 p.m. on Tuesday, March 1st. The Preference Stock Books will also close at 3 p.m. on Tuesday, March 1st.

All books will be re-opened on Saturday, April 2nd next.

By order of the Board.

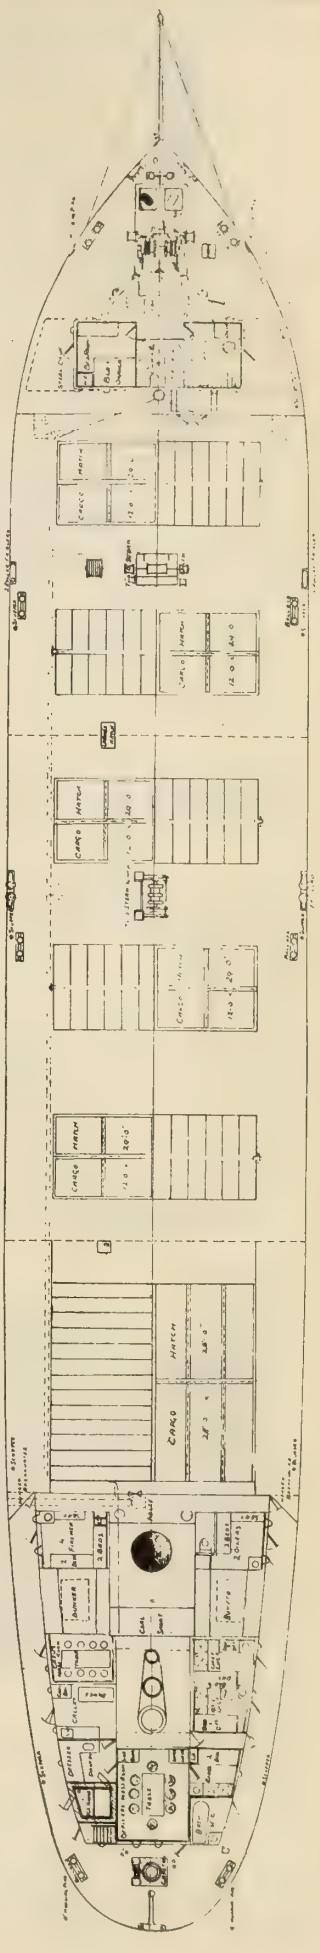
W. R. BAKER, Secretary.
Montreal, 14th February, 1910.



The Steamship Port Colborne.

Forwarders, Limited, Kingston, Ont., have purchased through R. A. Carter, Montreal, the steamship, Port Colborne, recently built in England, and on her arrival in Canada, she was taken possession of by her new owners, proceeding from Montreal to Buffalo, N.Y., from which port she carried a cargo of 2,500 tons of coal to Port Arthur, Ont. As a return cargo she loaded 89,000 bush. of wheat at Fort William for Kingston. At this latter port the company has a grain elevator with a storage capacity of 500,000 bush. Through this elevator wheat can be elevated and spouted into barges at the rate of about 15,000 bush. an hour. It is not intended, however, to use this house as a storage elevator, but as a working transfer house, elevating the grain out of the vessels which bring it to Kingston from the head of the lakes, into barges to be towed to Montreal. The company expects to be in complete operation in the spring, equipped with suitable lake steamers, and barges and the necessary tugs.

The Port Colborne is a steel screw freighter, of Welland canal size, being 250 ft. long over all, 42½ ft. wide and 20 feet deep. She is constructed with cellular double bottom, for water ballast, and fore and aft peak water tanks. The capacity of these tanks is 548 tons of fresh water in the double bottom, and 95 tons in the peaks. The boilers and engines are placed astern with coal bunkers, having a total capacity of 143 tons, on either side. On the main deck, at the stern are quarters for the chief and assistant engineers, cook, cook's galley, mess-rooms for officers and crew, and rooms for the firemen and oilers. Forward, below the main deck is the chain locker and store room, and on the main deck are quarters for the mates, wheelmen, seamen and watchmen, as well as a suite of apartments, consisting of sitting-room, bedroom and bathroom for the owner. Overthis are the captain's quarters, surmounted by a flying bridge and wheelhouse. The midships portion of the vessel is entirely given over for cargo storage, entrance being obtained by six hatchways, one 28 by 29 ft., and five each 12 by 29 ft., each. For handling the cargo there are provided one 7 by 10 in. steam winch, one 7 by 10 in. double-barrelled steam winch, and a steam derrick 43 ft. long, with a lifting capacity of five tons, attached to its foremast. A windlass engine is fixed on the main deck forward. Two lifeboats, each 20 ft. by 6 ft. 9 in., by 3 ft. 6 in. are provided. In addition to the usual hand steering gear for emergencies, steam steering gear is fitted for regular use. Light, the vessel has a draught of 4 ft. 6⅝ in. in fresh water, and with a dead weight cargo of 2,430 tons, has a draught of 14 ft. 4½ in. in fresh water. A profile and deck plan are given on this page.



Notices to Mariners.

The Department of Marine has issued the following:—

124. Dec. 24. 323.—Ontario, Georgian Bay, Penetanguishene harbor, range lights established. 324.—Ontario, Georgian Bay, Midland bay, Tiffin, new harbor established. 325.—United States of America, Lake Erie, Conneaut harbor range front light station, fog bell established.

125. Dec. 28. 326.—Quebec, Ottawa River, Grenville canal, upper entrance, range lights established.

126. Dec. 29. 327.—Nova Scotia, Annapolis basin, Port Wade, lighthouse established. 328.—Nova Scotia, south coast, East Ironbound island, hand fog horn at light station. 329.—Nova Scotia, south coast, Ship harbor approach, Nichol island, Wolf point, hand fog horn

Government Quarantine Steamship.

A contract has been awarded to a firm in Dartmouth, Eng., for the construction of a quarantine steamship for service at Halifax, N.S., at a cost of $22,600. The vessel will be of steel throughout, with five water tight bulkheads, and with provision for about five tons of water in the forepeak tank and 10 tons in the afterpeak. A steel deckhouse, 58 by 12 by 7 ft., will be built on the main deck, with lamp room, refrigerator and stairway to crew's quarters on the forward end, followed by galley and mess room, boiler and engine rooms, saloon, toilet and stairway to doctor's quarters, which are below the main deck aft. The captain's quarters will be placed on a texas abaft the wheel house on the upper deck. The hull will have a plate keel and be built of plates and bars in excess of Lloyds requirements for vessels of this size, and will be built under Lloyds special survey, class 100A. The dimensions will be:—length, extreme, 89 ft. 3 in.; length from forecastle of stem to afterside of stern post, 83 ft. 6 in.; beam, molded, 19 ft.; depth, 10 ft.; draft, with 15 tons of water and 30 tons of coal, to be 8 ft. at stern and 6 ft. at bow. The engine will be of the direct acting, inverted, compound surface condensing type, with cylinders 13 and 26 ins. diar. by 18 ins. stroke, making 150 revs. per minute, supplied with steam at 140 lbs. working pressure, by one marine boiler built to Lloyds survey, and to pass the requirements of the Canadian Steamboat Inspection Act, 10 ft. internal diar. by 9 ft. 6 ins. long, fitted with two Morrison's corrugated furnaces, 38 ins. diar. inside corrugations. Delivery is to be made at Halifax, N.S., within six months.

Tenders are being invited for another similar vessel of larger dimensions.

F. L. Corey, Dominion Atlantic Ry., Kentville, N.S., writes:—"During the year that has just past I gathered a great deal of valuable information from the Railway & Marine World, and think it invaluable to railway men."

Atlantic and Pacific Ocean Marine.

The Allan Line s.s. Numidian arrived at Halifax, N.S., with her bulkhead damaged and deck gear washed away. The damage, which was sustained during a storm off the Irish coast, was not serious.

The Allan Line is reported to have decided to equip all its passenger vessels with wireless telegraph apparatus, and to have placed a contract with the Marconi company. Several of the more important vessels have already been equipped.

H. A. Allan, of the Allan Line, is reported to have stated recently that the company would shortly call for for tenders for the construction of new vessels for its fleet. It is said that the boats will be of about 12,000 tons.

Major Moody, of the Mounted Police, on his recent return from Fort Churchill, is reported to have said that, with buoys and lights, Hudson Bay is good for navigation, but the trouble at present is with the many shoals and rocks, especially along the coast.

The steamships forming the Battle Line, managed by W. Thomson and Sons, St. John, N.B., each of which is owned by a separate company, are to be combined under one ownership, a company being in course of organization for that purpose.

The C.P.R. s.s. Empress of Ireland sailed from Liverpool, Eng., Feb. 11, for St. John, N.B., after having been overhauled after her accident in the St. Lawrence last fall. During the time she was under repair, the company operated one of the Allan Line steamships under charter.

The Allan Line s.s. Corinthian arrived at St. John, N.B., Feb. 3, inaugurating the St. John-London-Havre service under the new schedule, whereby Halifax has been eliminated as a port of call. Merchants at Halifax are taking the matter up with a view to the reinstatement of the port for this service.

Holt & Co., owners of the Blue Funnel Line, it is reported, will place the recently built s.s. Protesilaus in service between Liverpool, Eng., and Canadian Pacific ports, via the Suez Canal and Asiatic stations shortly. The vessel is 501 ft. long, with a deadweight capacity of 13,000 tons.

G. M. Bosworth, Fourth Vice President C.P.R., while in Austria recently in company with G. McL. Brown, European Manager, is reported to have said that if he were satisfied with the facilities at Trieste harbor, the scheme for a direct line between Canada and Austria would be immediately realized.

The Royal Commission appointed to enquire into the trade relations between Canada and the West Indies completed its work at Kingston, Jamaica, Feb. 2, and it is understood that the members were unanimously of the opinion that a subsidized fast weekly line of steamers between Canada and Jamaica would be of great benefit.

English rumor has again been busy with the statement that the C.P.R. was about to absorb the Allan Line, and that H. A. Allan would be placed in charge of the steamships, with the title of Fifth Vice President. Sir Thos. G. Shaughnessy, President C.P.R., who returned to Canada from Europe, Feb. 2, promptly denied the reports, and is credited with the statement that Mr. Allan had no connection with the C.P.R., and so far as he knew there was no prospect that he would have.

The Board of Railway Commissioners early in Feb. heard the application of the Elder Dempster Steamship Co. for an order directing the C.P.R. and G.T.R. to apply the established export rate on general merchandise shipped from Eastern Canada to Montreal, St. John and Halifax for shipment to British Columbia ports, by way of the Tehuantepec Isthmus. The Board's decision had not been announced at the time of going to press.

Press reports from various points state that the Canadian Northern Ry. has made arrangements for making Southampton its English port of call, and others state that application has been made to the authorities at Liverpool for berthing accommodation there. D. B. Hanna, Third Vice President, is at present in Europe for the purpose of making all necessary arrangements in connection with the inauguration of the C.N.R. Atlantic service, and until such arrangements have been completed, any such statements are, at least, premature.

An enquiry was held, Feb. 11, into the causes of the stranding of the Allan Line s.s. Corinthian at Halifax, N.S., in Dec. last. The commissioners found that the disaster was caused by an error of judgment on the part of the master in estimating his distance from a schooner showing no lights, and also from the shoal on the northwest point of George's Island, the error probably being due to the strong glare of the electric lights on the wharves. The master was held to have been fully justified in manœuvering the vessel as he did, and was exonerated from all blame for the stranding.

Maritime Provinces and Newfoundland.

The Newfoundland sealing fleet, which is due to leave St. John's about Mar. 10, will consist of 18 steamers. Last year, two of the steamers engaged were lost.

The Dartmouth ferry steamboat Halifax, which was recently considerably damaged by fire at Halifax, has been sold by tender for $850 to C. Brister and Sons, and will probably be broken up.

The Dominion Atlantic Ry. will, it is said, inauguarate a direct steamship service between Digby, N.S., and Boston, Mass., commencing July 1, leaving Digby every Wednesday and Saturday, and Boston every Tuesday and Friday.

The Nova Scotia bark Calcium while bound from French Guiana to Carteret, N.J., was destroyed by fire, Feb. 6, the crew being saved by the British s.s. Servian, and landed at Halifax, N.S., Feb. 8. The Calcium was built at Parrsboro, N.S., in 1896, her dimensions being:—length, 166.3 ft.; breadth, 35.9 ft.; depth, 18.7 ft.; tonnage, 687 register.

With a view to the abolition of duplicate names, the following changes have been made in the names of light stations, and the Marine Department has issued a notice that, in future, the new names only will be used:—Debert to Masstown, N.S.; Green Cove to Port Maitland, N.S.; Seal Island to Dog Island, N.S.; Marjories Isle and Gooseberry Island to Marjorie Island, N.S.; Grand Rustico to North Rustico, P.E.I.; Montee du Lac to Cap Brule, Que.

The Government has decided to introduce a bill into the House of Commons, providing for an increase in the aid which it may grant for the construction of dry docks in Canada, from a bonus of 3% for 20 years, on a maximum expenditure of $1,500,000, to 3½% for 25 years. A recent proposal made to the Government in which several of the large transportation companies were said to be interested, included a bonus of 4% for 50 years on the cost of constructing dry docks at St. John, N.B., and Levis, Que.

The Summerville Tow Boat and Ferry Co. will probably build a steamboat for the forthcoming season to replace the Avon in the Avon River. The Avon, which has been on this route for nearly 20 years, has been condemned. At a meeting held at Windsor, N.S., recently, a committee was formed to sell sufficient

new stock to cover the estimated cost of $10,000.

A resolution adopted in the House of Commons, Feb. 7, called for the production of reports and surveys made of the Cape John harbor and Tatamagouche Bay, N.S., and recommended a change in the winter route between the mainland and Prince Edward Island, and also improved facilities between the two points, both summer and winter, and suggested that the P.E.I. winter port should be changed from Georgetown to Charlottetown, with a service to Tatamagouche Bay instead of Pictou.

Province of Quebec Marine.

The name of the car ferry, Henry R. James, no. 126,388, registered at Quebec, has been changed by order in council to John S. Thom.

The Department of Railways and Canals received tenders Feb. 22, for improving the approach to St. Gabriel locks on the Lachine canal.

Harbor improvements are being carried on at St. John's, concurrently with the widening of the channel of the Richelieu River. The channel will have a width of 300 ft., with a depth of 14 ft., but the work will not be completed for several years.

The longshoremen of Montreal have notified the steamship companies there that they desire the abolition of the bonus system, which has prevailed for many years. The rates at present in force are 27½c. an hour for day work and 32½c. for night work, with a bonus of 2½c. an hour, payable at the end of the season, to those who complete the season. They are asking for flat rates of 30 and 35c. an hour.

Ontario and the Great Lakes.

Capt. H. Boult, of the steamboat Turret Chief, died at Collingwood, Feb. 6, aged 39.

The name of the steamboat Camilla, no. 100,024, registered at Toronto, has been changed by order in council to Russell Roque.

The Michigan Central Rd., is reported to be planning the erection of a bridge across the Welland canal, to be operated by electricity for the passage of vessels.

The Reid Wrecking Co.'s steam tug, City of Sarnia, which it has recently constructed to replace the tug Ottawa, destroyed by fire last fall, was given a trial run, Feb. 4.

The London city council will place in the estimates for the current year, $1,000 for dredging the River Thames, and will also ask for tenders for building a dredge for the purpose.

The Argyle Steamship Co. has purchased a steamboat for service on Lake Ontario, in conjunction with its present vessel, the Argyle. Capt. Moller recently went to England for this purpose.

The Toronto Ferry Co. has ordered from the Polson Iron Works, Toronto, a ferry steamboat, 185 ft. long, 44 ft. beam, capable of carrying 2,200 passengers. The contract price is stated to be $80,000.

The Richelieu and Ontario Navigation Co., will probably utilize the steamboat Rapids King as a freighter between Montreal, Toronto and Hamilton during the forthcoming season.

Capt. E. A. Booth of the Richelieu and Ontario Navigation Co.'s steamboat Toronto, will, at the opening of navigation, be transferred to the steamboat Kingston, and Capt. Redfern of the Belleville, will take his place on the Toronto.

The Richelieu and Ontario Navigation Co. intends, during next year, to improve its Saguenay division, and will either build new boats, or lengthen and rebuild the steamboats Murray Bay and Tadousac.

The Richelieu and Ontario Navigation Co. has leased the premises at 48 Yonge St., Toronto, previously occupied by the Royal Bank, for offices, which it will share with the Chicago and North Western Ry.

The steamboat Wissachickon which was driven ashore on the Outer Duck Island on the north shore of Georgian Bay in December last, was released Feb. 7, and taken to a safe anchorage between the islands. It is reported that she has not suffered much damage.

The Porcupine Transportation and Trading Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $40,000 and office at Cobalt, to own and operate steam and other vessels, and to carry on a general business of carriers of passengers and freight.

The Huntsville, Lake of Bays and Lake Simcoe Navigation Co.'s annual meeting was held at Toronto, Feb. 9, when the report for 1909 was adopted. The amount in hand at the end of the year was transferred to profit and loss, no dividend being declared. The officers and directors were re-elected for the current year.

The Richelieu and Ontario Navigation Co. is rebuilding its steamboat Three Rivers at Sorel. The company's new Rapids steamboat, which is under construction at Toronto, is expected to be ready for service by July 1, and its steamboat, Rochester, under construction at Detroit, Mich., early in June.

The Niagara Navigation Co. has appointed the following officers to its vessels for the coming season:—Cayuga, captain, J. McGiffin; engineer, G. Arnold; Chippewa, captain, G. J. Smith; engineer, H. Parker. Corona, captain, W. Malcolm; engineer, A. J. Woodward. Chicora, captain, H. King; engineer, J. Finlay.

The Welland Board of Trade passed a resolution Feb. 2, a copy of which was forwarded to the Minister of Railways and Canals, asking the Department to record freight rates on all produce passing through the canals, by having the bills of lading state distinctly the rate the vessel was obtaining before the canal pass should issue.

The U.S. Lake Survey reports the levels of the Great Lakes, for Jan., in feet above tidewater, as follows:—Superior, 601.96; Michigan and Huron, 579.96; Erie, 571.26; Ontario, 244.94. As compared with the average stages for the past ten years, Superior was 0.41 ft. below; Michigan and Huron, 0.18 ft. below; Erie, 0.45 ft. below, and Ontario 0.41 ft. below.

The Canadian Association of Masters and Mates held its eighth annual meeting in Toronto, Feb. 8, and decided to dissolve the organization. Those in attendance then organized as the Shipmasters' Association of Canada, and elected the following officers for the current year:—Capt. J. H. McMaugh, Grand Master; Capt. J. McGiffin, Grand First Officer; Capt. H. O. Jackson, Grand Secretary-Treasurer.

The Montreal River Transportation Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $40,000 and office at Toronto, to own and operate steam and other vessels and other means of transportation, and to carry on the business of common carrier. The provisional directors are, W. M. Kervin, Callander, Ont.; W. H. Garvey, J. A. Rowland, A. Dwyer, J. N. Mulholland, Toronto.

The Mutual Steamship Co.'s annual meeting was held at Welland, Feb. 4. A dividend of 6% for the year 1909 has been declared. Following are the officers and directors for the current year:—President, D. McGillivray, Port Colborne; Vice President, W. E. Phin, Welland; Managing Director, J. W. Norcross, Toronto; other directors, W. M. German, Welland, and R. M. Wolvin, Duluth, Minn.

The Farrar Transportation Co.'s annual meeting was held at Collingwood, Jan. 25. Following are the officers and directors for the current year:—President, D. D. Lewis, Philadelphia, Pa.; Vice President, T. I. Thompson, Owen Sound; Managing Director and Secretary-Treasurer, G. E. Fair, Collingwood; other directors, E. Stubbs, G. P. Pearsall, M. Snetsinger, E. R. Wayland, W. E. Allen, A. W. Howe, and J. G. Ferris.

With a view to the abolition of duplicate names, the following changes have been made, and the Marine Department has issued a notice that, in future, the new names only will be used:—Stonehouse point to Glengarry point; Brown's point to Knapp point; Gage point to Ninemile point; Indian point to Point Pleasant; Egg Island to Scotch Bonnet; Gull island to Peter Rock; North Foreland to Long point; Big Otter creek to Port Burwell.

The Kingston civic finance committee has recommended to the city council, that a by-law be submitted to the taxpayers as soon as possible, granting exemption from taxation to the Kingston

Shipbuilding Co., on its drydock property, on condition that the company agrees to guarantee an expenditure of $20,000 a year in salaries and wages, and an additional $50,000 this year in buildings and equipment, and if it fails to do this it will pay taxes on $50,000.

J. W. Norcross, of the Mutual Steamship Co., Toronto, and R. M. Wolvin, of Duluth, Minn., are having a vessel built at Port Glasgow, Scotland, of which the following are the chief details:—length between perpendiculars, 250 ft.; breadth, 42 ft. 8 ins.; depth to awning deck, 20 ft. 6 ins.; draft, 14 ft.; deadweight capacity, 2,451 tons; hold capacity, 136,539 cubic ft.; 'tween deck capacity, 8,043 cubic ft. The engines have cylinders 17, 28 and 46 ins., diar., by 33 ins. stroke, supplied with steam at 185 lbs. pressure by two boilers, each 12 ft. by 11 ft. The vessel is built for a speed of 9½ knots an hour when loaded.

The Steamers Agency, Ltd., Montreal, is having a vessel built at Port Glasgow, Scotland, for the lake trade, of which the following are the chief particulars:—length, between perpendiculars, 249 ft.; breadth, 43 ft.; depth to awning deck, 26 ft. 6 ins.; draft, 14 ft.; deadweight capacity, 2,338 tons; capacity of hold, 102,059 cubic ft.; capacity 'tween decks, 73,101 cubic ft. The engines have cylinders 18, 30 and 50 ins. diar., by 36 ins. stroke, supplied with steam by two boilers, each 13 ft. by 10 ft. 6 ins., at 180 lbs. pressure. The vessel is built for a speed of 9½ knots an hour when loaded. The Steamers Agency is controlled by Munderloh & Co., Montreal. It is said the vessel will be largely used in the Wallaceburg sugar trade.

At a recent meeting of the Lake Carriers Association and the Great Lakes Protective Association, at Detroit, Mich., A. A. Wright, President Dominion Marine Association, said insurance rates could only be brought down by the united action of vessel owners. The present rate to Lake Ontario is 6%, and to Montreal 7%, and he added that two-thirds of the premiums paid on the insurance of these ships has remained in the pockets of the underwriters. He also mentioned that the valves of the Canadian lock at the Sault canal are too large, thus causing the too sudden flooding of the locks, masters having frequent difficulty in controlling their vessels. President Livingstone spoke on the necessity of additional lockage facilities at the Sault, and urged the Canadian members to begin at once an agitation for the construction of a second lock on the Canadian side of the St. Marys River.

Manitoba, Saskatchewan and Alberta.

The Arctic Ice Co., Winnipeg, has awarded a contract for the construction of a twin screw steam tug for operation on the Red River. She will be 70 ft. long over all, 16 ft. 6 ins. beam, and 4 ft. 6 ins. draft, and will be of steel throughout.

H. Sutherland, Executive Agent Canadian Northern Ry., Winnipeg, is having built a twin screw steamboat for operation on Lake Winnipeg, in the stone trade. She will be built of steel, and will be 175 ft. long, by 40 ft. beam.

J. H. Hyland, of the Hyland Navigation and Trading Co., has called the attention of the Winnipeg board of control to the fact that the navigable channel of the Red River has been made very crooked, and in some places dangerous, owing to the number and style of bridges which have been erected across it from time to time. He opposed the proposed erection of a bridge at the foot of Lombard St., Winnipeg, and stated that, probably, there would be 25 boats running on the river this year.

The question of the development of western waterways was brought up in the Senate Feb. 11, when Senator Davis asked for surveys and reports on proposals to improve the navigation of the Saskatchewan River, in order to facilitate passenger and freight traffic from the Rockies to Winnipeg. He said that with a little improvement a waterway could be opened from Edmonton to Winnipeg, by way of the North Saskatchewan and Saskatchewan Rivers and Lake Winnipeg, and by the South Saskatchewan River between Medicine Hat and Winnipeg. By the North Saskatchewan, Edmonton was about 500 miles to the Forks, and from Medicine Hat to the Forks, by the South Saskatchewan, it was 370 miles. Very little dredging would have to be done, but there would have to be some cutting to bring Lakes Manitoba, Winnipeg and Winnipegosis into the system.

B.C. and Pacific Coast Marine.

The vessel which the Boscowitz Steamship Co. is having built on the Clyde, Scotland, will be 180 ft. long, 32 ft. wide, and 19 ft. deep, with 500 tons deadweight capacity, and accommodation for 56 first class passengers, in adidtion to a large third class capacity.

The C.P.R. is adding a vessel to its B.C. Lake and River Service, which is to be ready for next year's trade. The hull is to be of steel throughout, and engines of the tandem compound type. The contract price is stated to be about $120,000. She will operate on the Arrow Lake and adjacent waters, and it is reported that another vessel will probably be ordered in the near future for operation on Kootenay Lake.

Press reports from the Pacific coast state that the Union Steamship Co., Vancouver, B.C., has ordered a steamboat for the coast trade between Vancouver and Prince Rupert. The hull, it is stated, is under construction at Dublin, Ireland, which after launching, will be taken to Belfast for the installation of machinery.

Capt. T. H. Worsnop, of the Canadian-Mexican Line, left Victoria recently for England, where he will arrange for the acquirement of two, and possibly three vessels for this service. The company is at present operating the steamships Georgia and Lonsdale under charter, between Victoria and Vancouver and Salina Cruz, and this charter expires in June, when they are to be returned to England. The new vessels, it is reported, will arrive on the coast in May and June.

The Dominion Government Hydrographic steamer Cartier, which was launched recently at Newcastle, Eng., was designed for the Pacific Coast hydrographic service. There are a large number of watertight compartments ensuring her safety when she is in uncharted waters. Her equipment includes two gasolene launches, fitted with drawing boards, for use on shore soundings, and in the chart room, which is especially large, a special drawing table has been fixed. The vessel is steam heated throughout, and fitted with improved ventilation to provide for extremes of temperature. Full particulars of this vessel were given in our Oct., 1909, issue.

An Experimental Mallet Articulated Locomotive.

By G. I. Evans, Chief Draughtsman, Locomotive Department, C.P.R., Montreal.

A Mallet articulated locomotive was designed and constructed by the C.P.R. during 1909, and embodied some original features which, in addition to its being the first of its kind on this road, made it an experimental locomotive. The object of this paper is to describe briefly some of its details, tests made on it, and finally what it is doing in regular service. For the benefit of those who have not had a very close acquaintance with the Mallet articulated, it may be said that a Frenchman named Mallet was the first to successfully design and construct a jointed or articulated locomotive, that is, one which is so arranged as to permit of part of the wheel base moving sideways independently of the remainder, thus enabling a locomotive with a long wheel base to better adapt itself to sharp curves. As the locomotive was to be used in pushing service in the Rocky Mountains, it was necessary that it should traverse curves of at least 15 degrees and have comparatively high tractive power. The following table gives the general dimensions:

Type	0-6-6-0
Gauge	4′ 8½″
Service	Pusher
Fuel	Bituminous Coal
Tractive power	57,400
Weight on drivers, working order	262,000
Weight, total in working order	262,000
Weight of engine and tender, working order	391,000
Wheel base, front engine	10′ 4″
Wheel base, rear engine	10′ 4″
Wheel base, total engine	35′ 2″
Wheel base, engine and tender	60′ 7″
Weight on drivers ÷ tractive effort	4.57
Tractive effort × dia. drivers ÷ equivalent heating surface	975
Equivalent heating surface ÷ grate area	59
Weight on drivers ÷ equivalent heating surface	77
Cylinders, dia. and stroke h.p.	23¼″ x 26″
Cylinders, dia. and stroke l.p.	34″ x 26″
Valves, dia. and kind h.p.	11″ Piston
Valves, dia. and kind l.p.	12″ Piston
ving wheels, dia.	58″
Driving axles, size	Main 9½x12, others 9x12
Boiler, kind	Radial stayed, wagon top
Pressure	200 lbs.
Firebox, length and width	120″ x 69⅞″
Firebox, thickness of sheets	5-16″, ⅜″, ½″, 7-16″
Firebox, water spaces	Sides, 4½″; throat, 5″; back, 3½″
Tubes, number and dia. in front section	281, 2″ O.D., and 12, 2¼″ O.D.
Tubes, length in front section	96″
Tubes, number and diameter in rear section	289, 2″ O.D.
Tubes, length in rear section	109″
Heating surface, tubes	2,605 sq. ft.
Heating surface, firebox	180 sq. ft.
Heating surface, total	2,785 sq. ft.
Superheating surface	420 sq. ft.
Equivalent heating surface*	3,415 sq. ft.
Grate area	58 sq.ft.
Tender tank, kind	Semi-water bottom
Tender frame sills	Centre, 13″; sides, 10″
Tender trucks, kind	Equalizer
Tender wheels, size	34″ dia.
Tender axles	5½″ x 10″
Water capacity	5,000 Imp. Gals.
Coal	12 tons

*Equals total heating surface + superheating surface × 1.5.

CONSTRUCTION, GENERAL.—The outline of the locomotive is shown by the line drawing, fig. 1, and the half-tone engraving, and reference to these shows that there is considerable difference between this design and other locomotives recently put into service on American railways. For convenience of comparison, a line drawing of a Mallet locomotive, designed and built by the Baldwin Locomotive Works, is reproduced in fig. 2. The most striking difference between the two designs is in the arrangement of the cylinders, the shortness of the front bumper or footplate, and the position of the superheater. The absence of front and back guiding trucks is also noticed, but these are not in general use, being advocated by practically only the Baldwin Locomotive Works. This arrangement of cylinders, whereby the two pairs are brought together near the centre of the locomotive, permits of an extremely simple pipe arrangement, cutting out a number of packed expansion joints, everyone of which is a continual source of trouble through leakage. The removal of the cylinders from the front also permits of shortening the overall length of the locomotive, and, as locomotives of this type are very long, every foot possible must be saved to permit of their being taken into existing roundhouses. Provision has been made for changing piston packing rings by simply removing the front cylinder heads, disconnecting the main rod from the crosshead, and pushing the piston out into the space between the two cylinders. The piston valves have also been taken care of in a similar manner, so there can be no objection to this arrangement on account of inaccessibility.

GEORGE McL. BROWN
European Manager, Canadian Pacific Railway.

BOILER AND SUPERHEATER.—This is of the wagon top type, as shown by fig. 3, is radially stayed, and has an unusually small front ring and smokebox. There are three separate compartments in the barrel, the front of which is practically a feed-water heater, and, owing to its small diameter, is full of water all the time. The injectors discharge into this compartment, which is connected to the boiler proper by two equalizing pipes 4″ in diameter, one of which is located on the side centre line and the other on the top.

The second or middle compartment is for the superheater, which consists of double loops of 1¼″ seamless steel tubing dropped down into the path of the hot gases from the firebox. There are 69 of these superheater elements. One end of each connects to the saturated header, which takes steam from the boiler, and the other connects to and discharges into the superheated header, which is connected direct to the h.p. cylinders. When the locomotive was first turned out the superheater was connected to the l.p. cylinders, but, from tests made subsequently, it was changed as described. The reasons for this are explained further on. Two ¾″ blower pipes having nozzles are so located as to blow jets of steam diagonally across the superheater compartment, through the tubes, to bring down any soot which may collect.

There is no steam in the superheater pipes when the throttle is closed, but no cases of burning out have developed after about four months' service, nor is any trouble anticipated, as this condition applies, although to a lesser degree, to other types of superheaters which are giving good service. The superheater pipes are secured to the headers by union nuts, and are readily removable for repairs, one element at a time, through the opening at the top of the boiler, which is closed by a flanged steel door. If necessary, the complete superheater, header, and tubes may be lifted out bodily.

The back compartment is the boiler proper or steam generating section, and the construction is similar to ordinary boilers, except that the radii on the cor-

PITTSBURG AND NEW YORK

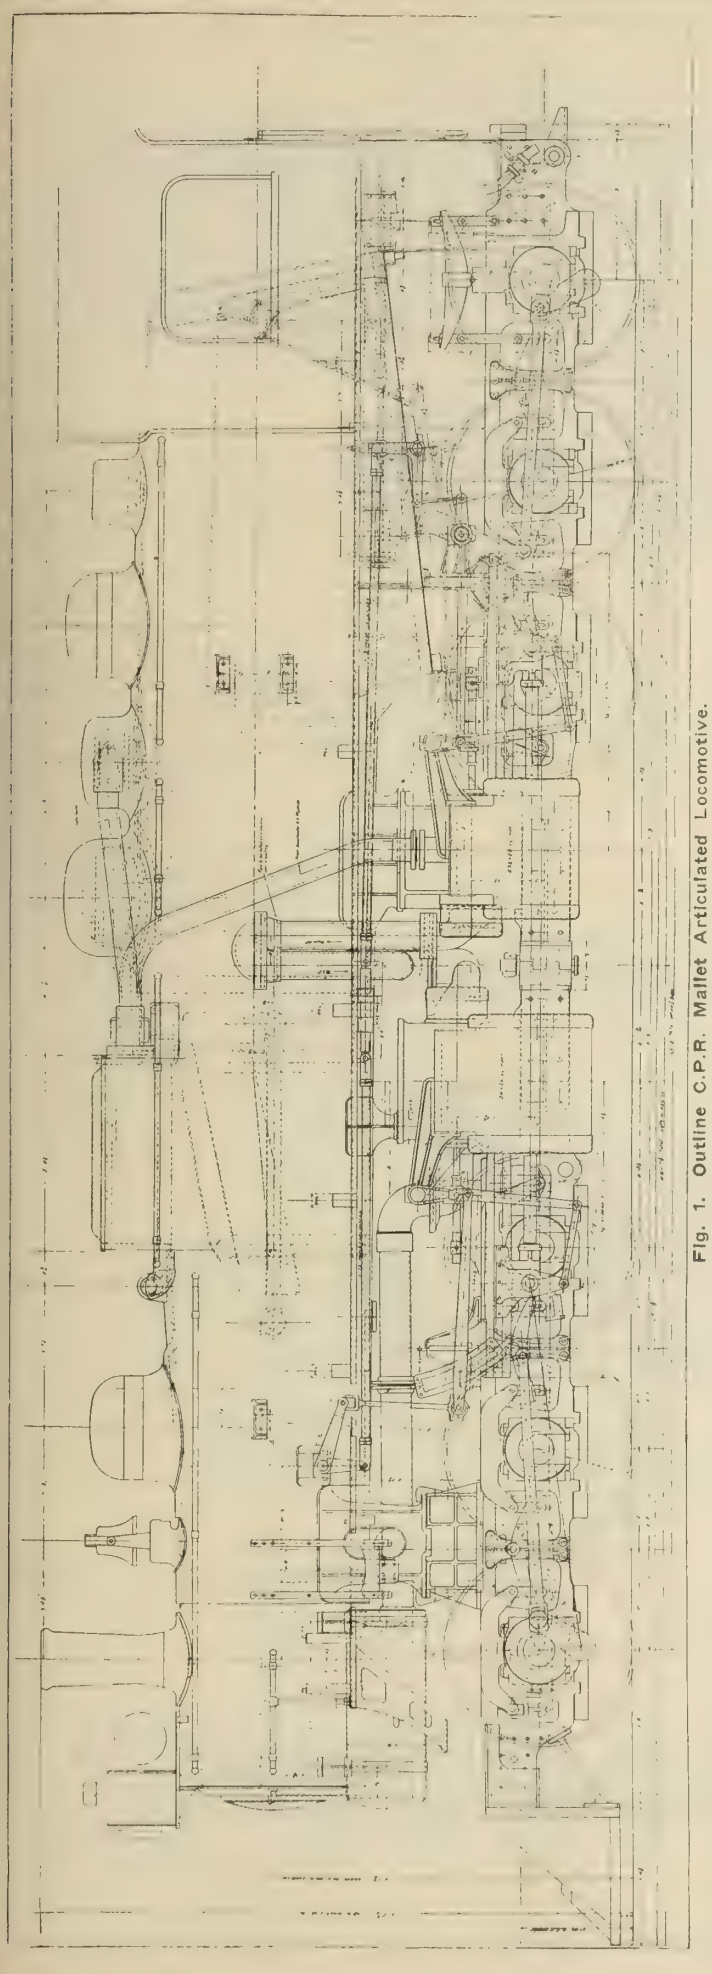

Fig. 1. Outline C.P.R. Mallet Articulated Locomotive.

ners of the firebox, both inside and outside, are larger than usual. This has been done to increase the rigidity of the sheets, which, it is believed, is largely responsible for staybolt breakage on the end rows.

There are four flue sheets in the boiler and two sets of flues. The front set is 96" long and the back 109", with a 63" superheater compartment between, and although cleaning holes have been applied underneath, it is seldom found necessary to use them, all cinders being carried through by the action of the draft.

As already stated, the front section of the boiler is really a feed-water heater, and has 281 tubes 2" O.D. and 12 tubes 2¼" O.D., giving 1,230 sq. ft. of heating surface, leaving 1,555 sq. ft. in the steam generating section (tubes and firebox).

The measure of steaming capacity of this locomotive, as expressed by the formula $\frac{\text{T. P. (max.)}}{\text{H. S. (Total)}} \times$ dia. drivers, is shown in comparison with others of a similar type in the following table, and, as the C.P.R. locomotive has a superheater, the equivalent heating surface has been used:

Road	Builder	$\frac{\text{T.P.(max.)}}{\text{H.S.(total)}}$ x dia. drivers
C.P.R.	C.P.R.	975
B. & O.	A. L. Co.	715
Gr. Nor. (road)	B. L. Co.	813
Gr. Nor. (pusher)	B. L. Co.	690
Erie	A. L. Co.	910
D.N.W. & P.	A. L. Co.	775
Cen. Brazil	A. L. Co.	915

In using this factor in comparisons, it must be borne in mind that the lower its value the greater will be the capacity of the boiler as a steam generator, and from the above table it might seem that the C.P.R. locomotive would not steam satisfactorily. This, however, is not the case, as an inspection of the boiler pressures in figs. 10 and 12 will show.

The injector check valve is located on the top centre line of the boiler, and consists of a cast-iron body, with connections for the right and left-hand injectors, and a third connection suitable for a pipe or hose coupling, which is used for filling or blowing off the boiler.

Throttle, Steam and Exhaust Pipes.—The throttle valve is located on the top of the boiler outside, and consists of an iron casting, having two 5" steam-pipe connections, one on either side. The joint to the boiler is made by a brass ball ring, having an opening 12¾" in diameter. The throttle casting extends down through this, and connects to a cast-iron dry pipe, which takes steam from a dome set further forward on the same course. The arrangement of this is shown clearly on the boiler drawing, fig. 3.

Outside steam pipes lead from the throttle to the saturated header of the superheater, and steam, after passing through it, goes directly to the h.p. cylinders, also through outside pipes, which are heavily lagged to prevent condensation, as are also the pipes from the throttle. This portion of the piping is of course all high pressure, but no special importance attaches to it, as there is no movement in the pipes, the h.p. engine being attached rigidly to the boiler. There is therefore no chance of leakage if the joints are properly made.

The steam exhausts from both h.p. cylinders into a common header or receiver bolted over the ends of the steam chests, and this header connects by a 7" pipe to a similar one on the l.p. cylinders, which connection, however, must be flexible, as the movement of the front truck begins to affect the piping at this point, and, to minimize its effect, the connection has been placed directly over the pivot point of the front truck. The receiver pipe between the two headers extends upward about 6 ft., which was done to give sufficient volume; and this pipe, down to the point where it enters the l.p. header, is braced solidly to the boiler, and the connection which bolts to the l.p. steam chest rotates about it, due to the movement of the front engine. This rotation is about 5 degrees on a 20 degree curve, which is the greatest the locomotive will be called on to traverse. The joint is packed with alternate cast-iron and babbitt packing rings, and is the only one in the pipe system in which packing is used.

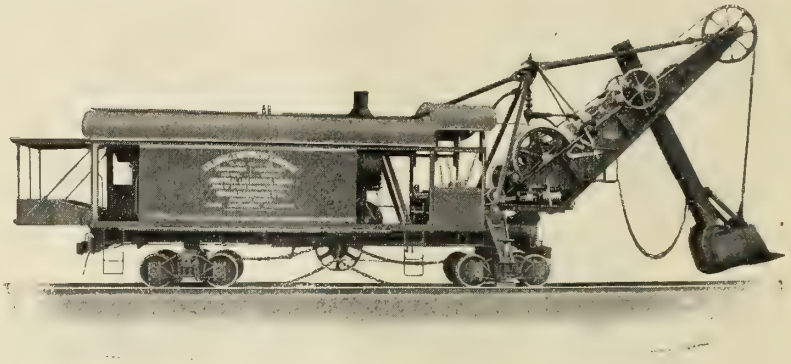
The exhaust pipe connects to the cylinder and under side of the smokebox by ball joints, and both ends have a small rotary movement, but as the angular movement is only 2' 34" on a 20 degree curve, the extension between the connections is only ⅜", which is taken up by the sliding of the pipe flanges on the flat faces of the ball rings. The flanges are held to their seats on the ball rings by 10 springs of 200 lbs. capacity each, or a total of 2,000 lbs. The extension due to the truck movement being provided for in this way, the use of the packed expansion joint is unnecessary. The arrangement of this portion of the piping, which may be called the low pressure system, is shown by fig. 4. The dotted line shows the movements of the pipes on a 20 degree curve, and the diagram underneath shows the movements of the pipes as they would have been if the l.p. cylinders were at the front of the engine. A comparison of the two arrangements shows that, with the cylinders at the front, the angular movement of the exhaust pipes would be 15 deg. 19' and its

LOCOMOTIVES FOR ALL CLASSES OF SERVICE

Consolidation Type Freight Locomotive, Built for Eastern British Columbia Railway.

Total weight of engine in working order, 186,310 pounds. Weight on driving wheels, 166,100 pounds. Diameter of driving wheels, 51 inches. Boiler pressure, 210 pounds. Cylinders, 20 x 28 inches. Maximum tractive power, 39.200 pounds.

ATLANTIC STEAM SHOVEL

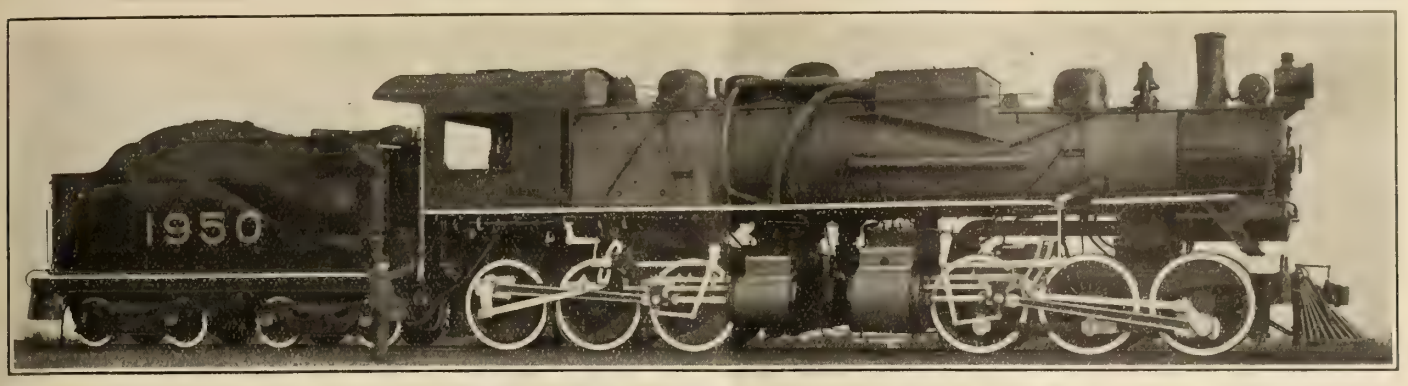


Direct wire rope hoist with but one sheave, instead of chain hoist with from five to seven sheaves, reduces delays and loss of time due to breakdowns, increases the efficiency of the engines, and reduces repair bills as well as fuel consumption.

Finished, interchangeable spare parts always on hand at works.

MONTREAL LOCOMOTIVE WORKS, LIMITED

BANK OF OTTAWA BUILDING, MONTREAL, CANADA



Canadian Pacific Railway Mallet Articulated Locomotive.

extension 1⅝", which would necessitate the use of two universal ball joints with packing and a packed expansion joint instead of two simple ball rings, which are sufficient to take up both the rotary movement and extension. The receiver pipe movement would be the same, provided the connection to the h.p. cylinders was directly over or close to the frame connection pin. This pipe is usually given flexibility by a packed universal ball joint and a packed expansion joint.

From the above it will be seen that, with the l.p. cylinders at the front, and following the usual pipe construction, five packed joints would have been used, but with the arrangement adopted there is only one packed joint and two ball rings.

Cylinders, Valves and Valve Motion. —The cylinders are of the piston valve type, with inside admission on the h.p. and outside on the l.p., which permits of the most satisfactory arrangement of steam pipes. The diameters are: h.p., 23¼" x 26" stroke; l.p., 34" x 26" stroke. All four are cast separately, without saddles, and are bolted together by vertical flanges in the usual manner. The h.p. have a cast-steel saddle which is common to both cylinders, and which bolts rigidly to them and to the boiler. This connection to the boiler is a very important one, the barrel being under pressure at this point, and the saddle is secured with 1¼" bolts, having a taper of 1-16" in 12", driven into holes reamed from the pressure side. The l.p. cylinders have no saddle, as there is a movement between the boiler and truck at this point. A small steadying casting has, however, been applied, which slides across the flat surface on the top of the cylinders, but no weight is transmitted to the truck by it. The main frames are slabbed to a section 15" deep x 3" wide at the cylinder fits, and are braced laterally by the frame connection castings which join the two engines together. The arrangement of the cylinders and their fastening is shown by fig. 5.

Walschaert's valve motion is used. The design varies but slightly from that used on other C.P.R. locomotives, except in the radius bar lifting link on the l.p. engine, which, of course, must have flexible connections to permit of movement between the boiler, to which the reversing arm is attached, and the truck. It must also be made as long as possible, as, when the locomotive is rounding a sharp curve, the boiler will swing about 9" off the centre line of the truck at this point, and the angle taken by the lifting link causes the radius bar to raise in the radius link, thus shortening the travel of the valve when the engine is in forward gear and lengthening it when in backward, the radius bar being down for forward and up for backward gear. This applies to all Mallet locomotives having the radius bar suspension arranged in this manner, but is comparatively unimportant if sufficient clearance is allowed between the radius link and block at the top.

Provision has also been made for varying the cut-off in the l.p. cylinders independently of the h.p. That is, the l.p. cut-off may be lengthened without affecting the h.p.

Reference to fig. 1 shows that the h.p. reverse shaft has two arms on the right-hand side. One of these is 11½" long, and is connected to the power reverse cylinder, the stroke of which is 12", and as the h.p. radius bar lifting arm is forged to the same shaft, the lift or fall of the radius bar is always proportional to the travel of the power cylinder piston. The arm on this shaft, to which the l.p. reach rod connects, has a slotted upper end with a sliding block, to which the reach rod pin connects. This block is held in any desired position by means of a screw adjustment. The shortest length of the arm is 12½", and with the longest power piston travel of 12", the movement of the reach rod is $\frac{12''}{11.5}$ x 12.5", or 13" nearly. If, by means of the screw, the reach rod block is moved up to 14" from the shaft, the movement of the reach rod becomes $\frac{12''}{11.5''}$ x 14", or 14.6", with a consequent increase in the rise or fall of the l.p. radius bar, which will increase the travel of the valve.

A simple form of power reverse gear is used, consisting of a 6" steam cylinder, with its piston rod connected to the reach rod shaft as described above. Rapid movement is prevented by an oil dash pot, the piston of which is connect-

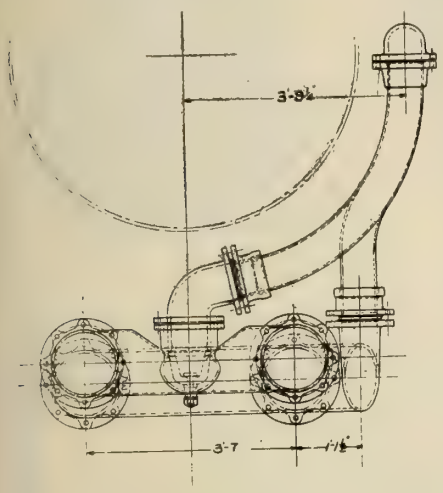
ed to the same rod as the piston of the power cylinder.

Frames, Spring Rigging, and Weight Distribution.—The frames on each engine are in one piece, and are slabbed for the cylinder fits and for the front bumper and back footplate, which makes a very simple arrangement, there being no frame splices to break or get loose, and at the same time gives a stronger cylinder fastening. The sections of top and bottom rails of these frames are 4½" wide x 4½" deep, top, and 4½" wide by 3" deep, bottom, on both frames, and owing to the rather unusual condition of weight distribution, the design was gone into very carefully and the sections not only checked against the piston thrust, which is usually all that is considered, but against the weights carried by the frames. The bending moment and shearing forces for the front engine are shown by fig. 6. These have been worked out considering the frame as a beam supported at four points (where it rests on the springs), the reaction being equal to the sum of the loads supported by the springs.



Reference to fig. 6 shows that the proportion of the boiler weight carried by the front engine is concentrated midway between the first and second wheels, or 31" ahead of the middle wheel, and as this is the only point on the front truck at which the boiler is supported, the weight must be such that its moment about the centre of the truck will equal the moment of the weight of the front truck itself acting at the distance. Its centre of gravity is located in rear of the centre of the truck. On most Mallet locomotives now in service the above is not the case. The actual point of support of the boiler on the frames is set forward (considering a truck with the cylinders at the front) of the virtual point sufficiently far to make the moment of the truck weight considerably greater. This is done to prevent rocking in a longitudinal direction, and, of course, tends to allow the truck to drop at the front, to correct which a suspension bolt working on ball seats connects the lower rail of each back engine frame to the upper rails of the front engine, and any tension put on them by screwing up on the adjusting nuts pulls down on the rear end of the front engine frame, correcting the effect of the centre of gravity of the front system falling ahead of the centre of the truck. On the C.P.R. Mallet this rocking effect is checked by the frame connection castings, which have jaws that interlock in such a manner as to make longitudinal rocking impossible. The arrangement of these castings and their pin connection is clearly shown by fig. 5. The construction at the joint is very substantial. A turned pin 4" dia. is used, and with this arrangement of interlocking jaws the pin is put in triple shear when pulling, but for buffing shocks, which are more severe, it is entirely relieved, and the shock is taken up by the socket joint formed by the metal around the pin on the front casting fitting into a machined pocket on the back casting. As the extension of the exhaust pipe, due to the truck movement, must be taken up by the sliding of the pipe flanges on the ball rings, and as only a rotary movement has been provided for on the receiver pipe, the importance of having a solid connection for the frames of the two engines is seen.

The spring rigging is of an ordinary type. The front engine is equalized from back to front, and has a cross equalizer at the front. The rear engine is also equalized through its whole length, but has no cross equalizers. The weights carried by the front and back engines are not equal, but are so distributed that approximately 9,000 lbs. more weight is carried by the front than by the back. As the effect of pushing or pulling a train is to reduce the weight on the front truck, and the service for which the locomotive was built calls for continued maximum tractive effort for considerable distances, it is important that the ratio of adhesive weight to tractive power be sufficiently high to ensure the engine holding the rail. As this ratio is 4.57, which is about as low

as is desirable, it will be seen that any transfer of weight from the front truck would further reduce the adhesion factor and tend to make the front engine slip.

Guiding Power of the Front Engine.—Mallet articulated locomotives are built both without and with guiding trucks, and in most cases, where leading trucks are used, a truck is also placed at the rear end, back of the last pair of drivers. The theory advanced for admitting these trucks is that, in going ahead, the front engine is in itself a truck, and the front drivers are able to enter a curve against the resistance of the boiler without causing undue flange pressure or danger of derailing. On the other hand, those who advocate the use of trucks do not believe as safe an engine can be obtained without as with them. In any case, more advantages and better arguments can be advanced for eliminating the truck, such as the decrease in the total length of the engine, saving in weight, etc., and it can also be shown that the flange pressure is sufficiently low to ensure perfect safety.

On the C.P.R. locomotive trucks are not used, and the weight of the boiler, which offers the principal resistance to curving, as the truck must swing laterally underneath it, is supported partly by friction plates and partly by a spring suspended roller. The arrangement of this device is shown by fig. 7, and its construction and action is as follows. There are two main castings, one of which is mounted on the frames, and the other bolted solidly to the boiler moved with it, across the frame casting. The weight of the boiler and attachments resting on the front truck at this point is 40,000 lbs., and one-half of this, or 20,000 lbs., is carried on friction plates, four of which are set on each casting, forming two approximately radial paths, with an 8¾" space between The total area of these plates is 834 sq. in., and provision has been made for lubrication, each plate having oil grooves connecting with an oil box on the top casting. Under these conditions the coefficient of friction may be taken as .08, which gives 1,600 lbs. at starting as the resistance due to friction. This resistance decreases slightly, as will be explained later. In the 8¾" space between the two friction paths on the upper casting is the roller path, which consists of two wedge-shaped blocks, having an incline of ¾" in 12. These are set with their thin ends at the centre line between the frames, and these ends have also been made flat for a distance of 2" on each side of the centre. The roller on which the inclined blocks travel is carried by two equalizers supported on springs, which in turn are carried by the bottom castings, and any movement of the truck sideways, as when entering a curve, causes the inclined blocks to force the roller downward against the resistance of its supporting springs, which produces a force to pull the boiler around the curve with the truck and relieve the leading flanges of the back engine from the excessive pressure which would otherwise result. The greater the movement of the truck sideways, the greater will be the deflection of the springs, and there will be a constantly increasing rolling resistance, as shown by the truck-guiding power

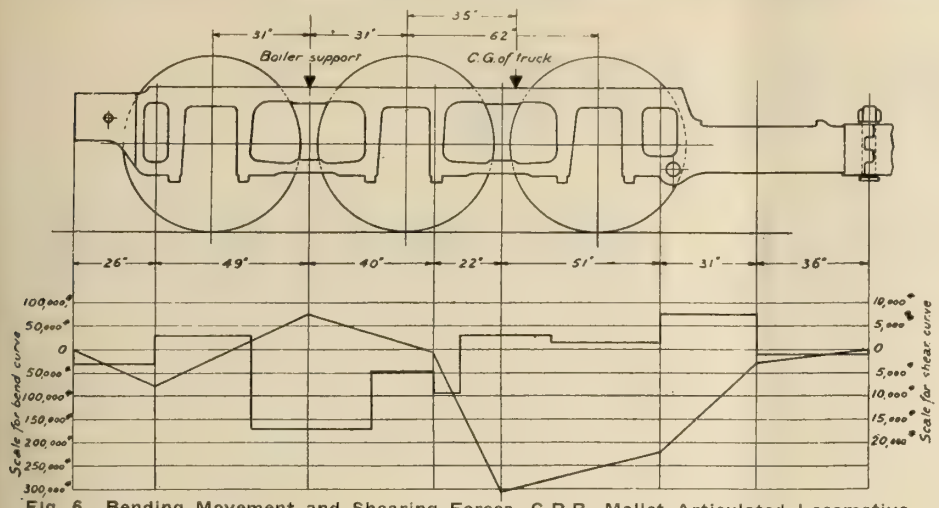

Fig. 6. Bending Movement and Shearing Forces, C.P.R. Mallet Articulated Locomotive.

chart, fig. 8, reference to which shows the curve marked "rolling resistance" as starting at a point which corresponds with the beginning of the incline, or 2" from the centre. The resistance at this point rises immediately to 1,250 lbs. and increases to 1,965 lbs. at 15¾", or the maximum movement sideways.

As mentioned above, the frictional resistance decreases slightly. This is due to the reduction of weight on the friction paths as the truck moves sideways, caused by the additional weight carried by the springs and, consequently, by the roller also. The decreasing frictional resistance is shown by the drop in the curve marked "frictional resistance," and begins 2" from the centre or the point where the roller picks up weight. The total resistance offered by the boiler to the truck moving sideways is shown by the curve marked "combined resistance." When the locomotive is entering a curve, for the first 2" truck movement to either side the resistance is only that due to friction, or 1,600 lbs. When straightening out, as on leaving a curve, the inclined surfaces tend to slide the boiler back to its normal position on the centre of the truck against the increasing frictional resistance, thus relieving the pressure on the flanges. The resistance may be entirely altered by changing the inclination of the wedges, or the amount of rolling or frictional resistance may be varied at will by screwing up or slacking off on the roller supporting spring nuts, which has the effect of increasing the weight on the roller and decreasing the weight on the friction plates or vice versa. The total resistance, however, would not be materially altered, unless the incline of the wedges were changed, which may easily be done by raising the boiler at the front, as the wedges are not cast solid with the top casting, but are held in pockets in it.

Tests.—As stated at the beginning of this paper, the locomotive was of an experimental nature, and a number of tests were made to determine if the desired results were being obtained. These tests were not directed towards the amount of coal and water consumed or the economy of the machine as compared with other heavy road locomotives, but were more as a check on the design in general, to show what changes would be desirable in locomotives of the same type constructed in futre. Special attention was therefore directed towards the following:

1. The receiver and exhaust pipes and their connections.
2. The boiler and machinery; whether the boiler was of sufficient capacity to supply steam to the cylinders, and what improvements could be made in the details of the latter.
3. The ability of the locomotive to curve freely, that is, traverse curves having a radius as short as any on which it would have to operate, and to do this at ordinary speeds, both heading and backing on, without danger of derailing or excessive flange wear.
4. The ability of the locomotive to develop her calculated tractive power.
5. The most satisfactory size of cylinders and arrangement of reheater or superheater, that is, what diameter of cylinder within the limits of 22" to 23¼" on the H.P. and 32½" to 34" on the L.P. would give the best results, using either reheated steam in the L.P. or superheated in the H.P.

Of these, 1, 2, and 3 could be settled by observation of the locomotive when pulling the test trains and on a 20° curve, as well as in the regular service later, while 4 and 5 necessitated the use of the dynamometer car and indicators. The locomotive was particularly adaptable to experiment as to the size of cylinders and arrangement of reheater or superheater. The cylinders and bushings which would permit of varying their diameter and the outside arrangement of steam pipes made possible the use of a reheater for the h.p. exhaust or a superheater in direct communication with the boiler at small cost.

It was apparent from the first that the receiver and exhaust pipes would do what was expected of them, and during the period of about 10 days when the locomotive was under test and 3 weeks' observation subsequently during regular service, no leakage of steam developed, nor was it even necessary to tighten up the packing gland on the receiver pipe or the bearing plates of the sliding ball rings on the exhaust pipe. Owing to its length, the exhaust pipe has considerable capacity as a receiver, and the exhaust is very mild, but this may be considered as an advantage, as no difficulty is experienced in maintaining full steam pressure. Some leakage developed around the taper bolts which hold the h.p. cylinder saddle to the boiler, and on future locomotives other systems of fastenings will be considered.

All curves were traversed freely, both heading and backing on, and from observations made on a Y on which the rails were light and the curvature about 18° at one point, it was proved conclusively that the articulated locomotive did less damage and curved easier than an ordinary 2-8-0 locomotive, weighing 185,000 lbs., with a rigid wheel base of 15' 10" and a total wheel base of 24' 4½", the pony truck having 5" × 8" three point hangers.

The amount of flange wear after about 4,000 miles was 3-64" at the point of contact between the rail head and flange on the leading wheels, and 1-32" on other wheels, which is satisfactory service, considering the crookedness of the track on which the locomotive is operating, there being a large number of 10° curves. This amount of wear also compares very favorably with that on other locomotives in the same service.

The size of the cylinders on the locomotive, as first turned out, were 22" and 32½" × 26", or a ratio of 2.18, and the exhaust from the h.p. pair passed through the reheater before entering the low pressure steam chest. Three other combinations of cylinders and position of reheater or superheater were tried, and altogether six tests were made before the final size of cylinders was determined.

A large number of indicator cards were taken, and those shown by fig. 9 are fairly representative of each test. In the Summary of Indicator Cards the measure of steam at cut-off is expressed in terms of the following: "Steam at cut-off=(T.P. per lb. m.e.p. × cut-off% + t.p. per lb. m.e.p. × clearance %) × pressure at cut-off + 14.7."

Fig. 10 shows the dynamometer car record, indicated and dynamometer horse powers, speed, boiler pressures, etc., for tests 4 and 5. In tests 1, 2, and 3, which were made under similar conditions, it was found that there was practically equal amounts of steam in each pair of cylinders, and that the l.p. cylinders were developing considerably greater power than the h.p. This condition can best be accounted for by the increased volume of steam in the receiver, due to its being reheated and consequently expanded, causing excessive back pressure on the h.p. pistons, as indicated by the drop in pressure between the back pressure line on the h.p. cards and the admission line on the l.p. To more nearly

equalize the power, it was decided to increase the diameter of the l.p. cylinders to 34", or a ratio of 2.38, which would have the effect of emptying the receiver more rapidly, with a consequent decrease in the back pressure and rise in m.e.p. on the h.p. pistons without materially changing the amount of work done by the l.p. The reheater was left connected to the receiver, the lack of condensation at the cylinder cocks being very noticeable, which was a desirable feature. The maximum temperature obtained in the l.p. steam chest, using reheated steam, was 440°, which with a pressure of 75 lbs., would give 120° superheat. The result of this arrangement is shown by test 4, and made considerable improvement in the distribution of power, although the equalization could still be improved.

At the conclusion of this test the reheater pipes were changed to connect to the h.p. steam chest and the receiver pipe, as shown in fig. 4. Superheated steam would thus be used in the h.p. cylinders and the exhaust would pass direct to the l.p. steam chest. The amount of steam shown by the l.p. indicator cards in test 5 now averaged about 87% of that shown by the h.p. cards, and the total amount of power as calculated from the series of indicator cards was approximately equal between the two engines.

It was next decided to try and increase the total power of the locomotive, which could still be done, as the factor of adhesion could be reduced without going below safe limits. The most satisfactory ratio, as indicated by the previous tests, would have been 2.38, as shown by test 5, but as the bushing had been removed from the l.p. cylinder its diameter could not be further increased, and the h.p. only was changed, its diameter being increased to 23¼", or a ratio of 2.14. Although the l.p. cylinder diameter could not be increased, its cut-off could be lengthened by means of the adjusting arm, previously described, without changing the cut-off in the h.p., which would have a similar effect in reducing the back pressure on the h.p. pistons. The results obtained with this arrangement are shown by test 6, and everything considered, it was the most satisfactory which had been tried. The power had been increased, and the amounts developed by each engine were reasonably well balanced. The decrease in the measure of steam in the l.p. cylinders, due to the position of the superheater, is well illustrated in this test by comparing it with no. 1, in which the amounts were very nearly equal. As the tests just described indicated that the best results would be obtained with cylinders 23¼" × 26" on the high pressure engine and 34" × 26" on the low, and with the high pressure cylinders taking steam from the superheater, the locomotive was therefore put into regular service in the Rocky Mountains, pushing on the grade eastward from Field to Stephen. The profile of this section is shown by fig. 11. The maximum grade is 2.2% and there are two spiral tunnels of 2,890 ft. and 3,200 ft. long, having a radius of 573' 0". The regular locomotives working on this and similar grades in the Rocky Mountains have general dimensions as follows:

Weight, total	185,000 lbs.
Tractive power	36,200 lbs.
Factor of adhesion	4.65

Their full rating in summer is 424 tons, and on the same basis the Mallet locomotive should handle 660 tons, which it does without trouble, and has also taken up 700 tons, which may be considered the maximum tonnage for this grade.

Dominion coal was used on the tests made at Montreal. This is a friable, rather fine coal, and an average of the analysis of 25 samples gives the fixed carbon as 55.71%, and the heat value 13729 b.t.u.'s. That used in regular service is Canmore coal, mined in the Rocky Mountains. It is much finer than the Dominion coal and very dusty, and must be thoroughly wet down before firing, otherwise a considerable percentage goes up the stack in the form of cinders. It is rather higher in fixed carbon than the former, but the heat value is about the same. The locomotive steamed as successfully with the Canmore coal as it did with Dominion, although adjustments were necessary in the smokebox diaphragm and draft pipes, the diameter of the exhaust nozzle with both coals being 4¾".

Fig. 12 is the log of what may be considered a representative trip of the locomotive in regular service on the Field hill, and is chiefly interesting as proving that the boiler is of ample capacity to supply steam to the cylinders. This also shows the temperatures and pressures in the high and low pressure steam chests. The maximum temperature

STREET RAILWAY LUBRICATION A SPECIALTY

Galena Railway Safety Oil

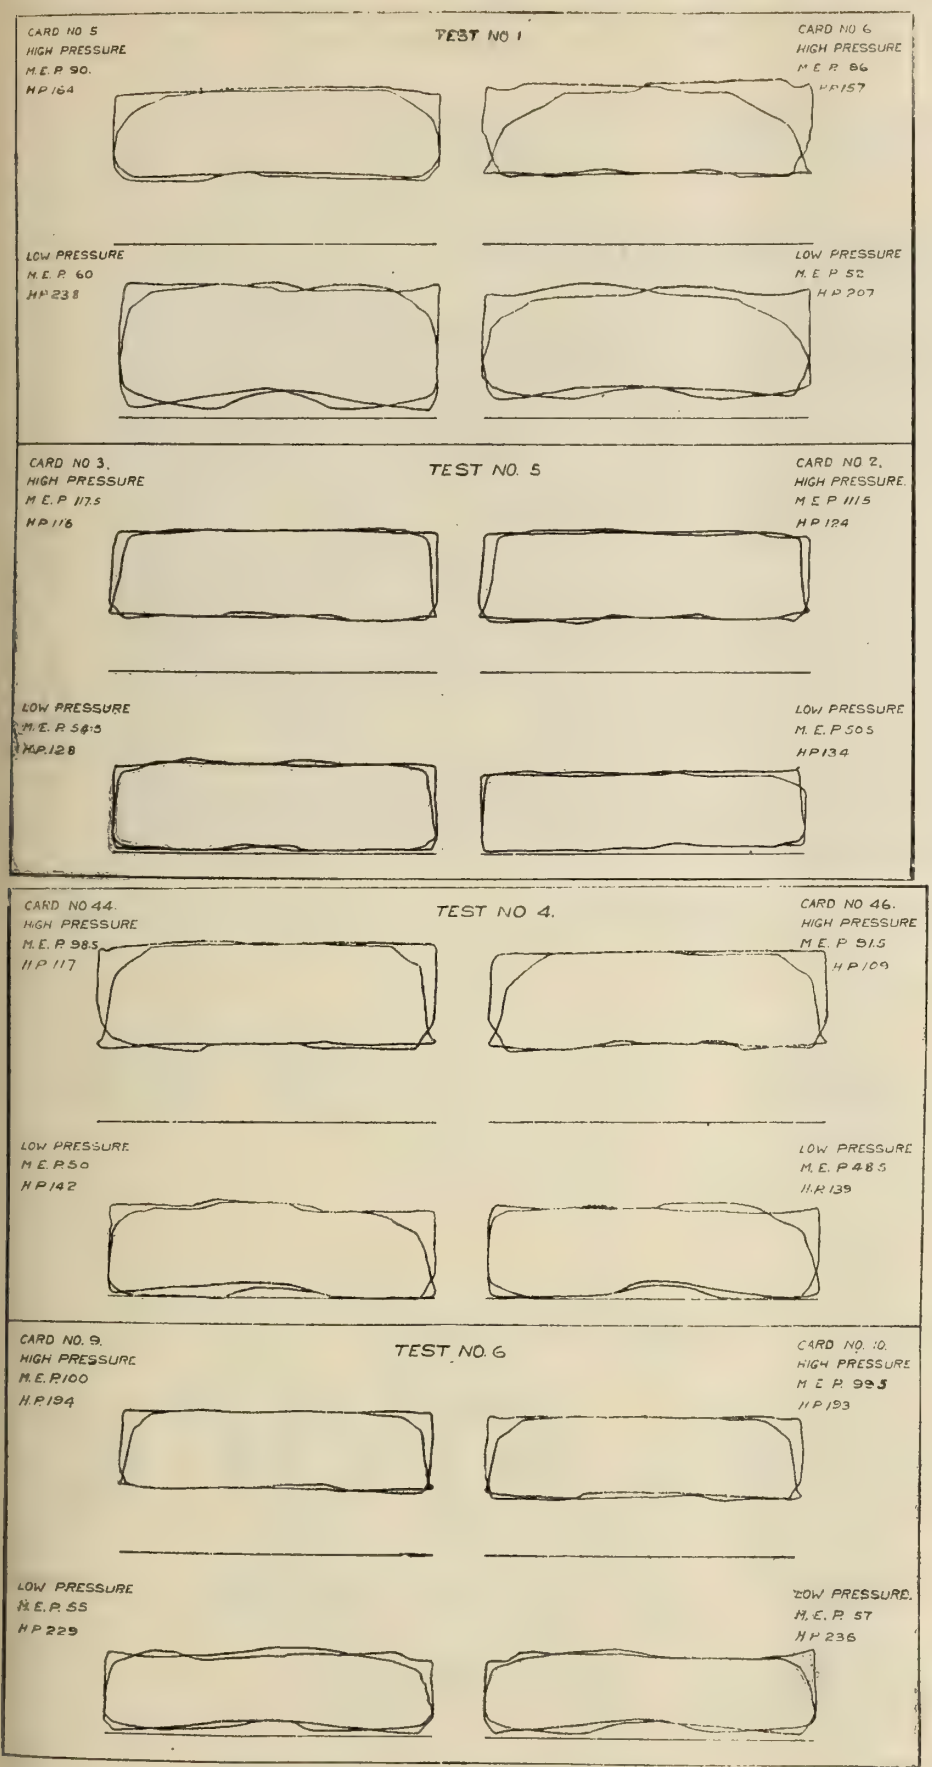
Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT



Tests of C.P.R. Mallet Articulated Locomotive.

shown in the h.p. steam chest was 540°, or 153° superheat. An average of a number of trips shows a temperature of 535°, or 148° of superheat, which is reached soon after a train is started, and remains practically constant, irrespective of boiler pressure, cut-off, throttle position, or speed. The maximum temperature shown in the receiver pipe was 350°, and the average was about 345°. As the pressures ranged from 60 lbs. to 75 lbs., this would give from 38° to 25° superheat in the receiver. The amount of condensation in the l.p. cylinders is very small, and the cylinder cocks are closed after a few revolutions, which, of course, tends to decrease the water consumption.

As the locomotive has not been in service sufficiently long, no figures are available as to cost of maintenance, but it is to be expected that, as there is practically double the amount of machinery, this will be somewhat higher than on the consolidation locomotives in the same service. The operating costs will be slightly higher when considered on a locomotive mile basis. The same crews do the work for the same wages, but more lubricant, waste, and sand must of necessity be used, and the cost of wiping and cleaning will also be higher. On a ton mile basis, which is the fairest comparison for operating cost, it will be lower, due to the greater tonnage hauled, which, it is considered, together with the saving in fuel, will show considerable economy in favor of the Mallet locomotive.

The foregoing was read before the Canadian Railway Club recently.

Per Diem Rates for Freight Cars.

On Jan. 3, the American Railway Association submitted to its members throughout the United States and Canada a letter ballot on the question of the amendment of the code of per diem rules by the insertion in rule 1 of one of the three following rates:—40c. per car per day; 35c. per car per day, or 30c. per car per day, also as a recommended method for securing the return of equipment on demand the enforcement of Car Service Rules 1, 2, and 3 by the imposition of a penalty of $5 a car to be paid to the owner of the car by the road violating the rules. It was provided that a majority of the members, representing two-thirds of the freight cars owned or controlled by members of the Association should be required for the adoption of the proposition submitted. The results of the voting showed that a majority of the members as provided above were not in favor of any of the proposed per diem rates, and all the propositions were lost. The proposition for a penalty of $5 a car as mentioned above was defeated.

At a special meeting of the Association in New York, Jan. 27, it was decided to take a letter ballot on the question of the adoption of 30c. as the per diem rate on freight cars for the five months of Mar., April, May, June and July of each year, and 35c. for the remaining seven months: Jan., Feb., Aug., Sept., Oct., Nov. and Dec.; and that these rates be incorporated as an amendment in Per Diem Rule 1. It was decided to close the ballot on Feb. 19, and if the proposition was adopted by a majority of the members owning or controlling two-thirds of the cars owned or controlled by members, it was to go into effect on the first of the month following the amendments that it had been so carried. The voting resulted as follows: Yes — 224 memberships, representing 1,767,162 cars owned or controlled. No —87 memberships, representing 419,851 cars owned or controlled. Not voting— 29 memberships, representing 62,994 cars owned or controlled. The total membership of the Association is 340, and the cars owned or controlled by the members 2,250,007. The majority requisite for approval is 171 memberships and 1,500,005 cars. The amendment therefore went into effect on Mar. 1, and the amended rule now reads as follows:—

"1. The rate for the use of freight cars shall be 30c per car per day for the five months of March, April, May, June and July of each year, and 35c per car per day for the remaining seven months, viz., Jan., Feb., Aug., Sept., Oct., Nov. and Dec., which shall be paid for every calendar day and shall be known as the per diem rate."

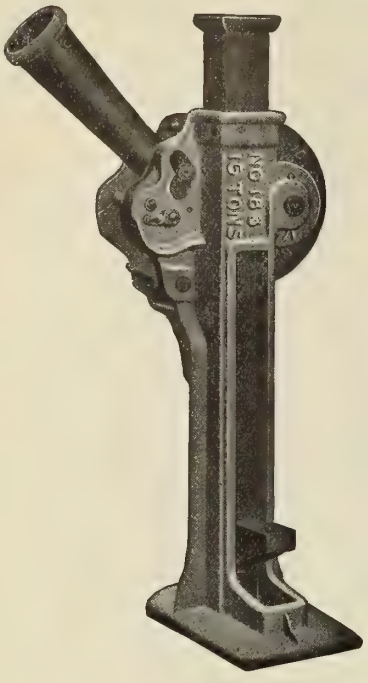
W. Woollatt, ex-General Superintendent Buffalo Division Pere Marquette Rd., Walkerville, Ont., born at Weedon, Hertfordshire, Eng., April 2, 1855.

Alberta Railway Commissioners.—A bill was laid before the Alberta Legislature Mar. 8, providing for the appointment of a Board of Railway Commissioners for the province, such board to have the same powers as the Lieut.-Governor-in-Council under the Railway Act. The bill provided that the board shall consist of the Hon. A. Rutherford, the Premier; J. Stocks, Deputy Minister of Public Works; and R. W. Jones, the Provincial Engineer. Mr. Stocks has declined to act as a member of the Board, and another name is to be substituted.



Geared Lever Jack No. 183

Joyce Crydland Track Jacks

GEARED LEVER TRACK JACK No. 183, with automatic lowering device; has four times the lifting capacity of the Plain Lever Jack. Specially adapted for wrecking work.

TOGGLE TRIP TRACK JACKS, Nos. 38 and 39, for line work and yard duty. The superior construction of these Jacks increases the grip and friction 40 per cent. or more above others of similar type.

FULL AUTOMATIC JACK, strong and reliable, combines highest efficiency with simplicity of mechanism.

Write for Bulletins giving full description of working parts of Joyce Crydland Jacks.

THE ELECTRIC HEADLIGHT

The following letter was received under date of May 8, 1908, from Mr. J. W. Cleary, Travelling Engineer Pyle-National Electric Headlight Co.:

"I learn from_____the Master Mechanic here, that an engineer running between_____ and_____discovered a broken rail with the Pyle-National Electric Headlight and made the stop without ditching his train. One or two pairs of wheels got off, but that was a small affair to what it would have been where a foot of the rail was broken off. Also an engineer running east of here found some cars shoved out on the main line. He saw them with the 'Electric' and made the stop without hitting them."

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta and Bow Island Ry. Lines.—Application has been made to the Alberta Legislature for the incorporation of a company with this title to build the following lines:—from near Coutts, on the International boundary to near Bow Island, thence northeasterly to tp. 15, range 10, west 4th meridian; from near Bow Island northeasterly to Calgary, with a branch line to tp. 12, range 29, west 4th meridan; from points on the previously mentioned lines to Lethbridge, and from Lethbridge southwesterly to tp. 1, range 24 and 26, west 4th meridian. Short, Biggar, Cowan and Collisson, Edmonton, Alta., are solicitors for applicants.

Alberta and British Columbia Ry.—Application is being made to the Dominion Parliament for an extension of time within which the company may build its authorized railway. (July, 1909, pg. 473.)

Alberta and Saskatchewan Central Ry. Lines.—Application has been made to the Alberta Legislature for the incorporation of a company with this title to build the following lines:—from tp. 30, range 1, west of the 4th meridian, northwesterly to tp. 45, ranges 26 or 27, thence northerly and easterly to Edmonton; from tp. 45, ranges 26 or 27, to the junction of the Saskatchewan and Brazeau Rivers, Alta. Short, Biggar, Cowan and Collison, Edmonton, Alta., are solicitors for applicants.

Alberta, Peace River and Eastern Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway from the Alberta Ry. and Irrigation Co.'s Ry. in tp. 3, range 16, west of 4th meridian, westerly to Cardston, thence northerly to Pincher Creek, thence to Cochrane, on the C.P.R., thence to Peace River Landing, thence easterly to Fort Churchill, Hudson Bay, with a branch line to Edmonton, Alta. Culbert and Carrs, Ottawa, are solicitors for applicants.

Atlantic, Quebec and Western Ry.—The House of Commons has voted $50,000 towards the construction of a deep water wharf at Gaspe, Que., at the Atlantic, Quebec and Western Ry.'s terminal. The wharf will be 1,000 ft. long, 95 feet wide at the top, and will run out to 45 or 50 ft. of water. It will be of ordinary cribwork faced, and will cost about $300,000. The railway will have three tracks on the wharf, which it is said will be used in connection with a proposed line of trans-Atlantic steamers. (Feb., pg. 109.)

Bow River Collieries Co.—Application has been made to the Alberta Legislature for an act authorizing the company to construct an extension of its projected line from the present proposed terminus to Taber, and southerly to the International boundary at Coutts, Alta. An extension of time for the construction of the previously authorized line is also asked. Simmons and Shepherd, Lethbridge, Alta., are solicitors for the company. (May, 1908, pg. 329.)

Bruce Mines and Algoma Ry.—The Minister of Railways said in the House of Commons recently that $53,920 had been paid the company in respect of the construction 16.85 miles of line. Other subsidies voted had expired. An application to revive them was made in April, 1909.

The Ontario Legislature has extended the time within which the company may complete the construction of its authorized lines, and declared the company's act still in full force notwithstanding defaults in certain directions. (Mar., pg. 185.)

Buctouche Ry. and Transportation Co.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway between Buctouche and Richibucto, N.B., and from West Point to Colman, P.E.I., on the Prince Edward Island Ry. main line, with power to construct wharves and docks at terminal points in New Brunswick and P.E.I., and to operate vessels and car ferries between Richibucto and West Point. Barnhill, Ewing and Sandford, Buctouche, N.B., are solicitors for applicants.

Central Ontario Ry.—We are advised that work has been restarted on the extension of the line from Maynooth to Whitney, Ont., on which a start was made last year. A gang is engaged clearing the right of way. The company is doing the work itself. It is expected to construct 10 miles this year. (Feb., pg. 109.)

Chicago, Milwaukee and Puget Sound Ry.—A Winnipeg press report dated Mar. 14, states that the company has secured right of way for a railway through North Dakota, to Neche, on the International boundary line, and that agents are working through Southern Manitoba, securing options on right of way from the boundary into Winnipeg. The points at which the agents are operating, the dispatch states, show a route from the boundary to Gretna, northwesterly to Sperling, thence westerly into Winnipeg between Canadian Northern Ry.'s Brandon line and the C.P.R. Glenboro branch. (Dec., 1909, pg. 881.)

Dominion Atlantic Ry.—A press report states that the company is arranging for the immediate starting of construction on the proposed North Mountain branch. The report states that it is the company's intention to complete three miles this year and the whole line in three years. Starting from Centreville, N.S., the branch will run north and west, passing through Billtown, Lakeville, Woodville and Grafton, and rejoin the main line at a point not yet decided upon. (Mar., pg. 185.)

Elkhorn Northern Ry.—Application is being made to the Manitoba Legislature to incorporate a company with this title to construct a railway northerly from Elkhorn, Man. J. F. Miller is one of the incorporators.

Great Northern Mining Co.—At the annual meeting of shareholders at Eastern Harbor, N.S., recently, a resolution was considered to authorize the directors to make application to the Legislature to permit the company to construct a railway from its mill to Eastern Harbor. M. V. Grandin is Secretary of the company.

Hardy Bay to Quatsino Sound.—Application has been made to the British Columbia Legislature for the incorporation of a company to build a railway from Hardy Bay or Port McNeil, or some other point between them to the east coast of Vancouver Island to Coal Harbor on the west arm of Quatsino Sound, or Rupert Arm, or to some other convenient point on Quatsino Sound, B.C. Barnard and Robertson, Victoria, are solicitors for applicants. (See Hardy Bay and Quatsino Sound Ry., Aug., 1909, pg. 573.)

Iron Range Ry.—An extension of time has been granted by the Ontario Legislature for the construction of this projected line. (Feb., pg. 109.)

Kettle Valley Lines.—The bill containing provisions ratifying the agreement between the B.C. Government and the Kettle River Valley Ry., for the construction of certain lines, was laid before the Legislature, Mar. 2. It grants a bonus of $5,000 a mile for the construction of a railway from Penticton to Merrit, 150 miles, in return for which bonus the company agrees to begin construction within four months after the ratification of the agreement, and to complete the line within four years; to construct a line from Grand Forks up the north fork of the Kettle River, and a line from Midway to Penticton; such lines to be completed also within four years.

The Dominion Parliament has authorized the K.R.V. Ry. Co. to build the extension to Penticton and to Merrit, mentioned in the agreement with the B.C. Government, and has granted an extension of time for the construction of its other other uncompleted lines. (Mar., pg. 185.)

Lac Seul, Rat Portage and Keewatin Ry.—An extension of two years has been granted by the Ontario Legislature for the comencement of this projected line. (Feb., pg. 111.)

London and Port Stanley Ry.—It has been decided to construct a switch at St. Thomas, Ont., for the Hydro-Electric Power Commission. Further consideration of the plan to electrify the line to Port Stanley has been postponed pending receipt of additional information. It has been decided to sell the freight house at Port Stanley. (Feb., pg. 111.)

Michigan Central Rd.—We are advised that there is no truth in recent press reports that the company is about to construct a third track between Buffalo, N.Y., and Windsor, Ont.

The new roundhouse at St. Thomas, Ont., will contain 40 stalls. It will have an outside diameter of 428 ft., there will be 95 ft. between the walls, except at the drop pits where the distance will be increased to 113½ ft., and there will be an 85 ft. turn-table. The building will be heated by steam, and a modern washout system will be installed. Brick and concrete will be used with wooden posts and timber roof. (Mar., pg. 187.)

Montreal Underground and Elevated Ry.—See under Electric Railway Projects, etc.

Morrissey, Fernie and Michel Ry.—The Crow's Nest Pass Coal Co.'s accounts for the year, 1909, show that during the year there was expended in improvements on the railway, which is operated as a subsidiary of the Coal Co., $14,451.55.

The Nickel Range Ry. Co. has been incorporated by the Ontario Legislature to construct the lines mentioned in our issue of Dec., 1909. (Mar., pg. 187).

Northern New Brunswick and Seaboard Ry.—The Lieut.-Governor's speech at the opening of the New Brunswick Legislature, stated that as a result of legislation passed last session the company entered upon the construction of a railway from the iron mines near the Grand Falls of the Nipisiquit River to the I.C.R., and in spite of the very wet weather last summer and autumn, has made very substantial progress with the work. It is expected, he added, that the line will be completed not later than July, and that thereafter the provincial revenues will be increased to a considerable amount by the royalties on the output of the iron mines which will be shipped over the railway. (Jan., pg. 21).

The Northern Quebec Colonization Ry.'s Co.'s application for incorporation by the Dominion Parliament has been passed. (Mar., pg. 211).

Pacific and Atlantic Ry.—An act has been passed by the Dominion Parliament granting the company an extension of time within which it may commence to build its projected railway. (Dec., 1909, pg. 885.)

Penticton to Osoyoos Lake.—Application has been made to the British Columbia Legislature for the incorporation of a company to build a railway from Penticton to the International boundary in the vicinity of Osoyoos Lake, B.C. A. H. McNeill, Victoria, is solicitor for applicants.

Prince Albert and Hudson Bay Ry.—By the first section of the amendment to the Dominion act incorporating the com-

GEIPEL EXPANSION TRAP

The GEIPEL Expansion Trap

is a simple, practical trap, with few working parts to get out of order. It works equally well with either high or low pressure steam. Its simplicity and few working parts will commend this trap to every engineer. Send for Catalogue.

Head Office: NEW GLASGOW, N. S.

pany, assented to May 17, the words, "thence crossing the Saskatchewan River and" are struck out of sec. 7, chap. 122 of the statutes of 1909. The company is authorized to construct an extension of its projected railway from its westerly terminus near Prince Albert, Sask., southerly and westerly to Calgary, Alta., and a branch southerly from its previously authorized line to Melfort, Sask. Its bonding powers are increased from $25,000 to $40,000 a mile, and it is given an extension of time for construction. (Mar., pg. 187).

Prince Edward Island Ry.—We are advised that work on the construction on the Harmony-Elmira branch will be resumed at an early date. When work was suspended at the end of the construction season of 1909 the contractor had completed the clearing of the right of way for its entire length, 9.9 miles, and had practically completed the culvert work. These culverts were all of concrete. Grading will be the first work taken in hand this spring. Whitehead Brothers, Grand Falls, N.B., are the contractors. (Feb., pg. 111).

Newfoundland Ry.—The Legislature has given a second reading to the branch railways bill, which confirms a contract with the company for the construction of a number of branch lines. The agreement provided for the immediate construction of the branch to Bonavista. This line commences at Shoal Harbor, on the main line, and extends to Bonavista, passing Goose Bay, Southern Bay, Trinity and Cortalina, providing railway accommodation for over 2,000 families. The construction of the branch was undertaken last year, at the solicitation of the Government, in order to provide work for the people of the district on account of the failure of the fisheries. It is expected that the branch will be completed this year. The contract provides for a payment of a cash bonus of $15,000 a mile, with a proviso that the laborers are to receive $1.50 a day. The other branch lines are to be completed within five years, the points between which they are to be constructed are:—Broad Cove to Heart's Content and Grete's Cove, 62 miles; Ransford Bridge to Trepassy, 70 miles; Country Channel to Fortune Bay, 48 miles; Bay of Islands to Bonne Bay, 42 miles. (Mar., pg. 187).

Rocky Mountain Collieries.—Application has been made to the Alberta Legislature for the incorporation of a company with this title, among other things, to build a railway from the coal fields within Rocky Mountain Park, Alta., northerly or northeasterly to the Canadian Northern Ry. or some of its branches, or southerly or easterly to the C.P.R. or some of its branches, or to connect with both lines. Short, Biggar, Cowan & Collisson, Edmonton, Alta., are solicitors for applicants.

Rural Ry. of Manitoba.—Application has been made to the Manitoba Legislature for the incorporation of a company with this title to build a railway to be operated by steam or electricity from St. Boniface, southerly, and on the east side of the Red River to the International boundary at Emerson; and from Winnipeg on the west side of the Red River to Emerson, and along the St. Boniface streets, with power to acquire running rights over existing lines. Power to operate steamboats on the Red River is also asked. The provisional directors are: A. Galliot, Notre Dame des Lourdes; P. Gevaert, J. E. Beaupre, N. Bernier, St. Boniface; F. Deniest, Winnipeg. (Feb., pg. 111).

St. John Valley Ry.—For many years past, said the Lieut.-Governor at the opening of the New Brunswick Legislature recently, there has existed a strong desire among the residents of the St. John River Valley for the construction of a railway which will, it is believed, add in a very great measure to their prosperity and be of general benefit to the province. All legislation heretofore passed for aiding such a work, has proved ineffective in accomplishing the purpose desired. A bill will be introduced at the present session, which, it is hoped, will result in the accomplishment of this long desired and desirable work at no far distant day.

F. B. Carvell, M.P., writing the Premier of N.B., Feb. 28, said he was satisfied that if the Legislature would give a guarantee of bonds to the extent of $25,000 a mile the Dominion Government would provide for the granting of a subsidy on the usual terms, towards the construction of this line. (Mar., pg. 211).

Temiskaming and Northern Ontario Ry.—The Ontario Legislature has amended the Commission's powers by authorizing it, subject to the approval of the Government, to construct an extension from the main line between mileage 205 and 228 westerly or south westerly to the Mettagami River in Mountjoy tp., a distance of about 40 miles. This extension would give an entrance into the Porcupine country in which there is a large mining population.

A contract has been let for the erection of several steel bridges over the Wabis River north of New Liskeard. (Mar., pg. 211).

The Toronto, Haliburton and Pembroke Ry. Co. has been incorporated by the Ontario Legislature to build a railway from Barry's Bay to Haliburton, Ont., or alternatively from the Canada Atlantic Ry. to Haliburton. (Mar., pg. 211).

Yellowhead Coal Co.—Application has been made to the Alberta Legislature for the incorporation of a company with this title, or to empower the joint stock company with the same title to construct a railway from Lacombe, on the C.P.R. Calgary-Edmonton line, to the Brazeau River, and along the river to its headquarters. Short, Biggar, Cowan and Collisson, Edmonton, Alta., are solicitors for applicants. A press report states that 50 miles of line will be built this year, and that M. J. O'Brien, Renfrew, Ont., is interested.

Telephone Dispatching on the C. P. R.

The following telephone dispatching circuits have already been installed on the C.P.R. as announced in the Railway and Marine World from time to time, and are in good working order:—

Montreal Que., to Newport, Vt.	114 miles.
White River to Fort William, Ont.	251 "
Winnipeg to Brandon, Man.	133 "
Swift Current, Sask., to Medicine Hat, Alta.	147 "

The following additional circuits are to be installed immediately:—

Chalk River to Cartier Ont.	232 miles.
Sudbury to Muskoka, Ont.	129 "
Sudbury to Sault Ste. Marie, Ont.	183 "
Cartier to White River, Ont.	269 "
Brandon, Man., to Broadview, Sask.	132 "
Broadview to Moose Jaw, Sask.	135 "
Moose Jaw to Swift Current, Sask.	111 "

The new circuits, with those already completed, will make a total of 1,836 miles which will be in operation in a few months. The additional circuits authorized will provide for complete equipment of the main line from Chalk River, Ont., to Medicine Hat, Alta., 1,829 miles, except between Fort William and Winnipeg, 419 miles, which is double track, besides the Muskoka, Sault Ste. Marie and Montreal—Newport branches.

The Grand Trunk, B.C., Coal Co., has been incorporated under the British Columbia Companies' Act, with a capital of $1,000,000 to carry on a general mining business.

Recent Dominion Legislation.

Among the first batch of acts to be assented to at the current session of the Dominion Parliament, Mar. 17, were the following affecting transportation interests:—

Calgary and Edmonton Ry.—Extending time for construction of branch lines, and authorizing extension of branch lines.

Campbellford, Lake Ontario and Western Ry.—Extending time for construction.

Canadian Pacific Ry.—Authorizing construction of additional lines, and extending time for construction.

Central Ontario Ry.—Authorizing making of agreements with certain other railways.

Columbia and Western Ry.—Extending time for construction.

Eastern Townships Ry.—Extending time for construction.

Edmonton and Slave Lake Ry.—Extending time for construction.

Edmonton, Dunvegan and British Columbia Ry.—Extending time for construction.

Esquimalt and Nanaimo Ry.—Extending time for construction.

Grand Trunk Pacific Branch Lines.—Authorizing construction of additional lines.

Kamloops and Yellowhead Pass Ry.—Extending time for construction.

Kettle River Valley Ry.—Authorizing construction of additional lines, and extending time for construction.

London and Lake Erie Ry. and Transportation Co.—Act of incorporation, and authorizing it to take over property and franchises of South Western Traction Co.

Manitoba and Northwestern Ry.—Extending time for construction.

Manitoulin and North Shore Ry.—Extending time for construction.

Montreal, Ottawa and Georgian Bay Canal Co.—Extending time for construction.

Nicola, Kamloops and Similkameen Coal and Ry. Co.—Extending time for construction.

Ottawa, Northern and Western Ry.—Extending time for construction.

Pacific and Atlantic Ry.—Extending time for construction.

St. Clair and Erie Ship Canal Co.—Extending time for construction.

St. Maurice Valley Ry.—Extending time for construction.

South Ontario Pacific Ry.—Extending time for construction.

Vancouver and Coast Kootenay Ry.—Act of incorporation.

Vancouver, Westminster and Yukon Ry.—Extending time for construction.

Walkerton and Lucknow Ry.—Granting extension of time for construction.

Western Canada Power Co.—Authorizing construction of a railway.

West Ontario Pacific Ry.—Extending time for construction.

Nova Scotia Steel and Coal Co., Ltd.

Following are statistics of the company's business last year:—

Coal shipped	809,341 g. tons.
Ore shipped	460,387 "
Coke made	87,816 net tons
Limestone quarried	75,407 "
Pig iron made	58,676 "
Steel ingots made	64,240 "
Steel billets cogged	52,931 "
Bars and plate made	45,090 "
Car axles made	27,703 pieces.
Freight carried by its Sydney Mines Ry.	1,629,400 tons.
Freight carried by steamers owned and chartered by the Co.	925,000 "

Freight paid to I.C.R. as follows:

Outward from New Glasgow	$153,000
Inward from New Glasgow	64,200
Outward from Sydney Mines	51,774
Inward from Sydney Mines	32,257
	$301,231

Aggregate operating revenue for seven months ended Jan. 31, $1,931,069.45; expenses, $1,314,960.87; net revenue, $616,108.58, against $1,580,825.03 aggregate operating revenue; $1,149,620.09 expenses; $431,204.94 net revenue for same period 1908-09. Approximate earnings for Feb., $219,473, and for two weeks ended March 14 ,$119,346 against $193,014 and $93,051 for same periods 1909.

MINERAL RANGE RD.—Operating revenue for Jan., $69,176.20; expenses, $61,767.71; net revenue, $7,408.49, against $62,666.03 operating revenue; $58,785.17 expenses; $3,880.86 net revenue for Jan., 1909. Aggregate operating revenue for seven months ended Jan. 31, $508,462.22; expenses, $428,419.96; net revenue, $80,042.26, against $490,512.66 aggregate operating revenue; $398,692.08 expenses; $91,820.58 net revenue for same period 1908-09. Approximate earnings for Feb., $64,148, and for two weeks ended March 14, $31,346 against $59,621 and $29,673 for same periods 1909.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RY.—Operating revenue for Jan., $1,213,323.38; expenses and taxes, $694,082.28; operating income, $519,241.10, against $762,640.67 operating revenue, $596,475.43 expenses and taxes; $166,165.24 operating revenue for Jan., 1909. Total operating revenue for seven months ended Jan. 31, $9,805,527.02; expenses and taxes, $5,254,995.49; operating income, $4,550,531.53, against $7,801,440.83 total operating revenue; $4,733,239.16 expenses and taxes; $3,068,201.67 operating income for same period 1908-09. Approximate earnings for Feb., $1,479,199, and for two weeks ended March 14. $804,577, against $1,302,252 and $700,015 for same periods 1909.

CHICAGO DIVISION.—Operating revenue for Jan., $723,049.14; expenses and taxes, $533,270.07; operating income, $189.79.07, against $555,631.79 operating revenue; $462,320.16 expenses and taxes; $93,311.63 operating income for Jan., 1909. Total operating revenue for seven months ended Jan. 31, $5,000,509.28; expenses and taxes, $3,527,314.50; operating income, $1,473,194.78. against $4,466,965.72 total operating revenue; $3,162,692.31 expenses and taxes; $1,304,273.41 operating income for same period 1908-09.

Grand Trunk Ry. Earnings, Expenses, Etc.

The following figures show the earnings of the G.T.R., C.A.R., G.T. Western Ry., and D.G.H. and M. Ry., separately, for Jan., as compared with Jan, 1909:—

GRAND TRUNK RAILWAY.

	1910.	1909.
Earnings	$2,385,700	$1,990,200
Expenses	2,063,000	1,745,900
	$322,700	$244,300

CANADA ATLANTIC RAILWAY.

	1910.	1909.
Earnings	$142,900	$113,000
Expenses	129,900	123,400
	$13,000	*$10,400

GRAND TRUNK WESTERN RAILWAY.

	1910.	1909.
Earnings	$465,500	$416,400
Expenses	381,200	334,200
	$84,300	$82,200

DETROIT, GRAND HAVEN AND MILWAUKEE RAILWAY.

	1910.	1909.
Earnings	$158,700	$120,800
Expenses	134,600	101,700
	$24,100	$19,100

*Deficit.

TRAFFIC RECEIPTS FOR THE SYSTEM.

Aggregate from Jan. 1 to Feb. 28:—	1910	1909	Inc.
Grand Trunk	£952,123	£812,691	£139,432
Canada Atlantic.	53,253	45,150	8,103
G.T. Western	190,437	157,873	32,564
D.G.H. & M.	61,458	46,591	14,867
Totals	£1,257.271	£1,062.305	£194,966

Approximate gross earnings for Feb., $2,965,729, and for the two weeks ended Mar. 14, $1,601,797, against $2,529,471 and $1,334,192 for same periods 1909.

Great Northern Ry. Lines in Canada.

Winnipeg Entrance.—L. C. Gilman, Assistant to the President G.N.R., and T. Cooper, Assistant to the President Northern Pacific Rd., attended a joint meeting of the Board of Works and the Railway Committee of the Winnipeg City Council, Mar. 8, to discuss the plan, prepared by the companies, for the entry into the city. The plans produced showed a line coming into the city from the west and passing from McPhillips St., on a line between Ross and Pacific Avenues, west of Paulin St., together with numerous shunting tracks and a freight station. The plans include the closing of Ellen St. for the width of the yards and also the closing of Leonard St. It is proposed to make a subway at Nena, between Ross and Pacific, by lowering the street 5 ft. and raising the track 10 ft. Objections were made by citizens on the ground that the company's charter contemplated an entrance from the south-east, and not from the west, and it was urged that the proper route should have been between Henry and Higgins Sts., where the streets had blind ends. The meeting was adjourned to enable the companies' representatives to submit their proposals in writing.

As a result of the adjourned meeting of the committee held Mar. 18, it was unanimously decided not to accede to the request to construct freight and shunting yards in the block bounded by Ross and Pacific Avenues and Isabel and Nena Streets. The plan as outlined by L. C. Gilman provides for a subway at Nena Street sunk 6 ft. below the level of the street and an elevation of 10 ft. above the street level for the tracks, these tracks to stop at Isabel St. From Isabel to Paulin Street a spur track would be constructed. Shunting along this track would only be done at night over a level crossing at Isabel Street, where gates would probably be placed. The application to the committee was made in the name of the Midland Ry. of Manitoba.

Brandon, Saskatchewan and Hudson Bay Ry.—The Dominion Parliament is being asked to extend the time within which the company may construct its authorized lines.

Penticton Ry.—Application is being made to the British Columbia Legislature to incorporate a company with this title to construct a railway from Penticton, to the lower end of Okanagan Lake, and southerly from that lake to the International boundary, where connection will be made with a spur northerly from Oroville, Wash. The provisional directors are:—A. H. MacNeill, solicitor for the Great Northern Ry., Vancouver, B.C., and J. H. Kennedy, Chief Engineer, Vancouver, Victoria and Eastern Ry., Grand Forks, B.C. Oroville is a station at the International boundary between B.C. and Washington, on the V.V. and E. Ry.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—The House of Commons has granted the company an extension of time within which it may construct its authorized lines. A proviso is added that if the extensions west of Princeton, are not constructed wholly within British Columbia, the powers of construction conferred upon the company shall be wholly void.

Business Opportunities in the West.

F. W. Peters, Assistant to the Second Vice President C.P.R., has charge of the work of the Industrial Department, which is engaged in the locating of settlers, the development of enterprises and manufactories at all points along the Western lines. He has compiled a 93 page publication, in which is given descriptive particulars of 424 towns on the company's lines from Port Arthur, to the West Coast of Vancouver Island, whither a line is now under construction. The greater part of the statistical information given is brought down to Dec. 31, 1909, and where these figures were not available the figures are to Dec. 31, 1908. The important point about the information is that indications are given of the openings which exist for the investment of capital in starting flour mills, and many other industries, or for lawyers, doctors, dentists, storekeepers, blacksmiths, carpenters, etc. An index is given to the stations, and another to the "industrial requirements." In this latter is shown under the provincial headings a list of the "wants" of the different places classified under the various trades, occupations, etc. Great care has been taken in collecting the information, but, as Mr. Peters says, the conditions change so rapidly in the West, that many of the openings noted may be gone when an enquiry is made. Hence he recommends enquirers to keep in touch with the Department so that they may have accurate and up-to-date information. It is proposed to reissue the publication at the end of the year, revised and brought up-to-date.

News for G. T. R. Officials.

Our esteemed contemporary, Canada, "an illustrated weekly journal for all interested in the Dominion," published in London, Eng., had the following in a recent issue:—

"CHANGES IN GRAND TRUNK RAILWAY STAFF.

"Mr. H. E. Byram has been appointed assistant to the first vice-president of the Grand Trunk Railway, and will have jurisdiction over the operating departments. Mr. C. G. Burnham will continue to act as assistant to the first vice-president, and will have jurisdiction over the traffic departments. Mr. D. Miller, first vice-president, will, in addition to his present duties, assume charge of the operating departments. These changes have been brought about as a result of the appointment of Mr. D. Willard as president of the B. & O. R.R."

Comment is unnecessary, further than to remark that none of the persons mentioned are or have ever been in the G.T.R. service.

A Railway to Hudson Bay.

J. Armstrong, Chief Engineer of the Dominion surveys for the projected railway to Hudson Bay, returned to Winnipeg, Mar. 20, from Pas Mission, Sask., where he had a consultation with W. J. Clifford, who had been in charge of the surveys carried on during the winter. Mr. Armstrong states that the result of the winter's work shows that there will be no heavy construction upon the first portion of the projected line. The location work will be continued by Mr. Clifford during the summer, and in June, another party will be sent north for the purpose of making surveys along the Nelson River. (Mar., pg. 179).

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them.

9595 to 9598. Feb. 16.—Authorizing Nipissing Power Co. to place wires across Bell Telephone Co.'s wires at four points in Ontario.

9599 to 9609, Feb. 17.—Authorizing Seymour Power and Electric Co., to place wires across North American Telegraph Co. s wires, at 11 points.

9610. Feb. 17.—Authorizing C.P.R. and Ottawa and New York Ry. to operate trains over crossing at Finch, Ont., without stopping.

9611. Feb. 17.—Authorizing C.N.O.R. to divert Kingston and side roads in Hamilton tp., and to cross same overhead.

9612. Feb. 17.—Amending order 8575, Oct. 27, 1909, which authorizes V.V. & E.R. to connect with B.C. Electric Ry. over Front and Columbia Sts., Vancouver, B.C., by striking out "B.C. Electric Ry. Co.," and substituting "Vancouver & Lulu Island Ry. Co."

9613. Feb. 7.—Adding Montreal Park & Island Ry., Town of St. Pierre, Lachine parish, and Turnpike Trust as parties to question of protection to be provided at G.T.R. crossing, Lachine Road, Rockfield, Que.

9614. Feb. 17.—Authorizing G.T.R. to build sidings to Northumberland Paper and Electric Co. and Northumberland Pulp Co.'s premises, Campbellford, Ont.

9615. Feb. 7.—Dismissing application of W. Duquette, Mile End, Que., alleging C.P.R. failure to remove snow from private sidings.

9616. Feb. 7.—Ordering that G.T.R. crossing at Eighteenth St., Lachine, Que., be protected by signal bell, 20% to be paid out of the Railway Grade Crossing Fund, and balance by the company.

9617. Feb. 7.—Refusing T. Laferriere's application for order directing C.P.R. to construct suitable farm crossing in St. Cuthbert parish, Que.

9618. Feb. 7.—On application of town of Maisonneuve, Que., prohibiting all unreasonable and unnecessary whistling by those in charge of any locomotive operating within the town, and providing that any person offending shall be liable to a penalty of $50.

9619. Feb. 7.—Authorizing Saraguay Electric and Water Co. to place cable under Montreal Terminal Co. at Rue St. Pierre, Tetreaultville, Que.

9620. Feb. 7.—Adding Montreal Terminal Ry. as a party to application of residents of Pointe Aux Trembles, Que., for order directing C.N.Q.R. to stop its trains at Pointe Aux Trembles for accommodation of public.

9621. Feb. 7.—Ordering C.N.Q.R. to raise tracks between First and Bennett Aves., Maisonneuve, to grade by June 1.

9622. Feb. 7.—Dismissing complaint of L. Lamontagne, of St. Malachie, Que., that National Transcontinental Ry. has taken 100 ft. of his land, and in order to cross same has made a cut at right angles instead of putting in a bridge, thereby allowing snow to accumulate causing damage to his land.

9623. Feb. 7.—Dismissing complaint of W. Ryan, Montreal, as to Bell Telephone rates for house telephone.

9624. Feb. 18.—Authorizing C.P.R. to use bridge 51.3 on its Montreal and Ottawa section.

9625. Feb. 18.—Authorizing C.N.O.R. to build across road between lots 30 and 31, con. 1, Hamilton tp.

9626. Feb. 17.—Extending until Apr. 1 time within which semaphores required under order 8850, Dec. 2, 1909, shall be installed, at G.T.R. and Galt, Preston & Hespeler St. Ry. crossings, Hespeler, Ont.

9627 to 9629. Feb. 18.—Authorizing Ontario Hydro-Electric Power Commission to place wires across C.P.R. at three points.

9630 to 9632. Feb. 18.—Authorizing Sidney Bell Telephone Association to place wires across G.T.R. at three points in Quebec province.

9633. Feb. 18.—Authorizing Walkerville Light and Power Co. to place wires across Pere Marquette Rd., at Walkerville, Ont.

9634, 9635. Feb. 18.—Authorizing town of Penetanguishene, Ont., to lay pipe under G.T.R. at Queen and Main Sts.

9636. Feb. 17.—Authorizing C.N.O.R. to place C.N.O.R. and C.P.R. joint tracks under Bell Telephone Co.'s wires at mileage 0.5, from junction with main line, Parry Sound, Ont.

9637. Feb. 19.—Authorizing Alberta Government to place wires across G.T.P.R. near Stony Plain.

9638 to 9643. Feb. 19.—Authorizing C.N.O.R. to build across six highways in Hope, Hamilton and Clarke tps.

9644. Feb. 7.—Declaring that T. J. O'Neill, Montreal, is entitled to be charged for Bell telephone at private house, and not business rate.

9645. Feb. 17—Authorizing C.N.O.R. to take lands in Scarboro tp. for diverting two highways.

9646. Feb. 17.—Authorizing G.T.R. to install full interlocking plant where it crosses N. St. C. & T. Ry., between Clifton Jct. and Stamford, Ont.

9647. Feb. 21.—Authorizing C.P.R. to construct its Wetaskiwin east branch across highways in Alberta.

9648. Feb. 17.—Extending until May 15, time within which C.P.R. may complete work required by order 9067, Dec. 28, 1909.

9649. Feb. 21.—Recommending to Governor in council for sanction C.P.R. lease of Orford Mountain Ry. for 999 years.

9650. Feb. 7.—Ordering G.T.R. to install gates at King St. crossing, Sherbrooke, Que., and to reduce shunting across the street to a minimum.

9651. Feb. 16.—Approving Atlantic, Quebec and Western Ry. Standard Freight Mileage Tariff C.R.C. 1, and Standard Passenger Tariff 1, subject to certain conditions.

9652. Feb. 21.—Authorizing C.N.O.R. to build across public road between lots 2 and 3, con. 4, Clarke tp., Ont.

9653, 9654. Feb. 21.—Temporarily approving, pending final determination by Board, Bell Telephone Co.'s tariffs of tolls; as per agreements entered into by it with Laird tp., Dec. 13, and Mount Albert Telephone Co., Dec. 2, 1909, for interchange of messages.

9655. Feb. 21.—Authorizing Hamilton Cataract Power, Light and Traction Co. to place wires across T. H. & B. R. at lot 2, con. 4, Barton tp., Ont.,

9656, 9657. Feb. 21.—Authorizing Ontario Hydro-Electric Power Commission to place wires across T. H. and B. R. in Gainsboro and Ancaster tps.

9658. Feb. 21.—Authorizing Oak Bank Telephone Co. to place wires across C.P.R. between sec. 21 and 28, tp. 11, r. 5, e., Man.

9659, 9660. Feb. 2 2.—Authorizing Bell Telephone Co. to place wires across P.M. Rd. at Kingsville, Ont., and across St. Lawrence & Adirondack Ry. at Woodlands, Que.

9661 to 9673. Feb. 21, 22.—Authorizing C.N.O.R. to build across 13 highways in Clarke, Scarboro, Hope and Pickering tps.

9674. Feb. 21.—Authorizing G.T.R. to construct a branch between its main line east of Port Hope viaduct and its Northern Division at Port Hope, Ont., and directing that Jacob's Ladder, so-called, be placed underneath the tracks, to be at least 6 ft. wide and 7 ft. high; to be operated by and at the expense of the town.

9675. Feb. 21.—Ordering that, in connection with the protection of G.T.R. crossing at John St., Port Hope, Ont., the company have the option of installing an electric bell or limiting the speed of its trains to 10 miles an hour.

9676. Feb. 22.—Approving C.N.O.R. plan showing bridge over Goforth's Creek, on its Toronto-Ottawa Division.

9677 to 9679. Feb. 22.—Authorizing Manitoba Government Telephones to place wires over C.N.R. and C.P.R. at three points.

9680 to 9682. Feb. 22.—Authorizing W. Y. Cannon to erect telephone wires across Kingston & Pembroke Ry. at Clarendon, Oso and Sharbot Lake Jct., Ont.

9683, 9684. Feb. 22.—Authorizing Bell Telephone Co. to place wires across G.T.R. at two points in Richmond, Que.

9685. Feb. 22.—Authorizing People's Telephone Co. to place wires across G.T.R. in Plympton tp., Ont.

9686. Feb. 22.—Authorizing C.N.O.R. to build across road, at lot 21, con. 3, Darlington tp.

9687. Feb. 22.—Authorizing C.N.O.R. to build bridge over Gages Creek, Hamilton tp.

9688. Feb. 24.—Authorizing C.N.O.R. to build across public road between lots 5 and 6, con. 3, and lot 4, con. 3, East Whitby tp.

9689. Feb. 24.—Rescinding order 9591, Feb. 17, authorizing C.N.O.R. to build across public road between cons. 1 and A, Hamilton tp.

9690. Feb. 21.—Ordering G.T.R., pending hearing, to provide watchman at crossings just east of its station in Beachville, Ont., the watchman to be on duty between 7 a.m. and 8 p.m. daily.

9691. Feb. 23.—Amending order 9613, Feb. 7, re G.T.R. crossing at Lachine Road, Rockfield, Que.

9692. Feb. 23.—Authorizing C.P.R. to build spur for Hamilton Powder Co. near Barnett station, New Westminster District, B.C.

9693, 9694. Feb. 23.—Authorizing C.N.O.R. to place its tracks and telegraph wires under G.N.W. Telegraph Co.'s wires at stations 2991÷67 and 2990÷17, west from Hawkesbury.

9695. Feb. 23.—Authorizing Bell Telephone Co. to place wires across G.T.R. telegraph wires at Main St., Richmond, Que.

9696. Feb. 23.—Authorizing Pipestone rural municipality to place wires across C.P.R. near Reston Station, Man.

9697. Feb. 23.—Authorizing Lincoln Electric Light and Power Co. to place wires across G.T.R. at Niagara St., St. Catharines, Ont.

9698. Feb. 23.—Authorizing Seymour Power and Electric Co. to place wires across G.T.R. at Madoc, Ont.

9699. Feb. 23.—Authorizing Consumers' Gas Co. to lay main under G.T.R. at Woodbine Ave., Toronto.

9700. Feb. 23.—Approving C.N.R. location through tps. 53-52 and r. 15, w. 5 m., and unsurveyed tps. 51-45, r. 15-18, w. 5 m., mileage 0 to 60.45, from junction with main line at mileage 124.48, Alta.

9701. Feb. 24.—Authorizing Canada Atlantic Ry. to build bridge over St. Lawrence River at Coteau, Que.

9702. Feb. 22.—Approving G.N.R. rules governing the operation of trains in Canada.

9703. Feb. 23.—Authorizing King Independent Telephone Co. to place wires across G.T.R. near King station, Ont.

9704. Feb. 24.—Authorizing C.N.O.R. to build across public road south of Hammer station, Capreol tp.

9705. Feb. 25.—Authorizing Alke Telephone Lines to place wires across G.T.R. in Phelpston village, Ont.

9706. Feb. 25.—Approving G.T.P.R. location, Prince Rupert, B.C., easterly, mileage 359 to 408.69.

9707. Feb. 24.—Authorizing C.N.O.R. to build across public road between lot 11, con. 2, and lot 11, con. 1, Capreol tp.

9708. Feb. 24.—Authorizing C.P.R. to build spur connection with Winnipeg Electric Ry.'s gas works spur, running northeasterly and crossing Sutherland ave., Winnipeg.

9709, 9710. Feb. 25.—Authorizing C.N.O.R. to build across public roads in Capreol and Hutton tps.

9711. Feb. 25.—Approving C.N.R. location through tps. 38 to 29, r. 19 to 21, w. 4 m., mileage 104.73 to 171.66, Alta.

9712. Feb. 25.—Interpreting order 9226, Jan. 8, in connection with Western Associated Press application, respecting telegraphic tolls. This order is given in full on another page.

9713 to 9715. Feb. 26.—Authorizing Pipestone municipality to place wires across C.N.R. at three points, in Manitoba.

9716 to 9718. Feb. 26.—Authorizing Sutton village, Que., to place wires across C.P.R. at three points.

9719. Feb. 22.—Ordering G.T.R. to keep view at first public crossing west of Longwood station, Ont., free from obstruction, and authorizing it, subject to this condition, to operate trains over the crossing without speed limitation.

9720. Feb. 24.—Authorizing V., V. & E. Ry. and Nav. Co. to construct spurs across B.C. Electric Ry. and certain streets and lanes in Vancouver, B.C.

9721. Feb. 25.—Approving plans of drain to be constructed by Raleigh tp. under G.T.R.

9722. Feb. 25.—Authorizing C.P.R. to build spur for Standard White Lime Co., Beachville, Ont.

9723. Feb. 26.—Approving C.N.R. location through tps. 45 to 39, r. 18 to 20 w. 4th m., mileage 56.17 to 104.17, Alta.

9724. Feb. 26.—Approving C.N.O.R. location through unsurveyed territory in Sudbury Mining Division, mileage 120 to 140 from Sudbury Jct.

9725. Feb. 24.—Ordering that, until further ordered, G.T.R. crossings at Trafalgar road and Hale st., in London tp., just east of London, Ont., be protected by electric bell to be installed within three months.

9726. Feb. 25.—Authorizing city of Brantford, Ont., to construct bridge on South Market st. over Western Counties Electric Co.'s canal and Toronto, Niagara & Western, Grand Trunk Rys., and Brantford & Hamilton Electric Ry.

9727. Feb. 28.—Approving G.T.P.R. location, Yorkton-Canora branch, from mileage 25 to 54.70, Sask.

9728. Feb. 28.—Approving Supplement 3 to C.N.R. Standard Freight Tariff C.R.C. 38, giving maximum freight tolls on Pas Mission branch between Hudson Bay Jct., Sask., and Pas Mission, Keewatin; also between stations on said branch and stations on C.N.R. lines west of and including Port Arthur, Ont., and on Qu'Appelle, Long Lake & Saskatchewan Rd. and Steamboat Co.'s lines.

9729. Feb. 28.—Approving C.P.R. standard plans for highway and farm crossings.

9730. Feb. 28.—Authorizing C.N.R. to open for traffic its line from Etoimami, Sask., to Pas Mission, Keewatin, and ordering it to provide a mixed train service once a week each way; speed not to exceed 18 miles an hour.

9731. Feb. 22.—Authorizing C.N.R. to open for traffic its line from Dalmeny to Laird, Sask.

9732, 9733. Feb. 25.—Ordering that M.C.R. crossings immediately west of Woodslee station and immediately west of Wyndham station, Ont., be protected by standard electric bells.

9734. Feb. 28.—Approving Canada Atlantic Ry. plans of proposed station at Henrysburg, Que.

9735, 9736. Feb. 28.—Authorizing C.P.R. to build sidings into Canada Furniture Company's premises, Woodstock, Ont., and Colonial Wood Products Co.'s premises, Thorold, Ont.

9737. Feb. 28.—Authorizing Bell Telephone Co. to place wires across G.T.R. near Richmond, Que.

9738. Feb. 28.—Authorizing Manitoba Government Telephones to place wires across C.P.R. near Bradwardine.

9739. Feb. 28.—Authorizing Bell Telephone Co. to place wires across G.T.R. at Laprairie, Que.

9740. Feb. 28.—Authorizing Montreal & Southern Counties Ry. to place wires across G.T.R. on Common st. and at Three Diamond crossing, near Riverside st., Montreal.

9741. Feb. 28.—Authorizing city of Montreal to lay sewers under C.P.R. at Papineau ave.

9742. Mar. 2.—Authorizing G.T.R. to build spurs to Doolittle and Wilcox's premises, Dundas, Ont.

9743 to 9750. Mar. 1.—Ordering that G.T.R. be relieved, for the present, from providing further protection at crossing at first highway west of Kingscourt Jct., Ont.; and M.C. Rd. from providing further protection at crossings, one mile east of Taylor second crossing east of Attercliffe; first highway west of Buxton; second highway east of West Lorne; highway east of Charing Cross; four miles west of Ridgetown and highway west of Dufferin, Ont., it appearing from inspections made by the Board's Engineer and Operating Department that views from both directions are excellent, and crossing boards and whistling posts provided.

9751. Feb. 28.—Authorizing C.P.R. to carry party of McGill University mining students at special rate of $40 each from Montreal to Rossland, Phœnix and Greenwood, B.C., and return, or of $50 each from Montreal to Vancouver, B.C., and return, including side trips to Rossland, Phœnix, and Greenwood, B.C.

9752. Feb. 21.—Approving C.N.Q.R. plan of revised crossing of St. Michel road, mileage 5.05, and rescinding order 8746, Nov. 19, 1909, in so far as it approves of crossing as shown on plan on file with the Board.

9753. Feb. 21.—Ordering M.C.R. to construct track for interchange of traffic with P.M.R. at Leamington, Ont.; the Leamington Canning Co. to furnish necessary land; plans to be approved by the Board's Engineer.

9754. Mar. 2.—Authorizing C.N.O.R. to build across public road between Ontario and Durham counties at station 1862÷87.

9755. Feb. 26.—Ordering that M.C.R. crossing just west of Comber station, Ont., be protected by gates to be installed not later than May 1, and operated daily between 7 a.m. and 7 p.m.

9756, 9757. Mar. 2.—Authorizing Argyle municipality to place wires across C.N.R. at two points near Neelin station, Man.

9758. Feb. 26.—Authorizing Ontario Hydro-Electric Power Commission to place wires across Lake Erie and Detroit River Ry. in Yarmouth tp.

9759. Feb. 17.—Ordering that on and after Mar. 15 use by C.P.R. and G.T.R. of Lachine Canal Bank branch and sidings shall be subject to the terms of the agreement, and varied to provide that cost of operation be divided equally, and cost of maintenance be divided on a mileage basis.

9760. Feb. 23. Amending order 3245 in so far as it applies to operation by Boston and Maine Rd. in Canada, so as to permit the use upon engines with extension smoke boxes of perforated spark plates made from steel plate, No. 8 gauge, with staggered perforations 3-16"×1½"; width of bridges between sides of perforations ⅛", and between ends of perforations 3-16", in place of No. 10 B.W.G. netting mesh.

9761. Mar. 1.—Dismissing National Transcontinental Ry. applications under secs. 227 and 256, for leave to cross overhead the C.N.R. terminal tracks and spurs in Winnipeg.

9762, 9763. Mar. 2.—Authorizing Seymour Power & Electric Co. to place wires across North American Telegraph Co.'s wires at Campbellford, and across Bay of Quinte Ry. at Stoco, Ont.

9764 to 9773. Mar. 2.—Authorizing Manitoba Government Telephones to place wires across C.N.R. at 10 points.

9774. Mar. 4.—Authorizing G.T.R. to build cross-over track on Ferguson ave., Hamilton, Ont.

9775. Mar. 3.—Authorizing C.P.R. to build two spurs for the Alberta Clay Products Co., Medicine Hat, Alta.

9776. Mar. 4.—Amending order 9047, Dec. 24, 1909, by substituting Twenty-fourth st. for Twenty-third st.

9777. Mar. 3.—Ordering that all telegraph companies doing business in Canada file with the Board, on or before April 1, copies of all forms used in transmitting and receiving messages.

9778. Mar. 1.—Ordering C.P.R. to carry out certain improvements along its right of way in Medonte tp., Ont., and that it install an electric bell at crossing at mileage 162.95, by May 1.

9779. Mar. 3.—Ordering that M.C.R. crossing just west of Ruscombe station, Ont., be protected by standard automatic electric bell.

9780. Mar. 3.—Dismissing application of St. Jacques des Piles parish, Que., for an order directing C.P.R. to construct a crossing where it intersects street I.

9781. Mar. 3.—Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co. and C.P.R. to operate trains over crossing on line from Sapperton to Fraser River Lumber Co.'s mills, New Westminster, B.C., without first being brought to a stop.

9782. Feb. 21.—Ordering Bell Telephone Co. to provide connection with West Williams Telephone Co., Parkhill, Ont., upon terms to be agreed upon.

9783. Mar. 5.—Approving Esquimalt & Nanaimo Ry. location from mileage 0 at Parksville on its Wellington-Alberni branch to mileage 34.79, at Union Bay, Vancouver Island, B.C.

9784. Mar. 5.—Authorizing C.N.O.R. to divert road between lots 20 and 21, con. 4, Whitby tp.

9785 to 9789. Mar. 4.—Authorizing Bell Telephone Co. to place wires across G.T.R. at five points in Ontario.

9790. Mar. 7.—Authorizing Essex Terminal Ry. to build second track and a spur across MacDougall st., Sandwich West tp., Ont.

9791. Mar. 4.—Authorizing C.P.R. to build across highways in Etobicoke tp., Ont.

9792. Mar. 7.—Authorizing C.P.R. to operate 24 bridges on its Mountain, Edmonton, Shuswap, Medicine Hat and Laggan sections.

9793. Mar. 4.—Authorizing C.P.R. to build extension to spur to Brandon Brewing Co.'s premises, Brandon, Man.

9794. Mar. 3.—Ordering M.C.R. to install standard automatic electric bell between Medora and Thomas st. crossings, west of Essex station, Ont.

9795. Mar. 7.—Authorizing C.P.R. to use subways at First st. west and Second st. east, Calgary, Alta.

9796. Mar. 7.—Authorizing C.P.R. to use bridge over ferry slip, Vancouver, B.C.

9797. Mar. 7.—Authorizing C.P.R. to use bridges 8.2 and 38.3, on its Macleod section, Alta.

9798. Mar. 7.—Authorizing C.P.R. to use four bridges on its Swift Current section, Sask.

9799. Mar. 8.—Authorizing G.T.R. to build passing track across road between lots 5 and 6, in concession fronting on Great Cataraqui River, Kingston tp., Ont.

9800. Mar. 8.—Authorizing Goderich Elevator and Transit Co. to build bridge for pedestrians across G.T.R. to C.P.R. at Goderich, Ont.

9801. Mar. 8.——Ordering V., V. & E. Ry. & Nav. Co. to grade and put in good order before July 1, within its right of way limits, approaches to undergrade crossing on Anderson's farm, New Westminster District, B.C.

9802. Mar. 1.—Ordering G.T.R. to protect crossings at Main st., Ottawa East, by gates to be installed not later than June 1, and to be operated by day and night watchmen.

9803. Mar. 7.—Authorizing Essex Terminal Ry. to build second track across Dougall road, Sandwich West Tp., Ont.

9804. Mar. 7.—Authorizing C.P.R. to use bridge at mileage 31.2, on its Cascade section, B.C.

9805. Mar. 1.—Ordering G.T.R. to install electric bell at Main st. crossing, Carp village, Ont.

9806. Mar. 8.—Rescinding order 9157, Jan. 5, authorizing C.N.O.R. to cross and divert G.T.R. near Brighton, Ont.

9807. Mar. 8.—Amending order 9736, Feb. 28, authorizing building of a branch line in Thorold, Ont.

9808. Mar. 8.—Authorizing Seymour Power & Electric Co. to place wires across C.P.R. at Sulphide, Ont.

9809. Mar. 1.—Ordering that bridge-tender at present employed day and night by G.T.R. at Echo Drive, Ottawa East, shall act as flagman there.

9810. Mar. 8.—Ordering that New York Central Rd. crossing near Beauharnois, Que., be protected by electric bell to be installed and maintained by the company.

9811, 9812, Mar. 8.—Approving G.T.R. plans and specifications of bridges over Moisson and Duck Creeks, Rochester tp., Ont.

9813. Mar. 9.—Ordering that rate to be charged by express companies for carriage of daily newspapers from Winnipeg, shall be the same as charged by the Dominion Express Co. in Eastern Canada, namely, ¼c. per lb. on aggregate weight per month, to points reached by the companies within 300 miles of Winnipeg, exclusive of wagon service.

9814, 9815. Mar. 9.—Authorizing Manitoba Government Telephones to place wires across Brandon, Saskatchewan & Hudson Bay Ry. at two points.

9816, 9817. Mar. 9.—Authorizing Farmers' Rural Telephone Co. to place wires across C.P.R. at two points, in B.C.

9818 to 9828. Mar. 9.—Authorizing Hamilton Cataract Power, Light and Traction Co. to place wires across Bell Telephone Co.'s wires at 10 points, and across Hamilton, Grimsby and Beamsville Electric Ry. at one point in Ontario.

9829. Mar. 9.—Ordering that C.P.R. crossing at Merry st., Magog, Que., be protected by an automatic electric bell; the town to do certain filling and fencing at bridge approach.

9830. Feb. 7.—Authorizing Dominion Light, Heat and Power Co. to place wires under Montreal Terminal Ry. at Aird st., Maisonneuve, Que.

9831 to 9838. Mar. 7.—Ordering tnat G.T.R. be relieved from providing further protection at crossings, south of Milton station; north of Maple; first highway east of York station; between cons. 4 and 5, Tecumseh tp.; south of Beeton station; first highway south of Bradford, and first hignway west of Manilla Jct., Ont.; and that M.C.R. be relieved from further protection of crossing at second highway west of Pelton, Ont.; it appearing from inspections made by the Board's Engineer and Operating Department that the views are clear and necessary signboards and whistling posts provided.

9839 to 9847. Mar. 10.—Authorizing Esquimalt and Nanaimo Ry. to build across nine highways on its Comox extension, from mileage 0 at Parksville to mileage 34.79 at Union Bay, B.C.

9848 to 9851. Mar. 9.—Authorizing city of Cranbrook, B.C., to lay water mains under C.P.R.

9852. Mar. 10.—Authorizing Esquimalt and Nanaimo Ry. to build Wellington to Alberni extension across Jones' cross-road at mileage 100.4.

9853 to 9857. Mar. 11.—Ordering that G.T.R. be relieved from providing further protection at crossings one mile south of Craigleith; one mile south of Caldwell; immediately west of Grass Hill station, and just east of Tanner's station; and that C.P.R. be similarly relieved respecting crossing on it Guelph and Goderich branch at mileage 82.6, Hullett tp., Ont., it appearing from inspections by the Board's Engineer and Operating Department that the views are clear and proper signboards and whistling posts provided.

9858. March 11.—Authorizing E. & N. Ry. to build Wellington to Alberni extension across Alberni main road, at mileage 104.8.

9859. Mar. 9.—Authorizing G.T.R. to construct spur to Terminal Warehouse & Cartage Co.'s premises, Montreal.

9860. Mar. 11.—Authorizing E. & N.R. to build Wellington to Alberni extension across Hellier's crossroad at mileage 102.9.

9861, 9862. Mar. 11.—Ordering that G.T.R. be relieved from providing further protection at crossing three miles east of Shakespeare, and that C.P.R. be similarly relieved respecting crossing between cons. 2 and 3, Sandwich East tp., Ont., it appearing from inspections by the Board's Engineer and Operating Department that the views are clear and proper signboards and whistling posts provided.

9863 to 9865. Mar. 11.—Authorizing E. & N. Ry. to build across highway at mileage 2.52 of its Comox extension from mileage 0 at Parksville; and across Alberni main road at mileages 104.1, and 104.7.

9866, 9867. Mar. 11.—Adding the town of Lindsay and Ops tp. as parties to application in connection with question of protection to be provided by G.T.R. at O'Halloran's crossing on concession road between cons. 4 and 5 Ops tp., Ont.

9868, 9869. Mar. 10.—Ordering that C.P.R. be relieved from providing further protection at crossings at Boulding's crossing between lots 9 and 10, Luther tp., and over concession road, between cons. 2 and 3, Caledon tp., Ont., it appearing from inspections by the Board's Engineer and Operating Department, that the views are clear and that proper signboards and whistling posts are provided.

9870. Mar. 9.—Approving C.P.R. plans of shelters to be erected at flag stations.

9871. Mar. 11.—Ordering G.T.P.R. to carry highway over its railway about 2 miles west of Ardrossan Sta., Alta., and that it file plans of overcrossing within 30 days from date.

9872. Mar. 14.—Approving drainage work of Tilbury East tp., Ont., crossing C.P.R. on lot 15, con. 3.

9873. Mar. 14.—Ordering that G.T.R. be relieved from providing further protection at crossing one mile north of Mount Forest, Ont., it appearing from inspection by Board's Engineer and Operating Department that the views are clear and that proper signboards and whistling posts are provided.

9874. Mar. 14.—Approving proposed deviation of Central Ontario Ry., Whitney extension, between stations 1382 and 1461.

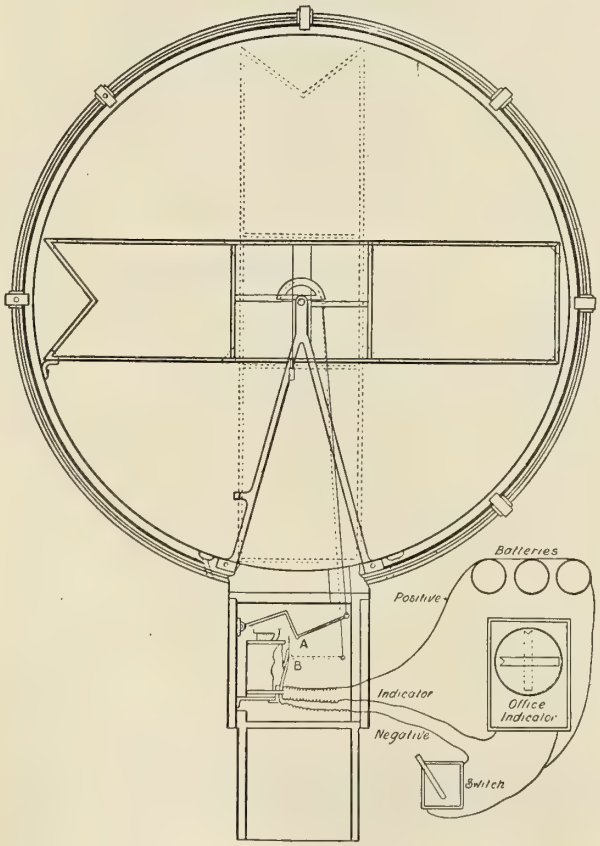
CHICAGO



Position of Semaphore Banner is always absolutely indicated to operator.

THE McAVITY ELECTRIC RAILWAY SIGNAL

SIMPLE RELIABLE ECONOMICAL

The McAvity Electric Signal can be used either in a Block System, as a Semaphore for Station, Yard, Junction and Drawbridge Protection, or as a Train Order Signal.

The banner in a horizontal position signifies "STOP." When current is applied the banner comes to position of "CLEAR," or perpendicular, as shown by dotted lines; this brings lever A down, making contact with point B, which contact must be made before Office Indicator will operate, and as the Semaphore only works to "CLEAR" electrically, therefore, in case there should be any derangement of the wires, **the banner instantly assumes the position of "STOP" by gravity,** where it will remain until the cause of the disturbance is discovered and removed.

Side View of McAvity Electric Railway Signal, Type B.

9875. Mar. 14.—Ordering G.N.R. to erect fences for 1½ miles north, and two miles south of station in Fruitvale townsite, B.C., work to be completed by May 15.

9876. Mar. 14.—Authorizing C.P.R. to use bridge 63.08 on its Broadview section, Central Division.

9877. Mar. 14.—Approving plans of C.P.R. and G.T.R. interchange switch at Brampton, Ont.

9878. Mar. 14.—Authorizing C.P.R. to use bridges 3.8 and 127.4 on its Moose Jaw section, Western Division.

9879. Mar. 11.—Authorizing town of Berlin, Ont., to lay water main under G.T.R. at Albert St.

9880. Mar. 15.—Authorizing C.P.R. to construct spur to Western Tent and Mattress Co.'s premises at Calgary Jct., Alta.

9881. Mar. 14.—Authorizing C.N.O.R. to build across concession road between cons. 1 and 2, Hope tp.

9882. Mar. 16.—Authorizing C.P.R. to open for traffic portion of its second track between Dalhousie Mills and Avonmore, Ont., mileage 48.6 to 48.8.

9883. Mar. 16.—Adding town of North Oxford as party in matter of protection to be provided by G.T.R. at highway crossing just east of Beachville station, Ont.

9884. Mar. 15.—Authorizing C.P.R. to construct spur to Fonseca Roofing Co.'s premises St. Boniface, Man.

9885. Mar. 15.—Authorizing C.P.R. to construct spur to Summit Lake Lumber Co.'s premises at mileage 12.26 east of Nakusp, B.C.

9886 to 9888. Mar. 15.—Ordering that C.P.R. be relieved from providing further protection at crossings, at Donlands station; at milepost 54.4, Toronto section, Ont., and at mileage 117, Shefford station, Que., it appearing from inspections by Board's Engineer and Operating Department that views are clear and that proper signboards and whistling posts are provided.

9889. Mar. 15.—Limiting advertisement of notice of C.N.R. application for approval of amalgamation agreement with Saskatchewan Midland Ry.

9890. Mar. 15.—Approving proposed changes of G.T.R. and C.P.R. interchange track at Jacques Cartier Jct., on certain condition as to interlocking, derails, semaphores, etc.

9891. Mar. 16.—Authorizing Hamilton Cataract Power, Light and Traction Co. to place wires across C.P.R. at lot 2, con. 4, Barton tp., Ont.

9892. Mar. 16.—Authorizing Bell Telephone Co. to place wires across C.P.R. at Queen St. near Chatham station, Ont.

9893. Mar. 17.—Authorizing C.N.O.R. to construct bridge over Stephens' Pond, Darlington tp.

9894. Mar. 16.—Approving G.T.P.R. Standard Freight Tariff C.R.C. 6, between stations in Manitoba, Saskatchewan and Alberta (east of Wolf Creek).

9895. 9896. Mar. 16.—Ordering that C.P.R. be relieved from providing further protection at crossings at mileage 94.85 and 12.2, Ontario Division, Havelock section, Ont., it appearing from inspection made by Board's Engineering and Operating Departments, that the views are excellent and crossing signboards and whistling posts properly placed.

9897. Mar. 17.—Authorizing Calgary Natural Gas Co., to lay pipe under C.P.R. at Ninth Ave., Calgary, Alta.

9898. Mar. 17.—Authorizing Ontario Hydro-Electric Power Commission to carry wires across G.T.R. at lot 20, con. 2, Brantford tp.

9899. Mar. 17.—Authorizing Bell Telephone Co. to carry wires across C.P.R. at Petite Cote Road, near Vaudreuil, Que.

9900. Mar. 17.—Authorizing C.P.R. to open for traffic its Langdon North branch, Alta., mileage 0 to 38.88 under certain conditions.

9901. Mar. 14.—Ordering that Etobicoke tp. be made a party in protection of C.P.R. crossing at Dundas St., at mileage 7.76, Etobicoke tp., Ont.

9902. Mar. 19.—Approving strain sheet of west end approach to C.N.Q.R. St. Maurice River bridge, near Grand Mere.

9903 to 9906. Mar. 18.—Ordering that G.T.R. be relieved from providing further protection at the crossings at first highway west of St. Hubert station, and first highway north of Laprairie station, Que.; and that C.P.R. be similarly relieved in respect of crossing at mileage 18.8 and mileage 20.6, Newport section, Que., it appearing from inspections made by Board's Engineering and Operating Departments, that the views are excellent and that signboards and whistling posts are properly placed.

9907, 9908. Mar. 18.—Ordering that St. Lawrence & Adirondack Ry. install electric bells at crossings at Chateaugay, and Huntingdon, Que.

9909. Mar. 18.—Approving C.N.R. revised location across Rainy Lake, Rainy River district, Ont.; the openings to be as required by Public Works Department.

9910. Mar. 18.—Approving plan of G.T.R. shelter to be erected at Tecumseh Road crossing, in Rochester tp., Ont.

9911. Mar. 18.—Ordering that C.P.R. provide highway crossing over its Shuswap and Okanagan branch, about two miles north of Enderby, B.C.

9912 to 9918. Mar. 18.—Ordering that C.P.R. be relieved from providing further protection at crossing at mileage 23.6, Ontario Division, Lindsay branch; and that G.T.R. be similarly relieved in respect of crossings, 2½ miles east of Stouffville; west of Mosborough station; about 1¾ miles east of Shakespeare, Ont.; at first highway north of Lacadie; first highway south of St. Remi; first highway south of St. Lambert, Que., it appearing from inspections made by Board's Engineering and Operating Departments that the views are excellent and that signboards and whistling posts are properly placed.

9919. Mar. 18.—Authorizing Wright & Co., to lay sewer under C.P.R. at Jessie St., Hull, Que.

9920. Mar. 18.—Authorizing Montreal Light, Heat and Power Co. to carry conduit under G.T.R. at St. Ambroise St.

9921. Mar. 18.—Authorizing A. C. Beatty, Garden Hill, Ont., to carry wires across G.T.R.

9922. Mar. 18.—Authorizing Gloucester tp. Telephone Association to carry wires across Canada Atlantic Ry. at Carlsbad Springs, Ont.

9923, 9924. Mar. 16.—Authorizing Bell Telephone Co. to carry wires across G.T.R. at Pottersburg, and at McMurray and Lawrence Sts., Brantford, Ont.

9925. Mar. 18.—Authorizing Manitoba Government Telephones to carry wires across Brandon, Saskatchewan and Hudson Bay Ry., near Minto station.

9926. Mar. 18.—Authorizing Municipal Telephone Co. of Oakbank, Man., to carry wires across C.P.R.

9927, 9928. Mar. 21.—Authorizing Ontario Power Company to carry wires across G.T.R. at two points in Port Colborne, Ont.

9929. Mar. 21.—Authorizing Trenton Electric and Water Co. to carry wires across Bell Telephone Co.'s wires at Belleville, Ont.

9930. Mar. 21.—Authorizing Manitoba Government Telephones to carry wires across C.P.R., near Brandon.

9931 to 9944. Mar. 8.—Ordering that C.P.R. be relieved from providing further protection at the crossings at Irwin St., Perth, and at mileage 11.05, Drummond tp., Ont., and that G.T.R. be similarly relieved in respect of crossings, one mile east of Trenton, Ont.; at first highway east of Valois; first highway east of River Beaudette; first crossing east of Beaconsfield, Que.; about one mile west of Lancaster; public road at mileage 190 about 2 miles west of Ernestown; first crossing east of Lansdowne; crossing of Kingston Road about 3½ miles west of Trenton; three miles east of Brighton; crossing of Kingston Road, 2 miles east of Cobourg; crossing of Wharf Road at Bowmanville; crossing of Shipman Road, 1 mile east of Oshawa, Ont.; it appearing from inspections by Board's Engineering and Operating Departments that the views are excellent, that signboards and whistling posts are properly placed.

9945, 9946. Mar. 11.—Ordering that Central Vermont Ry. be added as a party in protection of C.P.R. crossing at Main St. and Louis St., Farnham, Que.

9947. Mar. 10.—Approving C.N.R. location through tps. 20-29, r. 5-8, w. p. m., mileage 69.05 to 127.92, Man.

9948. Mar. 11.—Ordering that G.T.R. within 50 days install electric bell at first highway crossing east of Waterdown station, Ont.

9949. Mar. 21.—Approving C.N.O.R. revised location in Hope tp., mileage 180.63 to 182.45, from Ottawa.

9950. Mar. 21.—Approving C.N.R. Crooked Lake branch location through tps. 49-50, r. 3-4, w. 3 m., and unsubdivided tps. 50-56, r. 5-7, w. 3 m., mileage 0 to 56.58, Sask.

9951. Mar. 19.—Approving Essex Terminal Ry. by-law authorizing W. Wollatt to prepare tariffs of tolls.

9952. Mar. 19.—Extending until June 1, time within which G.N.R. shall put its V.V. & E.R. and N. Co.'s line, between Cloverdale and Point Guichon, and its New Westminster Southern line, between Hazelmere and New Westminster, B.C., in such condition that trains can be run with safety at not less than 30 miles an hour.

9953. Mar. 18.—Authorizing C.P.R. to construct spur from its Phoenix branch, 7.7 miles south of Eholt, to lot 1762, Yale District, B.C.

9954. Mar. 18.—Authorizing C.P.R. to construct spur to the I.W.W. Plewes' premises, Toronto.

9955. Mar. 19.—Authorizing G.T.R. to construct spur to Canadian National Carbon Co.'s premises, Toronto.

9956 to 9962. Mar. 21.—Ordering that G.T.R. be relieved from providing further protection at crossings, at second highway west of Iroquois; Kennedy Road, ¾ mile west of Scarboro Jct, Ont.; first public road west of River Beaudette, Que.; 1½ miles south of Huntsville; first highway west of Mille Roches; immediately north of Sundridge; Danforth Road, first crossing north of Scarboro Jct., Ont., it appearing from inspections made by Board's Engineering and Operating Departments, that the views are excellent and that signboards and whistling posts are properly placed.

9963. Mar. 18.—Dismissing complaint of Jas. Richardson & Sons, Ltd., of Kingston, Ont., against rate of 7c. per 100 lbs. from Kingston to Montreal, on western grain arriving at Kingston by vessel, destined to points in Ontario and Maritime Provinces.

9964, 9965. Mar. 21.—Authorizing Seymour Power & Electric Co. to carry wires across North American Telegraph Co.'s wires between Rawdon and Sidney, and at Stoco Road, Hungerford, Ont.

9966. Mar. 21.—Authorizing Ontario Power Co. to carry wires across Government spur to elevator, Port Colborne, Ont.

9967 to 9969. Mar. 21.—Authorizing Bell Telephone Co. to carry alarm wires across G.T.R. at three points in Ontario.

9970, 9971. Mar. 22.—Authorizing Kaministiquia Power Co. to carry wires across G.T.R. at two points in Fort William, Ont.

Recent Ontario Legislation.

Among the Acts passed at the Ontario Legislature's recent session were the following relating to transportation interests:—

Bruce Mines and Algoma Ry.—Amendments.

Buffalo and Fort Erie Ferry Ry.—Consolidation and amendments.

Dunnsville, Wellandport and Beamsville Electric Ry.—Extending time for construction.

Hurontario Ry.—Incorporation.

Iron Range Ry.—Amendments.

Lac Seul, Rat Portage and Keewatin Ry.—Amendments.

Monarch Ry.—Incorporation.

Morrisburg Electric Ry.—Amendments.

Niagara Falls, Welland and Dunnville Electric Ry.—Incorporation.

Nickel Range Ry.—Incorporation.

North Midland Ry.—Extending time for construction.

Ontario Railway Act, 1906.—Amendments.

Ontario Railway and Municipal Board Act, 1906.—Amendments (two acts).

People's Ry.—Amendments.

St. Thomas Street Ry.—Amendments.

Simcoe Ry. and Power Co.—Amendments.

Stratford City and G.T.R.—Confirming agreement.

Tay tp. and G.T.R.—Confirming agreement.

Temiskaming and Northern Ontario Ry.—Amending act.

Toronto, Haliburton and Pembroke Ry.—Incorporation.

Toronto Suburban Ry.—Amendments

Wahnapitae Ry.—Incorporation.

Western Central Ry.—Amendments.

Simplified Mechanical Perspective is the title of a treatise by F. F. Frederick, of the School of Industrial Arts, Trenton, N.J., planned for students of High School age, who have already received some training in mechanical drawing. The notes and problems, the author states, have been used by him in his teaching, in substantially their published form for more than 20 years. In the teaching given the endeavor is made to consider the essentials that will develop the perspective sense and enable the student to apply his knowledge to practical problems. The problems set are admirably calculated to do this, and when they are worked out in conjunction with freehand perspective, the student will secure a much better appreciation of the subject. The volume is published at 75 cents by the Manual Arts Press, Peoria, Ill.

The Longest Continuous Double Track Railway in the World under One Management and the only Double Track Line Between Montreal, Toronto, Niagara Falls, Detroit and Chicago.

GRAND TRUNK RAILWAY SYSTEM

Finest Roadbed in Canada. Modern and Luxurious Trains. Courteous Employees. Beautiful Scenery. The Best of Everything on this Popular Route.

4 FAST TRAINS, TWO EXPRESS AND TWO LIMITED

BETWEEN MONTREAL AND TORONTO, EACH WAY, DAILY

THROUGH TRAINS between BOSTON (via Boston & Maine R.R. and Cent. Vermont Ry.) MONTREAL, TORONTO and CHICAGO.
THROUGH TRAINS between NEW YORK, TORONTO and CHICAGO via Lehigh Valley R. R. and Niagara Falls.

Dining and Parlor-Library-Cafe Cars on Day Trains. Pullman Sleeping Cars on Night Trains.

THE "INTERNATIONAL LIMITED"

The "Railway Greyhound of Canada," the finest and fastest train in the Dominion, runs every day in the year between Montreal and Chicago.

The Lines of this Great System reach all the Principal Cities and Towns in Quebec and Ontario

American Association G. P. & T. A.

W. E. Rispin, Ticket Agent, G.T.R., Chatham, Ont., read the following paper at the American Association of General Passenger and Ticket Agents' meeting in Havana, Mar. 28:—

I have been requested by the Canadian Ticket Agents' Association to represent them at this meeting on an invitation extended by your body with a view of giving you some idea of our progress since your last annual meeting, and to offer suggestions for the good of the passenger service, which may be acted upon by your Association should you find them worthy of your attention. The first is rather difficult, as in an association such as the Canadian Ticket Agents, progress by some may be marked only by our numerical gain in numbers, whereas to my mind progress would be more marked by the evidence of something accomplished by us as a body which would be some tangible evidence that we were the means of doing some good to our members and that they were reaping some benefit from membership. Our last annual meeting was held at Buffalo, N.Y., in Oct., 1909, when matters pertaining to our business were discussed and papers of an educational nature read by some of our members appointed for the purpose, which proved of a very entertaining and instructive nature and I am sure were a great benefit to the members assembled some of whom expressed themselves as very much edified by what they had heard and learned. One subject taken up was an illustrated tour around the world, presented by one of our members appointed for the purpose, and in a very able manner. With the aid of a large map, he took us with him on his trip explaining the different routes in their order, describing the points where changes were necessary and altogether making his address very entertaining to his hearers. Another subject taken up was the best method of handling tourist business so as to prove most satisfactory to the people directly interested, meaning of course the travellers, and insuring a continuance of their patronage. Subjects of this nature prove very interesting to the members, as well as instructive, and I am sure give evidence that membership in our association is beneficial both to the members themselves and the railway companies.

Among other business transacted the Association passed a resolution requesting that the American Association of General Passenger and Ticket Agents appoint a representative from their membership to attend our annual meetings with a view of giving an address to our assembled members on some subject pertaining to passenger work, which we feel sure would be a very strong factor in making our meetings still more attractive and I assure you that should you accede to this request your action will be thoroughly appreciated by us and your representative made thoroughly welcome. We had the pleasure of a visit from one of your members at our last annual gathering in Buffalo and were indeed pleased to see him there and derived much benefit from his address. I refer to Mr. C. A. Cairns, G.P. & T.A., C. & N.W. Ry., who, needless to say, is always welcome.

In the very excellent address delivered to your meeting at Atlantic City by Mr. Bryne he said among other things that 50% of your passenger traffic was for pleasure, 10% for health and 40% for business. Therefore 50% of the passenger traffic of the American Continent is created traffic. Did it ever strike you what an influence the ticket agent has on this created traffic and did it ever strike you how much the traveller for pleasure depends on the ticket agent for information as to where he will go and how he will go? It is a common thing for clients of my own to depend entirely on my judgment as to places I may select for them to spend a holiday, the principle requisite being that I shall be familiar with the place and its surroundings and in a position to direct them and arrange so that they shall reach their destination with the least trouble possible and a ticket agent that is thoroughly conversant with the pleasure resorts of the country is a valuable man to his employers. A great many of the members of the Canadian Ticket Agents' Association who occupy positions as city and town agents for the Canadian railways are engaged in other business as well as routing passengers, a great majority of them being among the most influential of the citizens of their respective municipalities, and therefore in a very good position to control the traffic from their territory which your travelling passenger agents will tell you they do. Until the last few years our Association has always enjoyed the courtesies of the United States railways when our meetings were held in that country, but on account of the fact that all our members are not exclusively engaged in railway work you are debarred from granting us transportation as an Association on account of the rulings of the Interstate Commerce Commission but as you are well aware we do a great deal for your different railways and are constantly routing passengers over your different railway lines and through your different gateways and would do so a great deal more intelligently were we familiar ourselves with the routes and terminals. I am sure you will all agree with us that there is no educator for a ticket agent like travel and our Association would esteem it a great favor if you could represent this matter to the I.C.C. in such a favorable light that the bar against granting transportation to members of our associations would be removed, as I feel sure that should you succeed in doing so the result would be favorable to the U.S. railways.

Some of the United States and Canadian statesmen have recently met with a view of arranging a new tariff between the two countries. It is to be hoped their efforts will result in a tariff that will be satisfactory to the people of both countries so that traffic will not be hampered, as anything that tends to put a damper on the transportation of merchandise to, and between the United States and Canada will also have an adverse effect on passenger traffic.

The annual influx of farmers from the Western and North-western States into our Canadian North-west has already started and this movement is assuming very large proportions. The settlement of so many people from these states in Canada will cause a continual tide of travel to and fro between the two countries and materially assist in building up the revenues of the railways leading to and from both countries.

On behalf of the Canadian Ticket Agents' Association I thank you for the privilege of being represented at the meeting and for your patient hearing.

Esquimalt and Nanaimo Ry.

In connection with the extension of the line to Alberni, B.C., we are advised that the section now under construction from Parkersville to Alberni, crosses the mountain range which forms the backbone of Vancouver Island, with a summit of about 1,300 ft. above sea level. For 10 miles on either side of this summit there are gradients of 1.50%, with heavy rock work along the mountain side, and a liberal allowance of 10° curves, with a good deal of trestle work. There is only one stream of any importance to be crossed—the little Qualicum River—at the outlet of Cameron Lake, which requires a 120 ft. steel span on masonry abutments. At certain points the line passes through very fine timber lands, certain areas carrying 100,000 ft. b.m., an acre. The line will also open up a large tract of fine farming land in the Alberni Valley, and at Port Alberni will connect with the trade of the west coast of Vancouver Island, which is rich in timber, minerals and fisheries, including halibut banks, and a rich whale fishery.

We were advised, Mar. 17, that the location of the proposed extension to Comox and Campbell River was under consideration. This line has been located from Parksville to Black Creek, 47 miles, and the company is about to let a contract for clearing the right of way to Black Creek, 14 miles. The clearing of the right of way between Parksville and Union Bay will be taken in hand later on. It is expected that the location as far as Campbell River, 79 miles from Parksville, will be completed this summer.

Nothing has been decided as to the construction of the Cowichan Lake branch, the matter being held up pending the result of negotiations with the American Finance and Securities Co., which is desirous of purchasing the Cowichan Lake timber limits.

H. E. Beasley, Superintendent, was quoted as saying, Mar. 9, that the most important work to be carried out on the Victoria-Nanaimo line this year will be the replacing of the wooden trestle over the Niagara canyon with a steel one. The preliminary operations are in progress, and it is expected to have everything in readiness for the installation of the steel structure by May 1. It is the intention to replace the wooden bridge at Arbutus Canyon with a steel bridge at a future date. The general policy of betterment which has been carried on ever since the company took over the line, will be continued, it being intended this year to add a number of additional sidings.

Press reports state that C.P.R. and G.T.R. trainmen have made formal demands for 20% and 40% increases of pay, respectively.

The Ontario Legislature has passed a resolution providing that the Chairman of the Temiskaming and Northern Ontario Ry. Commission shall receive an honorarium of $5,000 a year. Heretofore he has received $3,500 a year.

Tenders for Construction of Irrigation Canals and Earth Dams.

THE CANADIAN PACIFIC RAILWAY COMPANY, IRRIGATION DEPARTMENT.

Calgary, Alberta, Canada,
March 15th, 1910.

Sealed Tenders will be received up to noon of May First, Nineteen Hundred and Ten, addressed to the undersigned, for all Excavation required to complete the Canal System in the Eastern Section of the Canadian Pacific Railway Company's Irrigation Block, Alberta, amounting to upwards of Twenty-five million cubic yards of material.

Plans, Specifications, and all other information may be seen at the office of the Assistant Chief Engineer, Calgary, Alberta.

Proposals will only be accepted for the work as a whole, and must be accompanied by a certified cheque for twenty-five thousand dollars ($25,000), payable to J. S. Dennis, as a guarantee that the party awarded the contract will execute the same. Cheques of unsuccessful bidders will be returned to them immediately after the awarding of the contract.

J. S. DENNIS,
Assistant to Second Vice-President,
Canadian Pacific Railway Co.

VANADIUM

Contrary to the custom of things, Vanadium won immediate success in the highest branches of Metallurgy—in the manufacture of armor plate, marine forgings, locomotive and automobile parts.

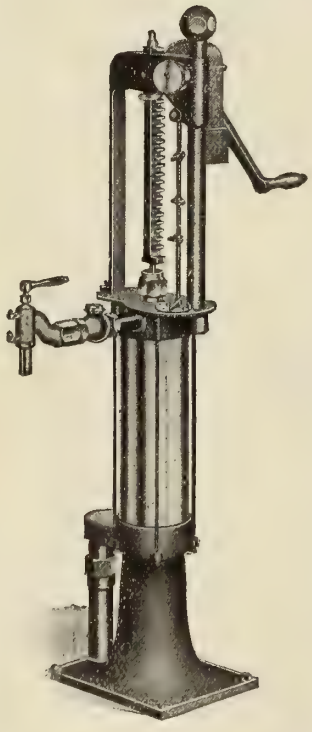
Tests tell; and the tests which instantly admitted Vanadium Steels to these important fields are revolutionizing results all over the metal world.

This space is too short for the story. It is a story that vitally affects the success ot every man, every machine, and every mill that uses iron, steel, brass, bronze or aluminum.

Vanadium, the "Master Alloy," is now in use all over the world. Get the complete story from our books.

American Vanadium Company

324 Frick Building,
Pittsburgh, Pa.



BOWSER

SYSTEMS FOR RAILWAY OIL STORAGE

are backed up by twenty-five years of experience in the manufacture of Self-measuring Pumps and Tanks.

The Tanks are made of any capacity, either cylindrical or rectangular, may be buried underground and connected with the pumps which are placed any distance away, wherever most convenient. No danger from FIRE.

The Pumps measure accurately, and by means of a Gallon Meter, keep an accurate record of all oil drawn. OVER FIFTY RAILROADS ARE USING BOWSER EQUIPMENT. Drop a card for BULLETIN 18.

S. F. BOWSER & COMPANY, LTD.

TORONTO, ONT.

Canadian Northern Ry. Construction, Etc.

Canadian Northern Quebec Ry.—The Montmorency branch connects with the main line half-a-mile north of Hedleyville Jct., Que., and extends to the Montmorency Lumber Mills, about 1.5 miles above the falls. The branch is approximately 7.5 miles and it has been constructed particularly for the handling of pulpwood for the lumber company. About 3,000 cords have been shipped since the line was opened, and it is expected to ship about 20,000 cords a year.

Plans are said to be under consideration for the construction of a terminal station in Montreal. Three or four schemes are spoken of, one of them being for the purchase of the old jail at the corner of Notre Dame St. and Delorimier Ave., and its utilization, and another for an uptown site. The advantage of the old jail site is its proximity to the river front.

Canadian Northern Ontario Ry.—An Ottawa dispatch states that the difficulties in the way of securing an entrance into Ottawa beyond Hurdman's bridge are in a fair way of being adjusted, and that the new plan will involve a bridge over the C.P.R. and the G.T.R. tracks.

The Supreme Court has affirmed the Board of Railway Commissioners' order granting the company permission to construct sidings from the G.T.R. main line in Scarboro tp., near Toronto, to the C.N.R. right-of-way between Toronto and Ottawa, for the purpose of transferring construction material.

In the Ontario Legislature Mar. 10, the Minister of Public Works stated that the company had built and placed in operation 30 miles of line northerly from Sellwood Jct., to Hutton tp., and that four survey parties were in the field between the latter point and Port Arthur, locating a route for further construction.

J. M. Campbell, is in charge of a staff of engineers, going over the route of the Toronto-Ottawa line, easterly from Trenton, Ont. On the western section of the line between Toronto and Trenton rapid progress is being made with construction.

Wabnapitae Ry.—The Ontario Legislature incorporated a company with this title for the purpose of constructing the railway mentioned in our last issue.

Canadian Northern Ry.—M. H. McLeod, General Manager, spent some time in Toronto in March in consultation with the President and Vice President, when most of the construction to be done this year was decided on. It is probable that between 400 and 500 miles of new track will be added to the company's mileage this year.

The Oak Point branch, which is now operated from Oak Point Jct., near Winnipeg, to Oak Point, 60.4 miles, has been graded for about 30 miles further northwesterly. This will be laid with track this year and considerable more grading will be done. This branch will serve the district east of Lake Manitoba and will ultimately reach the gypsum deposits there.

On the branch from Maryfield, on the Brandon-Regina line, running south-west and westerly and crossing the C.P.R. Pasqua-Portal branch south of Midale, track was laid in 1909 for 68.39 miles and about 80 further has been graded. Track will be laid on this early this year.

On the branch from Hallboro, Man., westerly via Rapid City, 69.28 miles of track were laid in 1909 and about 6 miles more grading has been done. This may be laid with track this year.

The Rossburn branch from Neepawa, Man., which is intended to connect with the main line at Dauphin, Sask., is now being operated to Russell, Man., 104.2 miles from Neepawa. A further extension will probably be built this year.

On the Thunder Hill extension from Thunder Hill Jct., Man., near Swan River on the Dauphin-Prince Albert line, track has been laid for over 40 miles and about 13 miles more have been graded, on which track will be laid this year. Some further grading is also likely to be done.

On the Goose Lake branch from Saskatoon, Sask., towards Calgary, Alta., track has been laid to Kindersley, the first division point, 127 miles, and grading has been done for 45 miles further into Alberta. Track will be laid on this grading this year.

The Prince Albert-North Battleford branch is now built to Shellbrook, 30 miles from Prince Albert, Sask. About 40 miles further will be built this year.

From the present end of track on the Prince Albert-North Battleford line via Shellbrook, 45 miles of the Crooked Lake branch has been graded. The remaining 15 miles will be graded this year and track laid on the whole 60 miles.

From North Battleford, Sask., via Jackfish Lake towards Athabasca Landing, 40 miles have been graded and will be laid with track this year.

On the branch from Vegreville, Alta., southerly via Camrose and Stettler toward Calgary, about 130 miles have been graded and 19.47 miles of track were laid in 1909. Track will be laid on the balance of the 130 miles of grading this year.

On the branch from Edmonton, Alta., towards Athabaska Landing 21.5 miles are being operated to Morinville and about 23 miles more have been graded. This will be laid with track this year.

The main line is in operation from Edmonton 21 miles west to Stony Plains and is graded for about 12 miles further. Track will be laid on this grading this year. The grading will probably be extended to the McLeod River, about 80 miles further, this year, and a portion of the new grading will also be laid with track. At the crossing of the Pembina River a large bridge will have to be built which will occupy considerable time.

Among the principal betterments to be made this year will be considerable ballasting on most of the lines. Between Port Arthur and Winnipeg a number of bridges will be filled in, and between Kakabeka and Slate River there will be a diversion of about nine miles to improve the alignment and reduce the gradient from 1% to 4/10 of 1%. There will also be another diversion of about two miles, 78 miles west of Port Arthur in connection with grade reduction. On the 438 miles between Port Arthur and Winnipeg 80-lb. steel rails have been laid on 240 miles and the relaying will be continued this year on the remaining 198 miles, replacing the present 56 and 60 lbs. rails. Yard facilities will be increased at a number of points and the locomotive houses at Port Arthur and Winnipeg will probably be extended. A number of additional sidings will be built between Port Arthur and Winnipeg and on the main line west of Winnipeg. Additional wires will be strung on some of the telegraph lines.

A proposition is said to be under consideration for the alteration of the C.N.R. route across the north-west arm of Rainy Lake, near Fort Frances, Ont. The Resident Engineer of the Department of Public Works at Winnipeg, has inspected the route, with a view of ensuring the freedom of navigation. The plan shows a new bridge to leave the mainland south of the present crossing, thence south-east to the islands south of Island no. 1, and sweeping in a semicircle to the Lobstick, where it joins the present main line. The piers would be of cement with steel super-structure, which would form the first section. Later on, the remainder would be filled and strengthened. The navigation interests ask that three drawbridges be provided one at Island no. 1; another at Rocky Inlet, and a third at Bears Pass, as well as two larger openings at the present opening west of Island no. 1, for the running of logs.

On the Fort Garry Station building at Winnipeg about 85% of the work has been done and it is expected to complete the structure by the end of the summer. Work on the yard is well under way. The tracks through the portion of the city between the Red and Assiniboine Rivers will be elevated, all level crossings being eliminated, the tracks being carried on embankment with retaining walls and steel bridges across the streets. A steel viaduct is provided at the rear of the station with room underneath for baggage, express, etc.

Replying to a delegation of farmers from the district north of Teulon, Man., recently, the Manitoba Minister of Public Works stated that the Government was prepared to give the C.N.R. a guarantee of bonds towards the extension of the line to the Eli sand pits northerly and westerly into the Brant and Argyle districts.

A cable from London, Eng., re-reports W. Mackenzie, President, as saying that he expected the railway to Hudson Bay to be in operation within three years. It remained to be seen whether the line would be constructed by the C.N.R. or by the Dominion Government.

The contract let to T. Kelly & Son, in connection with the new bridge across the Assiniboine River at Winnipeg, referred to in our Mar. issue, covers the construction of the piers only. The details of the superstructure have not been definitely settled. It has however been decided that one of the spans will be a rolling lift. The bridge will be double track. T. Kelly & Son also have the contract for the Pembina St. subway.

Canadian Northern Pacific Railway.—The British Columbia Legislature has confirmed the agreement with Mackenzie, Mann & Co. (Ltd.) for the construction of a railway from Yellowhead Pass to Vancouver, and 80 miles on Vancouver Island, upon a guarantee of bonds, and a second act incorporating the C.N. Pacific Ry. Co. for the purpose of carrying out the agreement. The agreement guarantees the company's bonds for $35,000 a mile, the company to construct a line from English Bluff near Vancouver easterly to connect with the C.N.R. at the eastern boundary of the province, and a line from Victoria to Barkley Sound, and to maintain a car ferry service between Vancouver and Victoria. Car shops are to be constructed at Victoria. The company agrees never to seek Dominion incorporation, and places the control of rates forever in the hands of the Provincial Government without appeal to the Board of Railway Commissioners. The money raised by the sale of bonds is to remain at the credit of the Provincial Government and to be paid out upon certificate as work on the different sections is proceeded with. A deposit of $500,000 is made by the company. Work on the mainland railway is to be started at or near New Westminister not later than July, 1910, and a minimum of the cost equivalent of at least 50 miles of line shall be expended thereon, during the first year, 75 miles during the second year, the line to be completed on July 1, 1914. The length of the mainland line is approximately 500 miles. It will run from the Yellowhead Pass, by the North Thompson River, touching Kamloops, if possible, or constructing a branch to that place, thence by the South Thompson River to New Westminister and Vancouver, with a line to English Bluff, south of the Fraser River, near the International boundary. The standard of the line is to be equal to that of the C.N.R. between Winnipeg and Edmonton; the gradients and curvature are to be kept as low as possible; the wages paid on

ADDITIONAL SAFETY AND ECONOMY IN

construction are to be such as are current in the districts and supplies are to be procured as far as possible locally.

The company is reported to have acquired 1,500 to 2,000 acres of land on the south bank of the Fraser River, near New Westminster, from the end of the Government railway bridge upwards, for

According to a statement made by the B.C. Premier, Mar. 15, construction will be started on the Victoria-Barkley Sound section of the C.N. Pacific Ry. this spring, simultaneously with construction on the mainland.
(Mar., pg. 183).

Railway Finance, Meetings, Etc.

Alberta Ry. and Irrigation Co.—Traffic receipts for Feb., $25,851, against $19,420 for Feb., 1909. Aggregate traffic receipts for eight months ended Feb. 28, $251,279.

Canadian Northern Ry.—A London, Eng., cable dated Mar. 10, states that the recent bond issue has been fully subscribed by the public.

Central Ontario Ry.—The Dominion Parliament has been asked to grant the company authority to enter into agreements with the G.T.R., the C.P.R., the Brockville, Westport and North-Western Ry., the Irondale, Bancroft and Ottawa Ry., the Canadian Northern Ontario Ry., the Ontario and Ottawa Ry., and the Marmora Ry. and Mining Co.

Dominion Atlantic Ry.—Gross earnings for Jan., $79,400, against $72,657 for Jan., 1909. Aggregate earnings for seven months ended Jan. 31, $806,250, against $774,492 for same period 1908-09.

Esquimalt and Nanaimo Ry.—The British Columbia Legislature has ratified an agreement between the Government and the company settling the long standing differences as to the company's land grant. The company in return for discontinuing all actions and proceedings arising out of the grants made under the Vancouver Island Settlers' Rights Act of 1904, and quit-claiming all its right and title, the company receives the right to locate 20,000 acres of Crown lands on the Island within three years of the act being assented to.

Georgian Bay and Seaboard Ry.—Application is being made to the Board of Railway Commissioners to recommend the sanctioning of a lease of the company's line to the C.P.R. Co. for 99 years, from Jan. 10, 1910. The line as projected is to extend from Victoria Harbor, Georgian Bay, to some point on the C.P.R. Toronto-Montreal line, various places between Peterboro and Smiths Falls having been mentioned. Of this line there has been constructed to date the section from Victoria Harbor to Coldwater Jct., on the C.P.R. Toronto-Sudbury line, 11.5 miles.

Grand Trunk Ry.—The Michigan State Railway Commission has undertaken the investigation of the ownership of the Pontiac, Oxford and Northern Ry., and evidence was given Mar. 10 in reference thereto by officials of the G.T Western Ry., which is the title under which the G.T.R. carries on business in Michigan and adjoining States. The evidence given showed that C. M. Hays, E. H. Fitzhugh, J. W. Loud, M. M. Reynolds, A. B. Atwater and L. C. Stanley owned one share of the stock of the Pontiac, Oxford and Northern Ry., and that the remainder was held by C. M. Hays, in trust for the G.T. Western Ry. The railway is operated as the Pontiac, Oxford and Northern Division G.T.W. Ry.

An act has been passed by the Dominion Parliament providing that the G.T.R. may acquire and dispose of shares in the Ottawa Terminal Ry., the Lachine, Jacques Cartier and Maisonneuve Ry., and the G.T. Pacific Terminal Elevator Co.

A special meeting of the shareholders will be held in London, Eng., after the half-yearly meeting, April 14, for the purpose of discussing a resolution authorizing the company to acquire, guarantee, hold, pledge and dispose of stocks and securities of the Lachine, Jacques Cartier and Maisonneuve Ry. Co., the Ottawa Terminals Ry. Co., and the G.T. Pacific Terminal Elevator Co.

Guelph Junction Ry.—Application is being made to the Dominion Parliament to facilitate the acquisition by the City of Guelph, Ont., of the shares of the company's stock not now held by it, and to make other provisions to secure to the city full rights in the company and railway, to change the mode of electing or appointing directors, and to reduce their number.

Orford Mountain Ry.—All formalities in connection with the leasing of this line to the C.P.R. have been completed and the line was taken over Mar. 1. It is being operated as Orford Branch, District 1, Eastern Division, C.P.R.

An indenture of lease, dated Oct. 6, 1909, between the O.M.R. Co., Sir Wm. C. Van Horne and other holders of the capital stock of the O.M.R., and the C.P.R. Co., has been deposited with the Secretary of State at Ottawa.

Quebec and Lake St. John Ry.—Gross earnings for Feb., $32,339.17, against $37,071.19 for Feb., 1909. Aggregate earnings for two months ended Feb. 28, $69,994.01, against $83,320.24 for same period 1909. Mileage operated, 280 against 285.4 during the same period 1909.

A meeting of the holders of the various classes of bonds of the company was held in London, Eng., Feb. 21. It was stated that three reports were being prepared on the property, and that these would be completed during March. Authority was given to add three additional members to the committee, from among the holders of prior lien bonds. The meeting was adjourned for a month.

At a meeting of the 4% prior lien bondholders in London, Eng., Mar. 22, a resolution was passed appointing a committee to watch their interests during the continuance of the receivership.

Reid Newfoundland Ry.—The Premier stated recently in the Legislature, that in 1904 the Reid Newfoundland Co. made a claim on the Colony for the cost of additional rolling stock, equipment and accommodation alleged to have been supplied under the Railway Operating Contract of 1893, between 1901 and 1904 the Government was advised that the Colony was not liable, and that the claim should be resisted. A case for the opinion of English counsel, was subsequently prepared and the advice given to the Government was confirmed. Beyond serving a notice of its intention to apply to the court for the appointment of an arbitrator nothing further had been done by the company, at least as far as the records show.

Thousand Islands Ry.—We are advised that the press report to the effect that the line has been sold to the G.T.R. is incorrect. Some members of the G.T.R. auditing staff were engaged recently going over the company's books in conjunction with J. H. Robitoulle, of the Rathbun Co., which owns the line. This, we are advised, is an annual occurrence.

White Pass and Yukon Ry.—Gross earnings for seven months ended Jan. 31, $853,428.

The Montreal Warehousing Co.'s annual meeting was held at Montreal, Mar. 3. Following are the officers and directors for the current year:—President, C. M. Hays; Vice-President, E. H. Fitzhugh; other directors, W. M. Ramsay, J. W. Loud and W. Wainwright.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Northern Engineering Works, Detroit, Mich., has sold the Miami Copper Co., for its Globe plant, three 15-ton cranes, electric and hand power, also one 5-ton crane.

G. T. Merwin, heretofore on the Canadian Car & Foundry Co.'s sales staff in Montreal, has been appointed Assistant Manager of Sales, Southwestern District, for the Pressed Steel Car Co., with headquarters at St. Louis, Mo.

Bruce, Peebles & Co., Ltd., Edinburgh, Scotland, who are represented in Canada by Vandeleur & Nichols, Toronto, have issued a pamphlet, "Peebles" Alternating Current Generators, sizes AD. 18 to AD. 70 inclusive," which contains a large amount of interesting information.

The American Vanadium Co., Pittsburg, Pa., has issued in both French and German, translations of its booklet on vanadium steels, their classification of heat treatments, with directions for application of vanadium to steel and iron, by J. Kent Smith. Copies in either of the three languages will be sent on request.

Burton W. Mudge & Co., 400 Commercial Bank Building, Chicago, advise that they have assumed the exclusive handling of the Garland ventilator, for both passenger and freight equipment, as well as the Garland heating and refrigerating appliances on the latter. Information in regard to ventilation and refrigeration of all kinds of equipment will be gladly furnished by them on application.

Babcock & Wilcox boilers of 12,000 h.p. have been ordered for the North Vancouver Ferries, Ltd., ferry now under construction, and also for H.M.S. Orion, Conqueror and Thunderer of 27,000 s.h.p. each. In two battleships for the Argentine Government, they are being installed for 35,000 h.p. each, and their White Forster boilers of 18,000 h.p. each are being placed in light torpedo destroyers for the Argentine Government.

B. J. Coghlin Co., Ltd., has been incorporated under the Dominion Companies Act with an authorized capital of $200,000 and head office at Montreal, and has taken over the business of B. J. Coghlin & Co., wholesale hardware merchants, spring and axle works, of which B. J. Coghlin, who died a short time ago, was the founder. It is intended to considerably enlarge the factory this year to provide for increased business.

Transfer Railway for Brandon, Man.—A joint meeting of the Brandon City Council and the Brandon Board of Trade was held Mar. 2, to discuss the feasibility of constructing a transfer railway to connect all the railways entering the city. The idea is that such a railway should be constructed by the city, and the City Engineer was asked to prepare a plan for consideration. The C.P.R., the C.N.R. and the Great Northern Ry., will then be approached with a view of obtaining such concessions from them as will make the construction of the line practicable and profitable.

G.T. Pacific Ry., St. John, N.B., Terminals.—It was stated in St. John, N.B., that the G.T. Pacific Ry. had purchased a large area of land around the head of Courtenay Bay, St. John harbor, for terminal and dock purposes.

National Transcontinental Railway.

Tenders have been received by the Commission for the supply of 24,733 gross tons of 80 lb. steel rails, together with the necessary splice bars, track spikes, bolts and nuts, nutlocks and tie plates. Tenders have also been received for the erection of a pump house at the locomotive shops near Winnipeg, the building to be completed by July 1; for the necessary pumping plant to equip the same, such plant to be installed by Aug. 1, and also for the construction of a 2,000,000 gall. reservoir, to be completed by Aug. 1, adjoining the locomotive shops. Tenders will be received by the Commission to April 12, for the supply of the plant for the equipment of the locomotive shops near east of Winnipeg, as follows:—Machines and tools; leather belting; shafting, hangers, steel frame work, etc.; miscellaneous equipment; industrial track and lockers; motors; furnaces and forges; cranes; air compressors; grey iron foundry equipment and brass foundry equipment.

GRAND TRUNK PACIFIC RAILWAY.

We were officially advised Mar. 16, as to the present position of the work on the G.T.P.R., and the construction in hand for the present season as follows: The end of the main line track is at present at the east bank of Wolf Creek, 915 miles from Winnipeg. At this point there is a large steel bridge to erect across Wolf Creek and a half a mile beyond another large steel structure across the McLeod River. The substructures of these bridges have been under construction simultaneously for several months and are now reaching completion, and it is expected that the erection of the steel superstructures will commence in the early part of April, and as soon as it is possible to cross them, the track will be pushed forward as rapidly as the grading work will permit. The grading of the line is now under contract from Wolf Creek to Tete Jaune Cache, approximately 179 miles. This work will be pushed as rapidly as possible and it is expected to have track laid this year from the east to within 20 or 30 miles of Yellow Head Pass.

The grading of the main line from Prince Rupert easterly to Aldermere, approximately 235 miles, is well under way. There is under construction a steel bridge 7½ miles east from Prince Rupert, crossing from Kai-en Island to the mainland. The work on this structure is being pushed forward as rapidly as possible and as soon as completed, track laying will be commenced easterly from Prince Rupert, and it is expected there will be about 180 miles laid easterly from Prince Rupert by the close of this year. It is the intention to place the balance of the main line between Aldermere and Tete Jaune Cache, approximately 400 miles, under construction this year.

During 1909 twenty-three stations were erected between Winnipeg and Edmonton, and an 18 stall locomotive house and shop at Edmonton. It is the intention this year to erect a 12-stall locomotive house at Edson, the first divisional point west of Edmonton, a 12-stall locomotive house and shop at Prince Rupert, and stations at various points along the line where conditions warrant.

GRAND TRUNK PACIFIC BRANCH LINES.

The following branch lines have recently been placed under contract:

From 50 miles south of the main line at Tofield, Alta., to Calgary, approximately 135 miles; the J. D. McArthur Co., Winnipeg, general contractor.

From Balcarres, the end of the present construction of the branch line from the main line at Melville, to Regina, approximately 60 miles; the J. D. McArthur Co., Winnipeg, general contractor.

From Yorkton, the extension of the branch line from Melville to Yorkton, to Canora, approximately 30 miles; Rigby, Hyland & Plummer, Winnipeg, general contractors.

Contracts will be awarded in the near future for the construction of a branch line from the main line at Oban to Battleford, about 50 miles; from Regina southerly, about 80 miles; and from the main line at Young to Prince Albert, about 130 miles. The grading of these branches will be pushed forward as rapidly as possible with the object of having track laid on all of them during this year.

The Melville-Regina line referred to above is one of the lines which the company is constructing under the subsidy contract with the Saskatchewan Government. The subsidy contract also covers the construction of an extension from Regina to the International boundary line, near Sherwood, Mont., terminus of a branch of the Great Northern Ry. A press report states that these branch lines will be connected, and that the G.N.R. will obtain an entrance to Regina by that route, and thence to other points on the G.T.P.R. Another report states that engineering parties are in the field between Regina and Moose Jaw, Sask., making surveys for a line to Calgary. The first camp was pitched at Grand Conlee. It is said the line will run almost directly to Moose Jaw, then bend north-westerly to the elbow of the South Saskatchewan River, and then on to Calgary. (Mar., pg. 181).

G.T.R. Betterments, Construction, Etc.

Southern New England Rd.—E. H. Fitzhugh, First Vice President G.T. Ry., and Central Vermont Ry., appeared before the committee of the Rhode Island Legislature, Mar. 11, when the bill for the extension of the S.N.E.R. to Providence was considered. The bill is being promoted in the Central Vermont Ry. interests to secure an additional outlet to the seaboard, and is being met with considerable opposition from the New York, New Haven and Hartford Rd., and the Boston and Maine Rd.

Lachine, Jacques Cartier and Maisonneuve Ry.—The Montreal City Council is asking the Quebec Legislature to ratify an agreement for the closing of certain streets. The company is also making application to the Legislature for an act confirming the same agreement.

Toronto Belt Line.—U. S. Gillen, Superintendent Middle Division G.T.R., in an interview Mar. 22, said there was no immediate intention on the part of the G.T.R. to re-open the old belt line for freight or passenger traffic. When reopened it would be from Yonge St. easterly and not westerly as was generally reported.

London Track Elevation.—It was reported Mar. 10 that G.T.R. engineers were making surveys in the vicinity of Wharncliffe Rd. East, London, Ont., in connection with the proposed rearrangement of the tracks in the city so as to do away with the existing level crossing.

Stratford Yards, Stations and Shops.—The Mayor of Stratford, Ont., received a letter from E. H. Fitzhugh, First Vice President, recently, stating that the various matters relating to the extension of the shops would be settled shortly, and that the whole question would then be dealt with in a definite manner.

The Ontario Legislature has passed an act confirming an agreement providing for the continuance of a further period of 10 years from 1910, the assessment of $8,000 a year, agreed upon in 1900.

The company is reported to be purchasing additional land along the line in the city, in connection with the plans to rearrange the yards, and to build a new station.

Port Huron Station and Shops.—A deputation from the Port Huron, Mich., City Council waited on E. H. Fitzhugh, First Vice President, at Montreal, recently in connection with the proposed new station. Mr. Fitzhugh stated that a new station will be built on the site of the present one, but it would be impossible to provide for a station down town.

We are advised, in connection with the proposal to enlarge the shops—that it is intended to make some re-arrangement there, but that nothing will be done until some understanding has been reached with the city concerning the use of the end of one of the streets.

Bay City, Mich., Terminals.—Press reports state that the company is arranging to expend $500,000 in connection with the proposal to secure a terminal in Bay City, Mich. Most of the right-of-way, it is said, has been secured. (Mar., pg. 191).

C. N. R. Freight Earnings.

In the table of steam railway statistics for the year ended June 30, 1909, published in our March issue, the Canadian Northern Ry.'s freight earnings per train mile were stated as 24c., on information issued by the Department of Railways statistical branch. Our attention having been called to the fact that a serious mistake had been made, investigation showed that the actual figures given by the Department of Railways were .246189. Enquiry of Canadian Northern officials shows that the actual freight earnings per train mile for the period in question were $2.46189, in other words slightly over $2.46, instead of slightly over 24c., and that the correct figures were reported to the Department of Railways.

The Comptroller of Railway Statistics contends that the Government Printing Bureau is responsible for the mistake and that a displacement took place while the page containing the figures was being printed. On looking into the matter we do not see how this could have occurred. But no matter who is responsible the fact remains that a very serious mistake occurred and the Comptroller should take whatever steps may be necessary to prevent such inaccuracy in future. The value of statistical information depends altogether on its accuracy and the system of proofreading and checking should be such as to prevent such mistakes as the one pointed out.

Brampton, Ont., citizens passed a resolution at a public meeting Mar. 22, asking that the railway companies be asked to grant commutation rates between that town and Toronto. At present the C.P.R. issues commutation tickets from Toronto to Streetsville, and the G.T.R. to Weston, Ont., on the lines reaching Brampton.

Hon. W. J. Hanna and Hon. J. J. Foy, representing the Ontario Government met the Secretary of State at Ottawa, Mar. 30, to discuss the question of Provincial and Dominion Legislation with a view of doing away with the friction at present caused owing to the granting of charters by the Dominion which overlap those granted by the Province.

A. W. Smithers, Chairman of the Board G.T.R., speaking as Chairman of the English Association of American Bond and Shareholders, London, Eng., recently said he believed there was imminent a long series of big enterprises for which adequate capital would be forthcoming if Canada maintained her present proud position respecting credit.

The Quick Way of Issuing Orders

Intercommunicating telephones afford the quick way of doing things in transportation work—for both big and little companies. They keep all the departments in touch with each other—the passenger, freight, baggage and all other branches of the organization are welded together—and each and all are under the direct supervision of the executive. They save time—do away with running back and forth for information—and pay for their installation and maintenance in proportion to the size of the institution. The "Northern Electric" Intercommunicating Way is the Quick Way.

Why not look into this—why not know for yourself in exact dollars and cents just what such a system would cost and save you daily, monthly, yearly?

Do you know what lost time is costing you now? No? You can easily figure it out. Have a clerk keep a record of it for a day or two. Its dead load of expense will amaze you.

We will be glad to tell you our side of the story on request. Ask for Bulletin No. 713.

C.P.R. Betterments, Construction, Etc.

St. John Harbor.—A resolution has been passed by the St. John, N.B., Harbor Board, recommending the city council to transfer the harbor property on the west side to the C.P.R., in exchange for the 1,600 ft. strip and wharves thereon, on condition that development of the 40 acre tract be begun within five years.

Lachine Canal Banks.—The arbitration proceedings which have been in progress for nearly three years arising out of the expropriation by the C.P.R. of certain lands on the Lachine canal banks owned by the St. Paul Land and Hydraulic Co., have come to a termination the arbitrators handing in their award Mar. 14. The company asked $150,000 for the land and the C.P.R. offered $8,000. The arbitrators allowed $35,000.

Windsor St. Station, Montreal.—The contract for putting in the pier foundations, which includes 300 open type caissons from 6 to 9 ft. diameter, is to be completed by April 20. Tenders for the four track viaduct which will be built between the present station tracks and St. Antoine St. will be let in the near future. The illustration on this page shows the approved design for the extended building.

Georgian Bay and Seaboard Ry.—A survey party was reported Mar. 11, to be working from Bathurst, Ont., a station 19 miles westerly from Smith's Falls, northerly and westerly with a view of securing a suitable location for the easterly end of this line.

St. Mary's and Western Ontario Ry.—The Ontario courts have quashed a by-law passed by Blanshard tp., authorizing the issue of $20,000 of debentures in aid of the construction of this railway. This is the second time that the by-law has been passed by the township and quashed by the courts.

Western Lines Construction.—In our last issue we gave particulars of new lines to be built this year. Some slight changes have been made and we have been furnished with official information of the construction to be undertaken as follows, a total of 434 miles:—

The line from Lauder, Man., which is built to Tillston, on the Manitoba-Saskatchewan boundary, will be extended west 24 miles into Saskatchewan.

The branch from Weyburn, Sask., to Forward, will be extended about 25 miles west by south.

From Regina south and south-east to Griffin, Sask., a station midway between Stoughton and Weyburn, a branch of about 79 miles.

The first 18 miles of the Craven-Bulyea (Sask.) line, extending the Regina-Craven line to connect at Bulyea with the Kirkella-Lanigan line.

On the Regina-Prince Albert branch from Craven, Sask., to Colonsay, on the Portage la Prairie-Saskatoon-Wetaskiwin line, 110.3 miles.

From Outlook, Sask., the present terminus of the branch north-west from Moose Jaw, an extension of 93.5 miles northwest in the direction of Castor, the present eastern terminus of the branch east from Lacombe, Alta.

From Macklin, Sask., on the Saskatoon-Wetaskiwin line, south-east 54.2 miles to a point on the Moose Jaw-Lacombe line.

An extension of 30 miles northwesterly from Carmangay, Alta., of the present line of 28 miles from Kipp to Carmangay.

In addition to the above, 434 miles for which appropriations were made during Second Vice President Whyte's visit to Montreal in Feb., a branch of 15 miles east from Irricana, Alta., on the Langdon-Red Deer line, which was authorized in 1909 will be completed this season.

A second branch will be built between Winnipeg and Portage la Prairie 55.6 miles this year.

The Kootenay Central Ry. is projected to start from or near Elko, B.C., on the Crow's Nest Pass line. The question of building first section to Fort Steel, about 25 miles, is under consideration, but it has not been decided whether it can be gone on with this year.

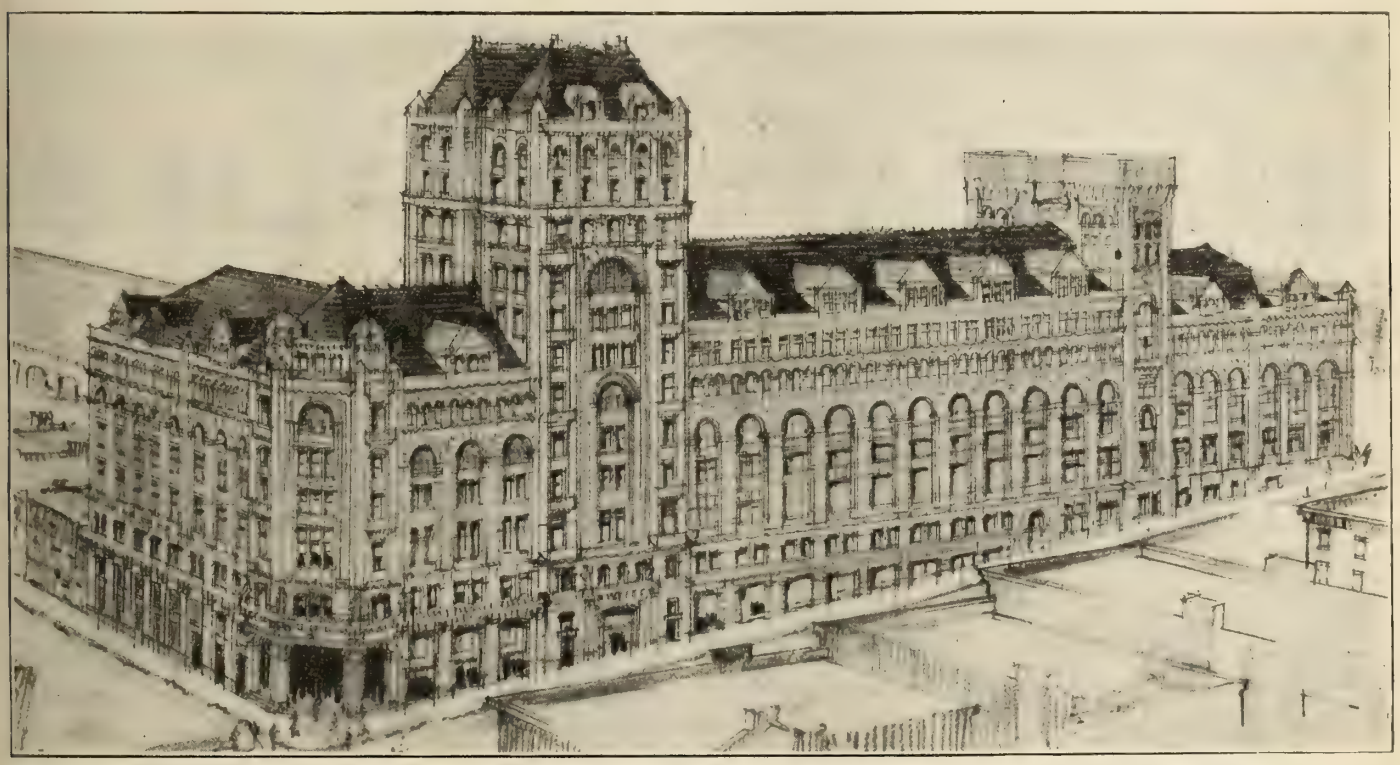
A dispatch from Winnipeg dated Mar. 22, states that the company's construction department has placed contracts for extensions and improvements to be carried out during the coming season. The works include over 20 new stations of standard designs, in addition to larger buildings at Red Deer, Banff and Laggan; a brick freight shed at Regina, 450 ft. long; an addition of 200 ft. to the existing freight shed at Moose Jaw; and three new buildings at Calgary, in addition to many small erections at various points along the line.

Edmonton, Alta.—Application is being made to the Alberta Legislature to confirm certain by-laws of the city of Edmonton containing an agreement between the city and the C.P.R. and the Calgary and Edmonton Ry.

Cranbrook, Y.M.C.A.—A Winnipeg press report, states that a contract has been let by the C.P.R. Construction Department for the erection of a Y.M.C.A. building at Cranbrook, B.C., on the same lines as the one at Kenora, Ont.

Midway to Hope, B.C.—A Vancouver, B.C., press dispatch states that surveys were completed Mar. 4, by C.P.R. engineers for a line through the Hope Mountains. The present westerly terminus of the company's Crows' Nest Pass line is at Midway, and the route now surveyed extends from that place, via Penticton, to Hope on the main transcontinental line 89 miles east of Vancouver. From Midway the route, reported to be gone over, proceeds via the west fork of the Kettle River, and crossing a summit reaches Penticton, at the foot of Okanagom Lake; thence through the Similkameen district to Otter Creek, across a low divide into the valley of the Coldwater River, on to the Coquihalla summit of the Hope Mountains, and down the western slope of the mountains to Hope in the Fraser River Valley.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—Press reports state that the



The Canadian Pacific Company's Windsor Street Station, Montreal

as it will appear when the additions now under way are completed. The left portion of the illustration shows the St. Antoine Street front, the larger portion to the right being the Windsor Street front.

company has appropriated $8,000,000 for construction and betterments for the current year, of which $3,000,000 will be expended on the old Wisconsin Central Ry. The principal new construction will be the completion of the line into Duluth. (Mar., pg. 215).

MAINLY ABOUT PEOPLE.

Lady Shaughnessy and Miss Shaughnessy sailed for England, Mar. 18.

G. H. Ham of the C.P.R. headquarters staff, attended the Old Timers' dinner in Winnipeg, Mar. 10.

H. R. Miles, C.P.R. Resident Engineer, North Bay, Ont., has been elected to the town council.

Jas. Woods, Secretary-Treasurer Quebec Harbor Commission, died suddenly at Quebec, Mar. 1.

J. A. Blair, for many years G.T.R. agent at Port Dalhousie, Ont., died at Spokane, Wash., Mar. 1.

C. S. Maharg, Superintendent C.P.R., Moose Jaw, Sask., was married to Miss Staples, Mar. 2, at Teeswater, Ont.

G. Fauquier, railway contractor, Ottawa, and Mrs. Fauquier, left early in March for Virginia Hot Springs.

Lord Strathcona has contributed $7,000 to the Toronto Public School Cadet Corps towards the provision of uniforms.

E. B. Osler, M.P., director C.P.R., has been re-elected President of the Ontario Rifle Association for the current year.

E. B. Osler, M.P., recently gave $25,000 for a site and equipment for a supervised playground in West Toronto.

Hon. W. C. Edwards, President Temiskaming Navigation Co., has been elected President of the Canada Cement Co., Ltd.

Sir H. Montagu Allan of Montreal, was presented to the King by Lord Strathcona, at a levee held in London, Eng., Mar. 2.

Lord Strathcona has been appointed by the British Government a member of the Advisory Committee on Commercial Intelligence.

F. Barlow Cumberland, Vice President Niagara Navigation Co., addressed the Berlin, Ont., Canadian Club, Mar. 3, on the Union Jack.

W. F. Wilson, Assistant Manager, New York Central Fast Freight Lines, Buffalo, N.Y., died suddenly on a train at Utica, N.Y., Mar. 16.

A. Price, General Superintendent C.P.R. Western Division, addressed a committee of the Y.M.C.A., at Lethbridge, Alta., Mar. 14.

Lady Reid, widow of Sir Robt. G. Reid, of the Reid Newfoundland Co., and Miss Reid, are spending about three months on the Mediterranean.

Sibthorp Wells, G.T.R. Claims Agent (Personal Injuries), Montreal, died there, Mar. 3. He had been in the company's service for several years.

G. M. Bosworth, Fourth Vice President C.P.R., and Capt. J. W. Troup, Manager C.P.R. Pacific Coast Steamship Service, returned to Canada Mar. 6, from Europe.

W. R. and Mrs. Baker, Hayter, and Mrs. Reed, F. W. Morse and R. Bickerdike, M.P., were among the Governor General's guests at dinner in Montreal, Mar. 19.

G. W. Caye, Assistant to the Vice President and General Manager G.T.P.R., who was recently married at New York, has returned to Winnipeg from his wedding trip.

G. A. S. Potts, a Winnipeg lawyer, who was claiming $25,000 from the C.P.R. for alleged services in connection with the recent strike of employes in the west, died at Field, B.C., Mar. 8.

Mrs. G. M. and Miss Bosworth returned to Montreal, Mar. 17, after a short visit to Great Britain. The marriage of Miss Bosworth to D. Seely is announced to take place in Montreal, Apr. 21.

A. K. McNair, a Toronto contractor, engaged on the construction of a dam on the Temiskaming Lake, at the head of the Ottawa River, died suddenly at Temiskaming, Que., Mar. 1, aged 59.

Hon. G. P. Graham, Minister of Railways and Canals, addressed the Ontario Club, Toronto, Mar. 3, and spoke generally on the expansion and prospects of the Dominion railways and waterways.

The marriage of Miss D. Fletcher, grandaughter of Collingwood Schreiber, C.M.G., General Consulting Engineer, Dominion Department of Railways, to R. Lake, M.P., is announced to take place Apr. 4.

Mrs. Thos. Malcolm, of Campbellton, N.B., wife of the President of the International Ry. of New Brunswick, is convalescing satisfactorily after an operation for appendicitis which was performed in Montreal.

Hon. L. P. Brodeur, Minister of Marine, who went south at the end of Feb. to recuperate after his serious illness, is reported to be recovering, and it is expected will return to Canada in a few weeks.

Miss Marjorie Blair, youngest daughter of the late Hon. A. G. Blair, at one time Minister of Railways and Canals and afterwards Chief Railway Commissioner, is to be married in April in Ottawa to Sutherland Gilmour.

H. R. Charlton, General Advertising Agent G.T.R. and G.T.P.R., gave an address with cinematograph illustrations to the Chicago Press Club, Mar. 4, on a hunting and fishing trip in the Timagami district of Ontario.

C. Clarke, Division Freight Agent, G.T.R., Detroit, Mich., left there Mar. 4, and sailed from San Francisco on the s.s. Tenyo Maru on Mar. 15, for Japan via Honolulu. He is expected back in Detroit about the end of May.

John Phillips, who died at Toronto, Feb. 28, aged 66, was in G.T.R. employ for nearly 50 years. He had been agent at Brantford, Fort Erie and Ingersoll, Ont., and for the last 11 years of his service was inspector of elevators.

Capt. C. H. Nicholson, Manager G.T.P.R. Pacific Coast Steamship Service, Vancouver, returned to Canada, Mar. 16, from Great Britain, where he has been in connection with the construction of vessels for the service.

Among the subscribers to the endowment fund of Queen's University, Kingston, Ont., which has now reached $400,000, are W. Harty, M.P., and C. Bermingham, of the Canadian Locomotive Works, Kingston, who each gave $5,000.

R. P. Fairbairn, Chief Engineer Ontario Public Works Department, has been appointed acting Deputy Minister of Public Works for Ontario, since the appointment of A. W. Campbell as Deputy Minister of Railways and Canals for the Dominion.

Probate of the will of the late Archer Baker, European Manager C.P.R., London, Eng., has been granted to his widow, to whom he left the whole of his property. The gross value of the estate was sworn at £12,552 18s 4d, and net personalty at £11,131 8s 5d.

The Hon. Angus MacDonnell, head of the firm of Angus MacDonnell & Co., which has the contract for the construction of the Alberni extension of the Esquimalt and Nanaimo Ry., is a nephew of the Countess Grey, wife of the Governor General of Canada.

The King has appointed Lord Strathcona and Sir Thos. G. Shaughnessy to be Knights of Grace of the Order of the Hospital of St. John of Jerusalem, and D. McNicoll, Vice President, and W. R. Baker, Secretary and Assistant to the President, C.P.R., to be Esquires of the same order.

Lord Mount Stephen has deposited securities to the value of $300,000, with a trust, the income to be utilized to foster desirable British emigration to Canada. The trustees are R. Meighen and J. Turnbull, Montreal, and the work will be carried on through the medium of Dr. Barnado's Homes.

Major J. E. Hutcheson, Superintendent and Purchasing Agent Ottawa Electric Ry., has been mentioned as the probable commandant of the Canadian team which will go to England this year for the annual Bisley shooting competitions, but it is not expected that he will accept the position.

C. B. Foster, Assistant General Passenger Agent C.P.R., Vancouver, who visited Toronto in March for the first time since his promotion from the District Passenger Agency there to the Pacific Coast, was warmly welcomed and entertained at luncheon and dinner by a number of transportation officers and others.

W. Whyte, Second Vice-President C.P.R., and G. J. Bury, General Manager Western Lines, are patrons, and Grant Hall, Superintendent of Motive Power and Car Department Western Lines, is honorary president of a troop of boy scouts which has been formed in connection with the C.P.R. Winnipeg shops.

Hon. W. R. Motherwell, Minister of Agriculture for Saskatchewan, is reported as a likely appointment to the Board of Railway Commissioners. Since the death of T. Greenway, who was appointed to the Board when the number constituting it was increased from three to six, but who never took up the duties, the work has been done with five members.

F. R. Haney, who has been appointed Assistant Tax and Insurance Commissioner and Claims Adjuster for C.P.R. Lines East of Fort William, Ont., entered the C.P.R. Law Department at Toronto in 1897, and moved to Montreal in 1901 as chief clerk of the Tax and Insurance Department, which position he held to Feb. 1, the date of his present appointment.

E. W. Bateman, who was recently appointed Local Right of Way and Lease Agent C.P.R. Pacific Division, Vancouver, B.C., was born near Crewe, Eng., July 24, 1859. He came to Manitoba in 1882, and was for a number of years engaged in private business, and from 1900 to 1905 was in the Manitoba Government Land Titles office. He entered C.P.R. service in 1905 as chief clerk in the Right of Way Department, Winnipeg, which position he held to Jan. 16, 1910.

R. Patterson, Master Mechanic G.T.R., Stratford, Ont., read a paper on technical education for the modern mechanic before the Canadian Institute in Toronto recently, in which he outlined the G.T.R. apprentice system and made a powerful plea for Government assistance for technical education. President Falconer of Toronto University and Dean Galbraith of the Faculty of Applied Science spoke in warm commendation of the paper.

During Feb., six railway employes were killed and 31 injured in the course of their work on Canadian railways. Of the fatalities, three each were due to derailments and to being run over, while of the other accidents, seven were due to derailments, five to falls, four each to being run over, and to falling material, three each being struck by an object in passing, and to being struck by a locomotive, two each to being caught between cars and to machinery, and one to an explosion of steam.

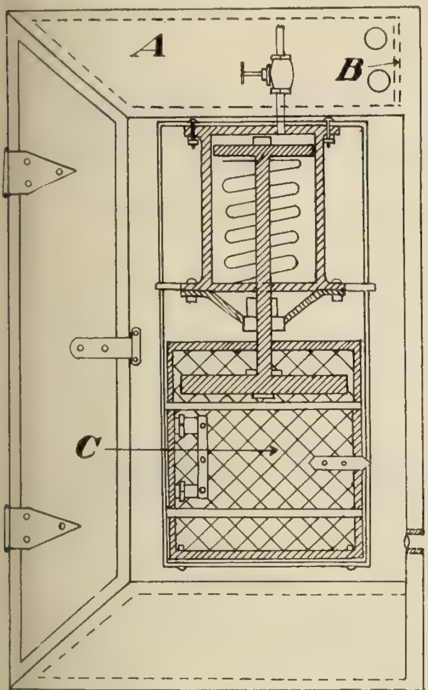
A Waste Press to Save Oil.

By H. J. Varlow, General Foreman C.P.R., Fort William, Ont.

The consumption of oil on railways is a serious one, not only as to what is used but what is wasted, therefore it is wise to prevent unnecessary waste where ever possible. A large quantity of oil is used in connection with packing journal boxes. The waste packing after being removed from the oil box contains a quantity of oil which could be used over again if proper precaution be taken. The oil after being extracted from the waste can be filtered, and by proper filtering can be used over and over again. The accompanying sketch shows a simple arrangement which can be made in any railway shop. "A" is a tank 4½ ft. long, 3 ft. high and 2½ ft. wide. There is a cavity "B" of 2 ins. round the sides and bottom. This is fed with steam from a steam pipe. "C" is a round cage made out of strong smoke box netting with one blank end and three bands round, 2 ins. by ½ in. to strengthen it. On the top side is a door where the waste is put in and when full the door is closed. At the front end is attached an air



brake cylinder, one off a box car will do. The cage and the air brake cylinder are coupled together with a band of iron round one end of the cage and round the end of the cylinder making this rigid and therefore no strain on the tank whatever. The cage and air brake cylinder stand in the tank on feet about 8 ins. clear from the bottom. The air is coupled on to the air line to the cylinder head. When the tank is heated with steam the waste becomes hot and the oil is made to run more freely. The piston head is forced into the cage to squeeze the waste, the oil dropping in the tank. The waste can be taken out in a short time quite dry. By using this arrangement the oil wasted in packing for oil box journals is reduced to a minimum. The cost is small considering the results obtained. This arrangement can be placed in the oil house.

The Canadian Society of Civil Engineers has awarded the Sir Casimer Gzowski silver medal for the best paper read before the Society during the past year, to Prof. Brown, of McGill University.

Railway Rolling Stock Notes.

The Mineral Range Rd. has ordered 100 ore cars.

The G.T.R. is building 10 Pacific type passenger locomotives at its Point St. Charles shops, Montreal.

The G.T.R. has received five mogul locomotives from the Canadian Locomotive Co., Kingston, Ont.

The Intercolonial Ry. has received one yard crane from F. H. Hopkins & Co., Montreal, and two coal cranes from the U.S.

The Anglo-Newfoundland Development Co. has the following rolling stock on its line from Grand Falls to Botwood, Nfld.:—four locomotives, 28 box cars, 40 flat cars, one passenger car and one caboose.

The C.P.R., between Feb. 15 and Mar. 15, received the following additions to rolling stock:—19 flat cars, 59 box cars and six vans from its Angus shops, Montreal, and four D-10 locomotives from the Montreal Locomotive Works.

The C.P.R., between Feb. 15 and Mar. 15, ordered the following rolling stock:—11 locomotives D-10, 40 box cars, 23 flat cars, two vans, one ballast car, at its Angus shops, Montreal, and 10 locomotives N-3, from the Montreal Locomotive Works.

The G.T.P.R., between Feb. 15 and Mar. 17, received the following additions to rolling stock:—483 box cars, nos. 310615 to 310824 and 311052 to 311325; 100 flat cars, nos. 361000 to 361099; and four first class coaches, nos. 2031 to 2035, from the Canadian Car and Foundry Co., Montreal.

The G.T.P.R. has ordered 20 ten wheel locomotives from the Montreal Locomotive Works, and 10 from the Canadian Locomotive Co., Kingston, Ont., details of which were given in our March issue. The statement then made that the 20 locomotives ordered from the Montreal Locomotive Works were for the G.T.R. was an error.

The two superintendent's cars which the G.T.P.R. is having built by the Canadian Car and Foundry Co., will have an observation room, 9′ 8″ long, bedroom 10′ 6″, and the usual kitchen, lavatory and porters' accommodation. Following are the chief dimensions:—

Length over end sills	42′ 0″
Length over buffer beams	48′ 6″
Width over side sills	9′ 8″
Width overall at eaves	10′ 0¼″
Width between deck sills	5′ 0″
Height overall	14′ 2″

The Canadian Northern Ry., between Feb. 15 and Mar. 15, ordered the following rolling stock:—600 box cars, 50 automobile box cars, two baggage and second class cars, three dining cars, and five baggage cars from the Canadian Car and Foundry Co., Montreal; 250 Hart convertible cars from the Hart-Otis Car Co., Montreal; and 500 flat cars and 50 refrigerator cars from the Crossen Car Manufacturing Co., Cobourg, Ont.

The Canadian Copper Co., Copper Cliff, Ont., has ordered from the Hart-Otis Car Co., Montreal, 25 fifty ton Otis type steel ore cars. Following are the chief dimensions:—

Length over end sills	25′ 0½″
Length inside	23′ 0″
Width inside	9′ 6″
Height inside	3′ 1″
Height top of rail to top of side	7′ 5 13-16″
Height from rail to floor	4′ 4 13-16″

M. P. & J. T. Davis, National Transcontinental Ry. contractors, have ordered from the Hart-Otis Car Co., Montreal, 45 Hart convertible cars, 1910 design. Following are the chief dimensions:—

Length over end sills	36′ 8″
Length inside as gondola	34′ 8″
Length inside as hopper	20′ 10″
Width inside	8′ 8″
Height inside	3′ 9¼″
Height from rail to top	8′ 1⅜″
Height from rail to floor	4′ 4⅛″

The Dominion Nickel Copper Co. has ordered from the Montreal Locomotive Works one mogul locomotive, of which the following are the chief details:—

Weight in working order	131,000 lbs.
Weight on drivers	113,500 lbs.
Weight on engine truck	17,500 lbs.
Wheel base, driving	12′ 6″
Wheel base, engine	20′ 6½″
Wheel base, engine and tender	50′ 0″
Cylinders	19″ by 26″
Driving wheels	50″
Boiler, type	Extended wagon top
Boiler, diar. at first ring	62″
Boiler, pressure	180 lbs.
Tubes, no. and diar.	240—2″
Tubes. length	10′ 5¼″
Brakes	Westinghouse American
Capacity, water	4,500 gals.
Capacity, coal	9 tons

The Canadian Northern Ry. has ordered 12 six-wheel and 10 ten-wheel locomotives from the Montreal Locomotive Works. Following are the chief details:—

	6-wheel.	10 wheel.
Weight in working order	124,500 lbs.	164,500 lbs.
Weight on drivers		126,500 lbs.
Weight on engine truck		38,000 lbs.
Wheel base, driving	11′ 6″	14′ 6″
Wheel base, engine		24′ 10″
Wheel base, engine and tender	40′ 0″	53′ 6″
Cylinders	19″ by 26″	20″ by 26″
Driving wheels	50″	63″
Boiler, type	Straight top	Ext. wagon top
Boiler, diar. first ring	64¼″	66″
Boiler pressure	180 lbs.	200 lbs.
Tubes, no and diar.	259—2″	308—2″
Tubes, length	11′ 0″	13′ 2¼″
Brakes	Westinghouse	American
Capacity, water	3,500 gals.	5,000 gals.
Capacity coal	5 tons	10 tons

The Canada Iron Corporation, Ltd., Montreal, has ordered one consolidation locomotive from the Canadian Locomotive Co., Kingston, Ont., for the Northern New Brunswick and Seaboard Ry. Following are the chief details:—

Weight on drivers	148,300 lbs.
Weight, total	164,850 lbs.
Wheel base of engine, rigid	15′ 3″
Wheel base, total	23′ 6″
Wheel base of engine and tender	54′ 5″
Length overall, engine and tender	65′ 1″
Width overall	10′ 2″
Height overall	14′ 6¾″
Heating surface, firebox	162 sq. ft.
Heating surface, tubes	1,934 sq. ft.
Heating surface, total	2,096 sq. ft.
Driving wheels diar.	56″

RICE LEWIS & SON LIMITED, - TORONTO

Driving wheels centres	Cast iron
Driving journals	8" by 12"
Cylinders	21" by 28"
Boiler, type	Radial stayed
Boiler pressure	200 lbs.
Tubes, no. and diar.	236—2¼"
Tubes, length	114"
Injectors and safety valves	Locomotive type
Brakes	Westinghouse
Weight of tender loaded	120,000 lbs.
Tank	U-shaped, sloping coal well
Capacity, water	5,000 gals.
Capacity, coal	10 tons
Truck	Diamond, all steel
Wheel, diar.	33"
Wheel, style	Chilled cast iron
Journal	5½" by 10"
Brake beam	Steel

Following are some additional details of the two superintendent's private cars which the G.T.P.R. has ordered from the Canadian Car and Foundry Co., Montreal:—

Platforms, steel, special design	Standard Coupler Co.
Couplers	Tower
Heating System	Safety Car Heating and Lighting Co.
Lighting	One car, oil; other, Commercial Acetylene Co. system
Air brakes	Westinghouse P1412
Trucks	4 wheel passenger type
Wheels	Cast iron 33", 625 lbs.
Axles	Steel, 4¼" by 8"
Brake beams	Simplex

Following are the chief details of the 10 consolidation locomotives which the C.P.R. is having built at the Montreal Locomotive Works:—

Weight in working order	220,000 lbs.
Weight on drivers	195,000 lbs.
Weight on engine truck	25,000 lbs.
Wheel base, driving	16' 6"
Wheel base, engine	25' 5"
Wheel base, engine and tender	55' 8"
Valve gear	Walschaert
Cylinders	24" by 32"
Driving wheel	63"
Boiler, type	Extended wagon top
Boiler, diar, at first ring	72"
Boiler, pressure	180 lbs.
Tubes, no. and diar.	272—2" and 24—5"
Tubes, length	15' 2¾"
Brakes	Westinghouse American
Capacity, water	5,000 gals.
Capacity, coal	12 tons
Superheater	Vaughan-Horsey

Following are the chief particulars of the 10 G2 Pacific locomotives which the C.P.R. is building at its Angus shops, Montreal, and of two similar ones which it has ordered in the U.S., mention of which has been made in previous issues. A diagram on pg. 297 shows the general dimensions.

Weight on drivers	136,000 lbs.
Total weight	215,000 lbs.
Cylinders	21" by 28"
Drivers, diar.	69"
Boiler, type	Radial stayed, wagon top
Boiler, pressure	200 lbs.
Heating surface, total	2,952 sq. ft.
Tubes, no. and diar.	193—2¼", 22—5"
Tubes, length	19' 6"
Firebox	94⅛" by 70"
Grate area	45.6 sq. ft.
Capacity, water	5,000 gals.
Capacity, coal	10 tons
Air brakes	Westinghouse ET6
Axles	Krupp steel
Brake beams	Simplex trussed
Brake shoes	C.P.R. standard
Couplers	Tower
Headlight	Pyle National Electric
Journal bearings	Canadian Bronze Co.
Sight feed lubricators	Detroit
Springs	Crucible
Steam gauges	Star
Steam heat equipment	Gold system
Wheel tires	Krupp crucible
Wheel centres	Cast steel
Superheater	Vaughan and Horsey

Canadian Ticket Agents' Association.—G. A. Cullen, G.P.A., Delaware, Lackawana & Western Rd., has been selected to represent the American Association of General Passenger and Ticket Agents at the next meeting of the C.T.A.A. in Quebec, Oct. 5 to 7. T. J. Trueman, C.P.R., Midland, Ont., has recently joined the C.T.A.A.

The Crossen Car Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $1,000,000 and office at Cobourg, Ont., to carry on the business of manufacturers and dealers in all kinds of vehicles for the carriage of passengers and freight.

Recent British Columbia Legislation.

At the recent session of the B.C. Legislature acts were passed affecting transportation interests as follows:—

British Columbia and Alaska Ry.—Incorporation.

British Columbia Central Ry.—Incorporation.

British Columbia Electric Ry.—Confirming agreement between company and city of Victoria.

British Columbia Mainland and Coast Industrial Co.—Authorizing company to construct railways and tramways.

Cariboo, Barkerville and Willow River Ry.—Incorporation.

Comox Logging and Ry.—Incorporation.

Canadian Northern Pacific Ry.—Incorporation.

Canadian Northern Ry.—Confirming agreement between company and Government for construction of C.N. Pacific Ry.

Electrical Energy.—Providing for inspection of premises, works, wires and appliances generating, supplying or transmitting electrical energy.

Esquimalt and Nanaimo Ry.—Ratifying agreement between company and Government.

Graham Island Ry.—Reviving act of incorporation.

Howe Sound, Pemberton Valley and Northern Ry.—Authorizing company to extend its projected railway.

Island Valley Ry.—Incorporation.

Kettle River Valley Ry.—Confirming agreement between company and Government for construction of a railway.

Menzies Bay Ry.—Incorporation

Midway and Vernon Ry.—Amending act granting subsidy for construction.

Nelson.—Validating city by-law respecting street railway.

North Vancouver.—Confirming agreement of Council granting aid to North Vancouver City Ferries.

North Vancouver Island Ry.—Incorporation.

Pacific and Alaska Ry.—Incorporation.

Penticton Ry.—Incorporation.

Port Moody, Indian River and Northern Ry.—Incorporation.

Queen Charlotte Ry.—Incorporation.

Railway Subsidy Lands.—Authorizing repurchase by Government of lands granted in aid of construction of railways.

Vancouver and Nicola Valley Ry.—Incorporation.

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

CLASSIFICATION OF AUTOMOBILES.

9494. Feb. 4.—Re objection of Canadian Manufacturers' Association to classification of automobiles proposed by Canadian Freight Association. It is ordered that application of Canadian Freight Association for variation in the Canadian Classification rating of automobiles, "set up," in less than carloads, be refused. That the Canadian Classification rating of automobiles and other self-propelling vehicles, taken apart (wheels detached), in box cars, less than carloads, actual weight, be changed to double-first class; and that this change be incorporated in the forthcoming amendments to the Canadian Classification.

The Northern Construction Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $200,000 and office at Winnipeg, to take over the Northern Construction Co., Ltd., incorporated under the Ontario Companies Act in 1904. A. R. Mann and A. C. McKenzie are those chiefly interested.

C. P. R. Construction Contracts.

The following contracts have been let for construction on C.P.R. western lines, already referred to under the heading of C.P.R. Betterments, Construction, Etc., on another page:—

From Forward, Sask., westerly for 25 miles, to McArthur and Dutton;

From Craven, Sask., to Colonsay, 110 miles, to J. Bradley;

From Outlook, Sask., northwesterly for 93 miles, to McArthur and Dutton;

From Macklin, Sask., southeasterly to a junction with the line from Outlook, 54 miles, to Janse, McDonald and Timothy;

From Carmangay, Alta., northwesterly for 30 miles to Foley, Welch and Stewart;

From Irricana, Alta., easterly for 15 miles, to Foley, Welch and Stewart.

Modern Lettering, Artistic and Practical, is the title of a book of instruction in the art of lettering, valuable not only to the beginner, but useful also to the experienced workman. The author, W. Heyney, is a man of experience, and gives in clear and simple language a useful course of instruction in lettering suitable for architectural, sign writing, decorative and artistic work. The instructions are illustrated by 35 plates of alphabets drawn by the author and suitable for adaptation to any class of work. In the first part the author describes the drawing materials and explains how they are to be used; in the second part, the mechanical construction of letters and numerals, and gives general rules for the construction of letters; in the third the alphabets, their history, description and proper use are treated of; the fifth, treats of the proper and artistic employment of lettering, the arrangement of letters, composition, spacing, grouping, designing, etc. The price of the volume is $2, and the publisher is W. T. Comstock, 23 Warren St., New York.

THE GRAND TRUNK RAILWAY COMPANY OF CANADA.

NOTICE is hereby given that the Ordinary General Half-yearly Meeting of the Grand Trunk Railway Company of Canada, will be held at the City Terminus Hotel, Cannon Street, London, E.C., on Thursday the 14th day of April, 1910, at twelve o'clock noon precisely, for the purpose of receiving a Report from the Directors, for the election of Directors and Auditors, and for the transaction of other business of the company.

Notice is also given that at such meeting a resolution will be submitted, approving of the provisions of an Act of the Parliament of Canada, authorizing this company to acquire, guarantee, hold, pledge and dispose of stocks and securities of the Lachine, Jacques Cartier & Maisonneuve Railway Company, the Ottawa Terminals Railway Company and the Grand Trunk Pacific Terminal Elevator Company, Limited, and to enter into such agreements as may be necessary to carry out the purposes of said Act.

Notice is also given that the transfer books of the company in London and Montreal will be closed from Monday the 14th day of March, to the day of meeting, both days inclusive.

By order,

ALFRED W. SMITHERS, Chairman.

H. H. NORMAN, Secretary.

Dashwood House, 9 New Broad Street, London, E.C., 4th March, 1910.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Lake Line.—J. M. Maver has been appointed Soliciting Freight Agent, Montreal.

L. J. Burns has been appointed Soliciting Freight Agent, Hamilton, Ont.

F. P. Welch has been appointed General Agent, Fort William and Port Arthur, Ont.

Canadian Northern Ry. — Osborne Scott, heretofore chief clerk advertising and general baggage offices, Winnipeg, has been appointed Travelling Passenger Agent, with headquarters in Toronto.

E. H. Williams, heretofore Locomotive Foreman at Kipling, Sask., has been appointed Locomotive Foreman at Brandon, Man., not General Foreman as stated in our last issue.

H. J. Cowie, heretofore Freight Agent at Liverpool, Eng., has been appointed European Traffic Manager, and will also have charge of Canadian Northern Steamships, Ltd., traffic business there.

Canadian Northern Steamships, Ltd.—H. C. Bourlier, heretofore of the Allan Steamship Co.'s Toronto office, has been appointed General Agent Passenger Department, Ontario Division, Canadian Northern Steamships, Ltd. Office, Toronto.

Canadian Pacific Ry.—A. C. Lytle, heretofore General Superintendent and Freight and Passenger Agent Orford Mountain Ry., has been appointed Assistant Superintendent District 1, Eastern Division, with jurisdiction over Orford Branch, reporting to the Superintendent District 1. Office, Eastman, Que.

E. W. Beatty, heretofore Assistant Solicitor, has been appointed General Solicitor. Office, Montreal.

F. R. Haney, heretofore chief clerk to Tax and Insurance Commissioner, Montreal, has been appointed Assistant to Tax and Insurance Commissioner, and Claims Adjuster for Lines East of Fort William, Ont. Office, Montreal.

P. A. Crysler, heretofore General Car Inspector Eastern Lines, has been appointed assistant general foreman of passenger car repair work at Angus shops, Montreal.

C. Lott, heretofore a train dispatcher at Smith's Falls, Ont., has been appointed temporarily a Train Rules Instructor and Examiner for the Eastern Division.

S. J. Sharp, until recently General Agent Passenger Department Atlantic Steamships, Toronto, who was transferred to a similar position at Winnipeg, as announced in our last issue, has resigned, and will go into the general steamship agency and real estate business in Toronto.

W. E. Woodhouse, heretofore Master Mechanic Western Division, Calgary, Alta., has been appointed Superintendent Winnipeg shops, vice S. J. Hungerford, resigned to enter Canadian Northern Ry. service.

E. A. Bradley has been appointed chief clerk Right of Way Department, Winnipeg, vice E. W. Bateman promoted.

R. Tidmus, heretofore in city ticket office, Nelson, B.C., has been appointed city ticket agent at Winnipeg, vice D. J. Rochon deceased.

J. Robertson, heretofore transitman, Moose Jaw, Sask., has been appointed Resident Engineer there, vice F. S. Rosseter resigned.

R. Anthony, heretofore Locomotive Foreman, Moose Jaw, Sask., has been appointed General Foreman there, vice J. H. Wilson transferred to Kenora, Ont., as stated in our Jan. issue.

R. A. Pyne, heretofore District Master Mechanic, Nelson, B.C., has been appointed Master Mechanic Western Division, vice W. E. Woodhouse transferred. Office, Calgary, Alta.

T. J. Brown, heretofore transitman, Calgary, Alta., has been appointed Resident Engineer there, vice H. W. MacLeod transferred to the operating department.

W. H. McConnell, heretofore Trainmaster District 1, Western Division, Moose Jaw, Sask., has been appointed General Yardmaster, Calgary, Alta., vice W. A. Whited, who has left the service.

L. E. W. Bailey, who was recently appointed road foreman of locomotives, District 4, Western Division, has his headquarters at Macleod, Alta., not at Cranbrook, B.C., as stated in our last issue.

R. Brown, heretofore assistant boiler foreman, Winnipeg shops, has been appointed Locomotive Foreman, Cranbrook, B.C., vice D. T. Main promoted.

W. O. Miller, formerly Superintendent District 2, Pacific Division, Vancouver, B.C., has been appointed Superintendent District 3, Pacific Division, Nelson B.C.

D. T. Main, heretofore Locomotive Foreman, Cranbrook, B.C., has been appointed District Master Mechanic, Nelson, B.C., vice R. A. Pyne promoted.

H. W. MacLeod, heretofore Resident Engineer, Calgary, Alta., has been appointed Trainmaster, District 3, Pacific Division, Nelson, B.C., vice T. H. Crump, Trainmaster, Grand Forks, who has been transferred to Field, B.C.

The position of European Manager's Assistant has been abolished, E. Edwards, who held the position, has left the service.

T. J. Smith, heretofore Freight Agent at Liverpool, Eng., has been appointed General Freight Agent, vice H. D. Annable. Office, 62-65 Charing Cross, London, Eng.

F. W. Forster, heretofore Agent at Bristol, Eng., has been appointed Agent at Liverpool, Eng., vice J. J. Gilbertson resigned. He has also assumed the duties of Freight Agent there, vice T. J. Smith promoted.

A. S. Ray has been appointed Agent at Bristol, Eng., vice F. W. Forster transferred to Liverpool.

Grand Trunk Pacific Ry.—The following agents have been appointed:—G.T.P. Junction, Man., W. A. L. Armstrong; Firdale, Man., W. A. Taylor; Gregg, Man., W. W. Barr; Lazare, Man., J. A. Jacques; Fenwood, Sask., J. O. Deshaye; Raymore, Sask., F. O'Flynn; Venn, Sask., A. M. Demings; Watrous, Sask., R. M. Sutherland; Leney, Sask., J. H. Lewis; Ardrossan, Alta., A. Hughes.

Grand Trunk Ry.—Sir Wm. H. White, K.C.B., has been elected a director, vice Sir C. Rivers Wilson resigned.

C. H. Storey, heretofore foreman Brockville yards, has been appointed acting Roadmaster, Districts 5 and 6, between Vaudreuil, Que., and Kingston Jct., Ont., vice J. Henderson resigned. Office, Brockville, Ont.

H. E. Rice has been appointed Road Foreman of Locomotives, districts 25, C.S.M., 27, 28, 29 and P.O.N., vice J. R. Bunce assigned to other duties. Headquarters, Durand, Mich.

The following agents have been appointed:—Norton Mills, Que., H. A. Dunn; Danville, Que., F. Eastman; Jeanette's Creek, Ont., F. D. Ellis; Drumbo, Ont., F. Newman; Wiarton, Ont., C. W. Hinchy; Newton, Ont., J. Baxter; Ravensworth, Ont., J. G. Blanchfield.

Michigan Central Rd.—B. J. Coulson, heretofore yardmaster, Montrose, Ont., has been appointed General Yardmaster there, with jurisdiction over Montrose yard and interchange of traffic at Suspension Bridge.

J. J. O'Neill, heretofore night yardmaster, Windsor, Ont., has been appointed General Yardmaster at Victoria yards, Ont., with jurisdiction over Victoria and Welland yards, and interchange of traffic at Black Rock yard, Ont.

J. Handley, heretofore conductor, has been appointed acting Assistant Trainmaster, St. Thomas, Ont.

New York Central and Hudson River Rd.—The Mohawk and Malone, and St. Lawrence and Adirondack Rys. are now being operated as the Adirondack Division, J. W. Eber is Superintendent with office at Utica, N.Y.

Northern Navigation Co.—B. Patten, heretofore Travelling Freight Agent, has been appointed General Agent at Port Arthur, Ont., vice R. Beaumont, who is reported to have been appointed Agent G.T.P.R. Pacific Coast Steamship Service, Vancouver, B.C.

Pere Marquette Rd.—J. W. Kearns, heretofore Travelling Passenger Agent, London, Ont., has been appointed District Passenger Agent, Detroit, Mich., vice H. W. Jameson, who has left railway service for commercial work.

W. M. Hood has been appointed Travelling Passenger Agent, London, Ont., vice J. W. Kearns promoted.

Quebec Central Ry.—Jos. Fortin, heretofore acting Superintendent, has been appointed Superintendent. Office, Sherbrooke, Que.

Jno. Farquhar, heretofore Roadmaster, has been appointed General Roadmaster and Superintendent of Bridges and Buildings. Office, Sherbrooke, Que.

Too Late for Classification.

Alberta Central Ry.—Sir Thos. G. Shaughnessy, President C.P.R., is reported as stating Mar. 18, that there was no information to give with reference to reports from Calgary, that the company had acquired the A.C. Ry. charter. The report was to the effect that the charter had been sold to the C.P.R., which company intended to begin the construction of a line from Red Deer, through the Rocky Mountains to the Pacific Coast. (Dec., 1909, pg. 881).

G.T. Pacific Ry. on Vancouver Island.—W. Wainwright, Second Vice President, in reply to a delegation representing the Board of Trade of Victoria, B.C., is reported as having stated that the company proposed to start the construction of its line to Vancouver, early next year. That ferry service would be operated across Bute Inlet and that a subsidiary line would give connection with various points on Vancouver Island.

G.T.R. Track Relaying.—The company has completed the relaying of its double track between Montreal and Napanee, Ont., 198.9 miles, with 100 lb. rails, and rails have been bought for the relaying of the 133 miles between Napanee and Toronto, which will be done this year.

Morrissey, Fernie and Michel Ry.—The officers and directors for the current year are:—President and Treasurer, E. Rogers, Toronto; Vice President, E. C. Whitney, Ottawa; other directors, H. B. McGiverin, Ottawa; A. E. Stovel, Toronto, and W. P. Clough, New York.

Point St. Charles Burying Ground.—There is a plot of ground at the foot of St. Etienne St., Point St. Charles, Que., which was used as a burying ground for the 6,000 victims of the ship-fever in 1847-48, to whose memory a monument was erected by the employes of Peto, Brassey and Betts, which firm had the original contract for the construction of the G.T.R. This plot of ground lies between the G.T.R., its car siding and the main land opposite the guard pier, and the company is desirous of expropriating it for yard extension. The proposal is being opposed by the Irish residents of the city.

Prince Albert and Hudson Bay Ry.—An unconfirmed press report states that a contract has been let to A. J. Taylor, New York, for the construction of the first portion of this projected railway,

and that a staff of engineers had arrived in New York from England Mar. 4, en route for Prince Albert, Sask. Dr. R. S. Reid, arrived in St. John, N.B., from Scotland, Mar. 11, and proceeded to Prince Albert, stating that he would have charge of the camps, etc., for the company. He said the surveys would be completed from Prince Albert to Edmonton, and Prince Albert to Fort Churchill on Hudson Bay as fast as possible and that it was hoped to complete 1,000 miles of line within two years.

A Prince Albert dispatch, dated Mar. 4, says, G. Atwood, the company's Chief Engineer, arrived there on the previous evening, and announced that the final location surveys would be proceeded with at once, and that construction would be started as soon as the frost was out of the ground. W. H. May, who is said to have been in charge of the preliminary survey work, will it is said remain as Assistant Engineer. A. J. Taylor was reported as being expected from New York by Mar. 30, to complete arrangements for starting work. A. B. Spicer, the principal shareholder, is reported as being expected from Great Britain at an early date, to represent the company. (Mar., pg. 187).

Quebec Central Ry.—Gross earnings for Jan., $61,025.09; expenses, $55,207.80; net earnings, $5,817.29, against $54,086.31 gross earnings; $50,654.12 expenses; $3,432.19 net earnings for Jan., 1909. Aggregate gross earnings for seven months ended Jan. 31, $641,795.18; expenses, $441,647.28; net earnings, $200,147.90, against $606,777.55 aggregate gross earnings; $428,233.92 expenses; $178,543.63 net earnings for same period 1908-09.

Temiskaming and Northern Ontario Ry.—Total revenue for Jan., $154,428.43; operating expenses, $97,091.34; net earnings, $57,337.09; ore royalties, $3,520.91; total, $60,858.00; less hire of equipment, $6,445.61; net result, $54,412.39; expenses per cent. of earnings, 62.2.

White Pass and Yukon Ry.—It is reported from Vancouver that an extension of five miles will be built to the Pueblo mine this season.

Telegraph and Cable Matters.

T. J. McKavanagh, Chief Electrician of the cable steamer Minia, read a paper on submarine cables at a meeting of the Nova Scotia Society of Engineers at Halifax, Mar. 10.

It is reported that the Commercial Cable Co. will, shortly, lay another cable between this continent and Europe, thus making the sixth cable controlled by the company.

D. Adams, who entered the Montreal Telegraph Co.'s service in 1869, has been appointed local manager G.N.W. Telegraph Co., at London, Ont., succeeding the late W. C. Furness.

The C.P.R. telegraph operators are reported to be considering the question of asking an increase of pay, and for the abolition of Sunday work, except where absolutely necessary, when double pay is suggested.

The Board of Railway Commissioners issued an order Mar. 3, directing that all telegraph companies doing business in Canada, file with the Board, by Apr. 1, copies of all forms used in receiving and transmitting messages.

The Board of Railway Commissioners took up the question of telegraph rates Mar. 21, when the Western Associated Press stated the objections of the western press to the schedules filed by the telegraph companies, Mar. 1, in accordance with the Board's order.

Press reports state that the G.T.P.R. has applied to the Dominion Government for authority to erect a system of wireless telegraph stations across the Rocky Mountains, to connect Edmonton with Prince Rupert, for its own, as well as for commercial purposes.

In reply to questions in the Newfoundland Legislature recently, the Minister of Justice said that a copy of the evidence in the enquiry into the use of railway telegraphs for purposes other than there contemplated by the Railway Act, would be laid on the table at an early date.

The Newfoundland Minister of Finance in a budget statement, Mar. 8, stated that with four months of the fiscal year to elapse, the telegraph receipts to Feb. 28, were $37,899,21, against $33,046.65 for a similar period 1908-09. He also stated that since 1890, about 2,500 miles of telegraph line had been erected.

E. W. Humphreys, who was at one time interested in the Dominion Deforest Wireless Telegraph Co., and the Northern Commercial Telegraph Co., has entered a suit in the Superior Court, to recover about $2,500,000 from the Northern Commercial Telegraph Co., Roeblinger Sons & Co., F. C. Dixon, and S. Carsley, of Montreal, and for the annulment of certain loans and contracts.

The bill to incorporate the Maritime Telephone and Telegraph Co., was considered by the Nova Scotia Legislature, Mar. 15, an amendment being put forward by the applicants defining that the powers sought were to conduct a telephone and telegraph business solely, and that the clause relating to water rights was intended to give power only for the crossing of streams or lakes with wires and poles.

The proposal to adopt a system of telegraph letters similar to one recently inaugurated in the U.S., is under consideration by the telegraph companies. The idea is that letters of 50 words should be sent at night at the same rate as 10 words in the daytime. J. Kent, Manager C.P.R. Telegraphs was reported to have said recently that should such a system be adopted in the U.S., it would also be introduced in Canada.

The Board of Conciliation appointed to investigate the grievances of the G.T.R. telegraphers, on the lines east of the Detroit and St. Clair Rivers, in reporting, state that they agree that the schedule which became effective Jan. 1, 1908, should remain in force with certain exceptions, and should become effective on the Canada Atlantic Ry., which should be classed as a branch line except from Swanton to Ottawa, which should be dealt with as a main line, the 1907 schedule in force on the C.A.R. to be cancelled. The schedule should also be altered so that the monthly pay of operators on branch lines should be from $46 to $75, and on main line, $50 to $75, with extra allowances for reliefs away from home, Sunday work, and extra service. W. Nesbitt, K.C., for the company objected to extra pay for Sunday work.

The application of eastern and western newspaper publishers against the telegraph rates on Press Association matter, came before the Board of Railway Commissioners, Mar. 22. As a result of a conference, the C.P.R. announced that it would give a rate for the eastern zone, which would be open to any association of publishers on the same terms as to the volume and number of words, as to the Press Association, and stated that a sliding scale of rates would be drawn up and filed by Apr. 12, under which the morning paper rate would remain in force and evening papers would pay an increase of 20%. The press representatives in reply said that until a per word tariff was filed for the western business, they would not be in a position to say whether the new rate would be satisfactory. The Board intimated that after the amended tariff was submitted for approval a sitting would be arranged in Winnipeg, when objections would be heard.

C. P. R. Telegraph Extensions.

In addition to the telephone train dispatching circuits to be installed on the C.P.R. this year, particulars of which are given on another page, a 210 lb. copper wire will be strung from Montreal to Vancouver, to be used entirely for British Pacific cable's Trans-Canada traffic. It will be operated with the Wheatstone automatic system duplexed. It is expected that only one relay office will be necessary between Montreal and the Pacific cable.

An additional copper wire will be strung between Cranbrook and Sirdar, B.C., also two iron wires between Nanaimo and Victoria, B.C., which will be continued on to Vancouver through a new 3-core cable which is now being manufactured and will be laid about June next between Vancouver and Nanaimo. This will provide an alternate cable connecting the main line with Vancouver Island, and has been found necessary on account of the increased traffic on the Island. There will also probably be wires strung between Amherst and Truro, N.S., Montreal, Que., and Ottawa, Ont., Stanbridge and St. Guillaume, Que., and Farnham and Drummondville, Que. In addition to the above there will be a large amount of re-building and general repairs requiring about 400 men during the summer.

Among the Express Companies.

The Board of Railway Commissioners has notified express companies operating in Canada that its final sitting in connection with its enquiry into express charges will be held at Ottawa, Apr. 6.

The Board of Railway Commissioners has extended until June 1, the time during which the tariffs of tolls of the various express companies operating in Canada, have been temporarily approved.

The Board of Railway Commissioners passed the following order 9813, Mar. 9. —Re complaint of Manitoba Free Press, Telegram Printing Co., and Tribune Publishing Co., of Winnipeg, complaining against the rate charged by the Dominion Express Co. for carrying newspapers out of Winnipeg. Upon its appearing that at one time newspapers were carried by the respondent company from Winnipeg to points in Western Canada at a special rate of ¼ c. per lb., which rate was advanced to ½ c. per lb., and that later, on Mar. 2, 1907, this rate was restricted to a radius of 300 miles from Winnipeg. And its also appearing that the special rate of the respondent company in eastern Canada is ¼ c. per lb. within a radius of 300 miles of the office of publication, and that the application for a rate in western Canada equal to that charged in eastern Canada, having regard to the former rate of ¼ c. per lb. from Winnipeg, is reasonable. It is ordered, That the rate to be charged by the express companies for the carriage of daily newspapers from Winnipeg, shall be the same as charged by the respondent company in eastern Canada, namely, ¼ c. per lb. on the aggregate weight per month, to points reached by the said companies within 300 miles of Winnipeg exclusive of wagon service. It is further ordered, That order 9156, dated Jan. 3, 1910, be rescinded.

A Sharbot Lake, Ont., liquor dealer, has been fined $50 and costs for selling intoxicating liquor to a C.P.R. locomotive engineer who was on duty. The engineer was dismissed from the service.

Grain Elevator Notes.

The Great West Elevator Co., Ltd., has been incorporated under the North West Territories Ordinance, with office at Edmonton, Alta.

The Montreal Harbor Commission will erect an elevator of about 2,000,000 bush. capacity, near the Victoria pier, as a part of its scheme of harbor improvement, which will be carried out during the next few years.

A bill seeking to extend the powers of the Dominion Millers' Association was on Mar. 4, referred by the Private Bills Committee of the House of Commons to a sub-committee for consideration. The Association is seeking power to construct elevators and to operate steamships in addition to other powers.

The Saskatchewan Government has appointed a commission to consider the grain growers' proposals in connection with the suggested Government ownership of elevators. The commission consists of Prof. McGill, Dalhousie University, Halifax, N.S., G. Langley, M.L.A., and F. W. Green, Secretary Saskatchewan Grain Growers' Association.

The contract for the erection of the addition to the Goderich Elevator and Transit Co.'s elevator at Goderich, has been let, and it is stated that the work will be commenced as soon as the ice clears sufficiently to allow of the necessary dredging being done. The structure will be of concrete, supported on iron and wooden piles driven to rock, and of the square bin type reinforced with steel bars.

The Manitoba Government bill to establish a Government system of grain elevators in the province, provides that elevators will be erected in any part of the province on a petition from 60% of the farmers in the vicinity, who must agree to use the Government elevators exclusively. The expropriation of existing elevators is also covered, but it is believed that this clause involves the Dominion Government, and some difficulty may arise in such connection. A commission will be appointed by the Government for the operation of the elevators, and the right to select and remove members of the commission is reserved by the Government.

Quebec Public Utilities Commission.

The Quebec Government, Mar. 4, appointed Col. Hibbard, Montreal; Sir J. G. Garneau, Quebec; and C. Laberge, Professor in the Polytechnical School, Montreal, members of the Quebec Public Utilities' Commission, the formation of which was authorized by the Legislature, in 1909. Colonel Hibbard has been named President.

The act of the Legislature authorizing the formation of the commission is chap. 16, and was assented to May 29, 1909. It authorizes the Lieut-Governor in council to appoint a commission of three members, (to hold office for ten years, unless removed previously for cause) which commission shall be a court of record, to be called the Quebec Public Utilities Commission. One of the commissioners is to be appointed President, and another Acting President, any two of whom shall form a quorum; but a single commissioner may act in cases where there is no opposing party, and no notice to be given to any interested party; or where the commission or the President may authorize any one of its members to make a report. The President's opinion on points of law shall prevail, and the commissioners shall continue to act though there be a vacancy. No commissioner shall act in any matter in which he may be interested, and his place may be temporarily filled by the nomination of some disinterested person, by the Lieut.-Governor in council. Provision is made for the appointment of a Secretary, and for the appointment of officials having expert or technical knowledge to assist the commissioners. The salary of the President is $4,000 a year, and that of the commissioners is $3,000 each, and the Lieut.-Governor in council is authorized to grant them in addition a sum not exceeding $10 a day for each day's sitting of the Commission attended. The salary of the Secretary is fixed at $1,800 a year, and the salary of other employes and the remuneration of experts is to be fixed at the time of their appointment. The interpretation clause defines the word "public utility as meaning every corporation (other than a municipal corporation), firm, person or association of persons, the business and operations whereof are subject to the legislative authority of the province, now or hereafter operating telegraph or telephone lines, any railway, street railway or tramway, or for the production and delivery of heat, light or power, either directly or indirectly to the public.

The Commission is given jurisdiction in all matters heretofore within the jurisdiction of the Railway Committee of the Executive Council; in all questions relating to the transportation of goods by tramway companies; in all matters mentioned in articles 5165 to 5169 of the Revised Statutes of the Province; in all contestations as to tolls of public utilities, subject as to electric railways to paragraphs 6a and 6b article 5172 of the Revised Statutes of the Province; in the placing of rails, etc., on public roads in certain cases; in the placing of rails, etc., on public roads in order to reach other places, and certain contestation between public utilities and municipalities. In connection with the construction of telephone, telegraph and transmission lines, section 24 of the act specifies the conditions which shall be performed over and above those which may be prescribed in each case by the Commission. The Commission has no jurisdiction in cases for damage.

The Commission may make rules of practice regulating its procedure, and sections 29 to 45 inclusive, cover the powers possessed by the Commission as to the making of orders and for enforcing them. An appeal against an order may be made to the Court of Appeal upon questions of jurisdiction and law by permission of a judge, and sections 46 to 51 inclusive, cover all the procedure in connection with appeals.

The Commission is to report to the Government annually in July on the work done for the year ended June 30. The powers of the Railway Committee of the Executive Council and of the Minister of Public Works in respect to all matters coming under the jurisdiction of the Commission, are suspended from the time of the appointment of the Commission, and "so long as the Commission shall continue to exist."

Toronto Railway Judgment.

The Judicial Committee of the Privy Council delivered judgment in London, Eng., Mar. 18, on the appeal of the city of Toronto from the judgment of the Ontario Court of Appeal in favor of the order of the Ontario Railway and Municipal Board, regarding the right of the Toronto Ry. to lay tracks on certain streets in the city. In delivering the judgment, Lord Macnaghten said:—"This is a singular appeal, and in their Lordships' opinion a very idle one. In form it is an appeal from an order of the Court of Appeal for Ontario dismissing an appeal from the order of the Ontario Railway and Municipal Board. In substance it is an attempt to avoid or impugn an order of his Majesty in council and to reopen a question finally determined in litigation between the parties to the present controversy, the city of Toronto and the Toronto Ry. Co."

After reciting the history of the street railway agreement and the disputes that arose between the company and the city, he continued:—"On May 17, 1907, on application by the city against the company in the case commonly called the 'overcrowding case,' the Ontario Railway and Municipal Board ordered the company to construct between 10 and 15 additional miles of single track. Proceeding to comply with the order the company selected certain streets. These streets, as appears from the finding of the board, had at one time been approved by the city engineer. The city, however, did not approve the recommendations of its own engineer, taking up the position that the company had no right to build on streets, even when recommended by the city engineer, unless those streets were also approved by the city council."

The decision then refers to the clause in the act promoted by the city and passed in 1908, and says:—"The preamble of the act contains recitals with reference to other matters dealt with in the act, but it is silent as to the object of clause 1. It is difficult to understand the purpose of that clause. At first sight it looks as if it were aimed at His Majesty's order, and the advice tendered by this board on the occasion of former litigation. If that were indeed the aim of the bolt, it is very wide of the mark. In effect, it seems to be nothing more than an affirmance of a proposition, with which the railway company was never concerned to quarrel, and with which it now professes to be in complete accord."

The application of the company to the Ontario Railway and Municipal Board for power to lay tracks upon the streets it had selected was then recited, and the judgment says:—"On the appeal to the Ontario Court of Appeal, and on hearing this appeal, some reliance was placed on behalf of the city on the enactment contained in the 1908 act. The argument on the part of the appellants appears to be mainly founded on the shorthand note of some extracts from speeches delivered by counsel on the hearing of the former case, a line of argument which their Lordships are not prepared to follow nor disposed to countenance. The judgment in the former case seems to be perfectly clear, and the order of His Majesty unaffected by the legislation of 1908. Their Lordships will, therefore, advise His Majesty that the appeal must be dismissed. The appellants will bear the costs of the appeal."

Railway Lands Patented.—Letters patent were issued during Jan., covering the following railway lands in Manitoba, Saskatchewan, Alberta and British Columbia:—

	Acres.
Canadian Northern Ry.	21.43
Canadian Pacific Ry.	3,871.77
Canadian Pacific Ry., Souris branch	7,608.30
C.P.R. roadbed and station grounds	152.02
Manitoba Southwestern Col. Ry.	2,840.25
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	160.00
Total	14,653.77

The Dominion Parliament has voted $38,700 for new machinery for the Intercolonial Ry. locomotive and machine shops at Moncton, N.B.

The U.S. Government has cancelled the privilege of bonding Chinese through Canada to the States at Pacific points. The C.P.R., it is stated, will overcome the difficulty by carrying the Chinese across the continent to Halifax, and transporting them thence to Boston or New York.

Winnipeg Electric Ry. Co.'s Report.

The report for the year ended Dec. 31, 1909, shows net earnings of $863,405.62 after providing for all operating expenses, taxes, the city's proportion of earnings, and other fixed charges. Out of net earnings the directors declared four quarterly dividends amounting to $600,000, leaving a surplus of $263,405.62, which has been transferred to profit and loss account, making a total credit to this account of $861,430.03.

The hydraulic works at Pinawa channel, Winnipeg River, were very satisfactory up to Nov. 23, when one of the penstocks burst, which resulted in the closing down of the whole plant for six days. While the hydraulic plant was closed down, the steam plant was put in operation and a partial service maintained in all departments. All expense in connection with this breakdown has been charged against operating expenses.

In accordance with the plan of extensions adopted at the last annual meeting, the following improvements and additions to the equipment and system have been made in the various departments: 4.995 miles of track was laid; 4.037 miles of which was track with concrete foundation and asphalt pavement—the balance being surface track with ballast. 30 large double truck closed cars, equipped with air brakes, electric heaters both in the body of the car and motorman's vestibule, and many other modern appliances to ensure the safety and comfort of passengers and operators, were constructed in the company's shops and put into service. 749 new poles were erected and 120,141 lbs. of wire, with 129 transformers, put up, in extension of the lighting and power distribution system. 26,914 ft. of new gas main were laid and 747 new gas services installed in extension of the gas distribution system.

The following increases were made during 1909 over 1908: gross earnings, $417,636.53 or 18.93%; expenses, $231,792.59 or 21.29%; net earnings, $185,843.94 or 16.63%. Expenses were 50.34% of earnings, against 49.35% in 1908. The number of passengers carried was 26,382,773 against 22,019,507 in 1908; transfers issued 8,925,849 against 7,777,315 in 1908, and the earning's per capita, 10.03c. against 9.80c. in 1908.

The officers and directors for the current year are as follows:

Winnipeg Electric Ry. — President, W. Mackenzie; Vice-President, W. Whyte; Secretary-Treasurer, F. M. Morse; other directors, Sir Wm. C. Van Horne, D. D. Mann, D. B. Hanna, A. M. Nanton, H. Sutherland, R. J. Mackenzie.

Winnipeg, Selkirk and Lake Winnipeg Ry.—President, F. M. Morse; Vice President, D. H. Laird; other directors, W. Whyte, A. M. Nanton, J. H. Munson, L. J. Loader, H. Sutherland.

Suburban Rapid Transit Co.—President, A. M. Nanton; Secretary, F. M. Morse; other directors, W. Whyte, D. B. Hanna, H. Sutherland.

Calgary Street Railway Earnings, Etc.

Following is a statement of the revenue and expenditure for the six months' ended Dec. 31, 1909, of this railway, which is owned and operated by the City of Calgary, Alta., the Chairman of the Commission being R. R. Jamieson, formerly General Superintendent C.P.R. Central Division:—

REVENUE.

Passenger earnings	$56,580.35
Miscellaneous earnings	925.33
	$57,505.68

OPERATING EXPENSES.

General expense	$ 3,931.25
Maintenance of way and structures	1,523.91
Maintenance of equipment	3,060.90
Power for operation	13,361.26
Transportation expenses	14,137.19
	$36,014.51
Balance revenue over operating expenses	$21,491.17
Interest and fixed charges	11,489.80
Net revenue	$10,001.37

DISPOSITION OF NET REVENUE.

Material purchased for maintenance and operation, 1910	$ 1,280.72
Insurance prepaid for 1910	1,213.15
Carried forward to contingent account	7,507.50
	$10,001.37

PASSENGERS CARRIED.

July	101,273 or 3,751 per day, operating 2 cars
Aug.	194,721 or 6,491 per day, operating 4 cars
Sept.	239,839 or 7,994 per day, operating 9 cars
Oct.	229,576 or 7,654 per day, operating 10 cars
Nov.	229,938 or 7,665 per day, operating 11 cars
Dec.	279,581 or 9,010 per day, operating 11 cars

Following is a statement of gross revenue and operating expenses for Jan., 1910.

REVENUE.

Passenger earnings	$11,375.60
Miscellaneous earnings	189.00
	$11,564.60

OPERATING EXPENSES.

Maintenance of way and structures—		
Track and roadway	$321.90	
Electric lines	81.00	
Buildings and fixtures	11.25	
		$414.15
MAINTENANCE OF EQUIPMENT.		
Cars	349.21	
Electric equipment of cars	298.43	
Shop expenses	68.45	
		716.09
TRANSPORTATION.		
Power for operation	$3,617.50	
Superintendence of transportation	39.00	
Wages of conductors and motormen	3,069.10	
Car service supplies	19.35	
Miscellaneous car service expenses	211.14	
Cleaning and sanding track	33.01	
		6,989.10
GENERAL EXPENSES.		
Salaries, general offices	$380.00	
Salaries, clerks	50.00	
Printing and stationery	109.30	
Miscellaneous office expenses	22.63	
Miscellaneous general expenses	45.75	
Rent of land and buildings	35.00	642.68
		$8,762.02
Revenue balance		$2,802.58

Revenue, 23.163 cents per car mile, operating expenses, 17.550 cents; net earnings, 5.613 cents; passengers carried, 276,752.

There are now 15½ miles of track operated. Tracklaying was commenced in May, 1909, and completed in September. It is expected to lay some more track this year.

The British Columbia Legislature has under consideration a bill providing for the appointment by the government of a tramway inspector whose duty it shall be to inspect all tramways or street railways constructed, in course of construction, or that may hereafter be constructed in the province.

Ontario Electric Railway Legislation.

In the closing days of the recent session of the Ontario Legislature, Sir James Whitney introduced two bills, one to amend the Ontario Railway Act, 1906, the other to amend the Ontario Railway and Municipal Board Act, 1906, one of their avowed objects being to render nugatory any decision which the Imperial Privy Council might give in the appeal pending between the city of Toronto and the Toronto Railway Company, should such decision be favorable to the company. Many of the other provisions of the bills were also of a most drastic nature and applied to other electric railway companies, Section 5, of the bill to amend the Ontario Railway and Municipal Board Act as introduced read as follows:—

"The powers conferred by this Act upon the Board shall be in addition to the powers now possessed by it, but shall not interfere with or take away the rights of any municipal corporation under any agreement between the corporation and the company and, unless with the consent of the corporation, shall be exercised subject to such rights."

While this clause provided that no rights enjoyed by a municipality under an agreement could be taken away, Section 9 provided that the Board could make an order against a company, notwithstanding any agreement or the provisions of any other act. On behalf of the Canadian Street Railway Association, strong objection was taken to this one-sided proposal, and as will be seen by the copy of the bill as passed, which is given further on, the portion of section 5 which was objected to was withdrawn, but other representatives met with scant consideration, except that section 10 was added, which limits certain powers given to the Board to cities having a population of 100,000 or over, in other words to Toronto.

The two bills as forced through the House by the Premier are confiscatory legislation of the most pronounced type, showing an absolute disregard of vested rights. Added to previous legislation, they will effectually prevent the investment of capital in electric railway construction and render it impossible to secure the construction of interurban systems which are so necessary through the rural districts of the older portions of the province. The acts are given in full below:—

AN ACT TO AMEND THE ONTARIO RAILWAY AND MUNICIPAL BOARD ACT, 1906.

His Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:—

1. This Act may be cited as "The Ontario Railway and Municipal Board of Amendment Act, 1910."

2. Whenever the Board is of opinion after hearing had upon its own motion or after complaint that the regulations, practices, equipment, appliances or service of any railway company in respect to transportation of persons, freight or property are unjust, unreasonable, unsafe, improper or inadequate, the Board shall determine the just, reasonable, safe, proper and adequate regulations, practices, equipment, appliances or service thereafter to be in force, to be observed and to be used in such transportation of persons, freight, and property and so fix and prescribe the same by order to be served upon the railway company to be bound thereby, and it shall be the duty of the railway company to observe and obey every requirement of every such order and to do everything necessary or proper in order to secure absolute compliance with and observance of every such order by its officers, agents and employes.

3. Whenever in the opinion of the Board repairs or improvements to or changes in any tracks, switches, terminals or terminal facilities, motive power or any other property or device used by any railway company in or in connection with the transportation of passengers, freight or property ought reasonably to be made thereto in order to promote the security or convenience of the public or of the employes of the company or to secure adequate service or facilities for the transportation of passengers, freight or property, the Board, after a hearing had either upon its own motion or after complaint, shall make and serve an order directing such repairs, improvements, changes, or additions to be made within a reasonable time and in a manner to be specified therein, and every railway company shall make all repairs, improvements, changes and additions required of it by any such order within the time and in the manner specified in the order.

4. Whenever in the opinion of the Board a street railway company

(a) Does not run cars enough or possess or operate motive power enough reasonably to accommodate the passengers transported or offered for transportation to it, or

(b) Does not run its cars with sufficient frequency or at a reasonably proper time, or

(c) Does not run any car upon a reasonable time schedule for the run, or

(d) Does not provide reasonable routes and services for the accommodation of the public, or

(e) Does not provide for stopping its cars to take on and discharge its passengers at convenient points or at a sufficient number of points, or

(f) Does not sufficiently or properly heat and light any of its cars or keep the same clean, or

(g) Operates any car which is not in proper repair and condition,

the Board shall have power after a hearing had either on its own motion, or after complaint to make an order directing the company to increase the number of its cars or its motive power, to change the time for starting any car, to change the time schedule for the run of any car, to require the company to run cars and provide a sufficient service upon any route that the Board may deem necessary for the accommodation of the public, to sufficiently light and heat its cars and keep them clean, to stop its cars to take on and discharge passengers at such points as the Board may deem proper, and to make any other order which the Board may deem necessary to accommodate and transport the passengers transported or offered for transportation, and the company shall be bound to obey every such order according to the exigency thereof.

5. The powers conferred by this Act upon the Board shall be in addition to the powers now possessed by it.

6. The Board shall have the like power and authority for the enforcement of any order made by it under the provisions of this Act as it now possesses for the enforcement of its orders, and especially the power and authority conferred by sections 20 and 63 of The Ontario Railway and Municipal Board Act, 1906.

7. This Act shall be read with and as part of The Ontario Railway and Municipal Board Act, 1906, and sections 2, 3, 5 and 6 of this Act shall apply to street railways as well as other railways.

8. Section 65 of the Act mentioned in the next preceding section is hereby repealed.

9. The provisions of this Act shall apply notwithstanding any agreement between the company and a municipal corporation or the provisions of any general or special Act relating to the agreement or to the company.

10. The powers conferred by this Act in the case of street railways wholly or partly in cities having a population of One Hundred Thousand or over shall include, but in the case of other street railways shall not include, the power to require the company owning or operating the street railway to construct, maintain and operate additional lines and extensions of existing lines, in, along and upon any street or highway or part of a street or highway upon which the company has authority to construct, maintain and operate its railway.

AN ACT TO AMEND THE ONTARIO RAILWAY ACT, 1906.

His Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:—

1. This Act may be cited as "The Ontario Railway Amendment Act, 1910," and shall be read with and as part of The Ontario Railway Act, 1906.

2. Where under the provisions of an agreement between a municipal corporation and a street railway company or any person from whom a street railway company has derived its title, the corporation has become or shall hereafter become entitled to grant to another company or person the right to construct and operate a street railway on any street or part or a street upon which such first mentioned company was authorized or empowered to construct or operate its railway or any part of it, by reason of the failure of such company to construct and operate or to operate its railway thereon, such corporation, instead of granting such right to another company or person, may itself construct, operate and maintain a railway thereon either as a separate and distinct line of railway or as part of any other railway which such corporation owns or operates or has power to construct or operate.

3. (1) A railway company shall not, without having first obtained the permission and approval of the Ontario Railway and Municipal Board, begin the construction of its railway or of any extension of it upon any highway or part of a highway upon which it has authority to construct or extend its railway, and the Board shall have power to withhold its permission and approval whenever it is of opinion that it has not been made to appear that the construction or extension upon such highway or part of a highway is necessary or convenient for the public service, or whenever in the opinion of the Board it is not in the public interest that the railway should be constructed or extended upon such highway or part of a highway.

(2) This section shall apply to a street railway.

4. The proviso to subsection 1 of section 569 of The Consolidated Municipal Act, 1903, is hereby repealed and the following substituted for it:—

Provided that the powers conferred by this section shall not be exercised in respect of any street or part of a street in, along, or upon which a street railway company is entitled under an agreement with the municipality to construct and operate its railway, so long as such right shall continue to exist, and any question or dispute as to whether a street railway company is so entitled, shall be determined by the Ontario Railway and Municipal Board.

5. Section 2 shall not come into force until a day to be named by the Lieutenant-Governor by Proclamation.

At a meeting of mayors and representatives of the larger Canadian cities, held at Ottawa, Mar. 9, a resolution was passed declaring that in order to prevent confusion of plans of operation, federal, provincial and civic, and to prevent injury to local franchises, it is essential that all plans of railway or telegraph companies should be subject to the consent of the municipalities expressed by by-law, before any rights are granted by Parliament.

Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—It is expected that the line from New Westminster to Cloverdale will be completed and placed in operation by April 1. It is now being ballasted by gangs working from both ends. The gravel for the ballast is being obtained from a pit at Sullivan's, eight miles from New Westminster, to which point the company has constructed a spur line. The grading between Abbotsford and Chilliwack, has been practically completed, the unfinished portions, including some heavy work between Abbottsford and Sumas, along Sumas Lake. The bridges are being erected, and it is expected that tracklaying will be started April 1, at Abbotsford, 36 miles from New Westminster. The sub-power station at Cloverdale is nearing completion, and those at Abbotsford and Chilliwack are under construction.

A contract has been let to the International Contract Co., of Seattle Wash., for the construction of two towers, to carry the high power transmission wires across the Fraser River at New Westminster. The towers are to be 190 ft. above high water mark. (Mar., pg. 231.)

Cape Breton Electric Co.—The question of the extension of the electric lines in Sydney, N.S., was considered by the City Council, Mar. 15, representatives of the company being present. Mr. Pratt, representing the Stone and Webster Management Association, Boston, Mass., the managers of the company, said nothing would be done this year, probably nothing next year, but it might be that some extensions could be arranged for in 1912, provided it could be shown that they would be a source of profit. (Dec., 1909, pg. 929.)

The Dominion Ry. and Plaster Co. owns a large deposit of gypsum in the vicinity of East Bay, N.S., which is being opened up, and for the purpose of providing adequate shipping facilities, it is proposed to construct an electric railway from the pits to Sydney, about 14 miles. A free right-of-way has been secured through the county of Cape Breton, and a cash bonus of $35,000 is promised on completion of the line. The route will be along the main highway, through a well-settled district, and the terminals at East Bay will be on the Bras d'Or Lakes, which have an inland shore line of about 500 miles, and are connected with the sea by the St. Peter Canal, and the Big Bras d'Or cut. (Mar., pg. 231.)

Dunnville, Wellandport and Beamsville Ry.—Meetings were held in Beamsville and St. Catharines, Ont., Mar. 15, when the matter of bonusing the construction of this projected railway from Beamsville into St. Catharines was considered. It was explained that the extension would cost $500,000 and the city was asked to join with Beamsville village and Louth and Clinton townships in guaranteeing the company's bonds upon half of this amount. No action was taken at either meeting.

The Ontario Legislature last session passed an act extending the time within which the company may construct its projected railway. (Mar., pg. 231.)

Fort Erie Ferry Ry. Co.—The power asked for the extension of time for the construction of the company's projected branch lines was struck out of the company's bill before the Ontario Legislature recently on the ground that proper notice had not been given. (Feb., pg. 147.)

Fredericton Street Ry. Co.—Application is being made for the incorporation of a company with this title to build a street railway in Fredericton, N.B., and in the County of York, upon such streets and highways as shall be agreed upon between the company and the various municipalities. The provisional directors are:—F. B. Edgecombe, C. F. Seide, J. S. Neill, A. S. Phillips, A. S. Shute, R. B. Hanson. (Mar., pg. 231.)

PEERLESS
The Fence that saves Expense

Because it saves repairs. It does not sag, bag, snap, or break, and when once put up it stays in good shape. Adjusts itself to all irregularities of the ground and resists weather—wear and stock especially well. Makes the best railroad fence you can possibly put up, both in appearance and lasting qualities. You can do no better than to erect Peerless Fencing. It will always be a standing example of your good judgment. The free book we are sending out is very interesting to people in your field. Shall we send you a copy—a postal request will bring one promptly.

The Best Training School for Steam, Electrical, and Marine Engineers

The International Correspondence Schools, of Scranton, Pa., are the best training schools in the world for YOU because: (1) The I. C. S. Courses in Engineering are first prepared by practical men—men that have met and solved the problems common to every-day work—and then rewritten by I. C. S. experts to suit the practical needs of the man having to get his technical training in odds and ends of time. (2) Each I. C. S. Course is prepared to qualify students for a particular branch of work; students study only what is necessary to equip them for the work they want to follow. (3) The Courses are so frequently revised as to be always up to the minute; the cost of revision exceeds $250,000 a year. (4) I. C. S. Courses are easy to learn, easy to remember, and easy to apply.

The I. C. S. can better **your** position, increase **your** pay, brighten **your** future. Let us tell you how. Mark and mail the coupon **NOW.**

Grand Valley Ry.—The lines owned by this company include the Brantford Street Ry. in Brantford, Ont., the G.V. Ry. from Brantford via Paris to Galt, and the Woodstock, Thames Valley and Ingersoll Ry. connecting Woodstock and Ingersoll. The interests controlling this company also control the London and Lake Erie Ry. and Transportation Co., which is the title under which the South Western Traction Co. is being reorganized by the purchasers at the recent sale. The plans of the company include the connection of all these lines and the construction of other lines which the charters of the several companies authorize. The principal officers of the G.V.R. are: President, M. A. Verner, Brantford; General Manager, W. P. Kellett.

The plans for immediate construction for the G.V.R. include 13 miles of lines in Brantford, and a new line from Brantford to Port Dover, 33.6 miles long, and passing through Mount Pleasant, Waterford and Simcoe. The maximum gradient will be 1%, and the line will be operated on the A.C.D.C. system. Freight and passenger business will be operated over it, and there will be physical connections for the interchange of traffic with the G.T.R., the Michigan Central Rd., and the Toronto, Hamilton and Buffalo Ry. The points at which connection may be made with the steam railways are at Brantford with the G.T.R., and the T.H. & B., at Waterford with the M.C.R., and the T.H. & B., at Simcoe with the G.T.R. (over which the Wabash Rd. has running rights), and at Port Dover with the G.T.R. The construction of the lines in Brantford will be carried out by the company itself, and a contract has been let to Joseph Gianinni, of Pittsburg, Pa., for the construction of the line to Port Dover. (Mar., pg. 231.)

Guelph Radial Ry.—An act has been passed by the Ontario Legislature providing for the construction by the city of Guelph, which owns the line, of a branch to the new central prison, which the Ontario Government proposes to erect near the city, and other branches of less than five miles in length. (Jan., pg. 57.)

Hamilton, Waterloo and Guelph Ry.—The Railway Committee of the House of Commons devoted a great deal of time during March to the consideration of this bill. The company is asking for authority to extend its line from Hamilton to Toronto, and this proposal is being opposed by the Toronto City Council. On Mar. 10, the committee approved of a clause giving the company power to make frequent stops within the city. Subsequently what is known as clause 3 was agreed on between the city and the company, and approved by the committee. On Mar. 22 when the bill, as amended, came up for consideration,this clause had been omitted from the printed copy. N. Guthrie, M.P., stated that the bill as reprinted was as the promoters desired that it should be passed. After a lengthened discussion, a sub-committee was appointed to try and bring about an understanding between the parties. (Mar., pg. 231.)

Monarch Radial Ry.—In the act of incorporation passed by the Ontario Legislature last session, it is provided that the southerly terminals shall be in the county of York near, but not in the city of Toronto. (Mar., pg. 231.)

Montreal Central Terminal Ry.—The House of Commons has passed the bill granting an extension of time within which to complete the projected lines, and authorizing the company to enter into agreements with all railway companies whose lines enter Montreal. The including clause of sec. 1 provides that the company shall not construct its line on any highway, street or public place without first having obtained the consent of the municipality. It was claimed in committee that the company was being promoted for the purpose of amalgamating all the street railway lines in and around the city, and the House inserted in the bill clauses providing that no amalgamation shall be made without the approval of the municipality if the line is to be operated on a street or highway.

Application is also being made to the Quebec Legislature to authorize the company to enter into agreements with any company having similar powers. The notice is signed by J. M. Shanly, President. (Jan., pg. 21.)

The Montreal Street Ry. is applying to the Quebec Legislature for power to construct underground railways throughout the city of Montreal, and to perform all the necessary works in connection therewith. It is also asked that in case of any disagreement between the company and the city in connection with the carrying out of the construction of such lines, the matter be disposed of by the Quebec Public Utilities Commission. W. G. Ross, Managing Director, was in Quebec, Mar. 16, in connection with the introduction of the bill. He is quoted as stating in an interview, Mar. 20, that the first underground railway to be built will be under St. James Street, from St. Lambert Hill to Victoria Square, the most congested route in the city, and that construction would be started as soon as the necessary rights were secured from the Legislature. He took the ground that no other than the Street Railway Company should be allowed to put in the subways, as the service would be a natural corollary to the surface roads. (See also Suburban Tramways Co., Mar., pg. 231.)

The company is applying to the city Board of Control for permission to lay lines on the following streets: Cote des Neiges Rd., from Trafalgar Ave. to Cote St. Luc Rd.; Cote St. Paul Rd., a double track where it is now single, from Notre Dame St. to the canal bridge; St. Patrick St., from Wellington and St. Etienne Sts., to the G.T.R.; a loop line at Britannia, Riverside and Forfar Sts.; Wellington St., a double track from Gallery Sq. to McGill St.; St. Michael Lane, Jurur and Vitre Sts., from Victoria Sq., to City Hall Ave.; St. Urbain St., from Craig to Ontario St.; St. Luke Burnside and Berthelet Sts., from Atwater Ave. to Bleury St.; Sherbrooke St., from the western city limits to the eastern divisions; Dorchester St., from Guy St. to University St.; Pine Ave., from Royal Victoria Hospital to St. Denis St.; Roy St., from St. Denis St. to Lafontaine Park; St. Gabriel St., from Notre Dame St. to St. James St.; St. James St., from St. Gabriel St. to S. Lawrence St.; Cadieux St., from Ontario St. to Sherbrooke St., and from Duluth St. to Rachael St.

Montreal Underground and Elevated Ry.—Application has been made for the incorporation of a company with this title, and with authorized capital of $20,000,000, to build a railway to be operated by steam, electricity or other motive power, through the city and island of Montreal; and to construct tunnels, viaducts, subways, bridges and other works required for the advantage of the company. Power is also asked to construct transmission lines, and to supply electricity for lighting, heating, power and other purposes. T. P. Butler, Montreal, is solicitor for applicants.

Moose Jaw, Sask.—The city council has received proposals from an Ottawa company, for the construction and operation of a street railway, and has decided, subject to conditions being satisfactory, to make a draft franchise the basis of a by-law to be submitted to the ratepayers at an early date. It is stated that at present, the arrangement is that three miles be constructed this year and a similar amount next year, the city to control the line of route and the time schedule, and to have the right to take over the property after 20 years.

Morrisburg and Ottawa Electric Ry.—The company at present known as the Morrisburg Electric Ry. has been authorized by the Ontario Legislature to change its name as above, to increase its capital stock to $500,000 and its bonding powers to $20,000 a mile, and to make a contract with any existing railway for trackage rights into Ottawa. The company was incorporated in 1898 to construct a line in Morrisburg, and in 1909 was given power to extend to Ottawa. An extension of time for the construction of these lines has also been given. (Feb., pg. 147.)

Niagara Falls, Welland and Dunnville Electric Ry.—The Ontario Legislature has incorporated a company with this title to build an electric railway from Niagara Falls to Welland and Dunnville, with a branch to Fenwick, Ont. The provisional directors are:—F. R. Lalor, Dunnville, Ont.; F. Buell, Buffalo, N.Y.; J. C. Gardner, Niagara Falls, Ont.; G. Arnold, Ridgeville, Ont.; F. E. Misner, Wainfleet tp., Ont.; G. H. Burgar and H. A. Rose, Welland, Ont. (Jan., pg. 59.)

Nipissing Central Ry.—Superintendent P. J. Uttley stated in Haileybury, Ont., Mar. 17, that the company was in a position to run its cars, but did not wish to send them out until everything was arranged so as to give a half-hourly service. An arrangement has been made for the supply of power from the Mines Power Co. (Nov., 1909, pg. 848.)

Port Arthur-Fort William Electric Ry.—N. C. Pilcher, General Manager, presented a report as to the state of the line to the commissioners, Mar. 7, showing that although there were certain sections in which considerable repairs were necessary, the general condition was good. (Mar., pg. 233.)

The Quebec and Isle of Orleans Ry. is applying for an act to extend the time for the construction of its authorized railway, and for authority to build it on the monorail type. P. Corriveau, Quebec, is solicitor for applicants.

Regina, Sask.—The Mayor of Regina was in Winnipeg, Mar. 10, regarding arrangements for the construction of a street railway in Regina. He is reported to have stated that eight miles of track would be laid this year, and routes laid out for a number of suburban lines, the construction of which would be undertaken later. A franchise is being prepared, and the necessary capital for the work is being subscribed in Winnipeg.

Toronto.—Among the provisions of the "act respecting the city of Toronto," passed last session of the Ontario Legislature, are sections authorizing the construction of tube railways within the city limits; but without a right to construct surface lines in certain parts of the city. The sections asking authority to expropriate the Toronto Ry. were struck out.

At a meeting of the city railway committtee, Mar. 22, the Board of Control was asked to secure special legal and engineering assistance for the carrying out of the powers conferred by the act. J. W. Moyes, who had previously reported on the tube railway plans has withdrawn from further connection with the matter. (Feb., pg. 147.)

Toronto and York Radial Ry.—The Toronto Board of Control, Mar. 22, discussed the question of the "third rail" on the Metropolitan division of the T. and Y.R. Ry. within the city, so as to permit of the operation of the city cars over it. The matter is now under the consideration of the city's legal department. (Nov., 1909, pg. 849.)

Toronto Suburban Ry.—The Ontario Legislature has given the company an extension of time for the construction of its authorized lines, and power to construct a line from Brampton, the projected terminal of the extension of one of its existing lines to Guelph. (Feb., pg. 147.)

Style No. 17 **Style No. 20**

Ask for Information about Six Other Styles.

Welland, Ont.—Application has been made to the town council for a 20-year franchise, for the operation of a street railway in the town. C. J. Laughlin, Hartford, Conn., is interested in the scheme, and is reported to have said that he has made all arrangements for the underwriting of the bonds, that construction will be commenced within three months of the granting of the franchise, and that the railway will be in operation within eight months thereafter.

Winnipeg Electric St. Ry.—Application was recently made to the Manitoba Legislature to ratify an agreement between the company and the rural municipality of Kildonan. (Mar., pg. 233.)

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—A London, Eng., cable states that a private underwriting prospectus has been issued offering holders of preferred and deferred stock of the company £530,000 of 4½% perpetual consolidated debenture stock, ranking pari passu form Mar. 31, with the existing £800,000 of 4¼% perpetual consolidated debenture stock.

Calgary St. Ry.—Passenger earnings for Feb., $11,140.05; miscellaneous earnings, $213; total earnings, $11,353.50; operating expenses, way and structures, $471.74, maintenance of equipment, $753.09, power and operation, $3,452.50, superintendence, wages, car service, supplies, etc., $6,813.30; general earnings, $358.10.

Halifax Electric Tramway.—Traffic receipts for Feb., $14,018.69, and for three weeks ended Mar. 21, $10,736.97, against $12,536.02 and $9,127.39 for same periods 1909.

Hamilton, Grimsby and Beamsville Electric Ry.—Following are the officers and directors for the current year:—President, J. Dixon; Vice President, J. Dickenson, Treasurer, J. Knox; other directors, J. W. Sutherland, S. O. Greening, W. C. Hawkins and J. R. Moodie.

London and Lake Erie Ry. and Transportation Co.—A meeting of the shareholders is to be held in London, Ont., April 7, to receive a report of the provisional directors, to organize the company and transact other business.

London St. Ry.—Gross earnings for Feb., $17,349.23; expenses, $13,126.91; net earnings, $4,222.32; deductions, $2,205.55; net income, $2,016.77, against $16,497 gross earnings; $12,724.38 expenses; $3,772.62 net earnings for Feb., 1909. Aggregate gross earnings for two months ended Feb. 28, $35,712.94; expenses, $26,705.13; net earnings, $9,007.81; deductions, $4,647.30; net income, $4,360.51, against $34,234.83; net income, $4,360.51, against $34,234.83 aggregate gross earnings; $25,709.49 expenses; $8,525.34 net earnings for same period 1909.

Montreal St. Ry.—Passenger earnings for Feb., $300,029.83; miscellaneous earnings, $3,947.43; total earnings, $303,977.26; operating expenses, $204,255.58; net earnings, $99,721.68; city percentage on earnings, $20,487.50; interest on bonds and loans, $14,834.90; rent leased lines, $552.89; taxes, $4,000; total charges, $39,875.29; surplus, $59,846.39, against $280,989.21 passenger earnings; $3,101 miscellaneous earnings; $284,090.21 total earnings; $196,912.17 operating expenses; $87,178.04 net earnings; $16,373.83 city percentage on earnings; $15,164.36 interest on bonds and loans; $498.67 rent leased lines; $3,000 taxes; $35,936.86 total charges; $32,141.18 surplus for Feb., 1909. The percentage of expenses to earnings for the month were 67.19 against 69.31 for Feb., 1909. Total earnings for five months ended Feb. 28, $1,656,039.62; operating expenses, $995,194.29; net earnings, $659,845.33; total charges, $171,910.57; surplus, $467,934.76, against $1,514,614.68 total earnings; $945,751.64 operating expenses; $568,863.04 net earnings; $159,141.74 total cahrges; $409,721.30 surplus for same period 1908-09. The percentage of expenses to earnings for the same periods, were 60.16 and 62.44.

Port Arthur and Fort William, Ont.—An act passed last session of the Ontario Legislature, on the application of the Port Arthur City Council, provided, among other things, for the confirmation of a by-law authorizing the payment of $1,733.02, costs incurred in the appeal against the decision of the Ontario Railway and Municipal Board respecting the municipal street railway.

The Legislature also passed an act on the application of the Fort William City Council, providing, among other things for the confirmation of a by-law to raise $137,000 for the improvement and extension of the street railway within the city. The preamble of the act set out that the existing debenture debt of the city was $2,089,056, of which $222,000 represented the amount of indebtedness on account of the street railway.

Quebec Ry., Light, Heat and Power Co.—The organization of this company, which is an amalgamation of the Quebec Ry., Light and Power Co., the Jacques Cartier Power Co., the Quebec Gas Co., the Frontenac Gas Co., and the Canadian Electric Co., was completed Mar. 14. Following are the officers and directors for the current year:—President, R. Forget, M.P.; Vice President, L. C. Webster, Quebec; Chairman of Executive, N. Belleau, Quebec; other directors, Hon. R. Mackay, Hon. J. P. B. Casgrain, J. N. Greenshields, P. Galibert, J. W. McConnell, A. H. Sims, S. H. Ewing and W. G. Ross, Montreal; Hon. E. B. Garneau, Hon. C. E. Hubord, Hon. L. P. Pelletier and W. A. Marsh, Quebec.

Sherbrooke Street Ry.—An option has been secured upon the property and franchises of the company, with a view to its reorganization. Ross and Holgate, engineers, Montreal, were engaged in reporting upon the property for the syndicate, which is applying to the Quebec Legislature for an act changing the company's name, increasing its borrowing powers, and amending its powers in various ways.

South-Western Traction Co.—Judgment was given Mar. 14, by the Master-in-Chancery at London, Ont., in the case of the South-Western Traction Co., which was recently sold to J. E. MacDougall, in trust for a company now being organized as the London and Lake Erie Ry. and Transportation Co. The decision grants the amount claimed under the issued bonds of the company. Coupons were justified, but no payment was recommended on a third schedule amounting to $104.932, pending further evidence as to the justice of these claims. Claims for $877,269.55 were filed. Of this amount $772,337.50 has been allowed, and claims amounting to $104,932.05 have still to be proved. The local master states that in his opinion it is proper that liberty should be given to pay an interim dividend of 50c. on the dollar, amounting in all to $886,168.75, to the persons and corporations whose claims have been allowed.

Toronto Ry.—Gross earnings for Feb., $305,557; expenses $166,497; net earnings $139,060, against $275,245 gross earnings; $148,860 expenses; $126,385 net earnings for Feb., 1909. Aggregate gross earnings for two months ended Feb. 28, $632,265; expenses $342,100; net earnings $290,165, against $563,626 aggregate gross earnings; $301,001 expenses; $262,625 net earnings for same period 1909.

Winnipeg Electric Ry.—Application is being made for an act ratifying the amalgamation of the Winnipeg Power Co., and the Winnipeg Electric Ry., and between the Winnipeg Electric Ry., the Manitoba Electric and Gas Light Co., the North-West Electric Co., and other companies, and vesting the franchises and assets of these various companies in the Winnipeg Electric Ry. Co.

Electric Railway Notes.

The British Columbia Electric Ry., has ordered 10 cars from the Preston Car and Coach Co., Preston, Ont.

The Nipissing Central Ry. has ordered two additional cars, the delivery of which will enable it to give a half-hourly service on its line between Haileybury and Cobalt, Ont.

The Grand Valley Ry. is in the market, for its Brantford lines, for 10 single truck city cars, 21 ft. car bodies, inside dimensions; and will shortly order two 60-ton electric locomotives.

The Port Arthur and Fort William Electric Ry. has recently installed a 300 k.w. motor generator generator set made by Allis-Chalmers-Bullock, Ltd., Montreal, and has purchased an 800 amp. hr. battery and booster.

The Montreal St. Ry.'s right to operate freight cars over the street routes, will come up before the Montreal Board of Control shortly, and it is stated that propositions will be made to secure from the company, in return for the franchise, an increased percentage of earnings, or a general reduction of passenger fares.

The Galt, Preston and Hespeler Ry., has ordered two interurban cars from the Preston Car and Coach Co., Preston, Ont. They will be 55 ft. long, finished in inlaid Cuban mahogany, and supplied with Westinghouse 93 A quadruple motor equipment with multiple unit control, and combination straight and automatic Westinghouse air brakes.

It is reported that application will shortly be made to the Board of Railway Commissioners on behalf of the Lord's Day Alliance, in connection with the operation of cars on Sundays on the electric railway, formerly owned by the South Western Traction Co., such operation being authorized by the act of incorporation of the London and Lake Erie Ry. and Transportation Co., which has taken over the property.

A number of contracts between the Post Office Department and electric railway companies for the conveyance of postmen have expired recently or are about to expire. Heretofore a merely nominal rate has been paid by the Department in many cases and as many of the companies have lost on the contracts, carrying the postmen for less than the cost of the service, higher rates of compensation are now being asked.

The B.C. Electric Ry., is testing a new fare box on its pay-as-you-enter cars. It is built of iron, and about 3 ft. high. The fare is deposited in a receptacle, and on the operation of a lever by the conductor, it is passed to the bottom of the box. At the end of his shift, the conductor operates another lever, which passes the takings of his shift into a separate receptacle this obviating delays at the end of each shift caused by the handing over of the single farebox.

The Recorder of Montreal has dismissed the action of the city to compel the Montreal St. Ry. to give a car service to the Mount Royal ward, recently annexed to the city. He is reported to have said, in giving judgment, that the company could be compelled to give the service, under sec. 34 of by-law 20, and he gave such judgment on a similar case a year ago, which was overruled by the Superior Court. He was still of the same opinion but was compelled to conform to the interpretation of the Superior Court.

New Ways To The Woods

The six railways of the Canadian Northern Railway system offer the widest choice of new territories for the fisherman, canoeist, camper and hunter.

IN NOVA SCOTIA the Halifax and Southwestern Railway, from Halifax to Yarmouth, serves seven hundred miles of ocean shore; two score generous trout streams and the famous Rossignol lake system.

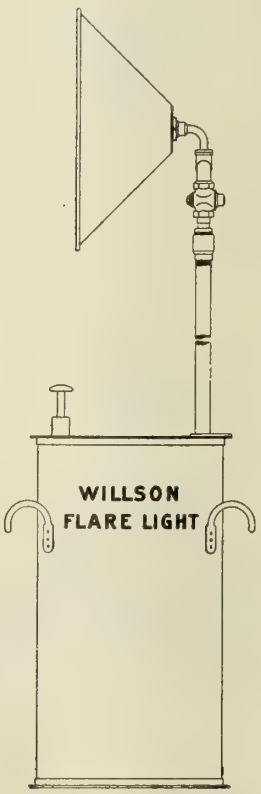
IN CAPE BRETON, sixty miles of the Gulf of St. Lawrence shore is skirted by the Inverness Railway, which gives easy access to the Margaree valley—far-famed for its salmon fishing.

IN QUEBEC, the Canadian Northern, Quebec and Quebec, and Lake St. John Railways give easy access to the Saguenay, Upper St. Maurice, the Batiscan, the La Tuque game and fish preserve, and the valleys of the St. Lawrence and Ottawa. All good fishing waters, abounding with ouananiche, trout and bass.

IN ONTARIO, the entire range of the Muskokas, the Georgian Bay hinterland, the French, Pickerel, Still and Maganetawan rivers—well stocked with bass, mascalonge, and pickerel, are best reached by the Canadian Northern Ontario Railway.

IN WESTERN ONTARIO and the prairie provinces, the Canadian Northern Railway serves over three thousand miles of splendid territory. The Rainy River section follows the old Dawson fur trail, which is the finest canoe trip on the continent. There is an amplitude of sporting opportunities for the camera hunter, the fisherman and canoeist.

For literature and general or special information inquire of the information Bureau, Canadian Northern Railway System, Toronto.



THE WILLSON PORTABLE FLARE LIGHT

Brilliant Powerful Economica

Specially adapted for use in all kinds of construction work.

Its candle power varies from 1,000—8,000 according to the size of apparatus. The cost of 8,000 candle power is less than 6c. per hour.

O'Brien & Fowler, Contractors to the G.T.P., say:—

"During the past two or three years we have used various kinds of lights, but none of them have proved the equal of yours, either in the matter of economy or usefulness. The effectiveness of your light is beyond **dispute.**"

BRADSTREET'S

Capital and Surplus $1,500,000

Offices throughout the Civilized World

Executive Offices:

NOS. 346 and 348 BROADWAY, N. Y. CITY, U. S. A.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices.

Correspondence Invited.

OFFICES IN CANADA:

C.P.R. LANDS

The Canadian Pacific Railway Company have 9,000,000 acres of selected lands for sale in Manitoba, Saskatchewan and Alberta.

Maps, as enumerated below, showing these lands in detail, will be sent free on application.

Map No. 1—Winnipeg to Second Meridian	$ 8.00 to $15.00 per acre.
Map No. 2—South-Eastern Saskatchewan, 2nd to 3rd Meridians	10.00 to 25.00 per acre.
Map No. 3—Main Line, 3rd Meridian to Range 10, W. 4th Meridian (generally)	8.00 to per acre.
Map No. 5—South-Western Alberta	8.00 to 15.00 per acre.
Map No. 6—Part of Alberta, Edmonton, Battle and Saskatchewan Rivers Districts—4th Meridian to Range 7, West 5th Meridian	10.00 to 25.00 per acre.
Map No. 7—Part of Western Saskatchewan, 3rd to 4th Meridians	10.00 to 25.00 per acre

All prices are subject to change without notice.

TERMS OF PAYMENT

An actual settler may purchase not more than 640 acres on the ten instalment plan by paying a cash instalment at time of purchase, interest at six per cent. on the unpaid purchase money at the end of the first year, and the balance of the principal, with interest, in nine equal instalments annually thereafter, as shown in the following table:

160	Acres at	$ 8.00	per acre,	cash payment	$191.70	first year's interest	$ 65.28	and nine instalments of	$160.00
"	"	9.00	"	"	213.70	"	"	"	73.46	"	"	180.00
"	"	10.00	"	"	239.70	"	"	"	81 62	"	"	200.00
"	"	11.00	"	"	263.60	"	"	"	89.78	"	"	220.00

"	"	15.00	"	"	359.50	"	"	"	122.44	"	"	300.00

Purchasers who do not undertake to go into residence on the land are required to pay one-sixth of the purchase money down, balance in five equal annual instalments with interest at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

F. T. GRIFFIN, Land Commissioner, Winnipeg.

CANADA NORTH-WEST LAND CO.

This Company has 525,000 acres of selected lands in Manitoba and Saskatchewan which offer excellent opportunities to settlers and investors who desire to secure good lands in well-selected districts. These lands are on sale at the Company's Office at Winnipeg, and at the various land agencies of the Canadian Pacific Railway Company.

Inspection of Steamboats.

An order in council has been passed repealing sec. 11 of part VIII. of the Rules for the Inspection of Steamboats, and substituting the following rule, which has been approved by the Board of Steamboat Inspection:—

Sec. 11.—Every steamboat not employed in the carriage of passengers, and every steamboat to which the foregoing provisions of the preceding sections do not apply, shall at all times, when the crew thereof is on board, be provided with and have on board or attached to such steamboat in some convenient place, a good, suitable and sufficient boat, or good suitable and sufficient boats, in good condition and properly equipped, and provided with oars in sufficient number and other necessary tackle, and of sufficient capacity to carry all the crew of such steamboat, and with sufficient means for lowering such boat or boats from on board safely and expeditiously,—provided,

(a) That any steamboat not employed in the carriage of passengers when less than 50 tons gross may be equipped with life rafts when boats cannot be utilized, if, in the opinion of the inspector such life rafts would in case of disaster be sufficient to secure the safety of all on board, and

(b) Tug boats 50 tons gross and upwards while engaged exclusively in harbor or canal towing may be likewise equipped.

C. P. R. Steamships for B. C. Coast.

The C.P.R. has ordered two more steamships for service on the B.C. coast. One, which will be built at Glasgow, Scotland, will be 290 ft. long between perpendiculars, 46 ft. beam and 17 ft. deep; she will be built of steel with cellular double bottom, seven transverse bulkheads, two watertight flats, and otherwise made as nearly unsinkable as possible, and will be driven by a single screw. She will have four boilers 15¼ ft. in diameter by 12 ft. long, with forced draught on the closed stokehold system. Her engine will be of the four cylinder triple expansion type, balanced. The cylinders will be 27, 42, 48½, 48½ by 39 ins. stroke. Steam pressure will be 180 lbs., and the auxiliaries, in the way of pumps, heaters, etc., will be of the very latest type. She will be lighted throughout by electricity. The dynamos will be capable of furnishing current for 1,500 sixteen candle power lamps. She will be steam heated throughout, and the matter of ventilation will be well attended to. There will be 118 staterooms for passengers, a large number of which will be supplied with running water, both hot and cold. Her social halls will be finished in mahogany, and her dining saloon will be beautifully done in figured walnut. In addition to the dining saloon, which will seat over 100, there will be a combined grill room and restaurant which will seat 100. The conveniences, fittings, and style of finish of this vessel will be superior to anything previously designed for the B.C. coast service. Her extreme draught of water will be about 15 ft. and her speed on service will be 16 knots. She will have ample cargo capacity for any of the company's local or northern services, and will be a very useful addition to its fleet on the coast.

The second and smaller steamer will be built at Paisley, Scotland. She will be 210 ft. long, 40 ft. beam at the deck, 37 ft. beam at the water line, with a depth of 16 ft. She will be well subdivided and have steel deck-houses and decks throughout. There will be 66 staterooms for passengers, and a nice dining saloon finished in mahogany and satinwood. The social halls, smoke rooms, etc., will all be beautifully done in hardwood, and she will have all modern conveniences, including running water in the staterooms. The motive power will consist of two boilers 16 ft. in diameter by 12 ft. long, with forced draught on closed stokehold system. She will be driven by twin screws, actuated by two sets of engines, 16, 27, 44, by 30. Her mean draught will be about 11 ft. and her speed 14 knots on service. She is being built to class 100A1 at Lloyds, and will be used in the company's various services on the B.C. coast.

The contracts require that both vessels be finished before Nov. 1. Upon completion they will proceed to Victoria under their own steam.

Vessels Removed from the Register.

The following vessels were removed from the register during Jan. and Feb., for the reasons assigned:—Steam—Albatross, Vancouver, 26 tons, wrecked; Emulator, Toronto, 17 tons, broken up; Enterprise, Vancouver, 8 tons, wrecked; Halifax, Halifax, 169 tons, burnt; Maud S., Collingwood, 11 tons, broken up; Odessa, Collingwood, 8 tons, broken up; Ottawa, Sarnia, 420 tons, burnt; Rothesay, Vancouver, 348 tons, broken up; Shawatlans, Vancouver, 8 tons, burnt; Surrey, 8 tons, broken up; Sailing—Acacia, Barrington, 99 tons, wrecked; Caledonia, Liverpool, 188 tons, transferred to West Indies; Canada, Vancouver, 304 tons, lost; Cartagena, Liverpool, 199 tons, condemned; Emperor, Lunenburg, 51 tons, broken up; Florence R. Hewson, Annapolis Royal, 289 tons, abandoned at sea; Gladys F., Lunenburg, 72 tons, transferred to Newfoundland; Hector, St. John, 498 tons, transferred to Newfoundland; James W. Cousins, Digby, 87 tons, wrecked; Lion, Lunenburg, 40 tons, broken up; Mariner, Halifax, 56 tons, broken up; Mary Hendry, Liverpool, 249 tons, transferred to West Indies; Mersey, Liverpool, 191 tons, transferred to West Indies; Montrose, Shelburne, 198 tons, stranded; Zoulou, Weymouth, 12 tons, wrecked "25 years ago."

Canadian Northern Steamships Ltd.

The Royal Edward and the Royal George are the names selected for the two triple turbine steamships Heliopolis and Cairo, which were purchased a short time ago by the Canadian Northern Steamships, Ltd., as mentioned in our Jan. issue. D. B. Hanna, Third Vice President C.N.R. has been in England for some weeks making arrangements for the inauguration of the company's Atlantic steamship service. The two vessels are now at Glasgow undergoing extensive alterations to adapt them for the Atlantic trade.

Captain G. Gregory has been appointed Marine Superintendent with headquarters at Bristol, and H. J. Cowie, heretofore the company's freight agent at Liverpool, has been appointed European Traffic Manager. In addition to the Bristol and Liverpool and London offices one will be opened in Birmingham. H. C. Bourlier, formerly with the Allan S.S. Line in Toronto, has been appointed General Agent Passenger Department, Ontario Division, with headquarters in Toronto.

Avonmouth, the port of Bristol, has been selected as the English terminus of the line. Modern docks have recently been constructed there at a cost of £3,000,000, with a special station for steamship service and the Great Western Ry. has built a cut-off connecting Avonmouth directly with the main line to London beyond Bristol, so as to shorten distance and time. From Avonmouth to London is 112 miles which ordinary express trains make in two hours and the steamship specials which will be run will do it in a little less. Montreal will be the Canadian summer port.

The Royal Edward is scheduled to leave Avonmouth May 12 and to leave Montreal May 26. The Royal George will leave Avonmouth May 26 and Montreal June 9. Sailings will be fortnightly from both Avonmouth and Montreal. The Volturno, principally for freight and third class passengers will also be in the fleet.

The Royal Edward and the Royal George are constructed of steel the main dimensions being: length, 545 ft.; breadth, 60 ft. 3 ins.; depth to shelter deck, 38 ft. They are built to Lloyds' requirements of the highest class, subdivided into 10 compartments by watertight bulkheads, and fitted with a cellular double bottom from stem to stern. They have a straight stem, and are schooner rigged, with two pole masts, and in addition to an auxiliary rudder carried, are fitted with a balance rudder. Bilge keels are fitted for a third length amidships. There are a total of seven decks rising in succession, viz:—lower, main, upper, shelter, bridge and forecastle, promenade and boat decks.

Boat Deck.—The navigating officers are accommodated at the fore end of this deck. Abaft their quarters a steel deck house forms the cafe for first class passengers. This room is designed in Regence and panelled in oak. The tables are arranged in drawing room style and accommodate small companies. The flying bridge is situated on the roof of the cafe upon which is also placed the chart and wheel houses. A large steel house is placed aft on this deck for the wireless telegraph.

Promenade Deck.—A steel deck house is erected in island fashion covering almost the entire length of this deck, forming a broad, spacious and covered in promenade around it. Amidships and at the centre of this deck is the music room 45 by 30 ft., designed and furnished in Louis XVI. style and finished in white. A large shaft passes through this room to the library, dining saloon and decks below, conveying an abundance of natural light to the various public rooms. A great portion of this deck is given up to cabins de luxe and first class cabins which are most luxuriously furnished. There are also a number of bath rooms and lavatories on this deck.

The Bridge Deck extends for four-fifths of the vessels' length and is arranged similarly to the promenade deck, having spacious alleyways alongside the steel deck house forming very comfortable and sheltered promenades. The fore end is fitted with cabins de luxe, or en suite rooms. Immediately abaft these sets of rooms the grand staircase is situated providing easy access from deck to deck, and convenience to public and private rooms. Ample natural light is reflected down this stairway from a handsomely designed skylight overhead. Additional first class staterooms separate the stairway from the library. This room is designed and furnished in Louis XV. style and its dimensions are similar to that of the music room which is directly overhead. The library is richly carved and panelled in oak of a rich natural shade with tapestries and hangings to match. Fifty by forty feet of the aft end of this deck is occupied by a first class smoking room; commodious and neatly arranged with numerous bays all around. Oak panels cover the walls and ceiling, and the floor is enhanced by a covering of interlocking rubber tiles which form a neat design. Bath rooms and lavatories occupy the remaining space on this deck.

Forecastle Deck.—The construction of this deck is at the same elevation as that of the bridge deck and has a length of 75 ft. It is fitted with a strong breakwater and is equipped with the most approved apparatus for manoeuvring the vessel.

The Shelter Deck is perhaps the most important one in the ship, most of the space being taken up by public rooms. The extreme fore end is devoted to seamen and is fully equipped with galley, scullery, lavatories and all necessities appertaining to their various requirements. A children's saloon is placed forward on this deck and is fitted with the same care and design which characterizes other public rooms. A number of first class cabins separate this saloon from the first class dining saloon which is a magnificent hall about 60 by 77 ft. The design is of the Georgian period and a wonderful unison in design is maintained producing a harmonious effect throughout. Tables accommodating eight, 12 and 16 persons are arranged in the centre, and along the sides alcoves adapted for five persons are fitted. A total of 256 passengers can dine at one time. Numerous large ports, in addition to a spacious well leading straight down from the weather deck, allows of ample daylight in this saloon. An upright grand piano is placed at the fore end of the apartment, and aft is a magnificent inlaid sideboard. The entire saloon is finished in white and upholstered in Genoa velvet. Wilton runners cover the floor, which is of polished teak. The first class dining saloon is separated from the second class dining saloon by the various offices necessary for the working of both these saloons, such as, galleys, pantries, sculleries, larders, bakery, etc., etc., each office being fitted with the very latest apparatus for its purpose. A large light and air shaft overhead in this space extends right up to the weather deck, affording abundance of light and cool air. The second class dining saloon is handsomely designed and capable of seating 150 at once. It is panelled in mahogany while the upper frame is finished natural, the whole being finished in a dark color. Tables in the centre of the apartment are laid fore and aft, with small tables each seating eight arranged along the side. Further aft on this deck is placed a second class lounge fitted and furnished in a dark shade and containing an overstrung upright piano. There is also a large bookcase in this room. Adjacent to this apartment is a second class smoking room panelled in mahogany and upholstered in a rich maroon leather the whole effect being very harmonious. Still further aft a steel deck house is erected and is partitioned off to form a third class lounge and a third class smoking room. Both these apartments are spacious and airy and afford third class passengers comfortable saloons for recreation. These rooms are well upholstered and fitted in dark mahogany. Abaft these saloons there are fitted male and female hospitals, with bathrooms and all other accessories necessary. The remaining space on this deck is cleared for a third class promenade.

The Upper Deck from stem to stern is covered in, and may be designated the working deck. On the port side accommodation is made for the crew, engineers, stewards and firemen. Fruit and vegetables are stowed in cold stores on this side of the vessel. Along the centre of this deck funnel casings, turbine hatches, etc., are placed occupying almost the total length. Forward a spacious and airy third class dining saloon has been erected with small tables arranged to seat from seven to 14 people, in all seating at one time 119. Aft on the same deck there is another third class saloon with tables seating 14 to 18 people, in all accommodating 142 people at once. Both these saloons are fitted in a very superior third class fashion, and ample light is afforded by the many large ports. The remainder of this deck is occupied by well equipped second class cabins, lavatories and bathrooms.

Main Deck.—The entire breadth of the ship for 200 ft. amidships is taken up by the turbine room, funnel hatches, coal bunkers and store rooms. Forward and aft cabins for third class passengers are fitted bath rooms, lavatories, etc., occupy the remaining space.

The Lower Deck contains no cabins but is devoted to a cold chamber with a capacity of 15,000 cubic feet, a mail and specie room, and a large baggage room. The remaining portion of the lower deck in addition to the holds below, will be used for cargo.

These steamships have so many special features that it is difficult to deal with them all in detail, but there are some worthy of special note. The thermotank system of ventilation is fitted throughout the ships with the exception of the machinery and cargo spaces. The installation consists of numerous thermotanks distributed over the various decks, which assimilate air from the open, and when charged can reduce or raise the temperature of the air to any degree desired. When this is done the air is discharged by centrifugal fans through trunks leading to various parts of the vessel. These tanks can maintain a temperature of 65 deg. Fahr. with a surrounding atmosphere at zero, and are capable of renewing the air 10 times in an hour. Electric exhaust fans are also fitted in the smoking rooms and first class dining saloon, as also in various other sections of the ship, in addition to the thermotank system of ventilation. An electric passenger hoist is another feature, to take passengers from deck to deck with a maximum of ease. Goods hoists are fitted for the conveyance of stores from the galley below to the shelter and boat decks. A complete installation of refrigerating plant is fitted for the preservation of fresh provisions as well as for the transportation of meat and dairy produce. A safe margin of power is provided and the engines are arranged for interchangeable working. The plant is also capable of producing a large quantity of ice daily for use of passengers. The cooling appliances are designed to

EXTRA STOUT AND
REDWOOD LAGER

Also the GOLDEN KEY BRAND
AERATED WATERS

enable different classes of goods to be carried as may be required, at almost any temperature. Electric light is installed all over the vessels and the fittings are of the most elaborate and substantial character. The installation consists of three sets of combined engines and dynamos of the compound type, any two of which are capable of generating and supplying light equal to 28,800 candle power, also supplying the necessary current for a large number of cargo cluster lamps of 200 c.p. each, and to all signal lamps, thermotanks, motors, fans, etc. The current is transmitted by insulated cables of high conductivity, all wiring being done on the double wire distribution box system. The main switchboards are fitted with ammeters, voltmeters, and switch, pilot lamps and switches, double pole switches and fuses for each of the generators, and change-over switches and double pole fuses for each of the main circuits. The instruments are of the moving coil type, and the whole switchboard is arranged for easy and convenient handling, each switch being distinctly marked by the name of the circuit which it controls. Two-way switches are fitted for the electric lights, convenient to the berths in the cabins, also two separate electric bell pushes, and in addition plugs are fitted to each first class cabin. The latest telemotor principles place the steering wheel on the navigating bridge in direct touch with the steering engine aft. Hand steering gear is also fitted on bridge aft. Telegraphs, telephones and voice pipes enable the officer on duty to transmit instructions to all necessary parts of the ship. Three separate systems of piping are installed throughout the ship; for supplying steam to the winches, windlass, steering gear, etc., supplying all thermotanks and heaters, supplying steam to the galleys, pantries, etc. A distinctly new feature in the way of fire extinguishing apparatus has been adopted in a machine capable of rapid generating and delivering to any part of the ship, upwards of 25,000 cubic feet of fire extinguishing gas per hour, by means of pipes leading to each compartment, simultaneously delivering sulphur dioxide into it. When the fire is extinguished the sulphur dioxide is withdrawn by suction. By the same machine fresh air can be simultaneously injected into the compartment, and it will thus be seen that the usefulness of this mechanism is not confined to fire extinguishing purposes, but may be used either for ventilation by extracting foul air and injecting fresh air, or to disinfect any infected compartment in the ship. A complete system of hot and cold fresh water and hot and cold salt water distribution throughout the ships is arranged for, not only to the sanitary quarters but also to the various galleys, pantries, scullerries, etc. The ships throughout are replete in everything that makes for comfort in travelling. Each vessel has accommodation for 350 first class, 200 second class, 572 third class passengers, and the crew will number well ahead of 300. The gross tonnage is 12,000.

Machinery.—The vessels are propelled by compound steam turbines working on three shafts, arranged with the high pressure turbine in the centre driving the centre shaft and propeller. The two low pressure turbines are arranged on either side of the high pressure turbine and drive the wing shafts and propellers. Astern turbines are placed on the wing shafts. The machinery embodies all the latest improvements and special attention has been given to the maintainenance of high efficiency under service conditions.

There are about half a million blades of hard drawn brass in the turbines, and if these were placed in one line they would extend nearly 30 miles. The three propellers, with three blades on each, are made of manganese bronze. They are accurately machined and balanced and the blades are carefully polished to reduce to a minimum the frictional resistance incidental to the high velocity at which they pass through the water, and which at the tips, exceeds 100 miles an hour. The turbines exhaust direct into two steel plate condensers, fitted with solid drawn brass tubes, and placed alongside the low pressure turbines. The cooling water for condensing the exhaust steam is circulated through the condensers by four large centrifugal pumps, two for each condenser, and the condensed steam is withdrawn from the condensers by two single acting twin air pumps. Special attention has been given to the efficiency of the main condensing plant with a view to the best possible vacuum being maintained on the service. There is a large auxiliary condenser for conserving fresh water derived from the exhaust steam of the electric engines, the refrigerating engines, donkey pumps, and other auxiliaries, and this condenser is provided with an independent circulating pump and an auxiliary air pump. The engine room is fully equipped with the most modern appliances and includes three large electric engines and dynamos, three refrigerating machines, pumps for supplying hot and cold salt water for the baths, also pumps for sanitary purposes, washing decks, for extinguishing fire and fresh water for passengers' use. There are also bilge and ballast pumps, and these can, in the event of accident to the ship, be supplemented by the large circulating pumps being connected to discharge water from the vessel, the total capacity of these pumps being equal to fully 2,000 tons per hour. The distilling plant consists of two large evaporators together capable of producing from sea water 100 tons of fresh water per 24 hours and two distilling condensers having a combined output of 12,000 gallons of pure fresh drinking water per day. In the engine room there are also arranged four large main and auxiliary feed pumps for the boilers, and one smaller feed pump for use when the vessel is in port. In connection with them there is fitted a large surface heater for extracting the waste heat in the exhaust steam from the pumps and other auxiliary machinery and utilizing it to heat the feed water for the boilers. Two gravitation feed filters are fitted for removing grease and other impurities from the feed water. Steam is supplied by four double-ended and four single-ended boilers of the cylindrical return tube type arranged in two boiler rooms and fitted with forced draught; air for the furnaces being supplied by eight large fans driven by electricity. There are about 7,000 tubes in the boilers, and in addition about 4,300 tubes for heating the air for the furnaces. There are two large double funnels each rising to about 100 ft. above the keel. The spaces between the inner and outer funnels being utilized for ventilating the boiler rooms and stokeholds.

The Heliopolis and the Cairo were taken to Glasgow at the end of last year where extensive alterations are being made to fit them for the Atlantic service. The whole of the first and second class accommodation on the main deck is being diverted to third class. No change is being made to the cabins themselves and with the exception of one or two minor alterations to the internal fittings, they will be left as before. On the upper deck, where previously were first class cabins, there are being constructed two third class dining saloons (referred to in the general description above) one forward and one aft. These will be spacious and airy rooms, capable of accommodating 261 persons at once. Promenading space previously for the use of second class passengers will be placed at the disposal of third class passengers. These vessels were designed and built for first and second class passengers only, but affer the alterations third class passengers will be also provided for. The draft of the ships is being materially increased. Refrigerated as well as other cargo will be carried. The boat deck which was formerly used to accommodate boats, and other gear, is being cleared of all superfluous fittings and will form an additional excellent promenade for first class passengers. The masts are being unshipped and shortened by several feet, as also the funnels which are to be round and less in diameter and also less in height.

The twin screw s.s. Volturno which has also been bought by the Canadian Northern Steamships, Ltd., is built of steel. Her principle dimensions are: length, 340 ft.; breadth, 43 ft.; depth, 20.7 ft.; tonnage, 3,581 gross. She has two spacious decks extending the whole length of the ship where passengers have every accommodation in accordance with their class. Each deck is fitted to accommodate 700 and 600 passengers respectively, chiefly third class. She has accommodation, however, for 24 first class passengers. She has been trading between Rotterdam, Halifax and New York and maintaining a fairly regular service. She was built at Glasgow in 1906.

R. & O. N. Co.'s Steamboat Rochester.

The steamboat Rochester which is being built in the United States for the Richelieu & Ontario Navigation Co. to run between Youngstown and Ogdensburg, N.Y., will have the following dimensions:—Length over all, 256 ft.; length over stem and stern posts, 246½ ft.; breadth of beam, moulded at frame, 42 ft.; breadth of beam over wales, 43 ft. 7-⅛ ins.; depth of hull, moulded at main deck, 14¾ ft.; draught, 9½ ft.

The propelling machinery will be of the twin screw, triple expansion, inverted surface condensing type, having four cylinders working on four cranks. The size of the engines will be 16, 25, 31 and 31 x 22 ins. stroke running at 180 maximum number of revolutions per minute, the two engines to develop 2,000 h.p. The air pumps will be attached to the main engine but the feed pump, bilge pump and cooler pump will be independent of the main engines. In order to reduce the vibration in the ship due to the engines they will be balanced. Each engine will have its own condenser having each 1,500 sq. ft. of tube cooling surface.

The auxiliary machinery is as follows: Two duplex pumps for boiler feed, donkey and fire pump service; one bilge pump; one duplex tank pump for fresh water supply for drinking purposes and kitchen supply; one duplex tank pump for use as cooler pump for main engines; one duplex tank sanitary pump for flushing plumbing service; two steam fans for use in connection with the forced draft installation; two centrifugal pumps in connection with the surface condensers; two ash ejectors of hydraulic type; two injectors for boiler feeding; a refrigerating plant of five tons ice capacity with machinery part located in engine room; two 20 kilowatt generators operating at a voltage of 120 will be placed in the lower engine room on a special partial deck. A switchboard will be placed in the after end of engine room on main deck; wiring in exposed places will be in conduit and the whole wiring and plant will be particularly installed with reference to freedom from danger of causing fire; an intercommunicating telephone system will be installed connecting pilot house, engine room, engineer's room and captain's room.

There will be four boilers in two fire holds with coal bunkers between. They will be of the cylindrical return tubular

type 11½ ft. mean diameter and 11 ft. over heads, each having two 42 ins. inside diameter corrugated furnaces of the removable type and with heating surface of best proportion for grates 5½ ft. long. The boilers will be fitted with hot draft. They must pass the Canadian and U. S. Government inspection for 165 lbs. working pressure of steam.

The dining room will be on main deck aft and panelled in mahogany. The entrance hall will be also finished in mahogany. The buffet, on the main deck will be finished in quartered oak. There will be 120 staterooms and 16 parlors on the promenade and gallery decks. The staterooms will all be outside rooms, the parlors will be equipped with brass bedsteads and decoratively finished and each will have a connecting bathroom. On the observation deck there will be a music room finished in white enamel, a smoking room finished in quartered oak, a lunch counter and news stand. The pilot house and texas will be on the hurricane deck.

This vessel when completed will be a thoroughly modern, twin screw passenger and freight steamer of the Canadian lake and river type, guaranteed to run 17¾ statute miles an hour.

Atlantic and Pacific Ocean Marine.

C.P.R. officials have denied that there is any intention to change its chief British port, from Liverpool to Fishguard.

The Allan Line s.s. Ionian collided with a derelict vessel, Mar. 3, near the west coast of Scotland. On arrival at Glasgow, Mar. 5, it was found that about 40 plates on the port side were damaged, all being above the water line.

The C.P.R. s.s. Empress of Britain, which is booked to sail from Liverpool, Eng., Apr. 22, for St. John, will, it is announced, sail instead to Quebec, thus inaugurating the St. Lawrence season for the company.

The Australian Government has extended the mail contract held by the Union Steamship Co., between Canada and Australia, for one year from July 31, and is calling for tenders for a faster service.

In response to a question in the British House of Commons, Mar. 22, it was stated that the question of establishing an all British service to the Antipodes, via Canada, was still under consideration but nothing could be said as to when a decision would be arrived at.

With reference to the recent press reports as to the establishment of an Austrian steamship service, G. M. Bosworth, Fourth Vice President C.P.R., on his return from Europe, Mar. 6, is reported to have said that the matter was not specially a C.P.R. affair. It has been discussed with several of the Austrian steamship companies, with the idea of making arrangements with lines now running out of Trieste, for regular sailings to Canadian ports.

The question as to whether or not the Canadian Northern Steamships, Ltd., will join the Canadian Atlantic Westbound Freight Conference is the subject of contradictory dispatches from England. One dispatch states that the company has made formal application for membership, while another is to the effect that D. B. Hanna, Third Vice President C.N.R., has stated that the company would not join the conference, and that though it would not cut rates, it preferred to conduct its business in its own way.

The Shipping Federation of Canada has decided to abolish the porterage charge of 25c. a ton charged on goods landed at Montreal and Quebec, and handled at the local wharves. The Montreal Harbor Commission recently refused to rent sheds to shipping companies unless this charge was dropped. The C.P.R. anonunced its intention to abolish the charge, Mar. 15, and the Federation followed on the next day, as a result of a meeting of the Canadian North Atlantic Westbound Freight Conference in London, Eng.

The steamship companies utilizing the port of Montreal during the St. Lawrence navigation season, in reply to the recent demand of the longshoremen for the abolition of the bonus system, and for increased pay, have decided unanimously that they will adhere to the bonus system, as it is the only way by which a sufficient number of longshoremen can be retained through the season to handle cargoes. The longshoremen recently applied to the Department of Labor for the appointment of a Board to enquire into their grievances, and the companies have responded that they fail to see how an investigation between themselves and the longshoremen can be held, as they have no longshoremen in their employ.

The New Zealand Shipping Co., has arranged to run a service between Eastern Canada and the Antipodes, utilizing five steamships for the purpose. These are named Rakaia, Whakatane, Waimate, Papanui and Wakanui. The first sailing from Canada is scheduled to take place May 15 from Montreal, which is to be the summer port, and monthly sailings will be made. During the winter season, sailings will take place from St. John, N.B. The company was inaugurated in New Zealand in 1873, and has its headquarters at Christchurch, N.Z., and London, Eng. It owns 17 first class steamships, operating in various parts of the world. The Canadian and New Zealand Governments have granted subsidies in aid of the enterprise, the Canadian subsidy being $10,000 a month. The C.P.R. is reported to be interested in the service.

Maritime Provinces and Newfoundland.

The Nfld. Legislature has been petitioned to inaugurate a ferry service on St. Margaret's Bay.

The G.T.P.R. is reported to be purchasing property along Courtenay Bay, St. John, N.B., for dock purposes.

An order in council has been passed providing regulations for the governance of a ferry across the Restigouche River between Crosspoint, Que., and Campbellton, N.B.

The St. John, N.B., city council is seeking legislation as regards the renewal of a grant of $50,000 a year for 20 years to the Imperial Dry Dock Co., for the construction of a dry dock at St. John.

The Maritime Fish Corporation, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $1,000,000 and office at Montreal, to carry on a general fishing business, and to deal generally in fish products, and in connection therewith to own and operate steam and other vessels.

The steamer Aspy, owned by the North Shore Steamship Co., Sydney, N.S., was built at Shelburne, N.S., and her machinery installed at Yarmouth. She is 124 ft. long, 25 ft. beam, and has 9 ft. depth of hold. Her machinery consists of a fore and aft compound surface condensing engine with cylinders 15 and 22 ins. diar. by 24 ins. stroke, supplied with steam at 135 lbs., by a boiler 11 ft. 3 ins. by 10 ft., and the usual auxiliary pumps and electric lighting plant.

Province of Quebec Marine.

J. H. Fontaine, has been appointed Inspector of Boilers and Machinery of Steamboats at Levis, Que.

Notice has been given that the water will be drawn off from the Lachine canal Apr. 1, and re-admitted Apr. 30.

The Governor General in council has approved the Montreal Harbor Commissioners' by-law giving them power to allot the wharf at sections 71 and 72, for a period not exceeding 10 years.

It is reported that R. Forget, M.P., who is interested in the proposed Quebec and Saguenay Ry., is considering the possibility of establishing a winter port on the lower St. Lawrence, at Baie St. Catherine near the mouth of the Saguenay River.

The Postmaster General, while in Quebec, Mar. 14, is reported to have said that the Government had decided to facilitate the construction of a dry dock at Quebec or Levis, and that aid towards the project would be voted in the near future.

The Minister of Finance gave notice of a resolution, Mar. 14, authorizing the loan of an additional $6,000,000 for the Montreal Harbor Commission, for the carrying out of an extensive scheme of improvements, with a view to making the handling facilities at Montreal the best on the continent. The loan will be secured by the Commission's bonds, repayable within 25 years, with interest payable half-yearly at 3½% per annum. Previous loans for similar purposes amount to about $9,000,000, the interest being met out of revenue.

Levis Ferry, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $500,000 and office at Levis, Que., to carry on island navigation on the River St. Lawrence and its tributaries; to own and operate steam and other vessels; to do everything connected with inland navigation, and in particular to carry out a contract made with Quebec city, by A. Bernier, dated Sept. 27, 1909, for the exclusive privilege of ferrying passengers and freight between Quebec and Levis, from May 1, 1910, to Apr. 30, 1925. The provisional directors are: G. Demers, J. Gosselin, J. F. Deemers, A. Bernier, Levis, Que., and G. S. Marceau, Quebec.

Ontario and the Great Lakes.

The Toronto Ferry Co.'s service across Toronto bay, between the main land and the island, was opened Mar. 19.

The Hamilton Steamboat Co.'s steamboat Macassa arrived at Toronto from Hamilton, Mar. 28, being the first vessel to enter the harbor from an outside port this season.

The name of the steamboat Japan, recently purchased in the U.S., by the Montreal and Lake Erie Steamship Co., has been changed by order in council to City of Hamilton.

James Richardson & Sons, Ltd., incorporated under the Dominion Companies Act, has been licensed to carry on business in Ontario, with G. T. Richardson, Kingston, as its attorney.

The St. Clair and Erie Ship Canal Co., has been given by the Dominion Parliament an extension of time within which it may start and complete its projected canal from the St. Clair River to Lake Ontario.

The Montreal, Ottawa and Georgian Bay Canal Co., has been granted an extension of time by the Dominion Parliament for the construction of the proposed canal along the Ottawa River Valley, through the divide to Lake Nipissing, and thence by the French River to Georgian Bay.

The Sarnia-Toledo Transit Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $25,000 and office at Toronto, to own and operate steam and other vessels, and to carry on a general navigation business. The provisional directors are:—S. Johnston,

The U.S. Lake Survey reports the levels of the Great Lakes, in feet above tidewater, for Feb., as follows:—Superior, 601.73; Michigan and Huron, 579.96; Erie, 571.19; Ontario, 245.03. Compared with the average Feb. levels for the past ten years, Superior was 0.40 ft. below; Michigan and Huron, 0.19 ft. below; Erie, 0.38 ft. below; and Ontario, 0.40 ft. below.

The Severn River and Lake Couchiching Navigation Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $100,000 and office at Orillia, to carry on business as shipowners and shipping agents, and to conduct a general shipping business. The provisional directors are:—T. W. Wood, Orillia; L. Sinclair, M. R. Edgar, A. G. Robertson and J. A. French, Toronto.

The Niagara and Ontario Steamship Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $150,000 and office at Toronto, to own and operate steam and other vessels, and to carry on a general transportation business. The provisional directors are:—F. T. Hutchison, H. W. Crawford, C. Moller, W. E. Davis, F. J. Dunbar, E. M. Fitzsimmons and M. A. Ball, Toronto.

Mr. Justice J. T. Garrow, a Judge of Appeal of the Supreme Court of Judicature for Ontario, has been appointed Local Judge in Admiralty of the Exchequer Court for the Toronto Admiralty District. Judge O'Leary of the Thunder Bay, Ont., District Court has been appointed Surrogate Judge in Admiralty of the Exchequer Court for that portion of the Toronto Admiralty District comprised in the territorial districts of Thunder Bay and Rainy River.

R. Forget, M.P., President of the Richelieu and Ontario Navigation Co., is reported to have confirmed the recent report that the company is negotiating for a working alliance or possibly the control of the Hamilton Steamboat Co., operating the steamboats Mocassa and Modjeska, and the Turbine Steamship Co., operating the steamboat Turbinia. Both of these companies are controlled by the T. Eaton Co., Toronto.

A deputation of laborers was received by the Dominion Premier, Mar. 4, when a petition was presented, asking that the deepening of the Welland canal be proceeded with, on the ground that in addition to the benefit to navigation, it would give employment to a large number of men. The Premier stated that the Government was fully alive to the advantages of the work, which was now engaging its attention.

The Dominion Marine Association has made an arrangement with the grain trimmers at Fort William and Port Arthur, by which the vessel owners forming the Association will pay a flat rate to trimmers on all grain leaving the dual ports during the forthcoming season. On the large bulk cargo vessels a rate of 50c. per 1,000 bush. will be levied, and on packet freight boats, an increase of 15c. will be paid.

A deputation representing the Port Arthur Board of Trade, waited on the Dominion Government, Mar. 18, to urge that something be done in order that steel plates and other material for the building of steel vessels in Canada, may be made in this country. The questions of the lighting of the harbor approach, the extension of the present breakwater, dredging, and the establishment of a wireless telegraph station were also taken up.

The Mayor of Goderich and a representative of the Goderich Elevator and Transit Co., visited Ottawa, Mar. 15, when they had an interview with the Minister of Public Works relative to some proposed harbor works at Goderich. They were informed that no appropriation could be made this year as the supplementary estimates had already been dealt with, but a report on the desirability of carrying out the work would be asked for, and due consideration given to the proposals.

The Morrisburg Ferry and Dock Co., is the title of a company which has been incorporated by the Dominion Parliament. It authorizes the company, subject to the provisions of the Railway Act, to construct and operate a ferry for railway cars across the St. Lawrence River, between Morrisburg, Ont., and the south side of the river in New York State; to construct and operate other steamships; to construct wharves, and to construct railway tracks on the same to be connected with the tracks of the G.T.R. or any other railway in Morrisburg. The capital of the company is fixed at $500,000, and it is authorized to issue bonds for $300,000. The provisional directors are:—B. B. Tucker, H. H. Bradfield, L. E. Murphy, W. H. McGannon, Morrisburg, Ont.

The question of the rights of Canadian vessels in the New York State canals, was brought before the House of Commons, Mar. 11, and in reply to questions, the Premier recalled the fact that this question was discussed several years ago and he inclined to the opinion that although the New York statutes accorded the same privileges to Canadian vessels, as were enjoyed by U.S. vessels, departmental regulations discriminated against them.

The Richelieu and Ontario Navigation Co. is applying to the Dominion Parliament for authority to acquire real estate for the construction of offices, and for other necessary purposes, to own hotels, dwellings and places of amusement; to carry on the business of warehousemen, wharfingers and forwarders; to construct freight and passenger stations, elevators, and general freight and passenger terminal facilities in Canada; to carry on the general business of common carriers by land and water; to acquire, hold shares in or guarantee the securities of other similar companies, and to construct and to repair steam and other vessels. The number of directors is to be not less than three nor more than 15. Certain sections of the company's existing acts are to be repealed, the new powers given being in lieu of those given in the repealed sections. The bill has passed the House of Commons and is before the Senate.

At the recent annual meeting of the British Corporation for the Survey and Registry of Shipping, the President said:—"While we have been doing our utmost to advance the interests of the Registry in other European countries, we have not been neglectful of the same interests elsewhere, and I should like

WOVEN WIRE FENCING

ARE YOU INTERESTED IN THIS FEATURE OF RAILWAY WORK?

While we are not the only people who make a good wire fence, we are the only firm in Canada who make the best "wrapped stay" fence. Our "Safe Lock" is so constructed that we don't require to kink the strand wires to prevent stays slipping, therefore, the whole strength of the wire is preserved in the "Safe Lock" Fence.

Our "Monarch" is a "stiff-stay" fence similar to others of this style with the most of their objectionable features eliminated.

J. A. MILLER & CO., - Winnipeg

Agents for Western Canada.

particularly to refer to the growth in recent years of our association with Canada, through the construction to our class, for Canadian owners, of vessels specially designed for service on the Great Lakes. During the past two years, by far the largest proportion of these vessels, which were built in this country, have been constructed under the supervision of the British Corporation. The Technical Committee have taken great pains to inform themselves as to the conditions of traffic on the Great Lakes, and our assistant chief surveyor spent some time there last year in order to become personally familiar with what was known to be very trying work. The results of our experience and attention to detail, in conjunction with the specialization of the structural design so required for the peculiar circumstances of the trade have been uniformly recognized as having contributed materially to secure for British shipbuilders the very large amount of work they have recently done for Canadian lake shipowners."

Manitoba, Saskatchewan and Alberta.

The Winnipeg Board of Trade has endorsed a petition to the Department of Marine for the lighting and buoying of Lake Winnipeg and the Red River. It is anticipated that traffic will be large during the coming season.

The Appeal Court, Mar. 7, dismissed the Dominion Fish Co.'s appeal against the award of $4,000 damages to a nurse who was injured when the company's steamboat Premier was destroyed by fire on Lake Winnipeg in 1908.

The Corona Lumber Co., Ltd., has been incorporated under the Manitoba Companies Act, with a capital of $100,000 and office at Winnipeg, to carry on a general lumbering business, and in connection therewith to own and operate steam and other vessels, for its own purpose and for the carrying of passengers and freight.

The Winnipeg Board of Control has decided to petition the Dominion Government to erect a wharf at an estimated cost of $250,000. Two possible sites have been mentioned, one being on the Red River at the foot of Rupert St., and the other at the foot of McFarlane St., north of the Louise bridge. If neither of these sites is suitable, one will be purchased.

A. R. Dufresne, Dominion Government District Engineer, has communicated with the Winnipeg Board of Control, pointing out that the St. Andrews lock will be ready for the opening of navigation, and suggesting that in view of the expected increase in traffic, the draw spans on all bridges under the city's control be inspected and placed in good working order.

The vessel which was reported in our last issue as being under construction for H. Sutherland, Winnipeg, for operation on Lake Winnipeg and the Red River, is stated to be the first of a number which will be operated in the transportation of building materials. It will be of suitable size for passing the St. Andrews lock, and propelled by twin screws driven by compound engines of 600 h.p. Its length will be 180 ft., by 40 ft. beam, and the construction is of steel throughout, with a carrying capacity of 1,000 tons. The equipment will include a powerful centrifugal pump for loading sand and gravel, and a series of hydraulic hoists for building stone. In addition, a certain amount of passenger accommodation will be provided.

B.C. and Pacific Coast Marine.

Work was commenced early in March on the construction of the G.T.P. docks in the inner harbor at Victoria.

The Boscowitz Steamship Co.'s new vessel, which has been named Venture, is expected to be in service about June 1.

The Canadian Fishing Co.'s s.s. Celestial Empire, struck a rock during a storm early in March, in Squally channel, while northbound, and put back to Vancouver for repairs.

The barkentine, Everett G. Griggs, owned by the Everett G. Griggs Ship Co., Ltd., Victoria, B.C., is reported to have been sold to Capt. E. R. Sterling for $27,500. She was built in Belfast, Ireland, in 1883, and is an iron, six-masted barkentine, with dimensions:—length, 308.2 ft.; breadth, 42.9 ft.; depth, 25.1 ft.; tonnage, 2,351 register. She was formerly known under the names Lord Wolsley and Columbia.

The officers of the recently organized Grand Trunk Pacific Dock Co., which has been formed for the construction and operation of docks at Prince Rupert, Victoria, Seattle, Wash., and other places on the Pacific coast, in the interests of the G.T.P.R., are:—President, C. M. Hays; Vice President, J. S. Gibson; Secretary-Treasurer, H. Phillips; Assistant Secretary, S. H. Smith; and the trustees are C. M. Hays, E. J. Chamberlin, J. S. Gibson, S. H. Smith and L. V. Druce.

Huntly and Brewster, who operate the steamboat Sonoma, on the Ladner-Steveston run, will probably build or purchase a larger vessel for this route this spring, owing to increased business. The new vessel will probably be about 70 ft. long, with 15 ft. beam, capable of 12 knots an hour, and with capacity for about 75 passengers. If it is decided to replace the Sonoma, she will be sold. She was built at Vancouver in 1905, her dimensions being:—length, 46.5 ft.; breadth, 11 ft.; depth, 4.6 ft.; tonnage, 19 gross, 13 register, and she is equipped with engine of 3 n.h.p. driving a screw.

Capt. C. H. Nicholson, Manager G.T.P.R. Pacific Coast Steamship Service, on his return from Great Britain, Mar. 16, said that the s.s. Prince Rupert was ready to start on her outward trip to Vancouver, by way of the Horn and that the s.s. Prince George would start about May 1. The first named would be operated in passenger and freight service between Prince Rupert, Vancouver, Victoria and Seattle, but it had not been decided whether the Prince George would also be placed on the same route, or on the Vancouver-Victoria-Seattle run. The s.s. Bruno would be operated between Vancouver, Queen Charlotte Islands and Portland Canal.

The G.T.P.R. steamship Prince George was launched at Wallsend-on-Tyne, Eng., Mar. 10, the christening ceremony being performed by Miss Hays, daughter of C. M. Hays, President G.T.R. and G.T.P.R., who in speaking on the accasion, said that faster boats with greater tonnage, between Great Britain and Canada must undoubtedly come as a result of an increased demand for Canadian grain in Great Britain, but unless there was a possibility of some attraction, some advantage or reason why such grain should come to England as against foreign grown grain, it would probably be some time before such vessels were needed.

Grade Separation.

By W. H. Breithaupt, M. Can. Soc. C.E.

Two bodies cannot occupy the same space. Of two intersecting lines of traffic on the same plane neither can be continuous; each must be intermittent, must stop, or change direction, while the other passes. And while each line may be naturally intermittent, may consist of detached units, if its units pass at variable and unrelated intervals, liability for two units, one on each line, to meet at the point of intersection remains unchecked. If either line is fixed in direction, as on a railway, and cannot turn aside, the danger of interference increases; and increases more if both lines are so fixed. The fact that the only safe crossing of street or highway and railway, or of railway and railway, is in placing one above the other, and thus giving each a free and unobstructed course, is an axiom. No so-called protected crossing—a grade crossing with gates, signals, derails and other appliances, or any of them, operated by attendants, or automatically—has been found to be ultimately safe. Separation of grades has in addition to safety, the further great advantage of elimination of delay and of maintenance and operating cost. This paper aims to give existing conditions governing the practicability of grade separation. The physical laws for grade separation are summed up in two:

1. The structure carrying the upper line of traffic must be sufficiently high above the lower traffic way to clear all objects passing on the latter.

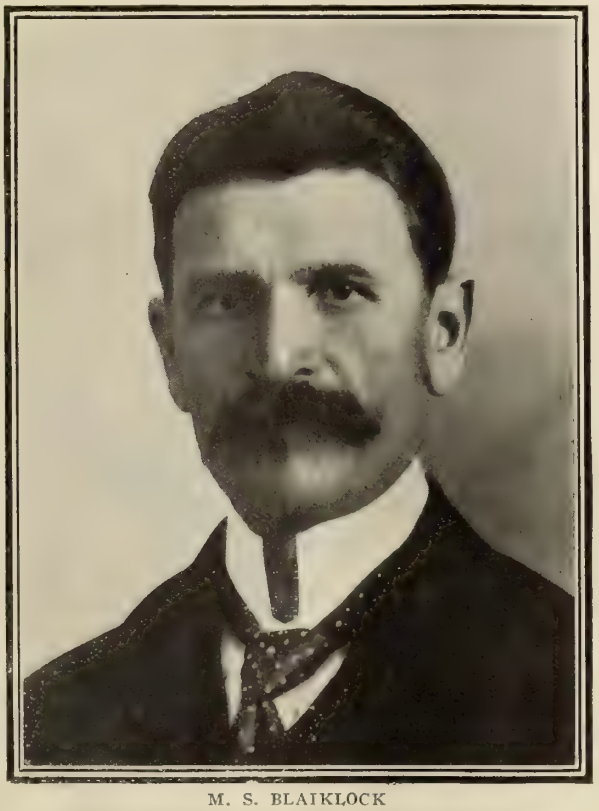
2. The grade on either traffic way, approaching the crossing, must be practicable for the traffic thereon.

The maximum height of loaded vehicles and any objects thereon on city streets or country highways has been accepted as 14 ft. This height is also sufficient to clear regular street railway traffic. While higher objects are moved along roads occasionally, it is properly not considered necessary to endanger the practicability of crossings under railways to accommodate them. With the railway on moderate embankment, undercrossings of roads, subways as they are called, become readily practicable. In many cases it is possible to sufficiently change the grade both of railway and road to meet requirements for a subway. Sometimes a deviation of the road, or change of location for a short distance, is practicable, and greatly simplifies the desired grade separation.

The vertical clearance, top of rail to bridge, required over railway tracks is in most cases much higher than over roads, and this constitutes, in the great majority of cases, the insurmountable obstacle to grade separation. The highest fixed projection on an ordinary railway train is the locomotive smoke stack, and passenger cars project higher than the great bulk of freight cars; but some, comparatively extremely few, special freight cars are higher than either passenger cars or locomotive stacks. The extreme clearance requirement is for height, top of rail to running board, of highest car, height of brakeman added thereto, and a further allowance for contingencies, among which may be height of load of light material on an open car exceeding maximum box car height. There are on the railways of standard gauge in the United States, Canada, and Mexico, about 2,377,282 freight cars of all kinds. They classify as to height, rail to running board, as follows:

Under 12 ft. including flat, gondola, and tank cars	63.1	per cent.
12 ft. to 13 ft.	23.4	" "
13 ft. to 13 ft. 6 in. inclusive	11.9	" "
13 ft. 6 in. to 14 ft. inclusive	0.65	" "
Over 14 ft.	0.95	" "

Of the total number of freight cars 98.4% are 13½ ft. high or under, and only 1.6% are higher than 13½ ft.; and Canada, has not fixed a standard for box car dimensions, but adopted in 1904, as recommended practice, a height of 12 ft. ¾ in. to eaves, equivalent to less than 13 ft. height to running board. High standard cars are such as the G.T. Pacific series 300000—310824, 13 ft. 4 in., and the C.P.R. new steel frame box car series 130000—132998, 13 ft. 4¾ in. The highest regular C.P.R. freight cars are 13½ ft. to running board and this may be said of most of the main trunk lines of railways. The highest Pennsylvania Railroad freight cars are 13 ft. 4 in.



M. S. BLAIKLOCK
Engineer Maintenance of Way, Grand Trunk Ry.

Limits of car dimensions are fixed by clearance outlines on the various railways. A composite clearance limit diagram for 90 railways, including all Canadian trunk lines, has a height of 14½ ft., limiting "over all" height of cars to this figure and practically limiting height of top of running board of freight cars to 14 ft. In the G.T.R. St. Clair tunnel, the clearance height at width of 3 ft. is 14 ft. It is true that on many divisions or branches of the lines considered, the clearance is somewhat greater than shown in the composite diagram referred to, while on the other hand, it is less on a number of main lines, and on many branch lines. An empty freight car 14 ft. high will on 5 ft. (out to out of rails) transverse base not resist a 30 lb. wind pressure when standing alone.

The limit of grade, approaching crossings, can for railways be taken as between 0.5 of 1% and 1%. For city streets a grade of 5% is in most cases extreme and it should be so for main country highways. A preferable maximum grade for roads is 4%, and 3% is materially better. This works out as follows:

Five per cent. grade 20x2=40 ft. length of approaches for every vertical foot of clearance.

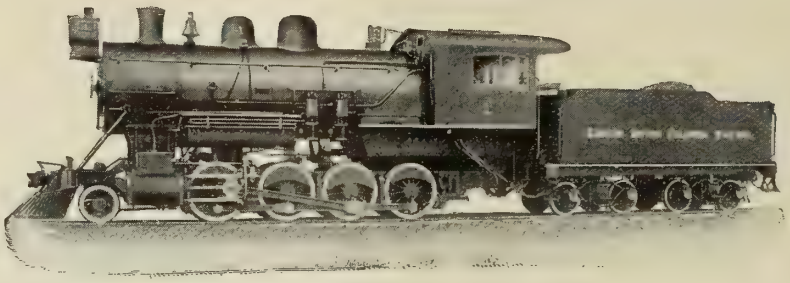
Four per cent. grade 25 x 2=50 ft. length of approaches for every vertical foot of clearance.

Three per cent. grade 33 ft. 4 in x 2=66 ft. 8 in. length of approaches for every vertical foot of clearance.

less than 1% higher than 14 ft. Considering main trunk lines, the Pennsylvania Rd., Baltimore and Ohio, Erie, Lehigh Valley, Great Northern, and a number of others, i.e., as far as known, with a small percentage of cars having dimensions not ascertained, among the latter the Grand Trunk and Canadian Pacific Railways, have either none or less than ¼ of 1% of freight cars over 13½ ft. to running board.

The M.C.B. Association, whose standards are adopted by railways on the North American continent and are recognized by the Board of Railway Commissioners for Canada, has not fixed a standard for box

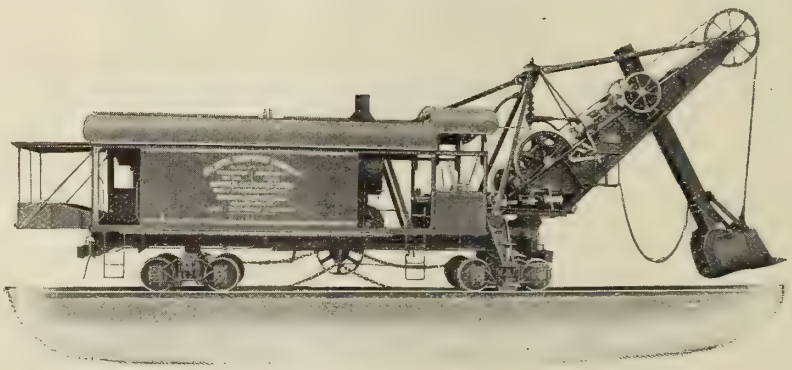
LOCOMOTIVES FOR ALL CLASSES OF SERVICE



Consolidation Type Freight Locomotive, Built for Eastern British Columbia Railway.

Total weight of engine in working order, 186,310 pounds. Weight on driving wheels, 166,100 pounds. Diameter of driving wheels, 51 inches. Boiler pressure, 210 pounds. Cylinders, 20 x 28 inches. Maximum tractive power, 39,200 pounds.

ATLANTIC STEAM SHOVEL



Direct wire rope hoist with but one sheave, instead of chain hoist with from five to seven sheaves, reduces delays and loss of time due to breakdowns, increases the efficiency of the engines, and reduces repair bills as well as fuel consumption.

Finished, interchangeable spare parts always on hand at works.

MONTREAL LOCOMOTIVE WORKS, LIMITED

BANK OF OTTAWA BUILDING, MONTREAL, CANADA

Any gain, by curtailment of vertical clearance requirement, or by change of railway grade, or by both, means corresponding shortening of road approaches, at the high ends. Such a gain of 1 ft. may greatly reduce the cost of a given grade separation, making it practicable when it would not otherwise be so. A vertical gain of 2 ft. would mean a very large addition to the number of practicable grade separations.

The extreme allowance that should be made for brakemen on a car must not exceed 7 ft.; 6½ will clear any brakeman unless he should be over 6 ft. tall, and 6 ft. brakemen are not common, to say the least. What is to be said for the contention, seriously made, that the brakeman on the running board of highest known car, should be allowed room to swing his lantern over his head? The necessity for brakemen on the tops of cars is becoming less and less, and has in many cases disappeared, rules and regulations of railway companies to the contrary notwithstanding. The air brake is now universally used in train control. In Canada the orders of the Board of Railway Commissioners, in force since Dec., 1908, provide that no regular freight train shall be allowed to proceed on its journey unless at least three-quarters of the cars comprising it are equipped with air brakes in good working order; also that every freight car built shall be equipped with air brakes and with operating levers on both sides of the end.

A stage is reached in the traffic of railways when grade crossings become intolerable, and when the risk and interruption due to them becomes more expensive than their elimination. In Europe, grade crossings, in any considerable centres of population are the exception, and this may soon be said also of main trunk line railways in the older parts of the United States. The Pennsylvania Rd. makes it a rule to avoid all grade crossings on new work, and has within the last nine or ten years eliminated over 50% of all its grade crossings on main lines. To do this clearance must be made as low as possible. Overhead bridges are as low as 16½ ft. above top of rail, while many are 18½ ft. and less. Twenty-one ft., the standard for signal bridges, is recognized as the highest clearance for which there can be any need. In New York State many overhead bridges are only 18 ft. above the top of rail, and this is the case also in Massachusetts and in other states. The New York Central and H.R. Rd. has asked for 16 ft. or 16½ ft. clearance for all overhead bridges within the electric zone, extending 16 miles from the Grand Central Station, New York.

Electric traction within limits for such large centres of traffic as Montreal and Toronto, with hydro-electric energy, abundant or soon to be, is easily within the range of probability in the not distant future. Smoke abatement alone points in this direction. The vexed question of grade separation would at once assume an entirely different aspect if these conditions were accompanied by a cutting down of the vertical clearance requirements to 17 ft. or even to 18 ft.

It is submitted that with conditions as they are and more so with regard to the future, 20 ft. (13½ ft. for car and 6½ ft. for man), is a reasonable vertical clearance. It has been shown that 13½ ft. covers the height to running board of all but a very small percentage of freight cars now in use, and that cars higher than 14 ft. to running board, i.e., higher than 14½ ft. over all, or to top of brake rod, can only to a limited extent traverse beyond their home railways. That higher cars will be economical or practicable is as little probable as that the gauge of railways will be widened or their entire structure changed. For a vertical clearance requirement greater than 21 ft. (14 ft. plus 7 ft), there can, in any event, be no conceivable rational need.

In the United States there is no federal law fixing vertical clearance for bridges over railways. A number of states deal with the question. In Massachusetts there is a special Grade Crossing Commission. The minimum clearance required by this Commission is in general 18 ft. Connecticut and Rhode Island also specify 18 ft. In New York the Public Service Commission has charge of grade crossing regulations. While this Commission requires 21 ft. clearance where practicable, many lower bridges are built throughout the state, some, as already stated, are as low as 16½ ft. New Hampshire, Ohio, and Indiana require 21 ft. The only states requiring more are Illinois and Vermont, where 22 ft. is specified, but exception is made where this height is not practicable. In all other States there is no statute or regulation, as far as has been ascertained, and heights of overhead bridges vary from 16 or 18 ft. to 22 ft.

In Canada the Dominion Railway Act of 1904 specifies a minimum clearance of 22½ ft. above rail top for bridges over railways, with no deviation except by leave of the Board of Railway Commissioners; and this board has hitherto not allowed a deviation in any case.

The foregoing paper was read before the Canadian Society of Civil Engineers recently.

A General Superintendent's Opinion.

Alfred Price, General Superintendent Western Division, Canadian Pacific Ry., is well known in Eastern Canada, the scene of his earlier activities, as he is also in Western Canada, where for the last seven years he has occupied prominent positions in the company's service. He has had a most valuable all round experience as messenger, operator, car accountant, train dispatcher, car distributor, chief train dispatcher, superintendent,Superintendent of Transportation and General Superintendent. and is consequently in a position to speak with authority on railway matters. We therefore specially value the following which he favored us with a short time ago:—

Canadian Pacific Railway.
General Superintendent's Office.
Calgary, Alta., Oct. 21, 1909.

To a railroader who desires to keep in touch with current railway news and alive to the railway development of our country, I consider it essential that he read the Railway and Marine World. Its distinguishing characteristic is its reliability.

A. PRICE.

That Mr. Price's opinion of our paper is shared by railway men generally is shown by its thorough circulation among all classes of them throughout every province of the Dominion and in Newfoundland. What Mr. Price describes as "its distinguishing characteristic, its reliability," has caused it to be absolutely relied on, and as a consequence it is thoroughly read by its subscribers, and is of correspondingly value to its advertisers.

The Temiskaming and Northern Ontario Ry. Commission has decided to send engineers to make a thorough examination and test of the lignite beds discovered on the projected route of the line north from Cochrane, Ont.

May Birthdays.

Many happy returns of the day to—

W. R. Baker, Secretary and Assistant to President C.P.R., Montreal, born at York, Eng., May 25, 1852.

G. S. Cantlie, General Superintendent Car Service C.P.R., Montreal, born there May 2, 1867.

M. Donaldson, Superintendent Ottawa Division G.T.R., Ottawa, Ont., born near Edinburgh, Scotland, May 1, 1851.

G. C. Dunn, District Engineer G.T.P.R., Winnipeg, born at Quebec, May 13, 1862.

J. D. Evans, Chief Engineer Central Ontario Railway, Trenton, Ont., born at Goderich, Ont., May 27, 1843.

E. T. Galt, President Alberta Railway and Irrigation Co., Montreal, born at Sherbrooke, Que., May 24, 1850.

C. M. Hays, President G.T.R., and G.T.P.R., Montreal, born at Rock Island, Ill., May 16, 1856.

G. H. Hedge, Assistant Master Mechanic C.N.R., Winnipeg, born at Neath, Wales, May 26, 1865.

R. B. Hepburn, President and General Manager Ontario and Quebec Navigation Co., Picton, Ont., born there May 27, 1876.

W. T. Huggan, Accountant and Auditor, Prince Edward Island Railway, Charlottetown, P.E.I., born at Halifax, N.S., May 24, 1851.

W. S. Kinnear, Assistant General Manager Michigan Central Rd., and Chief Engineer Detroit River Tunnel, Detroit, Mich., born at Circleville, Ohio, May 25, 1864.

W. Marshall, Superintendent C.P.R. Telegraphs, Ontario Division, Toronto, born at Garden Island, Ont., May 18, 1859.

M. Neilson, C.E., Consulting Engineer, Montreal Street Railway, born at Almonte, Ont., May 26, 1852.

A. L. Ogilvy, General Purchasing Agent, National Transcontinental Railway Commission, Ottawa, Ont., born at Richwood, Oxford County, Ont., May 23, 1868.

Hayter Reed, Manager-in-Chief C.P.R. hotels, Montreal, born at L'Orignal, Ont., May 26, 1849.

H. B. Sherwood, Superintendent Bay of Quinte Railway, Napanee, Ont., born at Auburn, N.Y., May 25, 1847.

E. Tiffin, Member Government Railways Managing Board and General Traffic Manager I.C.R., Moncton, N.B., born at Hamilton, Ont., May 5, 1849.

J. H. Walsh, General Manager Quebec Central Railway, Sherbrooke, Que., born at Quebec, May 12, 1860.

H. K. Wicksteed, Chief Engineer of Location, Mackenzie, Mann & Co., Ltd., Toronto, born at Quebec, May 25, 1855.

James Yeo, ex-Roadmaster Intercolonial Railway, Riviere du Loup, Que., born at Bideford, Devonshire, Eng., May 1, 1830.

Railway Subsidy Lands in British Columbia.—Under an act passed last session of the British Columbia Legislature, the Government is authorized to enter into conditional agreements to acquire for the province by purchase, exchange or otherwise, any lands granted by it in aid of the construction of railways, and to pay the whole or part of the purchase price of such lands by the issue to the vendor of inscribed stock of the province, or otherwise. All lands acquired under the act shall, after their acquisition, be subject to the provisions of the Land Act. No agreement is to take effect until it has been ratified by the Legislature.

The G.T.R. started running through trains from Montreal to Manitoba, Saskatchewan and Alberta, running over the company's own lines to Chicago, Ill.; thence by U.S. connections to Winnipeg, and from there over the G.T.P.R.

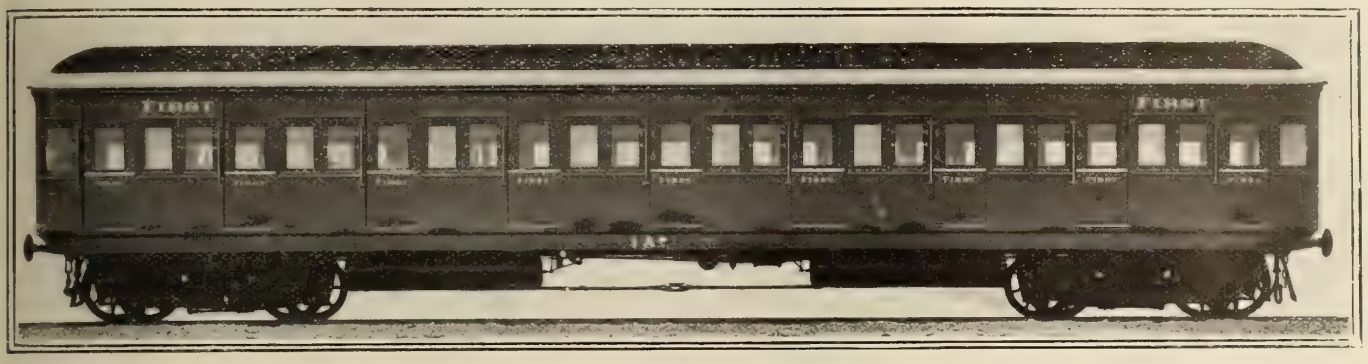
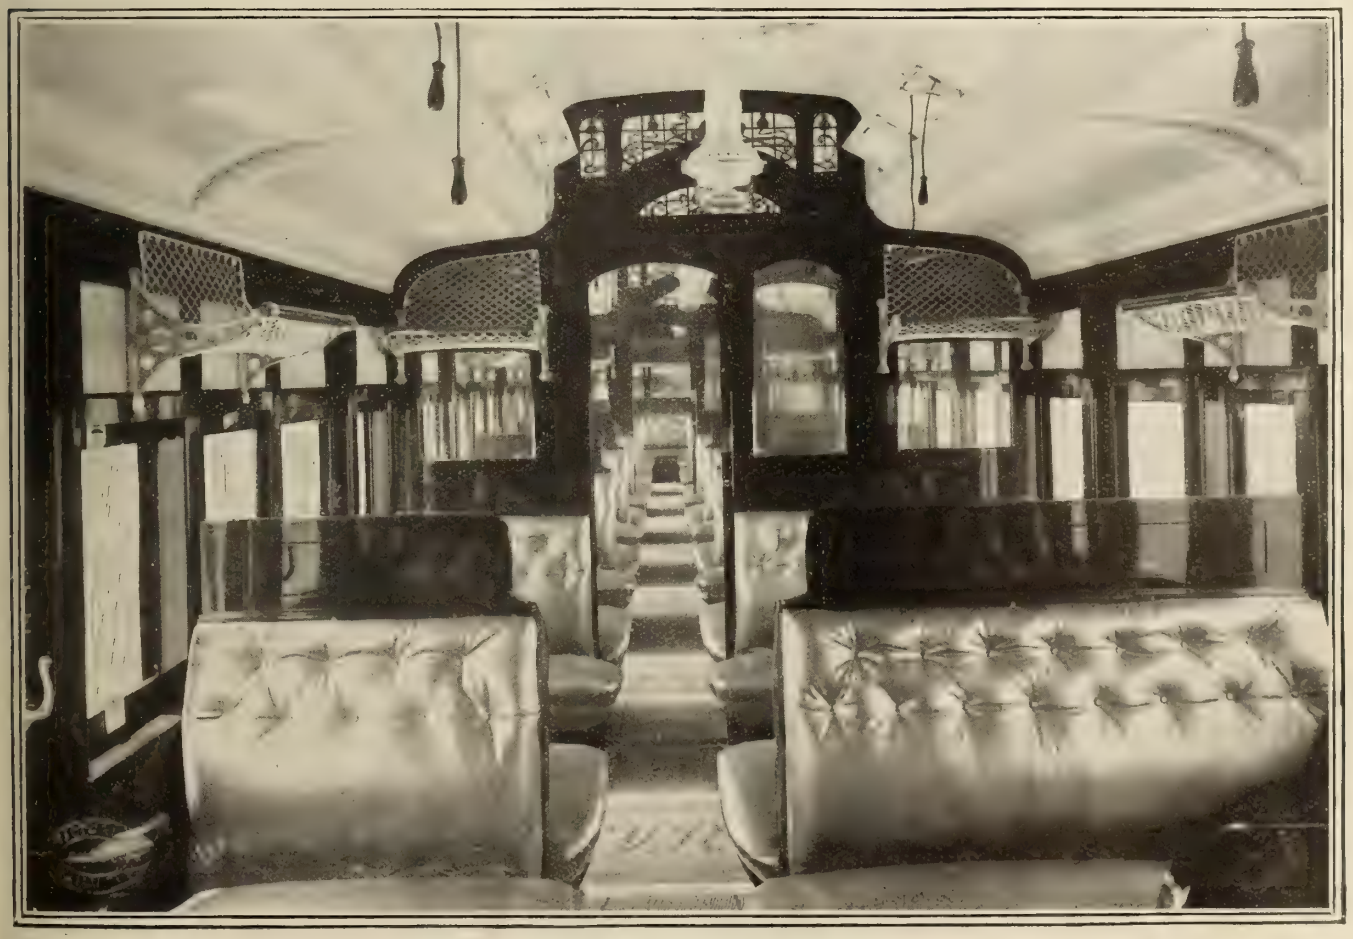
The Tait Suburban Car.

A very large traffic is dealt with by the Victorian Railways Commissioners on their suburban lines at Melbourne, Australia. The number of suburban passengers carried on these lines during the year ended June 30, 1909, was 74,541,-251, and the revenue derived therefrom £746,844. About 1,300 suburban trains and 150,000 passengers arrive and leave the central passenger terminal every day. When Thos. Tait, Chairman of the Victorian Railways Commissioners and formerly of the C.P.R. service, was in Europe and America three years ago he inspected various types of suburban carriages then in use, including those which had just been constructed for service on the Hamburg-Altona line and the suburban cars running on the Illinois Central Ry. at Chicago, and as a result of his observations the car, of which illustrations are given in this issue has been designed to meet the requirements of the Melbourne suburban traffic.

The most notable departures in this car from the suburban carriage hitherto in use at Melbourne, which is of the ordinary cross-compartment non-corridor type with swinging doors for each compartment, are the provision of a passage-way and the substitution of sliding doors for the swinging doors. The object of the passage-way is to permit of passengers distributing themselves through the car, thus obviating what frequently happens in the cars hitherto used, viz., overcrowding in one compartment when there may be vacant seats in other compartments. In order that the seating accommodation would not be diminished by the provision of this passage-way the cars have been made about a foot wider and this has necessitated the use of sliding doors as there would not be sufficient clearance of other trains on double tracks or of structures if swinging doors were used. Apart from this consideration, however, sliding doors are considered to be an advantage as they will do away with the noise and danger and some of the expense now contingent on the opening and closing of swinging doors, but, what is more important—in the event of the electrification of the Melbourne suburban lines—one of the principal advantages of electric traction, viz., the possible quick acceleration from stations will not be lost owing to trains having to be started slowly to permit of the swinging doors being closed and fastened. In this connection it may be mentioned that it is intended that passengers shall open and close the sliding doors themselves and that this will permit of some reduction in the station platform staff being effected. It may also be mentioned that, apart from the locomotive driver and fireman, only one man—a guard who travels in the compartment provided for the purpose at the extreme rear end of the train—is employed on the Melbourne suburban trains. The provisions of a passage-way and of a door on each side of the car for each pair of seats combines the advantage of the American car or of a corridor car in enabling passengers to distribute themselves to the best advantage throughout the car with the advantage of quick ingress and egress of passengers afforded by the



Exterior of the Tait Suburban Car.



Interior of the Tait Suburban Car, First Class.

Results Are What Count

A Combined Skidding and Loading Machine that will clear up the largest area at a setting and can be moved and set up ready for business in the shortest possible time will get the best results

The latest Russel Machine has some distinct improvements that save time and trouble, consequently money. Note the new method of suspending the skidding sheaves. They are hung from a vertically hinged jib or triangle the outer end of which is guyed by two lines, one on each side, which are power tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with either skidding or loading.

The uppermost leg of the jib has a spring connection to the tower, reducing shocks. All strains due to skidding are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from the tower and leading to two drums on loading engine, controlled by one lever. Machine is raised or lowered by hydraulic or patented geared jacks.

Built for 2 or 4 lines with stiff or swinging boom. Constructed entirely of steel, except loading boom.

IS WITHOUT QUESTION THE STRONGEST AND FASTEST MACHINE OF THE DAY

LOGGING CARS AND DUMP CARS

RUSSEL WHEEL & FOUNDRY CO.

Detroit, Mich., U.S.A.

Train of Tait Suburban Cars on the Victorian Railways.

European ordinary cross compartment car with side doors for each compartment.

The new cars are 57 ft. 4½ in. long over the bodies and are divided into three large compartments, separated by partitions fitted with sliding doors and glass panels so that passengers can see from one compartment into the other. These partitions will prevent too much draught through the car and will provide sub-divisions as required for smokers, etc. Each car will comfortably seat 92 passengers, two on each seat on one side of the passage-way, three on each seat on the other side, and six on the seat at each end of the car, and in emergencies many more passengers can find reasonable seating and better standing accommodation than in the existing carriages. A feature of these cars is that being a foot wider, which brings them to the full width of the footboards of the cars hitherto used and in line approximately with the nosing of the platforms, and the floors being designedly low, no footboards will be required, and there will be only one step—of about 10 ins.—between the car floor and the station platform. The end of the guard's van compartment has been made elliptical in shape, with a view to it being used as a motor compartment in the event of electrification, and a wide landing for the guard has been provided in the doorway of this compartment. It has not been considered advisable to provide moveable sashes at those windows past which the doors slide owing to the possibility of injury to passengers' arms or hands in the event of the doors being incautionsly opened, but ample provision has been made for ventilation.

Steel has been used largely in the construction of the bodies, and the underframes and bogies are entirely of steel. The whole of the external panelling is of steel and the interior ceilings and panels are of embossed steel of Australian manufacture suitably painted and grained. The body framing and pillars are of teak, and Australian cedar and maple have been used in the linings, mouldings, etc., of the interior. The seats are upholstered in Australian green leather. In the design and finish of the interior all sharp angles and corners or other receptacles for dust and dirt have been avoided. The lighting is by Pintsch gas with incandescent mantles. Although steel has been used so largely and the cars are a foot wider they will not weigh as much per passenger seat as the suburban cars of the same length hitherto used.

The extreme ends of each carriage are furnished with large sepia toned bromide photographs illustrating various Victorian tourist resorts. A complete train of these cars was put into service on one of the Melbourne suburban lines on Jan. 6 and has met with the general approbation of both the public and the railway staff. With the exception of a few minor alterations, which experience of these cars may show to be advisable, the Commissioners will probably adopt the Tait car for their entire Melbourne suburban service.

C. P. R. Irrigation Work.

In connection with the development of the C.P.R. irrigation block in the Bow River Valley, Alta., we are officially advised that the construction work for the current year will include about 300 miles of canals and ditches, which will bring the total mileage of canals and ditches on the western section of the block to 1,600 miles. The construction of the 300 miles will involve the moving of about 1,250,000 cubic yards of material, and the placing in position of 1,750,000 ft. of timber and 2,000 cubic yards of concrete. In this section there has been opened for traffic a branch railway from Langdon northerly for about 40 miles to Acme, and during the current year it is proposed to build a 15 mile branch line east from Irricana through the 3,000,000 acre block. It is also proposed to add 50 miles to the telephone lines in the western section, and to carry the line through the central and eastern sections of the block, a distance of 127 miles.

The plans for the development of the central and eastern sections of the block as now completed contemplates the construction of 1,000 miles of canals and ditches in the central section, and 3,500 miles in the eastern section, at an estimated cost of about $12,000,000. The work to be immediately undertaken is the development of the eastern section, for which it is expected that contracts will be let at an early date. The construction of these 3,500 miles of waterways will involve the movement of 28,000,000 cubic yards of material. During the current year 250 men will be employed upon the engineering staff in connection with the work, all of which is being carried on under the direction of J. S. Dennis, Calgary, Assistant to the Second Vice President.

Dynamos and Motors.—This is the title of a text book for use in colleges and technical schools, by W. S. Franklin, Professor of Physics at Lehigh University, and W. Esty, Professor of Electrified Engineering at Lehigh University, published at $4 by the Macmillan Co., 66 Fifth Avenue, New York. It was written to meet the demand for a simple physical treatise on dynamo electric machinery, apart from such subjects as electrical distribution and wiring and electric lighting. In the first part the authors deal with the elecrtic current, the dynamo and transformer, direct current and alternating current measurements; in the second, with the operation of a direct-current dynamo as a generator, the operation of a direct-current dynamo as a motor, power losses and efficiencies, ratings and guarantees; in the third with harmonic electromotive forces and currents, fundamental problems, the polyphase system; in the fourth with the alternator as a generator, the synchronous motor, the synchronous convertor, the simple theory of the transformer, the induction motor, the single-phase series motor; and, in the fifth, with switchboards and switchboard appliances, and the practical operation of dynamos. An appendix sets out a series of 188 problems on the different chapters, with the answers. The work is primarily a text book adapted for the requirements of the student, and aims to give him a good basis of theory as well as a practical conception of the direct and alternating current dynamos and motors.

The C.P.R., which has received several complaints as to freight going astray, or being delayed, on its western lines, has issued rules for the guidance of shippers, as to the marking of packages.

Efficiency in Transportation.

By D. Crombie, Assistant to General Transportation Manager, G.T.R.

This subject covers a wide field, too large to be handled in one paper, consequently, comment will be made at this time only on certain aspects which have, through a closer experience, more forcibly appealed to me, viz., car service, fast freight service, train loading, fuel, and station service.

Efficiency and economy are naturally and intimately related, since, to quote the dictionary, efficiency is, mechanically speaking, "the ratio of work performed to the energy expended," while economy concerns "a frugal and judicious use of materials." From either point of view, the results must correspond to the expenditure. Efficiency is not an extravagant perfection, nor is economy served by parsimony.

Due to the tremendous development of transportation the transportation officer has been expected and forced to produce results with but limited means, since the capital account expenditure could not expand as promptly as did the volume of traffic. We have been compelled, then, to "a frugal and judicious use of materials," and have accomplished "a ratio of work performed to the energy expended," which, compared with the results in other countries, speaks well for our efficiency. It it were not so, our executive officers would not meet with such a measure of success in tapping those reservoirs of capital which lie across the sea.

When we consider that the freight rate per ton per mile in Great Britain (2.31c.) is three times our rate (¾ of a cent), and in Germany the revenue per ton per mile (1.41c.) is almost twice our revenue; and when we consider that out of our lower rate per mile we pay to our employes wages, per man, 82% greater than in Germany, and 140% greater than in England; when we consider, further, the density of their traffic per track mile as compared with ours; and yet that, with all this, the ratio of our expenses to earnings (67.5%) is less than in Germany (69.1%) and but little greater than that of Great Britain (63%), it must be granted that we have in comparison reached a high degree of efficiency. Presumably it does not occur to the complainant who addresses the Board of Railway Commissioners, alleging excessive freight rates, that the average ton of freight handled by a railroad is moved 33 miles for the same cost per ton that this individual pays his coal dealer to transport a ton of coal across his lawn. This is an illustration which has been much used, but bears repeating.

On the other hand, when the Interstate Commerce Commission statistics for 1908 show that the average carload is but 19 tons, while the average capacity of freight cars is 34 tons; that the average movement per car per day is but 23.5 miles, and that 30% of these movements are empty, or, in car service as a whole, an efficiency of but 4% of the impossible perfection; when statistics show that the tractive power of the average engine is 27,500 lbs., while the rolling resistance of the revenue freight behind the engine on a 1% grade at 10 miles per hour is but 8,746 lbs., and on the level is only 1,606 lbs., and that the average train movement of each engine in freight service is but 57 miles a day, or, in train service, an efficiency of 1.4% of impossible perfection; when we realize that one-third of the total tonnage moved is coal, and that one out of every five tons of coal mined is consumed in railway engines, and that—as H. H. Vaughan has explained in a recent paper—but 5% per cent. of this coal is transformed into useful work; when we consider that on some railways as much as 3% of the gross freight earnings is paid back to the shippers in settlement of claims for loss and damage, we must, as transportation officers, confess to a need of continued endeavor. These figures are somewhat startling, but they sound considerably worse than they really are. They require analysis.

The strict enforcement of demurrage rules, with a view to decreasing, as far as possible, the shippers' delays, and the advocacy of a high per diem rate of car rental to stimulate the railway to prompt car movement, have, in the anticipated results, both been over-estimated. The chief controlling factors in the average movement per car per day are the distance the tonnage moves from originating point to destination, and the necessary free time allowances for loading and unloading. The average distance freight shipments are moved on all railways is 131.7 miles; the average mileage per car per day is 23.5 miles, or 5.6 days per trip.

How is this time consumed? Almost all of it in "shipper's detentions." For example, the National Association of Car Service Managers report that the average detention by consignor and consignee is 1.68 days at each end, and the railway detention, after arrival of car at destination and before same is placed on the unloading track, is .31 days. But in car demurrage calculations the free time detentions account of Sundays, legal holidays, Customs and weather are not taken to account, and this is in excess of 60 days in each year, or ⅙ of the total car days. Further, as cars placed between 7 a.m. and 11 a.m. are in accordance with demurrage rules considered as though placed at 1 p.m., and cars placed after 11 a.m. are considered as placed at 7 a.m., it follows that there is an average of at least a quarter of a day omitted in the calculations owing to the difference between the actual placing and this constructive placing.

The complement of time then actually necessary in the handling of one shipment may be considered to be:

	Days.
Loading time (consignees' detention)	1.68
Add ¼ day difference between actual and constructive placing	.25
In transit 131.7 miles at 10 miles per hour	.35
Advising and switching time (railway detention)	.31
Unloading time (consignees' detention) ..	1.68
Add ¼ day (as above)	.25
	4.72
Add ⅙ of complete trip time account elimination of Sundays, holidays, etc.	.78
Total time accounted for or explained, as above	5.50
Out of a total average time on each trip of.	5.60

It has seldom been shown, and it will be interesting to note, the history of car performance for the past 36 years:

Year	Total Ton Miles Moved (Millions)	Total Frt. Cars	Ton Miles per Car per Day	Miles per Car per Day	Tons per Car Mile	Av'ge L'gth of Tons Haul in Miles	Days per Trip
1907	236,601	1,991,557	328.2	23.5	13.9	131.7	5.6
1905	186,463	1,731,409	295.0	23.9	12.3	130.6	5.5
1902	157,289	1,546,101	278.7	23.6	11.8	131.0	5.5
1899	123,667	1,295,610	291.5	24.7	10.6	131.0	5.3
1896	95,328	1,221,887	213.7	22.4	9.5	124.5	5.6
1893	93,588	1,201,645	213.4	25.1	8.5	125.6	5.0
1890	76,207	1,109,952	188.1	21.4	7.7	119.7	4.9
1889	68,677	1,051,169	185.5	24.7	7.5	127.3	5.1
1886	52,802	845,914	171.0	24.4	7.0	101.5	4.5
1883	44,064	778,663	155.0	23.8	6.5	110.0	4.6
1880	30,376	539,255	154.3	23.0	6.5	See Note A	
1877	20,890	392,175	145.9	24.3	6.0	No figures	
1874	17,342	358,055	132.6	24.1	5.5	available	
1871	11,598	214,289	130.0	23.6	5.5	prior to 1883	

These figures, since 1890, are obtained from the Interstate Commerce Commission reports; prior to 1890, from Poor's Manual, the car loading, or "tons per car per mile" previous to 1890 being estimated.

If in making this estimate we allowed a greater load per car mile we would thereby necessarily create a slower movement per car per day since the total performance of "ton miles per car per day" is made up of the two factors of "tons per car mile" and "miles per car per day." It is evident we can not hope for any great improvement in the average miles per car per day.

The controlling features of the ratio of empty movements to loaded movements are the preponderance of loaded movements in one direction, namely, the outbound movement from the territory where the raw material originates to the consuming centres, and, secondly, but in a less degree, to the practice, more or less necessary, of supplying special equipment for certain commodities, which cars are unsuitable for general traffic. Eastbound tonnage dominates because in the exchange of commodities the raw materials necessarily bulk and weigh more than the finished product, and, broadly speaking, in the west the raw materials is produced and in the east dwells the producer of the finished article.

The figures on the Grand Trunk Ry. are as follows:

Eastbound tonnage..	11,281,677=	59.7%
Westbound tonnage..	7,596,026=	40.3%
Total	18,877,703=	100.0%

Consequently on our system to move the tonnage east requires an empty movement west equivalent to approximately 20% of its total movement.

This movement is controllable only to the extent that the rate on raw materials is capable of adjustment. There should be at least a safe margin between the tariff rate and the actual cost of transportation, otherwise the railway will unduly encourage the long distance movement of raw materials instead of encouraging local development of the finished product, with the more profitable rate, and this development of the manufacturing or industrial centre, where formerly the field, the mine, or forest existed, tends to equalize the inbound and outbound movement, as well as to produce an increase in the merchandise and other more profitable traffic in the inbound loaded cars. We thus get a loaded haul in both directions at better rates instead of a loaded haul in one direction at a low rate. The empty movement may be further controlled by supervision.

Such equipment as empty coal or flat cars returning to the mines and forests should be utilized, if at all possible, for the commodities moving in box cars if in the direction of the preponderance of traffic. Avoid the use of the standard box car in the direction of the preponderance of loaded movements if other equipment is moving empty in that direction. Never move an empty in the same direction as the preponderance of traffic if the empty car can be induced to carry a load.

Broadly speaking, movement of empties westbound is justified, as the preponderance of the tonnage moves eastward, but an empty movement eastward should be jealously watched, and every means taken to eliminate or reduce such movements. To illustrate: Anthracite coal should not be handled westward from the Niagara frontier in open cars, as such cars are not suitable for the eastbound traffic. To haul an open car westbound, loaded, usually results in an eastbound empty movement, and this again is duplicated by a westbound empty movement of a box car in order to provide a car for the eastbound loading.

A New York road's box car empty at London should not be sent to the Niagara frontier empty en route home, but should be sent to Chicago for loading eastbound, and this is true, even though the eastbound loading at Chicago is exclusively for Portland, Me.,

DUNDAS, ONTARIO, CANADA

which might necessitate the return of the car empty from Portland to the Niagara frontier. The merit in this is not always at first glance appreciated, and there are times when it would be unwise, but for the greater part of the time there is a loaded movement eastward through Michigan which can only be taken care of by the empty movement of box cars from the seaboard, and the movement of any box car empty eastward against the stream of empty box cars moving westward, would require investigation.

Has the efficiency of the transportation department kept march with the increased facilities supplied by the mechanical department? The capacity of cars and the weight of the loading in recent years has increased as follows:

Year	Capacity	Average loading all cars	Tons loaded cars
1902,	28 tons.	11.8 tons.	16.8 tons.
1905,	31 tons.	12.3 tons.	17.6 tons.
1907,	34 tons.	13.9 tons.	19.9 tons.

This low state of efficiency seems, at first glance anything but creditable, especially when we consider that coal tonnage is 33% of our total, and ore, stone, and other products of the mine, bring the percentage to 53%, while, adding grain, cement, lumber and like commodities, which lading usually approximates the full capacity of the car, makes the percentage 73%. Flour, sugar, meats, oils, liquors, manufactures, vegetables, and commodities of fair weight account for 20%, while hay, stock, mill feeds, furniture, vehicles, merchandise, etc., amount to but 7%. It is through the shippers that the influence must be exerted to obtain a full loading of the car. The average minimum carload weight of the 4,700 articles mentioned in the Freight Classification is 26,000 lbs., and, although in shipments of coal, ore, grain, lumber, and many other commodities, a loading approximating the capacity of the car can be secured, there is but little stimulus to the shipper to produce this result, or any result, in excess of the minimum. The freight traffic department, then, should, adjust the minimums, following closely the increase in car capacity.

Agents and shippers should appreciate that tariff rates are not based on the expectation that the minimum load is to be the usual load, but we hope for, and expect, a capacity load, the minimum being the breaking point between profit and loss. When it is essential to the shipper, the minimums will be accepted, but it is essential to the railroads that the minimums should not be frequently used.

The daily car report acquaints the headquarters or staff officer with the situation on the line. Every car on hand at the station is reported by the agent daily. The report shows the arrival of the car, contents, the reason for the delay, if any, and, if the delay is chargeable to the shipper, the car demurrage accrued and the amount of free time and occasion therefor; the departure of the car, contents and destination, and the number and kind of cars wanted for loading. With this as a basis, it is possible to know whether empty cars are moving in the same direction as the preponderance of loaded movements, and whether such empty cars can be pressed into service. It is possible to know whether the loaded cars are being loaded to their capacity and, if not, whether this is due to the space capacity of the car being out of proportion to the weight capacity with respect to the particular commodity to be moved. It is not wise to supply cars freely to a shipper, who, in order to save a few cents in the proper stowing of his goods, will not load above the minimum weight, while another shipper is suffering for want of cars and is willing to use them to their capacity. Careful supervision and judicious distribution of cars is something the obstinate shipper can appreciate, if he feels the effects thereof. It is possible to know whether the car of large space capacity is being used unwisely for heavy commodities, and thereby reducing the ability to move the more bulky commodities, since it is wasteful to use a furniture car for pig-iron.

It is possible also to watch the delays, that the car service, train service, and yard service be in proper relation. A car deteriorates through age as well as use. An engine deteriorates chiefly through use. It is not economy that the equipment, which is perishable in nature and revenue producing in capacity, should be idle, through delay, to save capital expenditures in power. The amount of time cars are in yards waiting switching to their proper position, or waiting to be moved by trains, should be calculated. It costs no more to move a car to-day than it does to-morrow. If the car is not moved to-day, our revenue earning power is reduced in times of car shortage, the day's operations are hindered and made more expensive, the shipper waiting for the loaded or empty car has been inconvenienced, and the car itself has deteriorated. The only saving to offset this has been in the capital expenditure for the engine. This, of course, provided the delay was chargeable to a shortage of power, it being assumed that the available power has been used with the greatest efficiency. It is but seldom that delays can be properly chargeable to shortage of track room. The usual failure is that the available track room is not used sufficiently. The delay which is not chargeable to railway detention can be assessed and checked with this report as a basis, and this may be done better in the headquarters office of the transportation department than in the demurrage bureaus, and, in fact, can only be done properly in the railway offices.

The duplication of the work and the very evident weakness of the checking by the bureau naturally conduce to create a lack of sympathy in the agents. The arrival and departure of the cars, as reported by the agents, can be checked by the car service officer against the arrival and departure as reported by the train conductors, and the full time of the cars accounted for, properly charging the delays against the offending interest. Demurrage bureaus, though expensive, have been necessary, but not at present, since it is now discriminatory and illegal not to enforce the letter of the law in car demurrage, and, since the benefits of prompt loading and unloading have been so demonstrated to the shipper as well as to the railroad that, irrespective of the action of the competitor, we must in our own interest see that the rules are enforced. The reasons for the continued existence of the bureaus are not apparent.

As a daily car report gives the arrival and departure of all cars, with the contents and destination, this furnishes the means of supervising the schedules and loading of merchandise cars from the various freight houses. Careful attention should be paid to this, as this traffic constitutes the highest class freight, delay to which causes much inconvenience to patrons since it includes the daily supply of merchandise for the retailer. It is in the handling of this class of traffic that the claims for damage and loss are most likely to occur. The schedule should be prepared with a view to furnishing prompt delivery with the minimum of handling en route. The contents should not only be safely stowed in the car and so loaded as to be accessible at destination without re-handling, but fully loaded, so that as few cars as possible may be engaged in the service. It is proverbial that freight house tracks are of limited capacity, and way-freights must not be overburdened with unnecessary car haulage.

The daily examination of these reports will disclose to what points straight cars should be loaded, and if a straight car is running too light, the freight traffic department's attention and efforts can be particularly directed towards securing additional business for the weak car. A check of the arrivals can be made to show whether schedule time is being maintained and whether the loading for one point is spread through too many cars, requiring greater concentration at starting point or en route. A merchandise schedule can, and should be so maintained that a freight solicitor can quote it with the reliance one ordinarily accords to a passenger train schedule. The symbol or manifest fast freight system of supervision can be extended to the l.c.l. movement, following the shipments through from starting point to destination. The car service man can appreciate what a relief this would be in eliminating complaints and reducing special requests to "please locate, rush and trace to destination shipment, etc."

The way-freight crew should load way-freight into the pick-up cars with the same system and with as much care and precision as does the freight house foreman at a large distributing centre. If this is done, much unnecessary transfer work at junction points will be avoided if the schedule for loading placed in the hands of the way-freight conductor is given careful supervision and adjustment from time to time, as the conditions require. Calculate where the greater tonnage to certain destinations originates, and start the pick-up car from that point, transferring and loading into it en route from the less important stations. Under such conditions, a greater part of the pick-up cars on way freights should not require re-handling at the terminal of the run, but might be immediately switched into their trains for forwarding.

In order to perfect this handling of merchandise, the staff handling "Over and short" reports, the tracers for l.c.l. delayed shipments, and the freight claims agent's forces in general (as distinct from the freight claims auditor's forces) should be assigned to the transportation department, in order that that department being at fault may be promptly and fully put into a position to correct the fault, since it has the authority to do so.

The symbol or manifest system, as applied to carload business, provides for the handling of special commodities in regularly scheduled trains of fast speed, and each car in each train is under direct supervision of the headquarters staff through a telegraph record of each movement it makes from the time it starts until it arrives at destination, each car being identified by its own code number. In this respect, transportation has reached a marked degree of efficiency.

With respect to train service; efficiency requires a faster movement of certain traffic, and this naturally concerns the higher classes which furnish the better revenue. The actual difference in the cost of furnishing such service, as compared with the most economical performance, should be carefully established and the information given to the traffic department, which makes the rates, and which requests that certain commodities be placed in the manifest schedules. The individual train expense, apart from the general operation, is made up of the two main items of wages and coal. The wages cost and the fuel cost must be carefully ascertained, and from this the cost per thousand equivalent gross ton miles arrived at.

The most economical performance in cost per thousand ton miles should be classed as the standard cost, and the tonnage handled most economically should

Labour-Saving Machine Tools

MANUFACTURED BY **ALFRED HERBERT, LTD.** COVENTRY ENG.

The **Patent Hexagon Turret Lathe**

is the machine for all classes of bar work in the LOCOMOTIVE SHOPS, whether on construction or repair work.

The present-day machine will do so much more work than previous types, that it will well repay investigation.

On Stay Bolt Work

we offer you the No. 2 Patent Hexagon Turret Lathe, fitted with the Patent Stay Bolt outfit, enabling steel stays up to 30 in. long to be produced in record time either from bars or forgings without any subsequent operations.

For **Locomotive Shops**

These machines are built in three sizes, as follows:
